FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

ASIAN LEGISLATORS TO ESTABLISH POPULATION, DEVELOPMENT FORUM

Kuala Lumpur BUSINESS TIMES in English 27 Jan 82 p 19

[Article by Manolo B. Jara]

[Text] ASIAN legislators have agreed to set up an Asian Parliamentarians' Forum on Population and Development.

Its establishment, competent observers said, underscores the parliamentarians' growing awareness of and a common concern for the need to integrate population policies into Asia's development programmes.

The Forum's establishment was one of the more significant results from the Asian Parliamentarians' Conference on Population and Development held here Oct. 27-30. More than 200 delegates from 19 Asian nations attended the first-ever major international meeting hosted by the Chinese government in cooperation with the United Nations.

Spearheading the Forum's establishment was the five-member Asean. Sponsored by Thailand and supported by the four other Asean members, the organisation aims to:

- Coordinate the activities and involvement of Asian parliamentarians in population and development; and,
- Seek ways and means to secure adequate financial and administrative support for its effective operation.

Informed sources told *Depthnews* that pledges of assistance and support for the Forum's operations have already been made by Japan and the United Nations Fund for Population Activities (UNFPA).

"The Forum is already as good as established," the sources said. "The only remaining question now is where it should be based."

Result

Earlier, Japan offered Tokyo as the Forum headquarters but it met stiff resistance from the delegates, according to the sources.

Another significant conference result was the unanimous adoption of the Beijing Declaration on Population and Development.

In the declaration, the MPs expressed concern, among other things, on the adverse impact of the imbalance between population and Asia's natural resources.

This resulted "in deforestation, soil erosion and other ecological changes leading to a deterioration of the natural environment which, if unchecked, will threaten the very human existence."

The legislators also took note of Asia's effective population policies and family planning programmes during the last two decades. As a result, they said, the region has contributed significantly to the decline in the global birth rate.

According to UNFPA executive director Rafael Salas, Asia's population growth rate has gone down from 2.1 per cent in the 1960s to 1.8 per cent during 1975-80.

Despite this achievement, however, much more needs to be done in the light of stark demographic realities prevailing in Asia. For instance, the MPs acknowledged that Asia now accounts for nearly 60 per cent of the total world population.

Trend

Its present population is estimated at 2.6 billion but it is projected to grow by another billion by the year 2000.

The most disturbing fact about Asia's population scene is that 90 per cent of the world's poor live in Asia. Estimates are that in the 1970s, those living in absolute poverty stood at 500 million.

If the trend continues, it is estimated that another 200 million will be added to Asia's poorest of the poor just in the 1980s. "This large proportion of our population suffer from malnutrition, illiteracy, ill health and thus does not fully enjoy their basic human rights and the benefits of development," the MPs noted.

Asia's women and youth population has likewise been a cause of the MPs' concern. In the case of women, although they "constitute nearly 50 per cent of the region's total population, they have not been accorded equal opportunity to effectively participate in the development process and share in its benefits."

The youth seem to be another neglected sector in Asia's population. Nearly 60 per cent of the region's total population are below 25 years old but "they have not been provided adequate opportunities for their development to the fullest potential as citizens and leaders of the future."

Policies

As legislators, the delegates felt they could help a lot in alleviating the plight of Asia's poor.

UNFPA's Mr Salas himself acknowledged their vital role in his speech at the first *World Parliament on Population and Development* held in Colombo, Sri Lanka, on Aug. 27, 1979.

He said: "The informed involvement of national legislators in as complex and sensitive a question as population will serve to deepen their knowledge of the needs of their constituencies. Communication between a government and its people must be a two-way process if development is to proceed in a sustained and orderly manner.

"To give substance and vigour to this process, one of the most effective links is the legislator who brings the message from the village to the chief executive who, in turn, transforms parliamentary policies into executive action.

"This vital link has been recognised by many countries which have taken measures with the active involvement of the MPs to devolve the apparatus of development into the rural areas to increase community participation." — Depth. news Asia

MOST ASIAN COUNTRIES 'SPEND MORE ON DEFENSE THAN SOCIAL SERVICES'

Kuala Lumpur BUSINESS TIMES in English 11 Feb 82 p 21

[Article by Adlai J. Amor]

[Text]

ASIAN countries in general are spending more money for their military forces than they do for basic social services such as health and education.

A Depthnews survey reveals that from 1975-1979, ten Asian countries spent an average of 20 per cent of their total expenditures for military purposes.

However, expenditures for health services averaged only 4.5 per cent of the total, while that for education averaged only 12.5 per cent for the same period.

For every US$1 spent by Asian governments, 20 cents went to the military, 4 cents to health and 12 cents to education.

And despite decades long international initiatives for disarmament and a reduction in military spending, it is likely that Asia will be spending more and more money on its military forces than for basic social services.

The countries included in the survey are Burma, India, South Korea, Malaysia, Pakistan, Philippines, Singapore, Thailand, Nepal and Sri Lanka. Other data from other countries indicate a similar trend in the rest of Asia.

The data from these ten countries correspond with the findings of the United Nations Centre for Disarmament on the escalating arms race and its costs in terms of development.

Today, the world spend roughly US$500 billion annually on armaments — or US$1.37 billion daily. Already, man has the capacity to blow the world 40 times over with the more than 40,000 nuclear weapons in stockpile — a stockpile which is one million times more powerful than the Hiroshima bomb.

On the other hand, there are some 570 million severely undernourished people in the world, while some 800 million are illiterate. Some 1.5 billion people have little or no access to modern health.

And the world hungers, with nearly 1 out of 5 people remaining hungry from cradle to grave.

Yet, if US$200 million — the price of two bombers — were given towards a worldwide literacy campaign, it could free every country from the curse of illiteracy.

And malaria, trachoma, leprosy and yaws could be eliminated forever if only the cost of one aircraft carrier — US$500 million — were made available to the World Health Organisation.

An international team of specialists commissioned by the United Nations has concluded that the low-income countries of Asia could improve their per capita consumption by as much as 47.6 per cent with even a partial reduction in military expenditures throughout Asia.

Pakistan and South Korea spent 33 per cent of their total expenditures on the military — the highest in the region. They are followed by Singapore with 27 per cent and Burma with 26 per cent.

Among the lowest military spenders are Nepal (6.7 per cent) and Sri Lanka (2.5 per cent).

Despite it being frontline state, Thailand has been consistently spending more for the education of its people than on the military. It spent 71,222 million baht (US$3,110 million) or 20 per cent of its total expenditures on education

while the military sector got only 18 per cent.

The same situation holds for Sri Lanka, which spent four times for the education of its people and twice for health services than on the military.

Malaysia also spent more for the education of its people (22 per cent) than on the military (16 per cent) for the same period. However, its health expenditures are very much lower than its military expenses.

Political observers say that it is unlikely Asian countries will deliberately reduce its military spending. This is largely because of the tensions in the region, especially the Soviet occupation of Afghanistan, the perceived threat of Vietnamese expansionist plans, and internal communist insurgencies.

The Indochina conflict continues, with Kampuchea and Thailand bearing the brunt of the war. As refugees stream into Thailand, it has become a major unstabilising force in the region.

The Philippines faces a secessionist movement in the south and a resurgent communist party. India still has the radicals called Naxalites, while Bangladesh faces rebellion from the hill tribes near Chittagong. Malaysia and Indonesia both face the threat of growing Islamic fundamentalism.

All these tensions have contributed to an increase in the military budgets of Asian countries.

Even the United States — which is the region's largest arms salesman and military aid donor — has started to increase its aid and arms sales to the region.

"With the unstable internal conditions and the escalating Indochinese conflict, the US has no other alternative except to continue increasing its military aid to the region," a Pentagon analyst told Depthnews in an interview last year.

This is especially true for the member states of the Association of South-East Asian Nations (Asean). Military aid reached US$819.7 million from 1975-80 compared with only US$327.43 million during the first half of the '70s. It is estimated that US military aid accounts for 10 per cent of the military budgets in the region.

Accompanying this upswing is an increase in arms sales to Asean countries which are largely dependent on US aid to modernise their military forces. Asean countries account for more than 10 per cent of East Asia's total arms sales of US$11,086 million from 1973-77.

With such a situation, diplomats seriously doubt whether the Asean region will ever become a zone of peace, freedom and neutrality as has been consistently espoused by Malaysia since the late '60s.

In South Asia, diplomats say that the prospects for peace appear to be gloomy due to the worsening relations between India and Pakistan. Despite Pakistani overtures for a "no war" treaty, India remains wary of its Muslim neighbour. And their armies face each other eyeball-to-eyeball across a thin border.— Depthnews Asia.

GANDHI REMARKS ON SOVIET RELATIONS, PAKISTAN REPORTED

AU181305 Vienna DIE PRESSE in German 17 Feb 82 p 3

[Gabriele Venzky interview with Indian Prime Minister Indira Gandhi: "Indira Gandhi Does Not Understand the United States Any More: 'We Will Not Let Ourselves Be Labeled Vassals of the Kremlin'"--place and date not specified]

[Excerpt] For the first time the sovereign manner with which Indira Gandhi claims absolute independence for herself and for her country gives the impression of being genuine. Does she feel she is being pushed by the United States into the Soviet camp? "No! We will not allow ourselves to be pushed in any direction. We are only doing what we regard as right. It is our interest to be as independent and self-reliant as possible."

And the relationship with the Soviet Union has noticeably cooled off, indeed. "Common interests do exist, yes." Invitations to Moscow have thus far been ignored, however. And how will things to with the Americans? "They are fashioning their strategies in such a way that there is no room for India," Indira Gandhi notes regretfully. "But the Americans are such friendly and dynamic people. At lease the people should act differently than the Reagan administration," she finds. "They at least ought to do something." But U.S.-Indian relations are bad as never before in the history of the two countries. Delhi's allegedly excessively pro-Soviet attitude on the Afghanistan issue has prompted the U.S. administration carelessly and frivolously to brand India as a Kremlin vassal. It is true though that up to the present day the Indians have not been able to pluck up courage to denounce the Soviet entry into that country. Mrs Gandhi: "But we actually have done a great deal. Many things, however, do not depend on those directly affected. Much also depends on others. That is why we cannot do anything, either. The situation is complicated because there are third parties in the background and because it is not just two countries that are involved. But we are keeping the ball rolling and shall try to do all we can."

Indira Gandhi painstakingly avoids being specific. She is silent about what she intends to do. But is already because of Pakistan that India is interested in a detente in Afghanistan, because the people in Delhi are convinced that the archenemy Pakistan is exploiting the situation in Pakistan for the mere purpose of massively arming against India with U.S. assistance. One could almost speak of a war psychosis which has enveloped India. Hardly a day goes by without

the Indian papers reporting about preparations for war. There is hardly any political conversation which does not immediately revolve around the super modern F-16 fighter planes which the Americans wish to deliver to the Pakistanis. Even though the 4-day negotiations with Pakistan's Foreign Minister Agha Shahi in Delhi in late January brought a ray of hope for the future of bilateral relations, a nonaggression pact between the two countries is as remote as ever.

The Main Evil Is Corruption

The offer for talks by the Pakistani head of government Ziaul Haq has come too suddenly for Mrs Gandhi. She does not quite trust it. "We are surprised and do not know what he is up to." And she is firmly convinced: "Even now they are planning a war; not against all of India but against part of it."

She does not want to listen to references to India's defense efforts, which will cost the country $15 billion in the end and thus will far exceed Pakistan's expenditures. "Our defense efforts are much smaller if put in context with the country and its population. Just think of the extent of our land and our maritime borders!"

Does India fear such a small country as Pakistan? "No, naturally not. But after all, they have already attacked us five times. The better we are prepared the less our people must suffer."

SHIFT IN JAKARTA'S PERCEPTIONS OF MOSCOW, PEKING

Kuala Lumpur NEW STRAITS TIMES in English 15 Feb 82 p 15

[Text] JAKARTA, Sun. — Indonesia's Soviet spy scandal has all the ingredients of an espionage novel — clandestine meetings, secret drops, special cameras, even a pitched battle with security men.

But more significantly, it highlighted a shift in Jakarta's perceptions of Moscow and Peking. Diplomatically, the change has been subtle but the espionage element was dramatic.

It unfolded eight days ago when authorities expelled military attache Sergei Egorov and arrested Alexander Finenko, head of the local office of the Soviet airline Aeroflot.

A brawl broke out when Finenko tried to join Egorov on the flight back to Moscow. An Indonesian naval officer, Lieutenant-Colonel Susdaryanto, was also arrested, accused of involvement in the alleged spy ring.

Less than a week later, embassy attache Gregor Odariuk was quietly asked to leave. He too had been involved in the airport fistfight.

Diplomatic analysts said that for years the Russians have benefited from — some officials say taken advantage of — Indonesia's "frozen" relations and deep distrust of Peking.

Now, leading military and security figures are arguing quietly that perhaps the balance has been tipped too far in Moscow's favour.

Some officials have openly said they believe Moscow poses a greater threat to Indonesia than does Peking, at least in the short term.

President Suharto's staunchly anti-communist new order regime emerged from the political confusion and economic anarchy of Sukarnoism which came to a head in 1965 with an abortive communist-backed coup.

Peking was blamed for masterminding the attempted coup. More than 500,000 suspected communists were arrested and about the same number of people were officially estimated to have been slaughtered in the aftermath.

Speculation

At the same time, the charismatic but discredited President Sukarno was eased from power.

The Chinese Embassy was closed and the remnants of the now-banned PKI communist party fled to China. A handful went to the Soviet Union and Albania.

Ties with Moscow, though strained, were not broken. The Russians built a huge new embassy and relations became most warm in 1979 when they staged a big industrial and trade fair here.

There was speculation that they were reassessing abandoned Soviet aid projects but nothing came of it and Western companies continued to complete them.

In recent months, however, Soviet-Indonesian relations have taken a turn for the worse. Opposition Muslim Party members of Parliament complained loudly about Moscow radio broadcast references to the PKI. Jakarta officially protested to Moscow.

There was nothing new in such broadcast references to the PKI but Indonesia's reaction led to a street demonstration and a statement earlier this month by Vice-President Adam Malik that relations with the Soviet Union could be disrupted if they continued.

Then came the spy charges, the departure of the diplomats, the airport brawl and the arrests.

Official sources said Foreign Minister Mochtar Kusumaatmadja wanted to keep the attache's expulsion quiet but this became impossible after the fistfight.

Any talk of a rapprochement with China would have been heresay only a few months ago.

But according to well-informed Indonesian sources several of President Suharto's influential advisers in state and military intelligence agencies are arguing that something of the sort is necessary to balance Soviet power.

National Security chief Admiral Sudomo said late last year that he believed the Soviet Union and a surrogate expansionist Vietnam now posed the greatest security threat.

But there are other considerations.

Internally, the authorities have always regarded the ethnic Chinese community with suspicion and with the election campaign officially starting on March 15, it seems most unlikely that there would be any overt moves towards Peking that might excite political debate.

While there is no doubt the government Golkar Party will win, authorities want above all to avoid what is described as an "an overheated political atmosphere."

Externally, a Foreign Ministry worry is that moves to cut down the big Soviet presence here — more than 40 diplomats and 100 "maintenance officers" - would provoke Soviet reprisals over East Timor.

Indonesia's annexation of the former Portuguese colony in 1976 has not been recognised by the United Nations and Jakarta actively lobbies for support in an annual U.N. resolution on the issue calling for self-determination.

Moscow has allowed several Soviet bloc countries to change from voting against Indonesia to abstaining and Dr Mochtar has publicly expressed his appreciation of this.

A few days after the spy scandal broke, he commented that he was confident it would not damage the "good relations" between Jakarta and Moscow. - Reuter.

NEW BUDGET CUTS SUBSIDIES, RAISES DEVELOPMENT EXPENDITURE

Kuala Lumpur BUSINESS TIMES in English 12 Feb 82 p 21

[Article by Warief Djajanto]

[Text] PRESIDENT Suharto has presented a new budget that warmed the hearts of his economic advisers but hurt the pockets of the ordinary Indonesians.

But the President was quick to defend his budget. He said it was the only way to ensure that the government's development plans are pursued without major hindrances.

And to do this, he said, the government is pouring more money into development programmes instead of into routine spending. As a result, fuel subsidies have been drastically cut and a freeze has been ordered on government salary increases.

"To continue development remains the only choice. To delay it will only prolong the sufferings and demanding life that will be harder to remedy in the future," Mr Suharto said in his budget message to Parliament.

At the same time, he appealed to the Indonesians to carry a greater share in the price of progress so that on-going development projects could continue unimpeded. The President appeal seems well-founded.

The budget for the new fiscal year starting April 1, totals 15,607 billion rupiah (US$25 billion) up by 12.3 per cent from the 1981-82 budget of 13,900 billion rupiah (US$22 billion). Fuel subsidies were slashed from 1,500 billion rupiah (US$2.4 billion) to 924 billon rupiah (US$1.5 billion); food subsidies were cut from 3-9 billion rupiah (US$495 million) to 188 billion rupiah (US$300 million).

Due to the fuel subsidy reduction, the price of petrol rose by 60 per cent. What this means is that Indonesian motorists now have to pay 240 rupiah (US$0.38) for a litre of premium petroleum; housewives too have to pay 75 rupiah (US$0.12) instead of the original 50 rupiah (US$0.08) for litre of kerosene.

President Suharto said the decision to slash subsidies was "made with a heavy heart under compulsion." Several international funding institutions like the World Bank, and Indonesian economic advisers have long been pressing for the elimination of state subsidies.

The Suharto government ended 1981 with a strong showing on the economic front. Indonesia had a bumper rice harvest of 22 million tons, up 10 per cent from 1980. The annual rate of inflation was 7.09 per cent. The economic growth rate, pending final calculations, was expected to reach a high 9 per cent. In industry, more than a dozen multi-million dollar projects from fertiliser plants to paper mills are under construction.

The government argues that to maintain the momentum in the face of worldwide economic recession, austerity measures should be carried out.

The belt-tightening measures fuelled speculation of an imminent devaluation of the rupiah. Money exchange dealers in Jakarta were swamped with people demanding to buy American dollars and other foreign currencies. The run increased the changer's selling price of the US dollar from 640 rupiah to 656 rupiah.

To dispel speculations, Mr Suharto asserted twice in five days that the government had no intention of devaluing the rupiah.

Economists and parliamentarians said they expected the government to increase the domestic price of fuel, but not so soon. They had expected the increase after the May 4 general elections to elect new members of Parliament.

Mr Suharto's decision to jack up fuel prices, however, apparently did not result in any adverse political fallout. In fact, all factions in Parliament approved the move, saying it was necessary and understandable. The absence of any opposition, in this sense, indicates that the President will have easy sailing when he runs for re-election in March 1983.

DECLINE IN FOREIGN RESERVES ATTRIBUTED TO SEASONAL FACTORS

Kuala Lumpur BUSINESS TIMES in English 15 Feb 82 p 19

[Text]

JAKARTA, Feb. 14

THE governor of the Central Bank told the parliament Budget Commission yesterday that Indonesia's foreign exchange reserves at the end of January stood at US$6.5 million, a decline of about US$800 million from US$7.3 million last April, the beginning of the outgoing fiscal year.

He said the decline was caused by seasonal factors because almost all of Indonesia's foreign exchange reserves came from payments by foreign oil contractors.

The oil companies usually make their payments in April, July, October or January, bank governor Rachmat said.

He said the reserves as in past years were inclined to decrease in January and February and would increase again usually in April.

Mr Rachmat said the rise in fuel oil prices has lately affected the rise of the rate of inflation in this country.

The government increased the price of fuel oils at the average 60 per cent early last month.

The rate of inflation in the past 10 months from April 1981 to January this year had increased by 9.1 per cent, Mr Rachmat said.

He said the inflation rate from April to December stood at 4.4 per cent. But, he added it increased by 4.7 per cent in January.

However, Mr Rachmat expressed confidence that current government efforts to retain the rate of inflation for the fiscal year not to exceed the rate of last fiscal year would be achieved.

The previous fiscal year inflation rate stood below 10 per cent, informed sources said.

They said efforts include adequate supplies of rice and other essential commodities in order to prevent domestic increase of prices and intensify non-oil export commodities.

Mr Rachmat said the government's economic policy in the 1982-1983 fiscal year would include incentives for non-oil exporters by providing them with low interest rate — between six to nine per cent.

Sources said previously the export interest rate was between 10 and 12 per cent. — AP

POLITICAL, RELIGIOUS SIMILARITIES WITH IRAN

Kuala Lumpur BUSINESS TIMES in English 17 Feb 82 p 21

[Article by Richard Cowper]

[Text]

A 32-YEAR-OLD Indonesian is on trial in Jakarta charged with attempting to overthrow the Indonesian government in an Iranian style revolution.

Imron bin Muhammad Zein clearly never posed any serious military threat to the 16-year-old government of President Suharto.

But the fanfare surrounding the trial illustrates the point that Indonesia's army leaders see orthodox Islam as the only serious opposition political force in Indonesia today.

The Imron case conjures up some of the most extreme fears of Indonesia's security -minded and secularist army leadership.

Charged with setting up a self-styled Islamic revolutionary council, Imron is accused of masterminding last year's hijack of an Indonesian airliner and of plotting to kidnap the Iraqi oil minister as part of a pain to overthrow the government and set up an Islamic state along the lines of Ayatollah Khomeini's in Iran.

When Khomeini toppled the Shah and proclaimed an Islamic state in a nation that was held up by the West as a shinning example of stability and economic development, its was a chilling reminder to President Suharto's government of the potential political power of fundamentalist Islam in its own country.

Though no one is pretending that Imron had anything like the power and influence of Ayatollah Khomeini, there are a number of similarities between prerevolutionary Iran and present-day Indonesia.

Indonesia is by far the world's largest Islamic country, with 135 million Muslims living there. And as with Iran under the Shah Indonesia is a major producer and exporter of petroleum and is strategically important to the world's non-Communist industrialised nations.

Sprawled across the main trading route between Japan and the Middle East, Indonesia is one of the world's leading exporters of rubber, palm oil, tin and timber. And, like the Shah, President Suharto has always laid great stress on modernisation and economic development.

Some of the circumstances which helped to topple the Shah would appear to exist in Indonesia today.

A broad Islamic political alliance forms the only real opposition to the Suharto government, and a number of its leading figures regard the new order regime as authoritarian and corrupt.

In private, some of them have been quick to denounce high-cost, low employment projects like the US$2.5 billion Krakatau steelworks and the US$2 billion Asahan aluminium complex which, they say, are grandiose schemes unsuited to a nation which has to feed 3 million people and provide 2 million new jobs a year.

Many areas in Indonesia are undergoing a process of rapid social change, which is putting noticeable strains on traditional values and ways of life.

A rapidly-growing urban population (Jakarta now has almost 7 million inhabitants) has already begun to give rise to a worrying increase in urban crime rates, and sociologists point with concern to the wave of pitched battles between secondary school pupils in the capital over the past 18 months.

In some areas of Indonesia, there is a powerful tradition of revolutionary Islam. The Achinese in the northernmost province of Sumatra waged a 100 years war against the Dutch East Indies government, and after independence fought a number of campaigns, inspired by their desire for an Islamic state, against the Jakarta authorities.

The Bugis, in southern Celebes, and the Sundanese, in West Java, also fought armed campaigns against the central government in the 1950s.

But here the similarities with Iran end.

Indonesia today does not have a Khomeini waiting his chance to take over, nor does it seem likely that the country's masses will rise up to depose President Suharto in a holy war against modernisation.

Indonesia may have the world's largest Muslim population, but about 80 per cent are Muslims in name only. These people hold a wide mix of beliefs, ranging from animism to Hinduism and modern secularism, which makes Indonesia one of the world's most tolerant and least orthodox Islamic nations.

For the vast majority of Indonesians, the idea of a truly Islamic state would be anathema.

Doctrinal

And, as the break-up of Imron's small band of about 150 followers shows, the security forces have generally been successful in infiltrating and reducing the effectiveness of those small groups of Muslim extremists which do exist.

In Indonesia, orthodox Islam is a minority religion, accounting for perhaps 20 per cent of the country's population. But even these adherents remain fragmented and divided, not only on doctrinal grounds, but also ethnically and geographically.

Unlike Iran, Indonesia's Muslims are Sunni rather than Sh'is and the Indonesian variant does not have the Ayatollah system which proved such a powerful means of building up leading opposition figures in Iran. There is no outstanding leader or institution that can claim the loyalty of Indonesia's orthodox Muslim community and speak authoritatively on its behalf.

In Indonesia, Parliament is powerless and democracy little more than a useful charade, but nevertheless President Suharto's government, unlike that of the former Shah of Iran, does respond to criticism and seems aware of the social, political and economic forces in the country.

President Suharto has worked hard to give an impression of consulting the country's religious dignitaries, and has been careful to back down on the rare of occasions when an issue threatened to unite the Islamic community against him.

Folly

Aware of the charges that the country's modernisation plans have often benefited only a small elite, the government has recently made great play in the country's third five-year economic plan of a new emphasis on distributing the fruit of development more equitably.

At the same time, the new order has done its best to ensure that Muslim politicians are given little chance of uniting the country's 30 million orthodox Muslims againt the government.

Since the brief alliance between the army and Islam after the abortive coup of 1965 (when the two groups combined to massacre as many as 550,000 Indonesians suspected of belonging to or supporting the Communist Party) the government has worked hard to keep orthodox Islam weak and divided.

The government does not allow political parties to organise or engage in political activities at village level except duirng an election. — FT

SHIFT FROM LOG EXPORTS TO PLYWOOD, SAWN TIMBER

Kuala Lumpur BUSINESS TIMES in English 8 Feb 82 p 1

[Text] INDONESIA is sacrificing its logging industry in the hope of becoming the world's largest plywood exporter and a major sawn timber supplier.

"We admit that the state foreign exchange revenue from log exports has dropped but we have to bear with it because we want to be a top exporter of plywood," the country's economic architect Prof Widjojo Nitisastro said recently.

Indonesia has to start now on its bid to be a major plywood exporter otherwise it will be running out of logs, added Prof Widjojo who is Coordinator Minister of Economy Finance and Industry.

The plan has proved to be very costly as last year log revenue of US$1,400 million was slashed by nearly half, and the export volume fell by over 60 per cent to around 6.5 million cubic metres.

The plan has also forced 63 timber firms to close down as they claimed they would be operating at a loss should they switch to plywood and sawn timber.

But the government believes that the plan will eventually materialise. As forestry director General Soedjarwo says, timber companies will make bigger profits when their plywood mills and saw mills are in operation.

The government's decree cutting log exports heavily is the last step to get the plywood industry plan moving, because many foreign log companies have ignored the government's appeal to set up timber processing plants, he said.

"We know that the present situation can be seen as a setback but in the long run it will be a big leap forward," he added.

Timber's position as the country's second biggest foreign exchange source after oil has been taken over by liquified natural gas (LNG) which earned over $2,400 million last year.

An official of the Indonesian Plywood Industries Association has predicted that the plan to be the world's top plywood exporter and a major sawn timber supplier will begin to make an impact from next year exports increased by nearly 90 per cent last year over the previous year when the volume was only around 300,000 cubic metres.

The government can understand that many log companies have preferred to close down rather than to switch to plywood or sawn timber industries.

These firms have, in effect, enjoyed a lot of profits for many years in the past and the government regards it as natural that they want to try to maintain these profits.

However, forestry authorities have charged that many companies had ignored their obligation of replanting during their concession period.

With the plywood switch, Indonesia hopes to replace South Korea and Taiwan as the two top plywood suppliers.

Indonesia, probably the last remaining source of sizeable quantities of tropical hardwoods in the world, has set temporary targets of sawn timber and plywood exports and production for this year and 1983.

Based on the target Indonesia is expected to export up to 1.5 million cubic metres of plywood this year.

Sawn timber production this year is set around six million cubic metres of which one-third will be for exports, and next year's production is estimated to increase by 20 per cent and exports to rise by 25 per cent. — AFP

EDITORIAL HITS SIHANOUK ON PAST TIES WITH DK

Paris MOULKHMER in French Jan 82 pp 2-3

[Editorial: "Why the Double Standard?"]

[Text] In the December 1981 issue of his "Bulletin Mensuel de Documentation," Norodom Sihanouk, former chief of state of Democratic Kampuchea and former high counselor to the Khmers Rouges until the beginning of 1979, complains bitterly of being forgotten by the international press, which on the whole has had only praise for Son Sann, now elected head of the National Liberation Front of the Khmer People (FNLPK). He squeals like a stuck pig, taking on all journalists (men and women) throughout the world, whom he blames for this flagrant injustice, for they prefer to him a man who, in the time of his splendor, was but one of his obscure prime ministers but who, at the time being, has committed the wrong, despite his opposition, of trying to free his country from the yoke of the North Vietnamese occupying troops. For having been guilty of such lunacy, Son Sann is labeled as a Cambodian De Gaulle!

Naturally, the latter has nothing to be reproached for, although his importance may have been exaggerated by that vile press! But was there any reason for him to be covered with laurels, when the press had not a word to say about the spectacular action of Norodom Sihanouk?

After all, was it not he, Norodom Sihanouk, who was so totally duped by his good friends in Peking, who, claiming to make an unconditional gift to the Khmer people of a few 60-year-old plants, asked him, in exchange, to give all his aid to the North Vietnamese troops, then fighting the American expeditionary corps in South Vietnam? Accepting these so-called unconditional gifts, he made his country the sanctuary for the foreign troops, allowing them to set up logistics bases within the national territory and having arms and munitions transported across Cambodia to those foreign troops, arms and munitions supplied by his good friends in Peking, in violation of Khmer neutrality.

Was it not also he, Norodom Sihanouk, who, duped by his good friends in North Vietnam, concluded a strange trading agreement with them in order to deliver products from Cambodia to them, without obtaining anything in exchange from their country?

Was it not also he, Norodom Sihanouk, who, instead of denouncing the intolerable exactions committed by the foreign troops against the rebel native people, limited himself to condemning his parliament, which sprang to their defense, thereby bringing the National Assembly and the Council of the Kingdom, meeting in congress and presided over by In Tam, to vote spontaneously and unanimously for his removal as chief of state?

Was it not also he, Norodom Sihanouk, who, in order to gain revenge for his ouster, did not hesitate to have his own country attacked by the North Vietnamese troops and what is more, to rally the camp of the Khmers Rouges, supported in their race for power by those very troops?

And finally, is it not he, Norodom Sihanouk, who, together with the beastly Khmers Rouges who are responsible for the tragedy of the Cambodian people, now continues to play into the hands of the enemy troops, either by opposing the national resistance fight against the occupier or by obstructing diplomatic and political attempts by nations enamored of peace, freedom and justice to help our country regain its national independence, finally agreeing to pretend to wage the same fight only because of the pressure of public opinion?

These are the main feats that can be marked up by Norodom Sihanouk, feats that well deserve to be pointed up by the international press.

In this arena, Son Sann is definitely outstripped by his former boss.

But if, in spite of himself, he is taken for the Cambodian De Gaulle for the simple reason that he was fool enough to try to liberate his country, could one not for good measure take Norodom Sihanouk for the Khmer Petain, for like the French marshal who collaborated with Adolph Hitler, Norodom Sihanouk collaborated with his great friend Pham Van Dong?

It would therefore be unjust to systematically forget Sihanouk, who, as one can see, has spectacular deeds to his credit, when his former prime minister, Son Sann, who has none, is covered with laurels by that wicked international press! It is as if it were trying to "destroy" that former chief of state of the Khmers Rouges!

Indeed, why the double standard?

PONCHAUD ALLEGES THAI, DK MISTREATMENT OF REFUGEES

Paris AVENIR CAMBODGE in French Jan 82 pp 4-7

[Article by Francois Ponchaud, author of "Cambodge Annee Zero," Editions Julliard: "One Scandal May Hide Another"]

[Text] Being in charge of refugees attracts the sympathy of sensitive souls, as we have just seen with the awarding of the 1981 Nobel Peace Prize to the UN High Commissioner for Refugees (UNHCR). Perhaps the members of the jury were impressed by reports unknown to us concerning the activity of the HCR in Africa or Europe. Did they know that their decision would be viewed as as scandalous as the presentation of the same prize to Kissinger and Duc Tho in 1973? Did they know that in Thailand, the UNHCR serves more as a moral and economic guarantee — with its foreign exchange receipts — for the Thai Government than as effective protection for the refugees? That for various reasons the Thai Army uses indescribable brutality in its treatment of refugees can perhaps be understood, but that an international organization in charge of refugee protection should remain silent about such conduct is scandalous, if not absolutely monstrous. A few members of the UNHCR pay personally for denouncing abuses and saving human lives, as in the case of the American who saved many Vietnamese women and girls who had fallen into the hands of pirates on Kra Island, but most UN officials are only there for career reasons and in order to administer the Commission.

Obtaining Justice

And yet, one could cite countless cases of refugees who are beaten and tortured under the very eyes of these international officials: the five children who in July rolled on the ground in pain in front of the building of the field officer of Khao I Dang after being kicked in the groin by Thai soldiers; the boys and girls who were stripped naked and left in the sun for hours; the women who went in February to file a complain with the field officer of Khao I Dang and who was held for 2 days, during which her husband was killed, and so on. The Khao I Dang refugees are making a desperate appeal to "competent organizations" to "help them obtain justice."

Document

Statement by Cambodian refugees at Khao I Dang in Thailand, aimed at seeking justice and freedom in their life as refugees:

Every day, Khmer refugees die from mistreatment or are shot by Thai soldiers in camp and prisons. We are asking the competent international organization to help us obtain justice.

We wish to report cases of misconduct on the part of Thai soldiers with respect to Cambodian refugees: 1 -- Concerning the food supply, every refugee should receive every week: 7 cans of uncooked rice (standard of measure - condensed milk can); 30 grams of chicken; 3 branches of Convolvulus; 1/2 cabbage; 2 small salted fish; 1 small fresh mackerel (spoiled when given to us); 200 grams of salt per person; 1/2 liter of peanut oil per person; 1/2 liter of brine; 300 grams of garlic per family; charcoal once a week, even though the amount given is only enough for two meals; 20 liters of water a day; no oil to use in lamps at night, no sugar. If there are several in a family, the ration is reduced.

2 -- Black market resulting from shortages: Refugees have to sneak out of the camp to go to neighboring Thai villages. Prices are as follows: 1 chicken, 300 bath; 1 egg, 6 bath; 1 kilogram of sugar, 40 to 60 bath; 1 sarong, 90 to 100 bath; cloth, 80 to 100 bath; 20 kilograms of charcoal, 160 to 180 bath.

3 -- Goods purchased can be sold or traded but such trading is risky. If the Thai soldiers arrive in time, they take everything, beating us and putting us in prison.

4 -- Before coming into the camp, adult women or girls and pregnant girls endure the brutality of the Thai soldiers or pirates, who take everything away from them and mistreat them physically and sexually. They steal their clothing and leave them half dead.

5 -- Some Khmer refugees are taken and left with the Khmers Rouges, who kill them. One or two manage to flee and sneak into the camp, avoiding the ambushes of the Thais, who tell them to go to the Cambodian border.

6 -- Refugees wishing to leave to make purchases must pay the Thai soldiers 100 bath when they leave and 100 bath when they return. Sometimes when one has paid and shot at when one returns. Some have their arms or legs broken, some are killed and have their goods stolen, some are caught and put in prison, where they have their heads shaved and beaten on the head with bottles several times a day. Some leave prison spitting blood and die.

7 -- Those killed by the Thai soldiers when leaving to make purchases number in the hundreds each month, two to three a day. At 0125 hours on 9 May 1981, a group of five refugees had paid the soldiers so they could leave to make purchases. They were questioned upon their returned, put into rows and shot by the soldiers. Three were killed, one had his leg broken and fled with another. The first killed was * (asterisks by AVENIR CAMBODGE to conceal names and places which the authors fear might alarm the families of the missing), 15. His father, *, 47 years old, living in section *, group *. The second killed was *, also 15 years old, whose father, 51, lives in section *, group *. The bodies were put into bags and buried at the foot of the hill (many persons are buried at the foot of that hill).

8 -- ***

9 -- A large part of the packages, letters and money orders sent by mail never arrive.

10 -- There are threats preventing us from studying foreign languages. When Thai soldiers catch anyone, they beat both teachers and students, imprisoning students for 7 days and teachers for 3 months.

11 -- If a refugee sneaking into the camp encounters Thai soldiers, he is beaten, sometimes to death. At 9:00 in the evening on 30 July 1981, Thai soldiers caught a pregnant woman along the wall of old section 5. They beat her until she was unconscious, then threw her into a truck to take her to prison.

12 -- Blood donations are required once a month. Of a group of 100 persons, 4 are taken and must give a half liter of blood without any compensation in food.

13 -- Refugees who work for foreigners (various organizations) are given no wages in money, but only some food.

As we have reported herein, the misfortunes of the Khmer refugees make them prisoners of war. Unable to endure this oppression and losing hope because of their suffering, some refugees decide to go back to the Cambodian border to live.

We are making a solemn appeal to the competent international organizations to help us obtain justice and the right of freedom for the Khmer refugees who suffer the mistreatment and even death every day at the hands of the Thai soldiers.

Khao I Dang, 31 July 1981

The refugees have the right to food and to receive news and money from their people. Since the beginning of 1981, everything possible has been done to make their lives impossible and make them return home. That is perhaps the only valid, realistic policy, but then the UNHCR should take measures to ensure effective protection of refugees once home. Then the UNHCR could receive the Nobel Peace Prize without shame.

CENTRALIZED ECONOMIC PLANNING STRESSED

Vientiane VIENTIANE MAI in Lao 8 Dec 81 p 3

['Things We Ought to Know' Column]

[Excerpt] In the past 4 years of reconstruction and socialist reform in our country the economic situation has had a rapid change from that of a colonialist economy to an economically independent nation, from a poverty stricken, backward country to one advancing economically and socially. The people are independent in their livelihood. Another difference is the political change, like a leap forward, from semi-colonial feudalism to independence, democracy, and building their own socialist economy, without going through expansion of the capitalist system. This is an abrupt, historical change. According to the direction of expanding the national economy, the 4th Plenum of the Party Central Committee divided the economy into two parts, the central economy and the local economy. The central economy has the function of guidance and supplying the technical needs and necessary materials for the local economy. The local economy has the function of implementing the plans that are in unity with the central government, depending on local conditions. The division and control of the economy proceed under the leadership of the party with the government in control.

FOREST SIZE, EXPLOITATION AND MANAGEMENT DISCUSSED

Vientiane VIENTIANE MAI in Lao 11, 12 Nov 81

['Things We Ought To Know' Column]

[11 Nov 81 p 3]

[Excertps] 1. Value of Forest

Forests are one of the several strong features in the economy of our country. Our forest area is immense, covering 15 million hectares, equal to 67 percent of the total area. Because our climate is tropical these forests are thick jungle. There are many kinds of excellent timber, valuable for all branches of the economy, such as construction, coal mining, and chemical processes. It is beneficial for communications and other industries. Besides, it is a very valuable export commodity which brings a fine income to the nation, representing 37 percent of total exports.

After liberation the party and state issued a policy on forests. The most important tasks were to protect the forests, prevent forest fires, stop the destruction of forests, and prevent haphazard exploitation of the forests. It is the responsibility of all of us, to try to limit the clearing of land for fields, by turning from shifting cultivation to wet rice farming in places that have the proper conditions, to rotate crops, and to practice deep cultivation. The state must enforce a forest protection law and teach the people to respect the law strictly. They must share the care for the forests. The central administration has direct responsibility for large forest areas which must establish exploitation on a large scale or joint exploitation with foreign countries.

The province has direct control for a forest area of ordinary size, for exploitation with no high technology. Other forest areas are assigned to agricultural cooperatives operating as a state enterprise, where they protect, maintain, and plant trees in reforestation, and exploit the timber according to state regulations, including agriculture and livestock raising, combining these with the forestry enterprise. They must work in each district, taking the district as the base, and follow the plans of the district and province.

[12 Nov 81 p 3]

[Excerpt] In the vigorous exploitation and processing of timber and the division of responsibility, as in Champassak, Savannakhet, and Vientiane, there is cooperation with all neighboring nations through foreign loans to buy equipment. We exploit this ourselves, with timber signing contracts with various companies of the foreign nations, under the condition that those companies must supply the components for us, as is done in Champassak. They comply with the policy and reform the capitalists engaged in the forestry enterprise, in Vientiane. (The capitalists still conduct this business, transport, and mill the lumber, but the state has the monopoly on wood exports.)

FOOD TO BE EXPORTED, INDUSTRIAL RAW MATERIAL SUPPLY NOTED

Vientiane VIENTIANE MAI in Lao 9 Dec 81 p 3

['Things We Ought to Know' Column]

[Excerpt] Agriculture

Most significant is the activity in irrigation construction in every province, creating a firm base for agricultural production. The movement toward agricultural cooperatives has flourished throughout the nation and now has reached 1,800 sites. Some cantons and some districts have basically completed this transformation to agricultural cooperatives. Especially significant was the attempt to mobilize the mountain people who formerly farmed only dry fields, destroying the nation's resources, to turn to wet rice cultivation or make their living on the plain. This reduced the area of shifting cultivation. In 1977 the rice harvest was 850,000 tons compared to 1967 when it was only 650,000 tons. The six provinces of the south are the abundant food producing areas and can ship to large town markets in the north. They also export products. Concerning this expansion of agriculture our nation has many favorable natural conditions such as a large area of fertile soil and a plentiful system of rivers and streams to produce energy.

Small industrial and craft factories have expanded, for example, rattan articles, basket weaving, carving, embroidery, and others. However, the industry is still weak. We have to depend on foreign products for the daily necessities of our people. But we have strong faith in the bright future of the nation, since we have many resources, like water power for production of electricity, coal mines, iron mines. Laos has all kinds of minerals needed in industry for smelting and the production of machinery.

PARENTS URGED NOT TO LET CHILDREN WATCH THAI TV

Vientiane VIENTIANE MAI in Lao 8 Dec 81 p 2

['Conversations with the Editor' Column]

[Excerpt] [Question] Does TV cause ideological damage to children, young people, and adults? If the children watch TV, how will their studies be affected and how will youth advance toward socialism?

[Answer] TV will not be detrimental to the ideology of the masses. It is the TV programs that are broadcast. If the programs that are not good are disseminated, they do bring deterioration to the people's ideology, especially affecting children and youth. In order to solve this problem, it is necessary to first of all select proper programs before broadcasting them on TV. Especially now, the problem is that we ought not let children and youth or others who are not firm on the party and government policy line, watch Thai TV (or not let them watch at all is better), because many programs are of no benefit for our people, since they serve the political function of the capitalists and weaken the ideology of youth the most.

PLYWOOD MEETS WORLD STANDARDS, EXPORTS PLANNED

Vientiane VIENTIANE MAI in Lao 12 Nov 81 pp 1, 4

[Excerpt] Following is the statement of Gniya, the deputy chief of the Board of Directors of the Lao Plywood Factory, to our reporter on the morning of 11 November 1981: "During the past 10 months of 1981 all the comrades, cadre, and workers were able to produce in the performance of their tasks 106,161 sheets of plywood of 15 kinds, with sizes from a thickness of 4 mm to 20 mm."

Gniya said that the factory products were of high quality. When compared with that of foreign countries Lao plywood met world standards. On distribution, Gniya stated that 50 percent of the production was used domestically and 50 percent was exported.

Gniya further commented that this plywood factory, after the capitalists had turned it over to the state officially in 1977, had greatly improved its work, in size and strength, gradually expanding, assuring its political and technical functions in quality and quantity. In the past 4 years from 1977 to 1980 the factory produced a total of 296,726 sheets of plywood to serve society, and 4,935 cubic meters of milled finished lumber, which is a subsidiary product of the factory.

BAGS BEARING ROYALIST REGIME SYMBOLS CONFISCATED

Vientiane VIENTIANE MAI in Lao 9 Dec 81 p 2

['Conversations with the Editor' Column]

[Excerpt] [Question] In the first week of November 1981 a number of teachers at the Pheui Vat Secondary School confiscated students' book bags. I do not know why because the teachers did not admonish the students at all. The pupils' parents objected vigorously.

If the bags bore some symbol contrary to the national character, why are they sold in stores? If it was truly wrong, why are the craft sewing groups producing them.

I hope you will forgive us because we are voicing the objections of the students' parents.

Respectfully,

Le Van Khang 23 November 1981

[Answer] Dear Comrade Le Van Khang,

At first when I read the letter I felt puzzled and scarcely understood, but when I investigated the facts and saw the truth, I answer at once that "The bags that the comrade speaks of are improper in all respects." The symbols on the bags were those of the old rotten regime that we overthrew. VIENTIANE MAI has often said "We cannot waste even one second." But why does such a thing happen? It shows that some people cannot distinguish between friend and enemy. The enemy can infiltrate because we ourselves are careless. This incident of the bags at the same time is a lesson for other reasons. We must work this out together. At first I was not going to answer, then reconsidered judging that you do not see the bag incident in the same way as I do. If you understood, you would not ask for understanding, would not make the accusation.

You ask why, if the picture or symbol on the bags is wrong, the bags were made. This is also hard to understand in Laos. If you see places making

bags like this anywhere, please report it as soon as possible. Then we will commend you again. There is a sincere desire in almost every person to eliminate the remnants of the old regime.

After you understand you will be aware of the public responsibility building the bright new society in our new regime.

TIN PRODUCTION TO BE REDUCED 25 PERCENT

Reduced Dependence on Tin Revenue

Kuala Lumpur BUSINESS TIMES in English 10 Feb 82 pp 1, 2

[Text]

MALAYSIA is to reduce its production of tin by 15,000 tonnes a year, or by 25 per cent of the current production.

Prime Minister Datuk Seri Dr Mahathir Mohamad told a Press conference in Kuala Lumpur yesterday that this reduction would take place gradually over a period of time, and "not overnight."

The Prime Minister also touched on the rationale for awarding turnkey contracts for government projects, the offer made to foreigners for adoption of Malaysia's ISA detainees and the lack of playing fields in some schools.

Explaining the rationale for reducing tin production, Dr Mahathir said it was intended to reduce the country's dependence on tin for revenue. "It is in our own national interest and we are not trying to push up prices," he emphasised.

He pointed out that with LNG production starting early next year, the country will have an additional source of revenue to offset its sacrifice of revenue from tin.

The Prime Minister said he was fully aware of the fact that substitutes were available for tin for several uses. In view of this it was not Malaysia's intention to push up prices of the metal which might cause consumers to look for alternatives.

Any rapid increase in the price of tin could have an impact on other commodities. As such, Malaysia did not want to precipitate an increase in the price but at the same time it did not want to be "held to ransom because of its dependence on tin."

Dr Mahathir pointed out that Malaysia was dependent on tin for export earnings and hence its concern for the price at which it was sold. But the sales took place outside the country where "we have no influence over the price and on buying and or selling."

"Of late there has been a little bit of lawlessness in the tin market and prices have been depressed or increased without any rhyme or reason. The so-called free market forces are not so free," the Prime Minister pointed out.

The Prime Minister was asked whether Malaysia was the "mystery buyer" involved in supporting the prices of tin through mopping up operations on the London Metal Exchange. His terse reply was: "Why should I answer that?"

When asked if he was denying such involvement, he said there was nothing to deny. "Are you accusing me of manipulating the tin market. I don't even know what tin is," he said.

He added that when the interests of certain groups were threatened, the rules were changed. While he did not specifically mention it, the Prime Minister was obviously referring to the reduction in the penalty for deferring delivery of the metal. It has been reduced from £300 a tonne a day to £120 a tonne a day, thus helping short-sellers whose manipulations had adverse repercussions on the price earlier.

Dr Mahathir pointed out that at the time of shortage of tin — only a short while ago — prices were purposely depressed, and no one complained or did anything to support prices. But now that short-sellers are affected they are being given a helping hand.

While admitting that the proposed reduction in Malaysian tin production was not large in relation to total world output — only about seven per cent — it was a major matter as far as Malaysia was concerned.

The Prime Minister said this reduction would not take place through nationalisation or by

decree but by the government trying to persuade the tin industry to slow down production.

He pointed out that it might be necessary for a number of small operators to get together to cut back production so that the adverse effects on individual units were minimised.

The methods being considered include the non-issuance of new mining licences. With quite a few tin lands approaching exhaustion of deposits, production was set for decline in any case.

At the same time the mines owned by government agencies would also be asked to cut down or even asked to produce on a quota basis. "This has been done before and is not something that is impossible," Dr Mahathir added.

The Prime Minister said the cutback was an internal matter and Malaysia would not be discussing it with other producers. "Even if other countries want to increase production, we don't mind," he added.

He emphasised that it was not meant to deprive the world of tin supplies but to protect the country from the vagaries of the tin market.

Besides the cutback, Malaywia will also propose a common marketing arrangement for producer countries to sell direct to consumers. This would be similar to the government to government marketing of oil bypassing the international oil companies as well as the Rotterdam spot market.

Direct selling, he pointed out, would reduce the role of the London tin market thereby short-circuiting the present system and trading practices which were detrimental to producers' interests. "We have to look after our own interests and not depend on others," he added.

Referring to the tin producers grouping proposed by Malaysia, Dr Mahathir said Malaysia was "doing it with great reluctance." Malaysia, he pointed out, had always emphasised producer-consumer cooperation but this was not forthcoming.

"Malaysia has always been the moderating influence in all international issues including the tin agreement but (its moderating influence) is not having any effect and in fact we are made to suffer more than others," he added.

Response to U.S. Dumping

Kuala Lumpur BUSINESS TIMES in English 11 Feb 82 p 24

[Editorial: "Tin: The U.S. Picks A Fight"]

[Text]

IN A commentary on commodities, the *New York Times* prophesies that tin prices are expected to fall just as sharply as they rose as soon as the support buying stops and the fundamentals of supply and demand reassert themselves. The assumption it makes about cause and effect are unexceptionable but the question to ask is what are the fundamentals to which the esteemed newspaper refers.

In a country now obsessed with supply-side economics, it may be assumed that releases from its stockpile of around 5,000 tonnes in the last few weeks is a legitimate exercise of market power regardless of the consequences it has for producer nations dependent on tin for part of their livelihood. The US as the world's largest tin consumer owes, it might be argued, an obligation to itself and to other consumers to hold down prices. If that is how Washington wishes to play it, it follows that it is equally legitimate for producers to do what they can to protect the prices they receive. Why then the indignation over the success of the "mystery buyer" in propping up prices on the London Metal Exchange? The shorts are now squealing, but why should the US administration raise its hands in horror against the verdict of the ultimate arbiter of its own choosing, the marketplace? You can't have your cake and eat it too.

Support buying is not new: It was tried by the so-called Bogota group of Latin American coffee producers and later by West African cocoa exporters led by Nigeria. The *New York Times* reminds that both bids failed, and the producers dropped hundreds of million dollars. The moral is drawn that the LME's mystery buyer, who has allegedly staked over US$470 million since July, is in for an equally rude shock. But this dire warning misses the fact that the tin market is a different ball game altogether because three neighbouring and like-minded countries in South-East Asia account for two-thirds of world supplies. The fourth, Bolivia, accounting for another 15 per cent, may not be able to act too forcefully in its present plight but it will certainly not do anything to undermine the other three.

With the most room to manoeuvre among the four on account of its diversified economy, Malaysia took the first step yesterday to counter the US bid to change the demand-supply equation in its favour by dumping tin on the market. In announcing the decision to cut Malaysian production gradually by a quarter, the Prime Minister said that the country is acting on its own and it is up to other producers to decide their own course of action. Statements from Jakarta by Dr Subroto, Minister of Energy and Mines, leave no room for doubt that he wants producers to act in concert to defend their vital interests. Since Indonesia's output comes mostly from public sector mines, there is no doubt about its ability to make a quick response to the Malaysian initiative.

In other words, the *New York Times* may find the scenario it has painted belied by the strength and purposefulness of the producers.

More important, however, than the outcome of the game of wits played on the LME is the impact it will have on other consumers. Since they have no stockpile to fall back upon, they may soon come to question the wisdom of the US in provoking the fight that has now been joined. Tin may yet become another case of the US being too too preoccupied with its self-interest to pay much attention to the wishes of its allies. The issue here is much larger than that of tin: It is whether the US under Mr Reagan has the sensitivity required of it as a world leader. Disjointed Western responses over Poland, and the European dismay over US monetary policies, are pointers that bode ill.

DRASTIC POLITICAL CHANGES MAY FOLLOW DEATH OF KOIRALA

Kuala Lumpur BUSINESS TIMES in English 4 Feb 82 p 21

[Article by Aditya Man Shrestha]

[Text] STUDENT unrest has sent new political rumblings across Nepal's campuses and observers here predict a new round of clashes reminiscent of the 1979 student upheaval.

There have been no new skirmishes between the leftist All-Nepal Students Federation (ANSF) and the rival Nepal Student Union (NSU) since their bloody clashes last November. But fears have been expressed that the present calm could only be lull before the storm.

The present tension in the campuses is ominously reminiscent of the April 1979 student agitation that finally led to the downfall of the Government of former Prime Minister Bista.

Only this time the situation may be exacerbated when former Prime Minister B.P. Koirala dies. The deposed leftist Premier has been a moderating influence on his party whose top leadership is made up of radicals. Mr Koirala is suffering from lung cancer and doctors have given him only six months to live.

Bloody clashes

When he dies, the leadership of the Nepali Congress Party, which he led for the last 20 years, is expected to pass to extremists who are openly opposed to reconciliation with moderate political forces.

The 1979 political upheaval was triggered by the execution of the late Pakistani President Zulfikar Ali Bhutto. Convinced that it was only a passing fury, the Bista Government did not do much to quell the uprising.

In the present situation, history may be repeating itself. Prime Minister S.B. Thapa has done little to defuse the simmering unrest, apparently believing that the November clashes were isolated cases that will never recur.

But it could be a sad mistake. The 1979 upheaval took a turn for the worse when leftist and rightist student groups were locked in bloody clashes, and the final object of their fury was the Government of Premier Bista.

In last November's clashes in Biratnagar, Nepal's second largest industrial town, the same protagonists started the mayhem. One Marxist student died in the fighting.

The situation eased when local authorities declared a state of siege in Biratnagar, but tension is mounting. Despite the emergency measures imposed by the local authorities to quell further trouble, the ANSF staged a big protest march amid shrill demands or revenge against the NSU.

In retaliation, the NSU organised a massive student rally in Kathmandu. The NSU suffered a major defeat in last October's student union elections, but judging from the crowd it drew to the rally, it has lost little of its penchant for agitation.

Predictably, the issues are clouded. The ANSF has accused NSU of being in cahoots with the Thapa Government, but the NSU is using exactly the same line against is rival.

Both obviously detest the Thapa Government. This makes it the more likely that in the event of another round of campus bloodbath, the Thapa administration may be among the biggest victims.

The NSU is a student wing of the banned Nepali Congress Party of Mr Koirala. Although the former Premier had led the anti-monarchical movement in Nepal, he has shown a more conciliatory attitude toward King Birendra since his release from jail in 1979.

The leftists had rejected the result of referendum favouring the monarchy-patronised *panchayat* (village coun-

cil) system, but Mr Koirala deserted his followers by stating that he was bowing to the people's mandate.

To the chagrin of the communists, Mr Koirala and his partymen boycotted the national election held last May, but did not disavow any move to disrupt the political exercise as suggested by leftist elements of his party.

Boycott

Mr Koirala's change of attitude towards the monarchy, which he fervently abhorred in the past, was brought about by what he perceives as India's threat to Nepal's sovereignty. He has, in fact, pleaded with the King to join forces with his party to thwart the alleged Indian threat.

But the Royal Palace has turned deaf ear to Mr Koirala's pleas. The Royal Palace has neither forgotten nor forgiven him for his anti-monarchical activities. He is still regarded as the most dangerous threat to the throne.

Painfully aware of his impending death, Mr Koirala is reportedly trying to effect a smooth transition of his party's leadership. The odds-on favourite to assume the party's presidency is Ganesh Man Singh, a political firebrand, while Krishna Prasad Bhattarai, a wellknown radical, is expected to become executive president of the party.

Mr Koirala's extremist brother, Tarini Prasad Koirala, is being tipped for party secretary general.

Although the Royal Palace remains wary of Mr Koirala's intentions, the former Prime Minister's death would be a great loss to the King. While it is true that the *panchayat* followers have made short-term political gains out of the continuing confrontation between the communists and the democrats, Mr Koirala's death would remove an influential moderating influence on the leftist radicals, who are avowedly anti-monarchy.

Observers here point out that any change in the triangular political equation among the royalists, democrats and the communists after the death of Mr Koirala could only damage the royalists.

Anticipations here are that the post-Koirala politics would be a convulsive one. Such a situation would put a great strain on the Nepalese Government regardless of who heads it and pose a challenge to the monarchy itself.

Another source of official concern is the likelihood of foreign interference in Nepalese internal affairs when Mr Koirala dies. India and China, the most dominant foreign influence in Nepal, have so far refrained from overt interference in the present tension in the country.

Their "neutral" position in the current squabble, the referendum and last year's election has boosted the position of the King.

Strain on govt

But how long they will maintain their "hands off" policy in Nepal's internal affairs remains a matter of speculation. Drastic changes in the political situation of the country after Mr Koirala dies could open the floodgates to foreign intervention by the two countries eager to preserve their influence in Nepal.

Political observers here recall that India played an active role in the ouster of the Ranas which led to the introduction of popular government in 1951.

Indian pressures have been counterbalanced by Chinese influence. But which way will the political wind blow after the expected struggle among the three political forces, nobody can say for sure.

NEED FOR TRANSFER OF POWER STRESSED

Lahore VIEWPOINT in English 18 Feb 82 p 34

[Text] Even now it is the Majlis-i-Shoora that has become the target of the politicians, although its Chairman, Khwaja Safdar, says that the members of the nominated Shoora have displayed freedom of thought to a greater extent than any elected Assembly and have discussed national affairs. On the other hand, according to a report from Karachi, the Karachi Corporation has unanimously adopted a resolution against the Shoora, denouncing the Federal Councillors and urging the Head of the State to throw rotten eggs and petrified fish out of the Shoora, because the (FA) Councillors were interfering in its (Corporation's) work. In the session, one member described the Shoora as a burden on the national exchequer and another member said that the Shoora had not been chosen by the people but by FIA, CIA and the police. This resolution of the country's biggest municipality about the Majlis-i-Shoora merits attention also because the Corporation is an elected body while the Shoora members have been nominated. It is possible to gauge from this the public attitude towards the nominated bodies.

As for the statement of the Head of State that the purpose of Shoora's establishment is to find a way for transfer of power in accordance with a commonly understood democratic process, in the light of this viewpoint the Shoora's field of activity is restricted. As regards a commonly accepted democratic process, what else than a general election can it be? If the Shoora confines itself to this field of action and only attends to the method of transfer of power, we think the politicians also will cooperate with it because the most important question today is that of transfer of power. At the same time the politicians themselves will have to prove that there is no dearth of political leadership in the country.--MAGHRABI PAKISTAN, Feb 11.

POLICY ON POLITICAL ACTIVITIES QUESTIONED

Lahore VIEWPOINT in English 18 Feb 82 p 7

[From "Between the Lines" column: "Point-Counterpoint"]

[Text] A variety of proposals formulated by defunct political parties--and summarized in four-point, five-point or eight-point plans--have been bandied about for many weeks. Now all these points are sought to be demolished with one counterpoint--that the multiple bans on political functioning remain fully in force.

This was demonstrated in plain, categorical terms immediately after last week's Cabinet meeting. Earlier, the CMLA-President had revealed that the crucial issue was to be considered by this body, raising the faint hope that such reconsideration could well mean that, following the creation of a Federal (Advisory) Council and the revival of some sort of a political process, those not nominated either to the Cabinet or the Council would also be allowed the privilege to speak out freely and without any restraints on national issues. This was not to be. The Information Secretary explained that there had been no change in Government policy; and he clarified that political activities are still banned, that political parties do not exist, and that Press reports on such matters were in contravention of the law.

Why?

No explanation was given for the decision to maintain the present anomalous situation. It was said merely that the relevant Martial Law Regulations remain in force, and that their violation by political parties or the Press could always evoke penal action, even though hitherto Authority had been lax in doing so. Interestingly, the section of the Press recently freed from the blanket of pre-censorship was advised not to follow the example of political leaders when they acted in breach of the law. To refer to MLRs 48 and 49 as a reason for the continuing bans is merely to beg the question. Surely, like other such laws, these two Regulations can be repealed or amended with the same speed with which they were imposed. What everybody wants to know is: why not?

While official spokesmen and members of the Federal Cabinet or the Council have not yet presented any rational argument to justify the retention of the bans, some newspapers have written in favour of maintaining the status quo and have said that to allow a free-for-all political debate would create

further chaos and confusion, that it would allow elements they think are not wedded to Pakistan's ideology, or are considered unpatriotic by the authors, to wean away the people from the strait and narrow path. Such waffling cannot be taken seriously, because gentlemen of this ilk would have written at length in eloquent praise of Government decision if it had been contrary to the one taken. In any case, their posture is seemingly determined by a lack of confidence in the cause they preach, a congenital inferiority complex, an inability to make out a case, and what is more serious, by a lack of faith in the people.

How?

Then, it has been said that no political party in Pakistan has a programme which fulfils national needs and answers national aspirations--although judgment on this should really come from the people--; and also that the aging politicians have failed the people and--like Pakistan's cricket team--young blood is required. But how can political parties evolve adequate programmes if they are not allowed to meet openly and discuss political issues/ How will new blood be introduced into the realm of politics if political functioning remains barred? And is it not obvious that political confusion and chaos are likely to be compounded by the existing hiatus.

Presumably, the whole matter has not been given proper attention by the Cabinet, and those ensconced in positions of privilege and influence have decided hurriedly to vote, for safety, in favour of preserving the status quo. If they could be persuaded to view the issue in its proper perspective, they would realize that the present restrictions cannot do any good and that they must be lifted, in stages if necessary but without unnecessary delay, so that the country can be guided back to normalcy.

CSO: 4220/286

POLITICAL BAN, OTHER ISSUES EXAMINED

Lahore VIEWPOINT in English 18 Feb 82 p 10

[Text] Leaders of the different defunct political parties have expressed their disappointment over the Government decision to continue the ban on political activities.

On Feb. 10, the Federal Cabinet announced that there should be no change in the Government policy regarding political activity in the country. Briefing newsmen after the Cabinet meeting, Information Secretary Maj.-Gen Mujibur Rehman said that Martial Law Regulations 48 and 49, which banned political activities and its coverage in the Press, respectively, were still in force and any violation of these could be taken note of.

Ministers Worried

Commenting on the decision, Pir Sahib Pagara claimed that the Ministers forced Gen Ziaul Haq to continue the restrictions on political activity, "because if this ban goes the Ministers will be exposed."

Pir Pagara said that an impression about the lifting of the ban was created by the CMLA-President himself, but after strong opposition from his Cabinet he decided to continue the curbs on political activities.

The President of the defunct JUP, Maulana Shah Ahmad Noorani, said this (decision) had disappointed the people. "The continuous ban on political activities will encourage underground subversive activities," he added.

Maulana Noorani said that any further delay in holding polls would be harmful for the country. He demanded immediate revival of political activities, announcement of elections, and release of all political leaders.

There was no justification for continuing curbs on political activity as the situation was most congenial to lifting of such restrictions, Mir Hazar Khan Bijarani, a leader of the defunct PPP, said in Karachi.

He said that his party did not have high hopes or expectations from the present Government regarding lifting of restrictions on political activities. However, it would have been in the national interest if these restrictions had been lifted.

Sardar Sherbaz Mazari, chief of the defunct NDP, said after this decision all defunct political parties should reconsider their strategies. Those parties that had high expectations from the present Government, Mr Mazari said, should learn a lesson from it. It was time for them to cooperate with other parties for the restoration of democracy and the 1973 Constitution, he added.

The defunct Tehrik-i-Istiqlal, JUI and Jamaat-i-Islami also criticised the decision to continue the ban on political activities in the country.

Gen. Zia's objectives

On Sunday, the CMLA-President, Gen. Mohammad Ziaul Haq, talking to newsmen in Islamabad, said he would take the nation into confidence about the reasons for continuing the ban on political activity in a broadcast to the nation. He said he had three or four objectives in mind. "One was to introduce sanity into the political process," Gen Zia claimed.

Gen Zia said some politicians were making statements which gave an impression that elections were round the corner. "They are trying to create an atmosphere of uncertainty. Politics does not mean making statements. Conditions at present are not ripe for general elections," the CMLA-President asserted.

The Ministers say

"General elections are now only a matter of months," said Federal Information Minister Raja Zafarul Haq, in an interview with a Lahore daily some days back.

He elaborated that "elections will be held under a new Islamic democratic structure for which the Government will soon submit a constitution formula before the Majlis-i-Shoora."

On Friday, Ghulam Dastgir Khan, Federal Minister for Labour, Wazirabad, said: "Elections at this juncture will complicate the problems instead of solving them."

He said political activities should remain banned under the existing circumstances "as it is in the interest of the country, people and Government."

The Minister said that those who were raising the slogan of election wanted to seize power while the circumstances were not suitable for general elections.

Earlier this month, the Chairman of the Majlis-i-Shoora, Khawaja Safdar, in several statements, pleaded that general elections could not be delayed for too long and that the council would make way for the restoration of democracy.

BAN CALLED 'INAPPROPRIATE AND INCORRECT'

Lahore VIEWPOINT in English 18 Feb 82 p 34

[Text] The Federal Cabinet's decision to retain the ban on political activities is not cent per cent unexpected. But in view of "a kind of political process having begun," consequent upon the establishment of the Federal Council, to which President General Mohammad Ziaul Haq had himself referred, this decision does not seem to be wholly correct and appropriate, because the reaction to long and indefinite suspension and state of inertia can only be in the form of unhappiness and dissatisfaction. This ban was imposed about two and a half years ago--one month before the general elections scheduled for November 1979 were postponed. And the longer this situation is maintained the deeper will the colour of unhappiness and disappointment over it become.

Looking optimistically at the situation prevailing for the last few months, one can say that it is perhaps the wish of men in authority that the process of making the existing state of affairs, that is, there is politics and there is not, tolerable will be continued. But this way the demands of political action have never been met, nor can be met. Political leaders do get together and some glimpses of their way of thinking and expressions and observations also become public. But when one refers to permission and freedom for political action, it does not mean gossiping in a drawing room or at a feast or ceremony but an opportunity for mass contact and party organisation which, in our present circumstances, is a basic requirement of preparation for elections.--NAWA-I-WAQT, Feb. 12.

FEDERAL COUNCIL SEEN AS VEHICLE FOR VOICING PUBLIC'S SENTIMENTS

Kuala Lumpur BUSINESS TIMES in English 16 Feb 82 p 22

[Article by Mohammad Ziauddin]

[Text] IS THE military government of Pakistan taking a cautious step back to the barracks?

President Mohammad Zia Ul-Haq's decision to create a 350-man Parliament has fuelled speculations that the Pakistani strongman may be preparing the political groundwork for the revival of the Parliamentary democracy crashed in the military takeover of the government in 1977.

But most Pakistani intellectuals and political leaders are unconvinced that the President's action represented a significant loosening of the military rule.

Their reading of the presidential decision is that Mr Zia desires to create a broader-based leadership coalition that should be held responsible for managing the country's affairs without actually sharing with them the more delicate decisions of government.

On the other hand, several intellectuals view the creation of the Federal Council as a step in the right direction toward the eventual restoration of democracy in the country.

They claim that if the nation is to get back on the democratic track it will need a period of transition to adjust to new political developments.

The Federal Council is a purely advisory body, but it has gained widespread acceptability in this predominantly Muslim society which holds in reverence almost everything associated with the rule of the early Caliphs of which the council was patterned after.

The first session of this non-elected Parliament was called by President Zia on Jan. 11. It was devoted to foreign relations, the internal situation and four draft laws on the establishment of Qazi courts, and the appointment of Ombudsman at the federal level. As of that date, 83 members were still to be appointed.

Although its members were only appointed, the Council has acquired a representative character because its membership was selected from a cross-section of the population.

The Council membership includes 183 former politicians, 22 religious leaders, 7 journalists, 6 labour leaders, 35 specialists from the various fields of endeavour, 13 women and 11 representatives from the minority religious organisations.

Censorship

About 70 the former politicians now in the Federal Council belonged to the Pakistan People's Party of the late Prime Minister Zulfikar Ali Bhutto, including three ministers from the Bhutto Cabinet and one governor.

The Council has also reached back to days of the old Parliament by adopting the rules and procedures of the National Assembly of 1973.

This is a temporary arrangement pending the formulation of the Council's own rules and procedures. Already, the Council has created six committees to deal with matters relating to the holding of sessions.

Council members are allowed to ask questions from the ministers and its proceedings are published in the newspapers without going through censorship. In fact, news censorship, which was imposed on Oct. 16, 1979, was lifted after the Federal Council was formally created, subject to these government guidelines:

- No material prejudicial to Islam and the Islamic ideology should be published.
- No material should be published that could endanger national security.
- No material should be published that may incite communal or regional prejudices.
- No material should be published that may affect or undermine the dignity of the armed forces.

President Zia has told the Federal Council, however, that the right to legislate or amend the Constitution rests solely with him as chief martial law administrator.

But in his address at the inauguration, Mr Zia stated: "I would like to have your advice, too, in the sense that you will be empowered to make or amend a law, and to alter or delete a constitutional clause to the extent that you would be able to prepare such legal documents, discuss them at length and send them to me with your recommendations."

Those who conceived of the idea of a Federal Council claim that the body will fill the political vacuum created by the dissolution of the old Parliament and, hopefully, pave the way for the transfer of power from the military to a representative legislature.

One of the Council's major tasks is to act as liaison between the government and the people.

Even Mr Zia's most ardent critics admit that despite its shortcomings, mainly its non-elective status, the Federal Council will serve as a formal forum for expressing people's sentiments. The only question is to what extent Mr Zia will allow honest and fair discussions of government's policies by the Council. — Depthnews Asia

UNIVERSITY TEACHERS' GRIEVANCES DISCUSSED

Lahore VIEWPOINT in English 18 Feb 82 p 12

[Text] The long-persisting sorry state of affairs at the Punjab University has surfaced again and this time the cause is centenary celebrations.

A week before the centenary celebrations were to begin, the general body of the Punjab University Staff Association (PUASA), in a unanimous resolution, threatened to boycott the celebrations if its demands were not accepted.

Through several resolutions, the general body blamed the Vice-Chancellor for creating grave unrest among the University teachers and strongly condemned his divisive tactics in dealing with the demands of the teachers community.

The demands made by the PUASA included immediate promotion of all eligible teachers/research staff to higher cadres and award of time scale for them, lease of land to members of the Association as decided by the Syndicate 18 months ago, and immediate steps for the long overdue completion of the Syndicate and the Selection Board.

Besides these demands, the PUASA called upon the authorities to withdraw the transfer clause from the University Ordinance and to annul previous actions taken under it. It demanded cancellation of transfers of three prominent and experienced teachers of the University, namely, Dr Habibullah (Chemistry), Prof. Khalid Mehmud and Mr Sajjad Nasir (Political Science)--they were transferred out of Lahore in 1979 under the University Act.

The Association also called upon the Vice-Chancellor "to remove gross anomalies in the recently announced small number of promotions and take steps to confirm those members of the academic community who have been working on a temporary basis for a long time."

The general body, in another resolution, demanded relaxation of the Ph.D. condition for promotion to grades 19 and 20, and of other similar conditions, in hardship cases, as directed by the University Grants Commission and as done in universities other than the Punjab University.

Frustration

The charter of demands speaks for itself. This is not the first time that the teachers of the University have raised their voice against the administration.

For the last many years, the representative body of teachers have from time to time called for immediate steps to end frustration and discontentment among a large number of highly qualified teachers, but on each occasion the administration not only ignored these demands.

Recently, the President of the Association, Dr Khalid Alvi, in a Press statement, said that the present administration was responsible for creating hurdles in the way of teachers' promotion. Such important bodies as the University Syndicate and the Selection Board had not met for the last 18 months because of, what Dr Khalid called, the administration's delaying tactics.

He alleged that a lion's share of the University budget was being squandered on administrative matters to the detriment of research and education.

Dr Khalid said that a preponderant number of University teachers had been got stuck in grades 17 and 18 in spite of their long tenure of service.

The University teachers demanded a 'running scale system' for promotion like those allowed to the employees in civil service and armed forces.

BALUCHISTAN LEADER 'PLAYS MOSCOW'S GAME IN DEMANDING PROVINCIAL AUTONOMY'

Peshawar MASHRIQ in Urdu 26 Jan 82 p 4

[Editorial: "Praiser of Kabul and Moscow"]

[Text] Mir Ghaus Bakhsh Bizenjo, while expressing his views on internal and external problems facing the country, tried to hatch some new and some old mischief. According to him, the most important internal problem facing the country is that the provinces should be given complete provincial autonomy, and only defense, foreign affairs and currency should be maintained by the central government. He said that a constitution that does not guarantee the integrity of the country by giving the provinces complete autonomy should most appropriately be thrown away. When Mr Bizenjo was asked to comment on the fact that the very constitution that he is asking the people to reject was duly signed by himself, he replied that at that time the country had already disintegrated and that if they were to quarrel over the constitution, then the remaining parts of Pakistan too would have been in trouble. The incident they were referring to, he said, took place in 1973 and they were now in 1982. During this period, a lot of changes have taken place and in light of these changes we should work out a structure for the constitution that will be satisfactory to the provinces constituting the federation of Pakistan.

The views expressed by Mr Bizenjo on the issue of complete autonomy for provinces, and the incentives underlying those views, are nothing new. He has more or less adopted the tone and arguments put forth by Shaykh Mujibur Rahman. Just as the main reason for the Shaykh's tone and argument was his desire to separate from Pakistan, Mr Bizenjo, too, would like to influence the provinces to adopt the path of separation from the federation of Pakistan on the basis of his slogan for total autonomy. Furthermore Sheykh Mujibur Rahman raised the slogan of provincialism and regionalism at the instigation of India and Russia. Today, the main driving force behind Mr Bizenjo's boldness for raising this mischievous slogan is his loyalty to Moscow and Kabul. The fact that he has been urging recognition of the Karmal government and openly supporting Moscow's point of view that Russian soldiers entered Afghanistan at the request of the legal government in Afghanistan and that they can only be withdrawn from Afghanistan on Babrak Karmal's request is clear proof of his loyalty to Moscow and Kabul.

It is a fact that at the time when the tragedy of separation was appearing on the East Pakistan horizon, Mr Bizenjo and other like-minded people, working in close conjunction with Shaykh Mujibur Rahman, were seeking autonomy for their respective provinces on the basis of the six-point plan. But when Bangladesh came into being as a result of the movement for provincial autonomy, then, at least for the time being, they had to give up their demand for complete autonomy for the provinces. They postponed their plans to a more suitable time and signed the 1973 constitution. Now, with the establishment of Babrak Karmal's government in Kabul and the arrival of Russian soldiers on the northwestern borders of Pakistan, according to Mr Bizenjo the right time has come to press his demands.

Moscow and Kabul are enraged with Pakistan for not recognizing the Karmal government and accepting the presence of Russian soldiers in Afgahnistan, and for Pakistan's insistence on the withdrawal of Russian soldiers from Afghanistan and its demand that the people of Afghanistan be given the right to decide their own future. Displeased with Pakistan's stand on these issues, Moscow and Kabul now wish to create disturbances in Pakistan aimed at bringing about regional nationalism and autonomy for the provinces. They are using Mr Bizenjo as an instrument to attain their goal. But the tactics used by Moscow and Delhi back in 1971, which succeeded in dividing Pakistan in two, cannot be effective in 1982 for the rest of the country.

First, Mr Bizenjo and the rest of his like-minded colleagues are so small in number that they can be counted on the tips of one's fingers. Second, the overwhelming majority of the people in the four provinces is now fully aware of the dangers concealed in the slogans for complete provincial autonomy. Russian activities in Afghanistan are aimed at destroying the Islamic identity of the Afghan people. If these actions are successful, the next goal of communist Russia will certainly be Pakistan. This is why the people of Pakistan would reject the efforts of elements working to disrupt Pakistan as agents of Moscow and Kabul. As far as Mr Bizenjo and his colleagues are concerned, they do not have the right to represent even Baluchistan, because their sphere of influence is limited to two or three districts of Baluchistan, and even in these districts their influence is restricted mainly to the tribes they represent. If, according to Mr Bizenjo's characteristic logic, Pakistan is made up of four nationalities, then Baluchistan itself consists of many nationalities. Under the circumstances, would Mr Bizenjo be prepared to transfer the power he is demanding for Baluchistan in the form of autonomy to the various nationalities inside Baluchistan? Would this not in turn lead to a process of division within Baluchistan itself?

In our view, the slogans of nationalism and provincial autonomy have been raised with the specific purpose of creating limitless mischief. In this era it is not possible to imagine the existence of a federation that has responsibility for only defense, foreign affairs and currency. In the Soviet Union, too, the so-called autonomous Soviet republics are under total Soviet domination. Not only that, even the communist countries of Eastern Europe are completely dominated by Russia, and Russia is not prepared to loosen its grip over them. Under these circumstances, the people of all four provinces in Pakistan are fully aware of the goals of those who praise and admire Moscow and Kabul like Mr Bizenjo and who have been raising slogans of autonomy for the provinces. The people reject them with utter contempt.

SOVIET PROPAGANDA AGAINST PAKISTAN

Karachi JANG in Urdu 12 Dec 81 p 3

[Editorial: "Baseless Propaganda Against Pakistan"]

[Text] A spokesman for the Ministry of Foreign Affairs has stated that Radio Moscow's accusation that America has epxressed interest in using Pakistani air and sea ports, and that the American Secretary of State Alexander Haig will discuss these matters on his proposed visit to Pakistan, is absolutely baseless and is sheer maliciousness. The spokesman said that the sole purpose of these accusations was to give Pakistan a bad name and cause misunderstanding between Pakistan and its friends in the area.

This is not the first time that Pakistan has been accused of being about to hand over its air and sea ports to America. These accusations have been made countless times before, and every time Pakistan has denied them. This time the accusations have been made by such an important and famous means of communication as Radio Moscow, and the sad thing is that the accusation made by such an important source is completely baseless. So what can it be called except maliciousness. The Soviet Union is a great world power. It has innumerable ways to know the truth and to scrutinize world events, so when Radio Moscow spreads baseless propaganda about such a small country as Pakistan, it can have no purpose other than to produce misunderstanding between Pakistan and other countries in the region.

It has been said many times before, and now the spokesman for the Ministry of Foreign Affairs in Islamabad has once more made it clear that Pakistan will not sacrifice its position of non-alignment for the sake of friendship with America, nor will it allow its close ties with the Third World and the world of Islam to be hurt. Pakistan has always opposed imperialism, and has supported the freedom struggles of oppressed and subjugated nations. The record of the United Nations is proof that, despite renewed ties with America, last week Pakistan vigorously censored the military cooperation between America and Israel. In such a case, how is it possible that Pakistan could hand over its air and sea ports to America.

As the spokesman for the Ministry of Foreign Affairs said, America has assured us that she understands very well our non-aligned status, and our ties with the world of Islam. And the international brotherhood is also well aware of the fact that we act strictly according to the principles of non-alighment. Whether it is the matter of the freedom of Namibia, or the racist policy of South Africa, Pakistan

has never hesitated to raise high the voice of right and justice. Just as Pakistan has supported the demand for the withdrawal of the Soviet troops from Afghanistan, so she has just as forcefully supported the restoration of the Arab territories under the control of Israel.

All of this propaganda against Pakistan has been started at a time when the American Secretary of State Alexander Haig is about to arrive in Pakistan for a short stay of one day. As it is clear that the central point of the talks between Haig and Agha Shahi will be the Pak-American alliance, which has no connection whatsoever with the use of Pakistani military bases, it is impossible to understand why Radio Moscow has given the American Secretary of State's trip to Pakistan such importance, and why they have spread these kinds of baseless rumors about it when these kinds of high level tours are very common in this area and are never made the target of false propaganda. Two days ago a Soviet delegation made up of high ranking officials visited India, but no neighbor of India's made any kind of propaganda against it, because such actions cause damage to the peace and stability of the region, and the area becomes prey to tension and uneasiness because of misunderstandings between neighboring countries.

Political observers in Islamabad say that some statements in the reviews of Radio Moscow are wrongly attriubted to important individuals in some third country so that the accusations may appear to be founded on fact. These observers pointed out another broadcast of Radio Moscow in this regard, in which it was said that the Indian Foreign Minister Narasimha Rao had said in Parliament that Pakistan had agreed to give the U.S. Rapid Deployment Force permission to use Pakistani air and sea ports, when the truth is that the Indian foreign minister made no such speech in Parliament.

Forty years ago the German propagandists had spread the lie that if a lie is told over and over people will believe it, but the world has greatly advanced today. The methods of communication have progressed also, and the rapid means of communication have made the world smaller. So now the reality of truth and falsehood are known quickly and milk and water are easily told apart. In such a situation there is no profit in false propaganda, rather there is shame and remorse. It is our advice to the great powers that instead of using false propaganda they should give attention to the basic ways to remove tension in the area.

ARTICLE LAUDS URDU, QUESTIONS CONTINUED USE OF ENGLISH

Lahore CHATAN in Urdu 7 Dec 81 pp 19, 20

[Article by Kalim Akhtar: "Is English Necessary?"]

[Text] It is an accepted fact that a country's identity and greatness, or lack of same, are judged by its language. The scholars and educators of a nation always try to make their language rich and cultured in order to represent all spheres of the country's life and make it a model for other countries and languages to emulate.

It is true that the whole world respects Urdu and that it is a great blessing for us. This language has helped bring people living in various places together and has provided us with a medium of expression and communication.

History tells us that nations that neglected their language were wiped out of existence like a wrong word, to make room for other nations and languages. Pakistan is a living example of this phenomenon. For over a century we have been strangers to our language and a foreign language and culture have reigned over us.

It is true that we are independent now and have freedom of speech. We cannot, however, forget that our language is inferior to the one used by our earstwhile rulers. This feeling has been deeply instilled in us by the nation that ruled us. This feeling of the inferiority of our language is like a chronic disease of our personality and psychosis. This is why, when we form or organize our national institutions, we select names and acronyms like WAPDA, DASA, PASSCO and PACO and then feel proud of them. Even though we talk about national character but when we want to name our large projects, we call them by such names as Mangla Dam, Sui Northern Gas Supply Company, Warsak Dam, Tarbela Dam, State Cement and Small Scale Industry Plant. If such foreign names are supplied by the government, the private sector is naturally going to follow with names like Acchara Shopping Center, VIP Stores, Botek Ready Made Producer, Production and Manufacturers and so on. When businessmen are asked why they use these foreign terms and words, they simply ask us to give them equivalent Urdu words that are equally attractive. The can easily translate such words as "company," "brothers," "sons," "merchants" and "made" into Urdu. The English "made in" can be changed into Urdu as "sakhta," the English "plaza" to "aiwan" and "construction company" to "idara-i-tameer." Many such Urdu words have been in use for a long time and the

common people have never had trouble reading or understanding them. In the private sector it is often said that an English name of a company helps it identify its trade and in correspondence with foreign companies. I do not buy that. Developed and industrialized countries like Japan use their own language for conducting international business and correspondence. Similarly, China, Germany, France, Iran and other Arab countries use their own languages. All these countries have their own languages. Japanese and Germans use English for correspondence with other countries but only as a last resort and only with countries where English is the lingua franca. If we use Urdu in our correspondence with those countries they will make arrangements to read and write Urdu just as some countries do in the case of English. The more we use our national language, the more it will be accepted in other countries. Our president, Gen Zia, has already established this precedent by addressing his meetings in other countries and with foreign delegations visiting Pakistan in Urdu. I believe that Urdu is a very broad and beautiful language and we no longer need to apologize for it. We need to expand its sphere of use. We have to train Urdu typists and stenographers. As long as we cannot supply such personnel to the private sector, they will continue to give a cold shoulder to Urdu. It is easy to speak Urdu but there are some problems in writing it and we must find ways to eliminate these problems. We should not use those problems as excuses for avoiding Urdu.

The sad part of this story is that we still believe that English is a great language even though our leaders have deplored its use. Why can't we call a school, a college, a university or a dentist by its Urdu name? English is the bitter relic of English colonialism. English is the symbol of our slavery to another nation. If we reject it now, nobody will drive us out of the company of free nations.

Recently, the use of English in the private sector has increased rapidly. The reason for this increase is said to be the beauty of the English language. The question arises: Do businesses in countries that use their national language fail? In Iran the Persian equivalent of "dry cleaner," "khushk shoi," is used. This is not a strange term for the Iranians. If we advertise our wares in Urdu, more people will be able to understand it. It will also show our patriotism. It is a fact that countries that have preserved their national characters and did not copy other countries blindly have been very successful.

Urdu is considered among the advanced languages in the world and it has all the characteristics of a successful language. When I see signs and neon lights in English I am forced to remember Julius Caeser. When he saw some foreigners petting their pet puppies and monkeys, he exclaimed, "Are the women in their country barren?"

BRIEFS

MUBASHIR BANNED FROM TRAVEL--Dr Mubashir Hassan, a former Federal Minister, has been served with a notice by the Government putting a ban on his travel abroad. The notice, which was received by Dr Mubashir Hassan at his residence, has been issued under the Exit from Pakistan (Control) Ordinance, 1981, which empowers the Government to prohibit any person or group of persons from proceeding to a destination outside Pakistan, notwithstanding the fact that such a person has valid travel documents, and that the Federal Government is not bound to mention any reason why a certain person shall not leave the country. [Text] [Lahore VIEWPOINT in English 18 Feb 82 p 13]

VETERINARY STUDENTS' DEMANDS--Students Union of the College of Veterinary Sciences, Lahore, has appealed to the authorities to punish the persons who trespassed into the premises of the institution on Feb. 9 and manhandled the students. In a statement issued on Friday, Syed Israr Hussain, President, Imtiaz Ali Chaudhry, Vice-President, and Zafar Raza Naqvi, Joint Secretary of the Union, declared that after the assurance from the Government and the College administration that elements responsible for creating disorder would be punished, the students decided to end boycott of their classes from Saturday. The student leaders strongly condemned the acts of violence and hooliganism by a certain students group and urged the authorities to take stern action against the persons responsible for it. They alleged that on Feb. 9 a group of students belonging to the Islami Jamiat-i-Talaba attacked the officebearers of the Union and seriously injured a final year student, Hassan Suroosh. Declaring that they were not associated with any political group and believed in Islam and Pakistan ideology. [Text] [Lahore VIEWPOINT in English 18 Feb 82 p 13]

PDP LEADER'S RELEASE DEMANDED--The Joint Secretary of defunct Pakistan Democratic Party (PDP), Javed Khan Swati, has urged the Government to release the PDP chief, Nawabzada Nasrullah Khan, and withdraw the orders of externment and other restrictions on political leaders. He said that the Press statement issued by NWFP Government barring Nawabzada Nasrullah from entering the province was ridiculous as Mr Nasrullah Khan was already detained in his house in Khangarh, which had been declared a "sub-jail" by the authorities. On Jan 29, the Punjab Government extended Mr Nasrullah's detention for another three months. "In these circumstances, the NWFP and Sind Governments' orders are surprising," Mr Swati added. [Text] [Lahore VIEWPOINT in English 18 Feb 82 p 13]

LABOR FRONT DEMANDS--The Mazdoor Ittehad Committee, Sargodha region, has demanded increase in wages and reinstatement of all retrenched mill workers. A demand notice on behalf of 600,000 workers was drawn up. The committee said that if the demands were not accepted the workers would consider further action. A spokesman of the Union said that in Faisalabad alone more than 20,000 workers had been retrenched during the last few months and in all 70,000 workers had lost their jobs in the Sargodha region. He said in these circumstances the workers had submitted an 18-day demand notice to the provincial Government. The notice also included the demand for reinstatment of 600 Kohinoor workers. The notice said lay-off in industrial units should end, there should be no denationalisation and enumerated other demands. [By Ehsan Rana] [Text] [Lahore VIEWPOINT in English 18 Feb 82 p 15]

POLITICAL ACTIVIST A SUSPECT--The Faisalabad police took into custody on Saturday a political activist, Mehboob Khan, as a suspect in the assassination of Chaudhri Zahoor Elahi. The former student leader was produced before the Summary Military Court, Sahiwal, headed by Major Mohammad Iqbal, by two lawyers, Ejaz Athar, Abdul Latif Malik, and his surety. When Mehboob Khan was about to leave the court premises, the Faisalabad police, after showing the warrants, took him into custody in connection with investigations in the Chaudhri Zahoor Elahi case. POTENTIAL STRENGTH SEEN IN NEW OPPOSITION PARTY

Kuala Lumpur BUSINESS TIMES in English 1 Feb 82 p 21

[Article by Adlai J. Amor in Cebu City]

[Excerpts] AT A time when a host of opposition parties are being organised throughout the country, the Social Democratic Party of the Philippines (SDPP) promises to become the strongest rival of the ruling Kilusang Bagong Lipuan (KBL or New Society Party).

The new party entered the Philippine political arena almost unnoticed in late December in this city — the traditional bastion of political opposition — some 260 kilometres south of Manila.

The SDPP is the latest opposition group which claims no connection with the United Democratic Opposition (UNIDO), an umbrella group of opposition parties.

Neither is it affiliated with recently formed and still to-be-named merger of oppositionists most of whom were already affiliated with the UNIDO. In fact, SDPP seems to be the only political party which was not invited by the merging groups to join, perhaps because two former ranking government officials — former Information Minister Francisco Tatad and Deputy Information Minister Reubean Canoy — were behind its formation.

This splintered opposition has left no other political alternative for many Filipinos, except the Communist Party of the Philippines (CPP). Observers say that prior to the merger of the political parties and SDPP's creation, the CPP was the most effective alternative — complete with an army and an existing government structure.

Expelled

What gives the SDPP better chances than the other political parties to counter the threat of the CPP and to challenge the KBL is their grassroots organisation, the youthfulness of its members and the fact that it was created not as an anti-Marcos party. It has also adopted the strategy of consolidating its strength in the provinces first before tackling the cities.

"The party is based on ideas, not personalities. It is a national political party which thinks far beyond the era of President Marcos," said Mr Canoy in an exclusive interview with *Depthnews*.

Although Mr Canoy is not a full SDPP member, he has been instrumental in its creation. Because of laws banning changes in political affiliations, Mr Canoy and two other opposition lawmakers — Mr Tatad and Hilario Davide Jr — have signed a coalition agreement with the SDPP until such time they can formally join it.

Aside from these three, the only other prominent political figure in the party is the former Cebu gubernatorial candidate Andres Corominas who ran under the banner of the Pusyon Bisaya (Young Turks of the Visayas).

Mr Corominas was elected as interim president, while journalists, farmers, lawyers and a woman leader were elected into the party hierarchy.

Assemblyman Canoy and his colleagues held ten workshops throughout the country since 1981. Many had thought that it was going to lead to the creation of his cherished party, the Philippine Alliance. But it did not prove so.

During the workshops, concerned citizens analysed the conditions in the Philippines. "The consensus was not to change President Marcos but the entire government structure," Mr Canoy said. "Such a change can only be lawful and is a long-term process."

The ideas that slowly filtered out during the workshops — some of which were held in church retreat houses — were oriented more to the social democracy as practised in Europe, especially West Germany.

"Social democracy is the wave of the future," said Mr Canoy.

In a national convention held in a small beach resort near Cebu City last Dec. 19-20, some 90 delegates and observers representing the 13 regions of the Philippines drafted and adopted a declaration of principles, a party constitution and by-laws.

In its five-page declaration of principles, the Social Democratic Party sees the need for constitutional reform to abolish authoritarianism and reinstate the system of check and balance.

The party believe that it is their duty to build a democratic social order "guaranteed by the inviolability of human rights ... (and) the independence of Parliament, the courts and the Press."

With three months, party members hope to have fully organised regional, provincial, town and village chapters to be able to participate in the village elections slated sometime in April.

This election is crucial for the SDPP — and any other political party — become it will test the party's acceptance. More important, it needs to earn at least 10 per cent of the votes in order to qualify as the legal opposition party in the two-party system envisioned by Philippine law.

But even while the local chapters are being organised, the party has activated its Institute of Social and Political Affairs in nearby Cagayan de Oro City which will serve as SDPP's training ground. A party newspaper is expected to be launched soon.

SDPP's choice of Cebu City as its main base of operations is appropriate since it is the most central city in the Philippines — giving direct and cheap access to Manila and Mindanao.

MNLF ATTACKS DECREASE, GOVERNMENT FORCES WITHDRAWN

Kuala Lumpur BUSINESS TIMES in English 10 Feb 82 p 21

[Article by Mario Baluyot in Manila]

[Text]

POCKETS of resistance are virtually all that remains of the nine-year Filipino Muslim secessionist struggle, boosting government hopes that the settlement of the southern Philippines conflict will just be a matter of time, according to official sources here.

Much of the government's optimism is anchored on a recent evaluation by military authorities, who see a "considerable improvement" in law and order in the area last year. The same officials predict that the situation will be further stabilised this year.

Rebel

In fact, a year-end review by southern and central Mindanao military officials cited an 80 per cent decline in attacks by the Moro National Liberation Front (MNLF) in 1981 compared to the previous year, when MNLF rebels killed 119 military officers and men in what is now known as the Pata Island massacre.

These attacks, they said, were also on a much smaller scale and characterised by minor skirmishes, ambuscades and occasional grenade attacks primarily intended to keep the MNLF cause alive.

Strengthening the government's favourable assessment of the situation were the withdrawal from the area last year of six military battalions and the lifting of a ban on foreign travellers as a result of the improved situation.

The southern military command chief, Gen Delfin Castro, said that three or four more battalions would be taken out this year to further reduce the military force which, at one time, rose to more than 35 operating battalions at the height of the conflict.

In spite of the apparent government progress in winning some of the rebel ranks to its side — military records cited 5,000 as of year-end 1981 — some hard-core MNLF members still managed to carry out operations against civilian and military targets.

Since October, some 35 people have been killed in MNLF rebel attacks.

The figure could become higher if the number of unsolved killings by grenade attacks was established as the work of the MNLF which, along with communist rebels, have often been made scapegoats for general unrest.

Sanctuary

Notwithstanding the reduction of tension, government and military authorities have remained alert by keeping tabs on rebel movements for possible regrouping following reports of arms being slipped into remote coastal areas from a training camp in a neighbouring territory.

Although the reported landings have not been substantiated, the government pursued its campaign to weaken the MNLF base by offering the rebels incentives to lay down their arms and by giving prominent play to a power struggle among the foreign-based MNLF leadership.

The most recent government move was to invite visitors from Arab countries in an effort to wean away the support they were giving to MNLF leaders who found sanctuary in several Middle East countries.

But what is considered a major stroke in helping resolve the nine years of political strife is the scheduled official visit to Jeddah next month of Philippine President Ferdinand Marcos, who has expressed the hope that Saudi Arabia would mediate to end to the conflict.

Saudi Arabia's King Khaled wields a strong influence on he 43-nation Islamic conference and the Arab League, both of which are based in Jeddah, and he might be influential in helping bring an end to the MNLF secessionist conflict that has left 60,000 people dead. — AFP

CREDITABLE 1981 ECONOMIC PERFORMANCE DESPITE HOSTILE FACTORS

Kuala Lumpur BUSINESS TIMES in English 13 Feb 82 p 9

[Article by Manolo B. Jara]

[Text] THE Philippine economy underwent a severe test less last year and emerged badly shaken but definitely not out.

The scars of the battle are still there. Its gross national product (GNP) grew in real terms by a mere 4.7 per cent in 1981, "admittedly the lowest in the Five-Year Development Plan (1978-82)."

At the same time, the country's export earnings plunged while its trade deficit rose as did interest payments on foreign loans. The Philippine peso likewise deteriorated against the US dollar, clearly manifesting its weakened external position.

"The year just past literally put to test the essential strength of the Philippine economy and the flexibility of the financial system," central bank governor Jaime Laya told President Marcos in a 14-page preliminary report on the country's economic performance.

But in Mr Laya's reckoning the economy passed the severe test "creditably." The major economic indicators showed gains in some areas despite "hostile influence of the external environment and dislocative incidents in the internal financial scene."

Even the growth of GNP — the sum total of the country's goods and services produced — was "appreciable," insisted Mr Laya, especially when viewed against the "economic dislocations of the period." The 1978-82 development plan originally set the overall economic growth targets at 7.5 per cent for 1979 and 1980, then rising to 8 per cent for 1981 and 1982.

But the country's economic managers scaled down the targets due to world recession and decline in world trade. Under the revised plan, the GNP annual growth rate was pegged at 5.5 per cent for 1980, 6 per cent for 1981 and 6.5 per cent in for 1982. Even then, the 1981 GNP growth rate of 4.7 per cent was 1.3 per cent down from the the 6 per cent target.

One economic indicator which showed gains despite the adverse conditions is the inflation rate. Inflation went down to 12.5 per cent last year. Mr Laya reported. This is the lowest inflation rate since 1979 "and considerably below the rates registered by non-oil developing countries and the world in general."

In 1980, the Philippines registered an inflation rate of 17.8 per cent, according to the Asian Development Bank. That placed it second to Thailand with the highest inflation rate among the five-member Association of South-East Asian Nations. Thailand then had a high 19.9 per cent inflation rate, replacing Indonesia at the top.

In his report, Mr Laya said the country's 1981 trade deficit jumped to US$2.533 billion or a 47 per cent increase from 1980's US$1.726 billion. This was attributed to declining export earnings and higher import payments, particularly oil which ate up one-third of the export-earnings.

Export earnings declined from US$4.653 billion in 1980 to US$4.52 billion last year, the report said. However the total import growth slowed down to about 10 per cent last year from 1980's 26 per cent. As a result Mr Laya said, import payments rose from US$6.379 billion to only about US$6.985 billion "mainly because of the higher oil bill (for 1981)."

About 23 per cent of the export earnings — US$1.102 billion also went to interest payments on loans. This meant a 10 per cent jump from the 15 per cent of 1980 due to the expansion in foreign borrowing and the increase in interest rates in the international capital market, Mr Laya said.

The country's trade gap was also indicated by the deterioration in the peso-dollar exchange rate, according to the report. However, the peso weakening was described only as "moderate" in the light of worldwide deterioration of major currencies against the US dollar.

A mitigating factor eased somewhat the country's yawning overall balance of payments problem. This came in the form of substantial gains in remittances of Filipino overseas workers. "This brought the overall deficit in the country's foreign exchange transactions to US$560 million which is 47 per cent higher than the US$331 million shortfall in 1980," Mr Laya said.

On external debts, Mr Laya revealed that as of 1981, these stood at a staggering US$15.835 billion. The figure exceeded by US$3.134 billion the 1980 level. Over half of the total, he explained, was for the public sector which further accelerated its borrowing programme to "sustain expenditures for development projects and to replenish its relending fund for private borrowers."

Earlier, however, Mr Laya raised a warning about the country's foreign borrowing. In his report on the first nine months of 1981, he warned: "In the context of the rising cost of foreign borrowings, it is important to exercise great care in project selection and in monitoring uses to which external finances are put, to ensure that external borrowings are applied toward highly productive investments which require the minimum outlay of foreign exchange." — Depthnews Asia.

GOVERNMENT BACKING FOR TRADITIONAL VALUES

Kuala Lumpur BUSINESS TIMES in English 9 Feb 82 p 21

[Article by Francis Daniel in Singapore]

[Text] GOVERNMENT leaders are concerned that a new breed of young affluent Singaporeans is emerging in the rapidly developing island state with scant regard for moral and traditional Asian values.

The problem is considered so serious that the government has decided to resort to legislation and other tough measures without which, one senior minister warned, Singapore could become "a nation of thieves."

Prime Minister Lee Kuan Yew announced last week that laws would be introduced to make young Singaporeans take care of their aged parents, while his deputy, Dr Goh Keng Swee, said religion and Confucian ethics would be made compulsory subjects in high schools.

The other government members of Parliament — the ruling People's Action Party (PAP) controls all but one of the 75 seats in the legislature — applauded the moves as the best way to give Singaporeans a cultural ballast against the less desirable aspects of Western culture.

But many educationists and religious leaders expressed doubt that Asian values and filial piety can be forcefed to a people who have been fast absorbing Western lifestyles since their independence 20 years ago.

Mr Lee and his colleagues, known for their tenacious pursuit of set targets, appear determined, however, to make sure that the 2.4 million Singaporeans discard liberal Western concepts which, they say, place great emphasis on youth and vitality, not age and wisdom.

In a Lunar New Year message on Jan. 25, Mr Lee told his predominantly Chinese population that he was upset over the increasing tendency of young couples living separately from their old parents.

If filial obligations are not honoured, then the government must pass laws to ensure that ancient customs and traditions are upheld, according to Mr Lee.

Estate duty concessions on houses left to children "will have to be conditional on a son or a daughter living with the surviving parent in the house," he said.

On the other hand, the government would make it worthwhile for at least one son or one daughter, after marriage, to live in their parents' homes, or to take their parents into their own homes, he added.

Mr Lee believes care for the aged is a Confucianist quality and will nicely fit in with his government's policy of avoiding any Western-style state welfare system.

A government consultant on moral education said, however, that the government could not absolve itself from blame for the breakup of the traditional extended family system in Singapore.

"How can we expect the Chinese extended family to exist in Singapore when the government family planning programme restricts to two children and its housing policies separate families into two bedroom flats, some of which are on floors with no lifts for elderly people?" he asked.

Mr Lee's edicts on filial piety followed a suggestion by his deputy, Dr Goh, that religion be made a compulsory subject in high schools in a bid to produce honest, upright citizens.

Stealing had become common practice in the Singapore Army and schools and unless this was arrested the state faced the danger of becoming a nation of thieves, he said.

Dr Goh's plan is to make it compulsory for students to learn one of Singapore's four main religions — Buddhism, Islam, Hinduism and Christianity. Students unwilling to study any of these must learn world religions, including Sikhism and Judaism, or Confucian ethics.

The idea is for students to leave school knowing it is wrong to lie, cheat and steal and also knowing that all will be lost in Singapore unless the government leaders were upright men, according to Dr Goh.

But most of the Christian mission schools expressed reservations over the Goh plan and warned the government not to be too hasty in carrying out its scheme.

But Dr Goh is of a different mind. He told all those who disagreed with his plan: "I think your approach is a very timid one. We can't sit and do nothing. Bold measures are needed."

As part of these bold measures, the government would be introducing Confucian ethics in Singapore schools, he said.

Describing the ethics expounded by the Fifth Century B.C. Chinese sage as a form of political ideology and a code of conduct, Dr Goh said:

"Confucius believed that unless the government is in the hands of upright men, disaster will befall the country. In this respect, the PAP (the ruling party) also believes the same thing." — Reuter

KEY FIGURE IN MUSLIM EXTREMIST ORGANIZATION

Kuala Belait BORNEO BULLETIN in English 23 Jan 82 pp 1, 23

[Text]

BANDAR SERI BEGAWAN. — A former teacher at a Brunei school has been identified as one of the key figures behind a Muslim extremist organisation set up to try and overthrow the Singapore government.

The man, Sulaiman bin Muhamad Shariff, 47, was one of 10 people arrested by Internal Security Department officers in a series of swoops in the republic a week ago.

The group calls itself the Singapore People's Liberation Organisation (in Malay, the Organisasi Pembebasan Rakyat Singapura) and its aim was to bring down the government through communal unrest and sabotage, said Home Affairs Ministry officials there.

Sulaiman, who arrived in Brunei from Singapore, taught for a year at SOAS College in the state capital.

Former friends say he was asked to leave the school sometime during 1978 and then left the state.

Education Department officials would not comment on why Sulaiman left the school.

In 1971 he was sacked from a teaching post in Singapore for contravening school regulations and misconduct.

Before being moved to the Brunei Education Department, Sulaiman worked for some years as the government tourist officer here.

He has been described by the Singapore Home Affairs Ministry as one of four "core" members of the extremist organisation.

It said the group comprised "a handful of disgruntled Malays and Indian Muslims who, through their actions and utterances, demonstrated they are racialists and extremists and who will not hesitate to use violence to achieve their ojectives."

The ministry's statement said the group had planned to create communal unrest by distributing pamphlets and carrying out acts of arson, the planting of bombs at shopping centres, community centres, cinemas and Port of Singapore Authority warehouses.

The extremists also intended to solicit support, including manpower and finance, from foreign powers and invi-duals to carry out their plans.

RIVAL FACTIONS DIVIDE OPPOSITION PARTY

Kuala Lumpur BUSINESS TIMES in English 28 Jan 82 p 19

[Article by Mallika Wanigasundara in Colombo]

[Excerpts] THE Sri Lanka Freedom Party, the country's largest opposition group, has gone ahead and did exactly what the ruling United National Party would like to see.

It has split right down the middle after a bitter and acrimonious infighting between two rival factions. One is headed by former Prime Minister Sirima Bandaranaike and the other by Mr Maitripala Senanayake, SLFP deputy leader.

The feud involves ideological friction, political rivalries and personal animosities. It reached a climax in mid-December when Mrs Bandaranaike's faction or SLFP (S) expelled 17 "dissident members" of the SLFP (M) led by Mr Senanayake.

Among those expelled were Mrs Bandaranaike's own son, Anura, Mr Senanayake, former Speaker Stanley Tillekeratne, former Minister P.G.B. Kalugalle, trade union leaders and sitting Members of Parliament (MPs). Earlier, 13 of these SLFP "dissidents," including Anura, had been suspended from membership of the party's politburo by the Bandaranaike faction.

The mass dismissal was preceded by the handing over of government-requisitioned SLFP headquarters to the Senanayake faction by the government. In the course of the infighting, the Darley Road headquarters of the SLFP in Colombo had been "captured" in turn by the contending parties. Eventually, it was sealed by the government.

The two contending SLFP factions have now asked the court to decide on the rightful ownership of the headquarters. But while handing over the headquarters to the SLFP (M), Sri Lanka's secretary to the Ministry of Defence referred to Mr Senanayake as the SLFP president.

Recognition

Observers said that in so doing, the government as good as recognised the SLFP (M) as the SLFP proper. What repercussions this recognition will have on the electorate is another matter. To be "favoured" by the ruling UNP is not exactly what would appeal to hardcore SLFP supporters.

Already, Mrs Bandaranaike has been alleging that there has been collusion between the Senanayake group and the ruling UNP to disenfranchise her. But admittedly, observers said, the government action was a crafty, well-timed and calculated move. For earlier, peace moves were afoot to bring the contending factions together.

And this is exactly what the UNP did not want to see. Timing it to distract attention from some work-a-day cracks in its own ranks, it threw in this spanner in the works to create disarray in SLFP ranks on both sides.

As Anura himself put it: "President Jayewardene called the tune and the actors played their parts. The Senanayake group took possession of the headquarters building and the opposing group expelled them from the party."

The split is complete for the present. But there is one thing that the two warring SLFP factions and UNP political strategists are well aware: that it is Mrs Bandaranaike, the charismatic widow, who is the vote-catcher. In short, she is the SLFP symbol

Which is why the UNP has set out to neutralise her, according to observers. It is also the main reason why even the dissident SLFP (M) still acknowledges her as the SLFP leader.

The expulsion of sitting MPs, meanwhile, could have drastic repercussions on them under the provisions of the present Constitution. The Constitution provides that an MP who is dismissed from a party can be also expelled from Parliament. This does not happen automatically and immediately, but only after certain procedures are followed.

This threat hangs over the heads of the SLFP members now in Parliament. But it depends on which SLFP faction is recognized by the Elections Commissioner M.A. Piyasekera.

Both Mrs Bandaranaike and Anura are steadfast in their Press statements that there is no animosity between them. And each says of the other that he or she is either being "misled, imprisoned or manoeuvred by ambitious and calculating persons." The two realise the need for SLFP unity, especially with the elections scheduled in mid-1983.

Immediately after the expulsion of the 17 members, called the "Gang of 17," Mrs Bandaranaike said the door was still open for a reconciliation. It is not the end of the road for negotiations, she said.

The rival groups admit, however, that anti-UNP forces have to unite before the 1983 elections. And true to their word, they have sent out separate calls to the left-winging parties.

As a result, the SLFP, now taking stock of its fortunes, finds itself engaged in unity talks in several directions. The UNP watches, alert and gleeful at the dilemma in which the SLFP has allowed itself to be placed.

PARLIAMENT BUILDING COMPLETED IN NEW ADMINISTRATIVE CAPITAL

Kuala Lumpur BUSINESS TIMES in English 9 Feb 82 p 23

[Article by Clarence Fernando in Colombo]

[Text]

PRESIDENT Junius Jayewardene will perform the ceremonial opening of a new parliamentary complex near here this month, marking a milestone in Sri Lanka's history.

The occasion will signal the end of Colombo's pre-eminence as the administrative capital of this Indian Ocean island since the British occupation in 1815.

The capital is being moved because Colombo has become too congested.

The sprawling parliamentary complex in the new administrative capital of Sri Jayawardenapura covers 68,000 square metres (730,000 sq ft) on a site some eight km (5 miles) southwest of here.

Sri Jayewardenapura, also known as Kotte, is the site of a former Sinhalese kingdom which came under Portuguese rule in the 17th century.

Monument

Costing 900 million rupees (US$45 million), the parliamentary complex is a monument to the combined skills of Sri Lankan, Japanese, Malaysian, Philippine and Singaporean engineers and craftsmen.

It was built by a Japanese consortium, the Mitsui Company and Mitsui Construction Company of Tokyo, on a contract awarded by the Sri Lanka government.

The consortium's administrative manager, Takahiro Kawakatsu, said 1,800 workers had been working on the project which they began in November 1979.

"The building is ready and only the finishing touches, the manicuring of the lawns and the internal decor, like the delicate hand-painting of murals, are being done now," he said.

The new parliament, on an island skirted by a slow-moving river, is modelled on traditional Sinhalese architecture.

Modern technology has been used by engineers from Japan, Malaysia, Singapore and the Philippines to make it one of the most modern parliamentary buildings in the region.

It has seating accommodation for 200 members, two more than the 198 members who will be elected at the next general election in 1983.

The present parliament of 168 members, is in a building in Colombo put up by the British in 1930.

Two pairs of massive doors, both made in Japan, provide access to the parliamentary chamber, which is pannelled in tamarind, ebony wood and Burma teak processed in Singapore.

One pair of doors is made of bronze and weighs about seven tons. The other, made of silver and carrying an inscription recording the country's independence and nationhood, was designed by Sri Lanka architect Jiffry Bawa.

The 21-metre (70 foot) high ceiling is of embossed aluminium, so made, said Mr Kawakatsu, "that it will keep its shine for ever."

The shifting of Parliament has sparked off a massive building programme. Many government departments are also moving from Colombo to the new capital.

Among the new buildings going up is a 1,000-bed hospital which the Japanese government is donating as an outright gift to Sri Lanka. — Reuter

CPT'S 40TH ANNIVERSARY FINDS PARTY BRUISED BUT NOT BROKEN

Kuala Lumpur BUSINESS TIMES in English 2 Feb 82 p 19

[Article by Anuraj Manibhandu in Bangkok]

[Text] THE outlawed Communist Party of Thailand (CPT) turns 40 this year, its image bruised but its will apparently far from broken.

The pro-Peking party has taken one blow after another since Vietnamese-led forces marched into Phnom Penh on Jan. 7, 1979, prompting China to throw its lot behind the ousted Khmer Rouge leadership.

The Thai party's internal troubles are told in the delay of its fourth national congress, initially expected to take place in 1979, even then a yawning 18-year lapse since the third such gathering in September 1961.

"It means they have lost," said Colonel Chakorn Tossawat, spokesman of the Internal Security Operations Command (ISOC), the government's counter-insurgency arm. Other critics have not been slow to capitalise on the sore point.

But the party's military arm, the People's Liberation Army of Thailand (PLAT), leading its "armed struggle" since "gunburst day" on Aug. 7 1965, has clearly denied a controversial suggestion that it was doomed to defeat.

The guerrillas killed 15 government troopers in the south and 19 others in the north within weeks after army authorities announced in October, 1981 that their last bastions were about to fall.

Power

However, there is no doubt that the party that grew out of the "Chinese Communist Party of Thailand" is hurting inside from wounds inflicted by the security crisis that came with China's move to back the Khmer Rouge.

China, whose revolutionary theories still dominate the Thai Party's thinking, was not only less attentive but, apparently in an exchange for an ally on the Cambodian question, closed down the Voice of the People of Thailand (VOPT) party broadcasting station in Southern China on July 11, 1979, following talks with the then Thai Premier Kriangsak Chomanan.

The blow screamed for self-reliance but, according to Thai intelligence reports, it was not until recent months that the party started conducting experimental broadcasts from the north of Thailand.

In a reportedly weak test run on the party's 39th anniversary on Dec. 1, 1981, the party reaffirmed its commitment to seizing power by force.

Before China dealt the blow, Vietnam, which has provided military training, announced that it would no longer support Thai insurgents.

The September 1978 announcement by Vietnamese Premier Pham Van Dong during a visit here was followed 11 months later by the expulsion of a senior captain cadre from Hanoi.

Defection

Laos told Thai insurgents to leave unless they were willing to break from China. But, though external pressures put the Thai communists in disarray, internal conflicts saw over 2,000 quit in the past two years for "lack" of demcracy in the party.

Thai military analysts have pointed to differeces in analyses of Thai society, and refusal to accept pro-Chinese trends.

Almost all students, intellectuals and politicians who went underground following campus clashes here in October 1976 have emerged.

They were not integrated into the party as such but were organised in a front — the Committee for Cordinating Patriotic and Democratic Forces (CCPDF) — an arrangement seen by Thai military analysts as a bid to minimise clashes between the "old guard" and the young activists.

Despite their defection, Thai authorities are unconvinced that they have made a clean break with the party.

Analysts see the party's recent strategy change as an attempt to draw back the defectors.

The new strategy, reportedly implemented in some parts of the northeast, calls for equal emphasis on operations in the jungles, plains and towns, to be conducted on political as well as military fronts.

But though the party is apparently making changes as its military arm continues to show mettle, the arrest of a politburo member — Damri Ruengsutham — in April last year has left a negative mark.

Thai military analysts were strongly sceptical of a later party explanation that he was on his way to peace talks with the government, which categorically rejected the suggestion.

The party has also suffered a considerable loss of armed fighters although estimates vary. According to one Thai official source, the guerrillas' armed strength has dropped from about 11,100 in 1979 to 7,000 last year, with the largest contingent of 1,900 in the South.

In fiscal 1981 that ended last September, 142 insurgents were killed, 87 captured and another 1,300 defected.

While the CPT struggles through troubled times, Thai authorities are keeping watch on a so-called "new party" apparently seeking to unite "disappointed intellectuals" from the Jungles.

The man behind what authorities describe as "still a concept" is a former MP for northeastern Thailand, Boonyen Wothong, currently in political asylum in Laos. — AFP.

SHORTAGE OF CABLE DELAYS EXPANSION OF CABLE RADIO NETWORK

Kuala Lumpur BUSINESS TIMES in English 3 Feb 82 p 21

[Article by Alex Marshall in Hanoi]

[Text]

WHILE some countries weigh the likely effects of cable television, Vietnam is trying to extend its cable radio network. Started in 1956 after the war against the French, the network now covers the whole of North Vietnam. Nearly every house has its set, linked through a village or commune centre to one of 60 local receiving stations, over which comes news, propaganda, music, early morning exercise classes, drama, instructions and advice.

A strong local flavour is given by the commune relay which adds its own programming to the centrally produced material. In some places, reports and requests by the village committees are relayed over a phone linked to the cable, to the district party or cooperative headquarters.

Ly Van Sau, director of the service, claims that North Vietnam's recent good harvest is proof of the network's effectiveness. New methods of cultivation were used, farmers following instructions given over the cable, and yields rose significantly, he says.

Brave New World?

North Vietnam is certainly not Huxley's vision: most of its 30 million people are clumped in villages of 3,000 to 5,000 each, throughout the rich plain of the Red River and into the hills beyond. With few good roads or telephones in most parts, radio becomes a vital link.

The cable costs almost nothing to the villager; on the other hand transistor batteries are scarce and expensive, and often the only way to obtain them is to register the set with the commune which controls supplies. TV sets (about a million throughout the country) must also be registered.

Radio has been part of Vietnamese life since it was started in the jungle over 30 years ago. Mr Sau was there. "We had two elephants and we used to load up the transmitter every morning and move. The French never found us. Afterwards the elephants got a medal." Radio Vietnam has been off the air for only nine minutes since then — on Christmas Eve of Dec. 24, 1972, the US bombing of Hanoi.

Cable was adopted as a low-cost alternative to a "wireless" system under which every family would have had to buy their own radio. Plans for expansion include extending the service to the southern provinces and more programming. A new unit has been set up to produce programmes on agriculture, health and family planning with the help of the United Nations Children's Fund (Unicef) and the United Nations Fund for Population Activities (UNFPA). The unit will shortly set up shop in Ho Chi Minh City (Saigon) and expand its present offices in Hanoi. With UNFPA help, 30 trainees spent three months at the Development Training and Communications Planning (DTCP) centre in Bangkok.

But all is not roses. In the commune we visited near Hanoi, the operator/announcer proudly put on a scratchy record, saying "Everyone is hearing this," and took us to a solid brick-built house nearby. No sound. The solid citizen had disconnected his set because it interfered with his nightly television-watching. By the time he hooked it up again, the electricity had failed.

TV will not be a big force in Vietnam for some time yet. It airs for only two hours in the evening, from 7 pm to 9 pm, and the most popular programmes are sports, beamed by satellite from the USSR or Eastern Europe. The local programming, especially drama, professionally acted and produced, suffers from poor facilities — Hanoi's TV studios are housed in a converted rice warehouse — and a melange of equipment from all over the world.

"Good politically," as we were told in an aside. "Bad technically." Shortage of spare parts means home repairs, but everything in a video-tape recorder, for example, can be fixed except the recording head. Colour TV is on the way — there is a fully-equipped colour studio — but so far colour is used only for training of "cadres" — technical staff to you and me.

So the short-term future is with cable radio. "We have lots of problems," says Ly Van Sau cheerfully, "like loss of power, old equipment. Communes in the south are not yet fully organised. But I think the chief problem in expanding the cable network is finding enough cable." — Depthnews Special

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

COMBAT NEWS REPORTED FROM MONG NAWNG, BHAMO

BK061004 (Clandestine) Voice of the People of Burma in Burmese to Burma 0030 GMT 5 Mar 82

[Text] Combat news: On 11 February, a small unit of the people's army ambushed the military government's mercenary 19th Infantry Division in the Mong Nawng-Lai-Kha road, killing one enemy soldier, wounding eight others, and destroying a vehicle.

On 13 and 14 February, the military government's mercenary 19th Infantry Division was ambushed on the Mong Nawng-(Wan He) road. The ambush killed five enemy soldiers and wounded five others. One G-3 and 20 rounds of ammunition were seized from the enemy.

News of joint operations by the people's army and the Kachin Independence Army [KIA] in Bhama District:

On 2 February, a joint unit from the people's army and the KIA attacked the enemy near (Mantha) village, killing one enemy soldier. One gun and 700 rounds of ammunition were seized. At the same time, the enemy's three bridges near (Mantha) were blown up.

On 4 February, a joint unit from the people's army and the KIA attacked the military government's mercenary 103d Infantry Division near (Singu-Tongkwa). The attack killed five enemy soldiers and wounded five others.

On 6 February, a clash with the military government's mercenary 40th Infantry Regiment occurred at (Nawng Palang), killing one enemy soldier and wounding three others.

On 8 February, a joint unit from the people's army and the KIA attacked the 2d column of the military government's mercenary 1st Kachin Rifles Regiment, wounding nearly 30 enemy soldiers including 3 officers and 7 privates.

On 10 February, the 1st Kachin Rifles Regiment was attacked at (Palaung Dengsa). The attack killed two enemy soldiers.

On 12 February, the mercenary 4th Kachin Rifles was attacked near (Naning). One enemy soldier was killed and six others were wounded.

BRIEFS

AUSTRALIAN AID--A collateral note to the memorandum of understanding between Burma and Australia, under which Burma will receive $5 million worth of machinery and technical services for the construction of Bassein-Monywa road construction project, was signed in Rangoon on 3 March. The note was signed by Australian charge d'affaires ad interim (P. A. Dexter) and managing director of construction corporation U Tin Hlaing at a ceremony held at the corporation's headquarters. [BK041223 Rangoon Domestic Service in Burmese 1330 GMT 3 Mar 82 BK]

KAYAH STATE COMBAT--On 25 January, a small unit of the people's army attacked the military government's mercenary 87th Infantry Regiment on (Loi-Mong) hill, west of (Thabaung) village, Pinlaung township. The attack killed three enemy soldiers and wounded two others. On 29 January, an ambush by a people's army unit on the military government's mercenaries near Taungmethin village, Pinlaung township, killed 18 enemy soldiers and wounded 9 others. One motor vehicle was burned and destroyed. One carbine, two G-2's and one G-4 were seized from the enemy. News of joint operations by the Kayah New Land Revolutionary Council [KNLRC] and Kerenni Nationalities Liberation Army [KNLA]: On 19 January, a combing unit of the KNLRC and KNLA attacked the military government's mercenary 72d Infantry Regiment at (To-re) village in Pru-so township and seriously wounded one enemy soldier. On 20 January, an ambush by a combined unit of the KNLRC and the KNLA on the military government's mercenary 72d Infantry Regiment between (Tapilao) and (Kho-ya), Pru-so township, resulted in three enemy soldiers being seriously wounded. [Text] [BK280732 (Clandestine) Voice of the People of Burma in Burmese to Burma 0030 GMT 28 Feb 82]

LAUHKAUNG AREA COMBAT--Combat news from Sadon and Lauhkaung area located east and northeast of Myitkyina: On 4 January, a guerrilla attack conducted by a small unit of the people's army at (Takin) in Salaw township wounded some enemy soldiers from the 29th Infantry Regiment. On 18 January, a small unit of the people's army intercepted and attacked the enemy, who had come to loot and kill people as they left a housewarming ceremony at (Sarein Nabwe) village in the Lauhkaung area. Some enemy soldiers were wounded. On 28 January, a small unit of the people's army attacked the enemy soldiers stationed at (Mantaung) village in the Lauhkaung area, killing one enemy and wounding some others. On 1 February, a mine attack

was launched against the military government's mercenary 15th Infantry Regiment which had come to loot and kill in (Rimon). The attack wounded some enemy soldiers. Five enemy soldiers were killed and some others wounded in an attack against the military government's mercenary 29th Infantry Regiment at (Yinpyin) village in Salaw township. Two G-3's, hand grenades, ammunition and some military equipment were seized from the enemy. [Text] [BK271030 (Clandestine) Voice of the People of Burma in Burmese to Burma 0030 GMT 27 Feb 82]

KENG TUNG, WA DISTRICT NEWS--Combat news from northern Keng Tung: On 10 January, a small unit of the people's army attacked the military government's mercenary 1st Infantry Regiment near Mong Yang, killing and wounding three enemy soldiers. On 2 February, a guerrilla attack launched by a small unit of the people's army in an area west of Mong Ngen wounded four enemy soldiers. On 6 February, a similar attack at (Wan Wa Sauk) wounded and killed four soldiers from the military government's 1st Rifles Regiment. On 12 February, a unit of the people's army attacked an enemy camp at Mong Yang, wounding and killing some enemy soldiers. Combat news from southern Wa District: On 6 January, the people's armed forces conducted a guerrilla attack against the military government's mercenary 33d and 67th Infantry Regiments at (Man Kan Aing) and (Pinkaung), wounding a total of five enemy soldiers. On 19 January and 8 February, attacks launched by small units of the people's army at (Pinton) and (Kyaukhein) killed and wounded three enemy soldiers. Combat news from northern Wa District: On 15 February, the military government's mercenary 9th Infantry Regiment sneaked into (Li Chaungho) village and made a surprise attack. However, vigilant members of the village militia brilliantly repulsed the attack, killing 8 enemy soldiers including a mercenary officer and wounding 10. The enemy retreated. [Text] [BK030333 (Clandestine) Voice of the People of Burma in Burmese to Burma 0030 GMT 3 Mar 82]

NORTHEAST BATTLES--From 1 January to 31 December 1981 the people and the people's army of the northeast Burma fought 63 large and small-size battles. During these battles, 114 enemy soldiers were killed, 106 were wounded, 1 was taken prisoner and 2 defected to the people's side. Thus a total of 223 enemy soldiers were put out of action. A total of 74 weapons, including 2 pistols, 9 carbines, 21 G-2, G-3 and G-4's
1 sten gun, 8 M-16's, 1 signal gun and 5 mortars, 16 hand grenades, 36 mortar shells, over 4,300 rounds of ammunition, 4 transport mules and other military equipment were seized. [Text] [BK240613 (Clandestine) Voice of the People of Burma in Burmese to Burma 0030 GMT 24 Feb 82]

KENG TUNG COMBAT--Guerrilla warfare in eastern Keng Tung: On 3 February, mines planted by the people at (Kawra) bend killed a mercenary sergeant, and a clash near (Kinsa-Hong) killed two enemy soldiers. Another battle near (Man Hawng)-(Man Tong) killed two more enemy soldiers from the military government's mercenary 3d Chin Rifles Regiment and wounded two others. On 11 February, one enemy soldier was killed and two others were wounded in

(Baw Kyauk-Hkan) battle. Mines planted by the people killed two more enemy soldiers near (Baw Kyauk-hkan). On 15 and 16 February, mine warfare by small units of the people's army, killed two enemy soldiers and wounded three others. The following day, on 17 February, mines of the people's army killed two enemy soldiers near Pa-hok. On 22 February, a guerrilla attack by a small unit of the people's army on the enemy who came to deliver supplies to the (Mong Mao area) resulted in one enemy soldier being killed and two others wounded. On the same day, another clash near (Pin[illegible]) killed one enemy soldier and wounded two others. On 1 March, [illegible] attack by a small guerrilla unit of the people's army near (Ywasaung) killed one enemy soldier and wounded two others. On the same day, a mercenary company which came out of Keng Tung was attacked between (Ywasaung) and Loi Mwe. Several enemy soldiers were killed or wounded. [Text] [BK140800 (Clandestine) Voice of the People of Burma in Burmese to Burma 0030 GMT 14 Mar 82]

MYITKYINA AREA COMBAT--Combat news: On 13 January, the people's army fought 2 battles against the enemy around (Wan Sein) region located south of Mong Husu, killing 21 enemy soldiers and wounding 8 others. On 8, 9 and 14 February, the small units of the people's army conducted guerrilla attacks in Sawlaw's (Chingkwe), located in Sadon-Lauhkaung area northeast of Myitkyina, and at (Yechong) and (Haw Saw) enemy camps, wounding many enemy soldiers. INDONESIA, PHILIPPINES OIL CONTRACTS--Pertamina and the Philippine National Oil Corporation this afternoon signed a crude oil sales contract at the Pertamina center in Jakarta. Pertamina president director Yudo Sumbono and the Philippine National Oil Corporation president director Geronimo Velasco signed the contract. Under the contract Indonesia will sell 11,700 barrels of Walio crude, 9,000 barrels of Handil crude and 500 barrels of Salwati crude a day. This contract is to supplement contracts since March 1977. On the occasion Yudo Sumbono and Geronimo Velasco also signed a contract on refining Indonesian crude oil in the Philippines comprising 8,000 barrels of Attaka crude and 8,000 barrels of Walio crude a day. The refining capacity may be increased to 30,000 barrels a day in future. [Text] [BK091042 Jakarta Domestic Service in Indonesian 0700 GMT 5 Mar 82]

TRADE BALANCE WITH ASEAN--Indonesia's trade balance with ASEAN countries during 1980 showed a surplus, except with Thailand where it showed a deficit. The trade and cooperative affairs department data said that Indonesia's export to Malaysia reached $59.9 million, while its import totalled $35.8 million. Indonesia's export to Singapore reached $2.4 billion and export to the Philippines totalled $181.2 million, while Indonesia's import from that country totalled only $90.6 million. Indonesia's export to Thailand totalled $34.7 million, while its import totalled $288 million or a deficit of around $240 million. A slight change, however, occurred in the inter-ASEAN trade balance during the 1981 period up to the month of October, especially Indonesia's trade with Malaysia, which showed a deficit for Indonesia. [Text] The existence and security of our beloved country is part of the faith of every patriotic citizen. Pakistan is the only guarantor of a dignified life for the residents of this region. Regrettably, our countrymen are more responsible than the foreigners for all the tribulations that have befallen this country. We are hinting at those countrymen of ours who out of a lust for power seek the assistance of internal and external enemies. God forbid if such elements succeed in their goals it would certainly be a great tragedy. In our opinion, the person who plants a bomb here on the arrival of Pope Paul indeed made a disgraceful move to discredit Pakistan. The intention of those people who started firing in Karachi University was to create an atmosphere of civil war in the country. The elements that hijacked the PIA plane to have their unjust demands met are no longer secretive. People responsible for the martyrdom of Chaudhri Zahur Ilahi are certainly not participants in a holy war.

This is the extreme. The intentions of those "hidden enemies" appear daily in the newspapers. Read any Pakistani newspaper any day and you will find somewhere in the country incidents of their "outstanding deeds" being performed very eminently. There is no need to inquire from the enemies about the details of those anti-social elements; the necessary information can be obtained from their own "associates." For example, on 2 March 1981, when the PIA plane was hijacked, the announcement made from Kabul by the hijackers' ringleader, Salamullah Tipu, was heard on the radio by the entire nation. On that occasion, in introducing himself, the terrorist declared that he was linked with the Al-Zulfiqar terrorist organization, the secretary general of which was Mir Murtaza Bhutto. This organization's acts of terrorism described by Salamullah in his own words are:

1. A bomb was placed in the National Stadium and Aslam, one of our own youths, was killed.

2. Our youths burnt a government jeep at Karachi University.

3. On 5 January, the guerrillas of the Al-Zulfiqar organization placed a bomb in the airconditioner of the Lahore High Court and it exploded.

4. Our guerrillas placed a bomb in one of the pipelines in Lahore, which exploded, killing one person.

5. Our men placed a bomb in the district commissioner's office at Para Chanar.

6. Two months earlier, at the Federal Capital area of Karachi, four guerrillas of the Al-Zulfiqar organization seized M1 rifles containing 20 bullets from the 2 Pakistani policemen.

7. We hijacked this plane.

8. Al-Zulfiqar guerrillas opened intensive firing at Karachi University and killed Hafiz Aslam, "hoodlum" of Jamaat Islami.

9. On 5 January, we opened fire in the Bajor area, killing two policemen.

10. In Karachi's Darig Colony, a grenade was thrown at a jeep, wounding three people.

11. On 15 January, bombs were exploded in Pindi.

12. In addition, our guerrillas destroyed a DC-10 plane.

According to the air terrorist, this organization is known as Al-Zulfiqar. Previously it was known as the PLA (Pakistan Liberation Army), but now its name has been changed to Al-Zulfiqar. The party's secretary general is Mir Murtaza Bhutto, son of Zulfiqar Ali Bhutto.

According to the daily newspaper JANG of Karachi, a few days after the hijacking of the plane, Mir Murtaza Bhutto gave a radio interview during his tour of Czechoslovakia, a member country of the Warsaw Pact, in which he said, "If my mother, Nusrat Bhutto, and sisters Benzir and Sanam Bhutto were not present in Pakistan, I would have demolished everything from Minar-e-Pakistan [in Lahore] to Jinnah Mausoleum [in Karachi]. I have signaled them to try to slip out of Pakistan. I am hopeful that as soon as the opportunity arises, they will escape from the country. After that, I shall be able to perform my task with no hesitation. Those leaders and active members of the People's Party who would flee from Pakistan and would like to work with us, we will not abandon to wander about from place to place and we will give them every support and cooperation."

Though there is no need for further evidence after such testimony, a few other facts should also be quickly reviewed. People who left the country both before and after Murtaza Bhutto's interview made England, Libya, Russia, India and Afghanistan the centers of their disruptive activities. As soon as the party's power diminished, Jam Sadiq Ali escaped with Murtaza. Later on, Ghulam Mustafa Khar and Shamim Ahmad Khan joined them. Similarly, Raja Anwar

also slipped away. In this way, on one hand they tried to defame Pakistan by referring to its military dictatorship, and on the other hand, after the hijacking of the plane, by summoning their own accomplices in foreign countries, they practically organized their own "military training" program against the integrity of the country.

During this period, Mrs Indira Gandhi regained power in India. She immediately transferred Shah Nawaz Bhutto's property, worth millions of rupees, to the name of his grandson, Mir Murtaza Bhutto. This, however, could not solve Mir Murtaza Bhutto's problems. He wanted to conduct large-scale, disruptive activities against Pakistan, for which a specific effort of begging for help was made. Almost every government, rather every important person, was approached with an appeal for help or the granting of a loan. Jam Sadiq Ali was the head of this committee. Even if these activities of the above-mentioned people against their own country are ignored, the foul play perpetrated on the arrival of Pope Paul in 1981 was indeed atrocious. If they had been successful in their attempt, positive world opinion about Pakistan would have certainly changed, producing extremely dangerous results.

The question is, is there anything our government can do against such elements within the country, if not abroad? The response is negative.

In our opinion, nothing is done except to seize unimportant people by associating them with the Al-Zulfiqar organization, giving importance to ordinary people and making martyrs out of them for nothing. Regrettably, it has been regarded as improper to pay attention to those people who can and do play the major role in this game. We feel that it is essential on this occasion to speak out clearly instead of merely implying. After all, why is it that tiny fish are preyed on while big catches are ignored?

What were the reasons that on the occasion of the anniversary of Agha Shorish Kashmiri, one speaker referred to the murder of Chaudhri Zuhur Ilahi and said openly that one of the murderers, Lala Asad, was in Karachi. After exactly 1 month, Lala Asad, the accused, was killed during a confrontation with the police in Karachi. Besides him, one so-called dutiful police officer lost his life too. The question is why were the police unable to take such a dangerous fugitive alive? Was killing him so very essential at the time of the fight that the secret of the murder of a political figure had to be buried along with him?

According to newspaper information, a diary and a photograph were discovered in the possession of the accused. The photograph portrays Lala Asad, the accused, standing with Mumtaz Ali Bhutto [a PPP leader). However, Mumtaz Ali Bhutto has not been included in the investigation. Are the police unaware of the fact that the accused wanted to destroy another important figure, but the course of action changed at the last moment?

Not only that, the people of this group are promoting a propaganda of anti-Pakistan concepts all over the country. For example, former speaker of the National Assembly Sahibzada Faruq Ali Khan, during a conversation with the Multan representative of CHATAN (in 1979), said that he and his party would

welcome the Russian army to Pakistan. (This very essential part of the diary, making references to Multan, was deleted by the censors.) Are those people who censor such news not enemies of the country?

Something similar recently happened because of the confrontation between the police and the subversive elements in Pakistan's Manchester, Faisalabad. Here, due to the involvement of the above two, the name of Al-Zulfiqar was being published continuously in the newspapers. After reading the news, we, too, were compelled to go there personally so that we might closely study the situation.

One aspect of the situation there is that during the previous municipal elections, just like the other parties, the defunct People's Party, though it made no announcement of participating in the elections, not only persuaded its members to participate in the elections but also gave them its full support. On that occasion, applying the terminology of "people's friends," the election advertisements of those people were published in the party's daily organ MUSAWAT. Due to this propaganda campaign, the "people's friends" also won the elections. The mayor of Faisalabad, Riaz Shahid, and deputy mayor Muhammad Siddiq Salar are among such elected people. After gaining power, this junta on the one hand deceived the government with its flattery and decorated their livingrooms with a display of their own photographs with people in power and authority; on the other hand, they tried their best to achieve their heinous objectives.

For example, the two ladies selected to represent the women of Faisalabad are from a pure Mirzai family. During the reign of the previous government, they and their families were full-time employees of the People's Party. The introduction of these two ladies can be given thus:

Mrs Khalida Mansoor: This well-known lady is the wife of a Qadiani lawyer, Khalid Bashir. Not only does she openly declare that she is a Qadiani, but she is also proud of being one. Besides being an office-holder of the defunct People's Party, her husband kept on trying for a party ticket to run for some election or bye-election, but to preserve its honor, the party went on offering the ticket to other people. Nevertheless, written appreciation of his services was expressed on several occasions. His wife is now a councilor. According to our sources, this family is an active element in a Mirzai group recently arrested in Rawalpindi.

Zubeida Malik: This lady, too, is associated with the Qadiani sect and she is the one who, after considerable foul play, was arrested by the police.

According to confirmed reports, the Mayor of Faisalabad, Riaz Shahid, and deputy mayor Mohammad Sadiq Salar; fresh guarantors of her good conduct like Muhammad Anwar Baluch, former member of the assembly; and retired captain Nisar Akbar are the "people's friends" trying their best to free Zubeida Malik. They are doing this because they had made every effort not only to nominate Zubeida Mali for councilorship, but in spite of continuous protests from the area councilor of Tariqabad, madam was made the chairman of the panchayat. It is impossible for them to ignore her now. According to

confirmed reports, the only reason for taking these steps was to cover up Zubeida Malik's condemned activities so that the above-mentioned people could freely come to her house to carry out their plans. Along with the above-mentioned visitors to her house, others included Tariq Wahid Butt of Lahore; Chaudhri Umar Daraz, a member of the National Assembly, and his cinema manager, Afridi; councilor Yusuf Minhas, who is under arrest; and the municipal corporation's nonofficial public relations officer, Mr Balal.

The name of the first-mentioned, Tariq Wahid Butt, is not new in Lahore circles. He is that very person who led the last dagger-bearing procession of the defunct People's Party era. After this procession, martial law was imposed in the country. After the martial law, too, he tried to lead a procession against the present government and in support of the People's Party. Now this person as well has become a "distinctive personality" of the city; he is presently a millionaire contractor in Lahore.

It is essential to point out here that Zubeida Malik and her accomplices were so very careful about keeping their disgraceful objectives secret from the people that they changed six places of residence within 1 year. The above-mentioned people went to every house to participate in the meetings. The houses were changed in this sequence: from Tariqabad to Nigehban Pura; from Nigehban Pura to Taj Colony, Sargodha Road; from there to Waris Pura, People's Colony; from Waris Pura back to Tariqabad; and finally to Abdullah Pur. A two-storied building was preferred when changing residence. God knows why the upper storey was selected.

While changing residence, Zubeida Malik used to move her husband's general hospital as well so that their neighbors would have a good impression of them. Now, after being arrested, this lady is in Shahi Qilah, and these important meetings are held at Chaudhri Nisar Akbar's hosiery near the ABC Cinema. This was the brief story of the antisocial elements known as "members of people's friends" and their disciples in Faisalabad. Even though they are spread all over the country, the police intentionally or unintentionally are acting in a lax manner in dealing with them and in spite of solid testimony, they have taken no steps against them, nor can they.

This point raises a few questions. The majority of police comprises illiterate people who are unaware of current situations; so how can they act against such antisocial elements? To prove this point, just go through this conversation between two policemen after the murder of Chaudhri Zahur Ilahi:

First policeman: My friend, who was this Zahur Ilahi?

Second policeman: I have heard that he was previously employed in the police. Later on he became a minister.

How can such people, who are unaware of well-known persons like Chaudhri Zahur Ilahi, be expected to suppress the smart, well-educated youths of the defunct PPP who were trained by experienced people from Moscow and Kabul? Most of our policemen get breathless while walking and in most police stations, the personnel do not know how to spell "zamanat" ["boil"] correctly. As a proof, any police station's records can be checked.

Lastly, we humbly suggest that a police force that, in spite of an all-out effort, has been unable to correct the rickshaw meters, is perhaps not in a position to act against such elements.

To restore the confidence of the people, the government should take some effective and decisive measures. If the police are incapable of doing this job, the government has a lot of other forces that can perform this task most efficiently. Besides, during martial law, the members of the institutions enforcing martial law should rely more on their own strength than on that of the police. It is hoped that this national institution will soon take some steps to bring those national looters to justice. This is not only the demand of the nation but also a call to their honor.

EDITORIAL ATTACKS CONTINUED RESTRICTIONS ON POLITICAL FREEDOM

Karachi JASARAT in Urdu 13 Feb 82 p 3

[Editorial: "Restrictions on Political Activities"]

[Text] The information departments of the Sind and Punjab governments have instructed newspapers and magazines not to publish news and comment that publicize political events, personalities and groups. The federal secretary of information, Maj Gen Mujib-ur Rahman, also expressed similar views while talking with newsmen in Rawalpindi. He asked the newspapers to respect the laws restricting political activities in the interest of the nation. Only a day before, on the first day of the meeting of the federal cabinet, he had told the reporters that the cabinet had decided to continue its policy on restriction of political activities and that there would be no change at all. He had added that the restrictions on political activities in the country are in accordance with Ordinance 48 of the martial law and that Ordinance 49 of the martial law concerns censorship on newspapers. Even though advance censorship has been removed, he declared that the exposure that newspapers are giving to politicians and political groups is illegal. He added that newspapermen and politicians are not adhering to those restrictions. The law was in its place and the related authorities, taking notice, were going to take action.

This is the position of the law and the state governments and the federal information secretary have confirmed it. The law says that all political groups and newspapers are breaking these restrictions. The offending politicians were often expelled from a state, and the newspapers were warned when they did not comply with the law. As far as the constitutional and political situations are concerned, the Constitution of 1973 has not been revoked, even though some of its statutes have been abolished. The present government keeps assuring us about the coming establishment of democracy and popular elections. Municipal elections are over and the municipal bodies are heralded as the first step toward democracy. Most of the minister's appointed in the states and in the federal government are politicians who belong to the disbanded political parties. State and federal councils, have been established and these are composed of people who were active in the old political parties. Again and again the purpose of establishing these political and semipolitical organizations is given as paving the way for democracy and elections. The chairman of the Federal Council, Khewaja Safdar, in the performance of his pious duties,

vowed that the Federal Council will be like a parliament and gave the good news that popular elections will be held within a year. Many federal and state ministers issued proclamations daily raising the hopes for democratic rule. Even the president announced that his cabinet was considering the possibility of restoring political freedom. And the cabinet did debate the question.

In the light of all of these promises, assurances and one-sided political actions, we do not think a restriction on political groups can be maintained for long. Running a government is politics itself no matter who is involved in it. There is a limit on political inactivity and uncertainty just as there is on political tumult and change. No solid, effective and positive national interest can be served by maintaining a status quo inactivity and indecision. Certainly this is also politics, but of a negative kind. It is imperative that the present government take a second look at its policies.

MINISTER DISCUSSES ENERGY PROGRAM

GF131059 Karachi NAWA-E-WAQT in Urdu 10 Mar 82 p 1

[Text] Lahore, 9 Mar (PPA)--Federal Minister for Petroleum and Natural Resources (retired) Maj Gen Rao Farman Ali has said that in the future Sui gas will only be supplied to those industries that use it as raw material. If an alternate source of fuel is present, the gas will not be used only as a fuel. The federal minister was addressing correspondents after a meeting with senior officials of Sui gas.

Rao Farman Ali said that the aim of this new policy is to conserve gas reserves so that they may last until new reserves of fuel are found, for which prospecting is going on. He added: all those factories using Sui gas as a fuel at present will be asked to use other sources of fuel. In any case, factories using Sui gas as fuel will be temporarily closed down next year. He did not specify how long they would remain closed.

The minister said: The gas reserves at Sui are 3 trillion cubic feet, which will be enough until the year 2000. The oil production at Khaskheli will be increased to 16,000 barrels daily by June. He said that there are other gas reserves in the country, each of which has 5.9 trillion cubic feet of gas. The recent increase in the price of gas is justified for the development of gas and for future investments in the field.

EDITORIAL ASSAILS CORRUPTION AMONG MEMBERS OF FEDERAL COUNCIL

Karachi JASARAT in Urdu 11 Feb 82 p 3

[Editorial: "Protest by Elected Municipal Councilors"]

[Text] The federal government was forced to take notice of the strong protests raised in the hall of Karachi Municipal Corporation against the corruption of some of the Federal Council members. The federal government has asked for copies of the welcoming address recently presented at a function organized by the so-called government-sponsored Pakistan Solidarity Council to the minister of information and broadcasting and a member of the Federal Council, who is also the chief of the Pakistan Solidarity Council. That was the reason for the protest? What caused it? The

The simple answer is that a member of the Federal Council did not get from Kar Karachi Municipal Corporation the reception or welcome he ardently desired. Thus, his dissatisfaction was expressed in these words, "A resolution to congratulate members of the Federal Council and arrange a reception for them on behalf of the city [of Karachi] was not allowed in the Karachi Municipal Corporation merely because at the present time the corporation is dominated by a certain defunct political party and the mayor is acting as a representative and as an instrument of this political party." This address further adds that "the total vote polled by the group that controls the municipal corporation represents only 3.8 percent of Karachi's voters."

It was natural for the municipal corporation members to protest such blatant accusations strongly. All of these members are elected while members of the Federal Council, who accused the municipal councilors of representing a minority of voters, had never received a single vote. Even if the members of the municipal corporation represent 3.8 percent of Karachi's voters, they still have more backing than the Federal Council members who just represent themselves and no one else. Who authorized them to analyze the system of democratic representation? They should look inside themselves; they should assess their own constitutional and democratic status.

Mr Hussayin Haroon, a member of the Federal Council and also a municipal councilor of Karachi, gave a fitting reply to the Federal Council members' criticism. He observed that the council members have hurt the feelings of the majority of the municipal councilors with their speeches and statements. He

added that he was a municipal councilor first, and was proud of it, and demanded a curb on such practices, which spread hatred and caused rifts between the mayor and members of the Federal Council.

It is good that the government took notice of the affair. We feel that an in-depth inquiry into the activities of these trouble-making elements is in order. These unsavory elements under the guise of Pakistan Solidarity Council are always looking for an opportunity to harm the city and the nation's unity and peace. The reason for this is just to establish their own political identity.

Now that the government has taken notice of this sad state of affairs, we feel that the following items, raised at the municipal corporation meeting, should be looked into.

1. Even though no political parties exist in this country, a certain group is very active politically. Some of these people have obtained membership in the council. This group works with the majority and the opposition at the same time. In the past, one of their factions cooperated with the government of another state. Some members of this group have now joined the state government of Sind. Some members of this group ran for municipal elections and even forfeited their deposits [for lack of votes], and now they are emerging as critics of the municipal system of government. The question arises: If all political parties are banned in the country, why is the bureaucracy patronizing the Pakistan Solidarity Council?

2. How were those people who lived in the slums of Jetland Line at the time of their appointment and became millionaires afterwards, appointed to the Federal Council? They should have to account for how they became millionaires. Also in need of investigation is: Who were those people who, [in recommending nominees for the Federal Council], vouched for the innocence of those members of the former state assembly who built their fortunes using their elected status and were commonly known to be corrupt. Who put a stamp of approval on the political heritage, decency and honor of such people? On what basis were those people cleared of their political crimes?

3. These members of the Federal Council obtained building plots from the former government and now they are driving poor people living there off the land. On what basis is the Karachi Development Authority protecting these members of the council and making many people homeless to set up gasoline pumps?

4. How come Federal Council members were allowed to block all traffic from the main road of Korangi to hold their public meeting for 3 days, but elected municipal councilors were forced to comply with various rules for their public meeting?

The president of the country is well advised to fire all these people from the council. The presence of such undesirable elements in the council after the president's declaration that the Federal Council was set up after investigating the political lineage of nominees is proving to be a matter of personal discredit for the president and will continue as such in the future.

BRIEFS

LITERATURE SEIZED--Karachi, 10 March (PPI)--The government of Sind issued orders today to confiscate the Urdu-English newspaper JUSTICE, Vol. 1, No. 6, because of some 'objectionable material' published in it. The government has also confiscated a cyclo-styled Urdu poster about the Majlis-e-Shoora ('Federal Advisory Council') issued by Ahsan Bari in Multan. The Sind Government has also forfeited the English journal ECCNOMIST, Vol. 282 dated 16 January 1982. This journal is published in London. [Text] [Karachi JANG in Urdu 10 Mar 82 p 2]

TEACHERS' ARRESTS--In Pakistan, hundreds of striking teachers were arrested yesterday when they were trying to hold a demonstration in Lahore. According to an agency report, 15 teachers have been injured. Several thousand teachers are agitating since the seventh of this month for higher wages. [Text] [BK190305 Delhi Domestic Service in English 0240 GMT 19 Mar 82]

LAW ON THEFT AMENDED--The chief martial law administrator has promulgated martial law order Number 88 amending the martial law order number 4. The order provides that whether the offense tried by the court is dacoity, burglary, robbery and theft or of an attempt to commit any such offense or of the unlawful possession of explosive substances or the abetment of any of such offense the sentence of rigorous imprisonment awarded by the court may extend to 3 years. [Text] [BK190256 Karachi Domestic Service in English 1700 GMT 18 Mar 82]

ORDINANCE ON DESECRATION--The president has issued an ordinance which will be referred to as Pakistan penal code amendment ordinance, 1982. Under this ordinance, any person found guilty of intentionally desecrating the Holy Koran or any of its parts; impairing its sacrosanct nature or using it sacrilegiously for any illegitimate purpose will be liable to life imprisonment. So far, there has been no law in the country which clearly provides for sentence for desecrating the Holy Koran. This ordinance is being enforced with immediate effect. [Text] [BK181554 Karachi Domestic Service in Urdu 1500 GMT 18 Mar 82]

ISLAMIZATION EFFORTS PRAISED--The two-member Iranian delegation has lauded the steps being taken by the present government toward the implementation of the Shariat in the country. The delegation called on Justice (Malik Ghulam Ali), a member of the Federal Shariat Court, in Islamabad yesterday and exchanged views on major aspects of justice under the Hudood ordinance. The delegation also held talks on the implementation of the orders of the Federal Shariat Court. The delegation consists of two members of the Iranian Majlis, Ayatollah (Sadiq Khalkhali) and (Mohammad Taqi Jahanvi). The delegation was deeply impressed by the formation of the Shariat court, which is a major step toward transforming society according to Islamic tenets. FINANCE MINISTER DISCUSSES JOINING ASEAN GROUPING

BK241549 Hong Kong AFP in English 0851 GMT 24 Feb 82

[Text] Kuala Lumpur, 24 Feb (AFP)--Sri Lanka is confident that the Association of Southeast Asian Nations (ASEAN) will "respond positively" to its application to join the five-member regional grouping.

Sri Lankan Finance Minister Ronnie de Mel told newsmen here today that it was natural for ASEAN to consider the aspects first as a decision on his country's application for membership should not be taken hastily.

But he said he was "confident that ASEAN would respond positively to our request to join the regional grouping."

Speaking after calling on Malaysian Foreign Minister Tan Sri Ghazali Shafie, Mr. De Mel said there was nothing "exclusive" or "contradictory" about Sri Lanka's wish to join ASEAN as it was for the betterment of the region.

"Moreover, our country feels that Sri Lanka and ASEAN, including Malaysia, should come closer to one another," he said.

Mr. De Mel said that Sri Lanka was now free of the political constraints which had earlier prevented it from joining the regional grouping since its inception.

The country's high commissioner, Dias Desinghe, had earlier said that Sri Lanka would submit a formal application to join ASEAN when the regional grouping met in Singapore in June.

In response to Sri Lanka's keen interest in joining, ASEAN leaders had earlier indicated that the group was not yet in a position to go beyond the region.

Mr. De Mel, who had also discussed economic cooperation with Mr. Ghazali, said that Sri Lanka also wished to expand trade and joint investment with Malaysia to "rectify" the balance of trade which was now heavily in Malaysia's favour.

COLUMNIST SUPPORTS NEGOTIATIONS WITH SRV ON KAMPUCHEA

Bangkok TAWAN SIAM in Thai 28 Jan 82 p 2

[Tawan Song Lok by Phairot Limpakan: "Getting Together Would Be Better"]

[Text] Asean leaders believe that forming a loose coalition government from the three Kampuchean factions, that is, the group of Mr Son Sann, the group of Norodom Sihanouk and the Khmer Rouge, will result in a government that is more acceptable than a single-element Khmer Rouge government or a Vietnamese-backed Heng Samrin government.

As for the reason for this, the Khmer Rouge once used ruthless methods in governing the Kampuchean people. Vietnam used this as an excuse to invade Kampuchea and set up the Heng Samrin government instead.

Concerning the common aim of the three Kampuchean factions that Asean would like to see cooperate, what can be seen clearly is that they all want to drive Vietnam out of Kampuchea. As for each group's ideals, it can be seen that it will be difficult for them to join together very closely.

If they were able to drive Vietman out, there would certainly be conflicts between these three groups again. The Khmer Rouge, which is the strongest [of the three groups] in all respects, would take charge in Kampuchea again and later destroy the other two groups. And China would not sit by idly since it has constantly provided money and manpower to support them.

In short, even the Khmer Rouge does not deny that cooperating would be difficult.

Many groups have commented that if this is the case, the Khmer Rouge should be left isolated and an agreement should be reached with Vietnam by inviting Vietnam and Heng Samrin to hold discussions.

Certainly, Vietnam will agree to negotiate only when it feels that it stands to make political gains and that the Heng Samrin government will be recognized by the world community. Also, Vietnam will probably have to listen to its big brother, that is, the Soviet Union.

The Thai and Vietnamese governments once had good relations. It is only recently that Thailand has become dissatisfied because Vietnam has jumped

into the Kampuchean game a little too strongly. Thailand has had to take great chances in many cases.

Turning towards each other to negotiate and become reconciled is the best way since each side is [composed of] reasonable human beings. They should be able to talk to one another. The only thing that is important is whether the people behind things are prejudiced or not.

IRREGULAR FORCES' ATROCITIES SAID TO AID COMMUNISTS

Bangkok MATICHON in Thai 24 Jan 82 pp 8,9

[Article: "Are the 'Irregulars' Carrying on Suppression Activities or Are They a 'Communist Front'"]

[Text] On 9 January, Police Major Naphadon Chuathai, the chief inspector at the Phromkhiri Subdistrict police station in Nakhon Sithammarat Province, received a report that a group of communist terrorists had entered villages in Phromlok Commune in search of supplies. He therefore ordered Police Master Sergeant Pracha (surname unknown) to take a force and intercept them.

At the same time, Master Sergeant Phloeng Kichawichit, the leader of Irregular Group 424, and his group patroled the area. Each group thought that the other was a band of communist terrorists and so a fight lasting 45 minutes ensued.

The result of this clash was that three irregulars were killed and two others were wounded.

Actually, nothing would have come of this incident if these irregulars had reported what really happened to their superiors. But instead they reported that these losses resulted from a clash with communist terrorists.

At the same time, they pressured and forced Mr Sumon Chumsua, a reporter for the newspaper THAI RAT assigned to Nakhon Sithammarat Province, to file a story with his head office in accord with the report that they had sent to their superiors, claiming that he should do this in order not to tarnish the image of the "irregulars."

If Mr Sumon had agreed to do this, this clash between the irregular forces would have come out as a different story. Instead of the story being one of losses resulting from confusion, it would have been a story of heroes who merited rewards. But Mr Sumon fulfilled his duty as a reporter, which is to be a "person who brings the truth to light." The result was that, 2 days later, he was ruthlessly killed with an M16.

Concerning the death of Mr Sumon, both the local reporters and the police in Nakhon Sithammarat agree that this murder was committed by Irregular Group 424.

The irregulars were first established in July 1978 in the lower northeast. The first aim in establishing this force was to have them serve as a paramilitary force that could carry on operations against the communist terrorists in place of the regular army. Another aim was to have them carry out things in accord with "bandits to suppress bandits" plan as once announced by Major General haowalit Yongchaiyut, the director of the Directorate of Operations.

This may have stemmed from the cost of establishing the irregulars, with the aim being to save money. This is because the expenses involving the irregulars are only one-fifth of those for regular soldiers. The irregulars go through a very short selection and training process. They are paid an allowance, including a food allowance, totalling only 40 baht per day and they do not have a deep understanding of the idea that "politics leads the military." In only a few years, the irregulars have generated much publicity about themselves.

Even though the irregulars, especially those in the south, are well known for their heinous behavior, which includes shooting people and claiming that they were "communists," using the weapons and power of the military to rob, oppress and kidnap people and showing off their great power, which has caused trouble for large numbers of people, many high-ranking military officers hotly defend the irregulars.

When he was still the commanding general of the Fourth Army Area, Lieutenant General Chuan Wannarat said in an interview that:

Concerning the stories about heinous acts committed by the irregulars, in actuality they have not committed such acts. Most were committed by members of the communist terrorist united front who pass themselves off as "irregulars" and cause trouble for the people in order to destroy the irregulars. They want the people to hate the irregulars, who are an important spearhead in suppressing the communists.

Even though there has been an attempt to defend the irregulars, the stories that have arisen time and time again clearly show that, in reality, the communist front talked about is none other than the "irregulars." When he first went and took over as commanding general of the Fourth Army Area in November last year, Lieutenant General Han Linanon took up his position as commanding general by ordering the entire company of irregulars at Ban Nong Thong in Pak Phayun District, Phathalung Province, disbanded. This was a very courageous decision, made without fear that by doing this he would be accused of "dancing to the tune" of the communists.

As for the case of Irregular Group 424 setting up a kangaroo court and killing the reporter, even though the commanding general of the Fourth Army Area

himself showed that he was serious about this case, when the police sent a warrant for the four "gunmen," the officer directly in command of the irregulars refused and sent only two men, obstinatly refusing to send the other two.

Everyone is waiting to see whether or not Lieutenant General Han Linanon will take stern action as he said he would in an interview. And what is more important is that this heinous behavior of the irregulars will prove whether the "politics leads the military" policy of the officials will be implemented seriously or whether it is merely a public relations ploy used to gain votes.

However, it is believed that Lieutenant General Han will certainly not trade the bright future of the "politics leads the military" principle for the boldness of the irregulars. Because if they can carry out such an audacious act as this and still receive protection, they will have been given a ticket to kill even more people.

And this amounts to forcing the people to choose [the side of] other soldiers who are not irregulars even though they have never had any desire to do so. And the "under the umbrella of tranquility" [tai rom yen] plan will in the end resemble "cold-blooded death" [tai luot yen], which is something that should not happen.

EDITORIAL BLAMES ECONOMIC DETERIORATION ON PARTY ALLIANCES, BAHT DEVALUATION

Bangkok TAWAN SIAM in Thai 11 Jan 82 p 3

[Editorial: "Economic Disaster"]

[Text] The people have entered a new era feeling depressed because of the crushing economic situation and it has reached the point where there are troubles everywhere, particularly in the rural areas. The farmers are facing crises on almost all fronts while the high-ranking people in the capital are enjoying themselves to the utmost and foolishly vying to see who can live the most extravagantly. The country is filled with the insane talk and voices of the politicians, scholars and corrupt people.

The economic situation is deteriorating daily and this stems from the mistakes made in administering the country ever since the first Prem government. The Social Action and Chart Thai parties were allowed to carry on a great feud; whatever one party said, the other said the opposite. More and more problems began to appear until finally the Social Action Party was forced out. The second Prem government carried on the same game, allowing the politicians in the Chart Thai and Prachathipat parties to feud with the scholars. Whatever the politicians said was good, whatever the politicians said was bad.

The economic decline began to appear clearly when the baht was devalued. Agricultural products could not be sold. The cost of living soared rapidly. Businesses encountered problems and many were forced out of business. The price of gasoline rose and so on. These things began to indict [the government] for being engrossed in a person's pride at completing a 4-year term of office and allowing 48 million people to experience great trouble. This seems to be contrary to the nature of a leader because leaders should at least have some common sense. It should be admitted that this economic decline is the responsibility of the head of the government and not of the political parties or scholars who joined the government.

PRC TO OPEN CONSTRUCTION FIRM

Bangkok BAN MUANG in Thai 10 Jan 82 pp 1,2,16

[Article: "Vanguard Chinese Team Penetrates Thai Economy"]

[Excerpt] It has been revealed that a [Chinese] spearhead will penetrate the Thai construction market in the form of a state enterprise with the government officially recognizing the establishment of an office. It has begun to compete in the private sector. This will have a major effect on business. But it will be good from the standpoint of promoting [construction] and lowering construction contracting prices because of the competition. It has been stated that the government is making preparations for this by quickly holding discussions with the Ministry of Finance and the sectors concerned in order to send Thai construction contractors to compete in world markets too instead of sending only laborers. In the future, employers will be sent too. It is expected that this will earn at least as much foreign currency for the country as rice or corn exports, prices for which are constantly falling. This is because our construction skills are admired abroad. At the same time, the government is making preparations to implement a major program to aid the rural homeless in accord with a United Nation's resolution concerning helping rural people.

Mr Damrong Latthaphiphat, the director of the National Housing Authority, talked with BAN MUANG reporters on 9 January about Thai construction contracting. He said that at present, this type of Thai business activitiy is experiencing a situation that is having a rather great effect. That is, the People's Republic of China (Red China) has officially established a construction firm in Thailand. This firm is called the "China Construction Corporation." Its offices are located behind the Indra Theater at Pratunam. China has established this firm in the form of a state enterprise that is recognized by the government. Since they have penetrated Thailand, [we] cannot sit by idly. A way to solve this problem must be found.

The director of the National Housing Authority also said that, concerning the entry of this state construction enterprise of China, there are great problems. This is only the first time that they have been in this country but they have already submitted a bid for their first project, which concerns a construction project of the National Housing Authority. They did not win

but it is known that they will submit bids and compete for all kinds of construction jobs. If we look at this from the standpoint of competition, this is good because when [firms] compete by submitting bids, the cost of construction declines. And they cannot be prohibited from entering the country. What we can do to solve this problem is to go into China. Since they have entered our country, we must begin operations there in exchange.

Mr Damrong stated that next Tuesday or Wednesday, he will present a program to the government to enable Thai contractors and the National Housing Authority to have a chance to contract for construction jobs abroad, which includes China, the Middle East and elsewhere. As for this proposal of the National Housing Authority, at present, it is under consideration by the government.

The reporters asked what effect the entry of China will have on the National Housing Authority. Mr Damrong said that this will not cause problems for the Housing Authority. Rather, it will be good since the more the contractors compete, the lower the prices. But at the same time, looked at from the standpoint of the nation, because of considering construction as something to be exported, it has been proposed to the government that construction should be promoted. We should go "dig for gold" abroad in order to bring foreign currency into the country. "At present, we are having trouble selling rice and corn and prices are low. Since we have a chance to earn an income from this abroad in order to keep up with China, which is penetrating [our market], I think that we must do this. By doing this, besides bringing foreign currency into the country, we will also create a good image. Do not forget that we have sent many laborers to work abroad, especially to the Middle East. This has brought much foreign currency into the country. Why haven't we sent contractors abroad too? In Singapore, Malaysia and Nepal, we have built roads and buildings for them and whatever else they have wanted."

The reporters asked about the problems in sending construction contractors abroad from the standpoint of what the government would be responsible for. Mr Damrong stated that the government would be responsible only for certain things such as putting up collateral security. By doing just this it will be possible to earn much money for the country and [people] will not be as poor as they are today.

CHINESE ECONOMIC POWER ANALYZED

Bangkok MATICHON in Thai 24 Jan 82 pp 4-6

[Article: "The 200th Chinese New Year's In Bangkok: the Merchants Are Depressed and the People Are Cheerless"]

[Text] This Chinese New Year's is the 200th anniversary of Chinese settling down in Bangkok. They have been here since Rama I granted land in what is now the Sampheng area to the Chinese who were then living in the area where the palace is now located.

From Sampheng, those first Chinese in Bangkok expanded their trading and residential area and moved into trading areas known as Talat Kao, Sieng Kong, Charoenkrung, Songwat, Talat Noi and Pobe. It is worth noting that this "Chinatown" land belonged to either the Royal Property Office or to the present Bunnak family. Land could be sold only to their children who had been born in Thailand and who could own land because of having Thai citizenship.

For 200 Years, Trade Has Been In Their Hands

The Chinese in Thailand are like the Chinese in other countries who play a greater economic role and have more economic influence than the natives of the country. This applies to the activities of commercial banks, financial institutions, credit and finance companies and pawnshops, import-export activities and even to those of the bean junket sellers. But most of these are activities that are under the control of Chinese who came from China.

However, as for Thailand, [control of] the main trading and industrial activities of the country has switched hands and is now in the hands of their children, who are Thai citizens and who have the same rights as all other Thais.

The business and industrial activities of today's Chinese have changed greatly with respect to form and administration from the activities that were carried out by a single person with his own capital. Then, the owner did almost everything and held to the principle of engaging in trade only and not becoming involved in other types of activities. It was like [the saying that] catching a fish with one hand is better than catching fish with both hands. But this is not done anymore.

The business activities of the Chinese have turned more to the international system. This is probably because the younger generation has been educated abroad and studied at higher levels in the country.

Concerning investment, they have switched from investing in a single activity to investing in other related activities and even in other fields. If this is considered, it can be seen that, concerning the present-day business activities of the Chinese in Thailand, they have began to "catch fish with many hands," claiming that this is being done in order to reduce the risks.

Because if the capital is concentrated in a single activity, they could go bankrupt easily if some crisis hit. But if investments are dispersed among various trading activities, besides avoiding bankruptcy, this also helps build a foundation between them.

Present-day agricultural product merchants are engaged in other activities besides simply selling agricultural products and carrying on industrial activities concerned with agricultural produce. For example, one rice mill has invested part of its assets in the industrial and service sectors. And the group that is worth keeping an eye on is the Yiemsakunrat family that has begun investing in petrochemicals.

Chinese merchants in Thailand who have sent their children abroad to study are becoming interested in the new large-scale industries that are coming into existence. This development will keep Thailand's trade economy in the hands of this same old economic group for a long time to come.

Seng Lee Is In Trouble, Interest Rates Are High

Last year's trading and industrial activities of the Chinese in Thailand did not fare too well. Normally, if business was good, when people ask them about business the Chinese will answer that things are fair. If business was only fair, they will say that business was terrible. But if business was terrible, they will only shake their heads like a person with a mouth full of water who cannot speak. And if they shake their heads several times, it shows that they have major problems.

Last year, the Chinese businessmen were in such a situation. That is, when asked whether business was good or bad, they all shook their heads wearily.

Most Chinese business activities [are carried on using] revolving capital and money borrowed from the black market and from financial institutions and commercial banks. That is, they borrow money every time they have the chance.

Last year, world interest rates rose, and in Thailand interest rates for loans to merchants rose too. The rates were 19 percent at commercial banks and 21 percent at trust and finance companies. And the money lenders on the black market raised rates accordingly. Those Chinese merchants who are

clever at exchanging checks bore the burden and turned capital over [so fast] that their "heads spun."

Some people had to pay a black market interest rate of 6 percent a month. And so at a time when financial institutions had raised interest rates on loans to 32 percent a year, there was much "gnashing of teeth" and competition.

Normally, high interest rates is not an important problem for Chinese merchants since they have endured much already and they believe the saying "no matter how expensiive, let there be money available." But this means that the economy must be vigorous and trade good if they are to be able to compensate for the high interest rates. Because if they produce or purchase goods and cannot sell them, they will have to pay high interest on their surplus inventories.

For example, last year, sales in the provinces and in Bangkok were very poor. Most types of goods, regardless of whether consumer goods or various types of agricultural goods, sold poorly. Thus, who survived and who failed depended on who had the most support and who had financial institutions to protect them in this time of crisis.

Retail and wholesale businesses and restaurants, which are businesses that the Chinese are clever at, had a very poor year last year. This is because the people lacked purchasing power and they turned to economizing. The economy in the rural areas did not improve and so the flow of goods into the provinces declined quickly. And the closing of Thailand's eastern border was another factor that caused trading in Chinese circles to stagnate.

Agricultural Products, the Merchants Are Downcast

Last year was a disasterous year for local agricultural merchants, except for those exporters who kept their balance. It is said that some merchants mortgaged their godowns, rice mills and agricultural products on hand to the banks. And by the end of the year, many of them went bankrupt, with the banks taking over all their assest.

Most owners of sugar refineries are Chinese. They have not yet recovered from the effects of Mr Bunchu Rotchanasathien's and Mr Tamchai Khamphato's [policy of] importing sugar from abroad. This caused them to miss a golden opportunity to sell sugar abroad at a good price. Most of the merchants who trade in agricultural products have much stock on hand, including much rice, corn and cassava, and they are sagging from the interests. Most of the local merchants are almost bankrupt.

Whether this trend gets worse or not depends on how much of the present agricultural surplus can be exported abroad.

It is not only the agricultural merchants who are depressed. The construction contractors, who are controlled by Chinese, are in a precarious situation. The amount of construction work in both the public and private sectors has declined greatly. As for construction projects that have been completed, many

houses and commercial buildings that have been completed cannot be sold.

In addition, they have been hard hit by the high interest rates and credit squeeze of the financial institutions and commercial banks.

When there is a decline in the construction industry, this has an effect on related industries, including those that produce such things as steel rods, construction equipment and building materials. And most of these dealers are Chinese.

The Hand That Controls the Money Is the Only Secure Hand

Last year was a year of high-level economic problems; it was not a year of basic economic problems that concerned the majority of the people. Those who encountered problems usually included those merchants who were involved with monetary problems and with the problem of producing goods that they could not sell. The only ones to make a profit were those who were involved in financial transactions, such as the trust and finance groups. They were able to mobilize large amounts from the people's savings and lend it out at very high rates of interest, most of which were set by government officials.

The rich Chinese involved in trust and finance operations thus smiled happily just like the many moneylenders on the black market who were able to make a fortune from this.

In a situation in which many checks are bouncing at Chinese trading markets, a worrisome question is how much trouble those businessmen who borrowed from various loan sources will have in repaying the money if the lenders have to call in the loans. Many Chinese-owned trading and industrial businesses have now fallen under the control of the financial institutions and commercial banks. And another thing is that they are a heavy burden on the financial institutions.

This is because few of the single-owner trading and industrial businesses of the Chinese have been altered so that they are strong enough to compete in an open economic system such as that in Thailand. And this system will become more and more open. The financial situation in world markets is changing quickly. Social conditions and competition have changed and this has made it impossible for the old closed system of the Chinese to withstand the tide.

Many Chinese businesses have been taken over by the banks because they mistakenly took out loans at the low interest rates offered by bank branches when new branch offices were opened. The branck offices did this to show the talents of the managers of the bank branches. But when the head office suddenly ordered the branch offices to recall the loans or establish new terms of credit, these merchants could not pay their debts.

The banks are blamed for this. People say that they once earned a good income and there were no problems "but after you borrow money from the banks, you

cannot find money fast enough to repay the banks. It would have been better not to have done this."

Bonuses Are Continually Decreasing

As Chinese New Year's approaches, Chinese businesses pay [their employees] bonuses, or "taiea" as this is called. And they set new monthly wage rates. Whether they pay small or large bonuses depends on various conditions including the work skills of the employees and the generosity of the employers. However, ever since the time of the oil crisis in 1972-1973, these Chinese employers have been less able to pay bonuses as compared with before when they paid substantial bonuses. This was necessary because the Chinese paid small wages and so had to compensate by paying bonuses.

The agricultural produce business is probably the only business that can still pay the employees a substantial bonus. As for the jewelry and gold shops that were once first, they no longer have any strength left because of poor sales.

The tradition of paying bonuses in Thailand is coming to an end. Instead, [businesses] are turning to the international system, that is, they will pay wages based on the actual situation and pay a small bonus in order to preserve this Chinese custom.

PARLIAMENTARY POLITICAL CORRUPTION, VOTE-BUYING NOTED

Transfer of Party Membership

Bangkok SIAM RAT IN Thai 23 Jan 82 p 7

[Thoughts From the News column by Prachuap: "Avoiding Politics"]

[Text] Recently, there was a report that the civil court had issued a writ sequestering 8,000 baht a month from the expense account of an MP who had disobeyed a court order to repay money borrowed from a finance and securities company.

As for this news item, this is a common type of civil suit that occurs frequently among ordinary people, merchants, businessmen and people in other occupations, including those in politics. But by chance, some MPs who knew about this case later revealed that politics was also a factor in the court's issuing a writ sequestering the money from the expense account of this MP. I thus feel that this is a very interesting case and would like to discuss it.

The MP whose expense account was sequestered by the court is Mr Chawalit Wisetsithikun from Ang Thong Province. He is a member of the National Democracy Party headed by General Kriangsak Chamanan. He signed a contract to borrow 150,000 baht from the General Finance and Securities Company. The contract called for him to repay the loan at a rate of 6,000 baht per month. But it appears that after borrowing the money, Mr Chawalit made only seven payments that is, 42,000 baht, and then stopped making payments.

The company then filed suit against Mr Chawalit in the civil court for violating the contract and asked for 133,521.50 baht. The court decided that Mr Chawalit had to pay this amount. But after learning of the court's decision, the defendant failed to repay the money. The plaintiff thus appealed to the court to issue a writ forcing Mr Chawalit to pay this sum of money within 1 month. But the defendant ignored this too and so the plaintiff asked the court to sequester 8,000 baht a month from his expense account, beginning in January, unitl the money is repaid. The civil court considered this and concluded that the defendant had intentionally disobeyed the court order and so it issued this writ.

In telling about this matter, Mr Siri Thungthong, an MP from Uthai Thani Province who recently left the Chart Thai Party, said that, in reality, Mr Chawalit was not the only MP to be sued in this case. About 10 other MPs who once belonged to the Seri Tham Party were sued also. This is because, after the general election in 1979, the MPs who were elected in the name of the Seri Tham Party, which is headed by Mr Bunying Nanthaphiwat, received a notice from Mr Siri Otsathanukhro, an employee of the General Finance Company and a member of the party's finance committee, to repay the 150,000 baht that they had each borrowed in order to pay their campaign debts. But none of them thought that they would be sued for the money.

In reality, concerning political parties giving their members money to help get them elected in the name of the party, this seems to be universal in countries that have a political party system. And there is seldom news of anyone being asked to return the money or of anyone being sued, regardless of whether they won or lost the election. Thus, concerning the fact that some MPs have had a civil suit leveled against them in court, it is understood that there must be some special reason for this. And it is understood that this happened because those MPs who received this financial help from their party later switched parties or did something in serious violation of party regulations or resolutions.

As for this, those who are interested and who have followed the movements of the various political parties since the 1979 general election will see that MPs who were elected in the name of a party frequently switch parties. This is because the temporary provision in the constitution does not compel an MP to belong to a political party or compel him to give up his seat in parliament if he resigns or is expelled from the party.

Since the temporary provisions in the constitution do not compel an MP to belong to a political party and since there is still no political parties act that would require this, this has opened a way for people who want to have political power or a political position. They can establish a political party by getting independent MPs or MPs who were elected in the name of another party to join their party. Concerning this method of establishing a party, even though it can be claimed that the MPs who switch parties do so voluntarily or that they like the policies of [their new] party, in fact, it is well known that almost all of them are paid money or they receive some other benefit in return for doing this. The amounts they receive range from 100,000 to 300,000 baht or even more. And in order to keep these MPs who have joined the party from changing their minds or switching to still another party later on, they are required to sign various types of contracts. For example, as a guarantee, they might have to write a check for the amount of money they received or [for that amount] plus interest. They might sign a loan contract or they might write their resignation from parliament, which is then kept [by the party].

Some news items have stated that, at present, many of the MPs who have switched parties are afraid that they will be sued. And some people who do not have any collateral for their debts are afraid that they will be killed or injured. And

some of them act as if they are about to have a nervous breakdown. For example, there is one MP, Mr Khondet Mansikhieu, from Phitsanulok who was originally elected in the name of the Social Action Party. But later on when Mr Wattana Atsawahem, an MP from Samut Prakan Province, established the Mass Line Party, Mr Khondet left the Social Action party and, along with other members of the Social Action Party such as Mr Sunthorn Yingnakhon from Samut Prakan Province, joined this new party without any consideration for the fact that he had once given his word to the people about which party he would belong to.

Mr Khondet revealed that when he joined the Mass Line Party he was given 100,000 baht. But when the Mass Line Party disbanded, or dissolved itself in order to join the National Democracy Party of General Kriangsak Chamanan, Mr Khondet did not join because he believed that since the Mass Line Party had disbanded, he no longer had any obligations to the Mass Line Party and that he therefore had the right to switch to another party. The party that he switched to was the Pracharat Party of Mr Chaisiri Ruongkanchanaset, or Sia Tang Hua as he is called. And it is said that in the recent by-election for parliament in Ubon Ratchathani Province, an amount of money similar to that spent by General Kriangsak during the by-election in Roi Et Province was spent here too. This is because winning an election does not mean becoming an MP only. This can also affect a person's status as the head of a political party that has been established because the policies of the party have just been brought out for popular approval for the first time.

On the same occasion, Mr Khondet also revealed that, at present, he is very depressed because besides the fact that he may be asked to return the money, he may also be killed, particularly since there has been news of some MPs being hunted down and shot by gunmen.

Concerning this matter of certain MPs being sued for repayment of their debts when they resign from a party or switch parties, even though this will not tarnish the image of the MPs or of the political party system in the eyes of the people since this involves only a few MPs and certain political parties, at the same time, what has happened according to the news report above is not something that should be ignored. Because in my view, this has resulted from weaknesses in the election and political party systems in Thailand and that is important.

This is because, if the election system allows people to compete by pouring in money freely, with whoever having the most money having the greatest chance of winning, the government will not be able to watch things to ensure that money is spent strictly in accord with the laws that have been promulgated. Or if the political party system still allows political parties to be formed without considering whether there will be people to form a base, that is, whether there are people who support them in their bid for election to parliament, this will open up a loophole that will allow [people] to freely buy the votes of MPs. This will result in the people mistakenly thinking that the political party system is a matter that concerns the interests of just a few politicians in parliament.

It seems that the feeling, or idea, that elections are just a matter of fighting to see which candidate can throw in more money or that the establishment of a political party is a matter for investors is not confined to the general public only. Even some people who were once high-ranking administrative officials or scholars feel the same way.

For example, General Sitthi Chirarot, the former undersecretary of the Ministry of Defense and the present Minister of Interior, told a reporter during an interview that certain people had come and asked him to play politics openly, imploring him to join a political party. He refused immediately, saying that he was not really interested in politics and that he was not financialy or personally ready since playing politics requires much money.

Another case is that of Mr Kramon Thongthammachat, the dean of the Faculty of Political Science at Chulalongkorn University. He told a reporter that several political groups, such as the Social Action, Prachatipat and Chart Thai parties had asked him to join them. And in particular, the New Force Party invited him to become the head of the party. But he told them that he was not ready since he did not have enough money. To campaign for MP, a person needs to have at least 200,000 to 300,000 baht.

When high-ranking government officials, who are considered by the people in general to have a good [economic] position, feel that they are not prepared to engage in politics, I feel that this is something that is really worth thinking about because if most people feel like this, in the future the only people who will engage in politics in Thailand will be the millionaires and capitalists since the good people who have knowledge and talent will not dare to come forward to serve the country politically. If they do get elected they will lack money. Otherwise, they have to rely on help from capitalists and carry out their duties in a way that fulfills the desires or needs of the capitalists who support the various political parties rather than considering the interests or troubles of the poor people, who form the majority of the people in the country.

As for the capitalists or wealthy people who have formed political parties with the intention of dedicating their lives and sacrificing their wealth and energies to promoting a correct political party system of government and democracy, if people contine to be allowed to use money as a tool in elections or to compete with each other using their financial strength rather than competing with each other with policies and ideals and do not help find a way to stop or prevent this beginning now, those who think about engaging in politics in order to serve the people honestly or who do not think about forming a political party for their own personal interests will all feel like withdrawing or become discouraged. Otherwise, they may have to change their thinking about playing politics and instead think about seeking profits in order to save money to compete in the next election.

If the various political parties think in this way, disaster will certainly befall the democratic system. And when this happens, the only two systems of government that the Thai people will have to choose between will be a

military dictatorship or a communist dictatorship. Will we allow this to happen without thinking about how to prevent it?

Editorial Cites Criminal Ties

Bangkok MATICHON in Thai 22 Jan 82 p 4

[Editorial: "The Price of Politics"]

[Text] The House of Representatives is an important institution in a democratic system of government. The MPs are considered to be the legal representatives of the people. If the House of Representatives is composed of MPs who are moral, knowledgeable and capable people, this will be one guarantee that the interests of the people will be upheld and a significant force for developing democracy.But if the House of Representatives is composed of poor quality people, it will be like a dangerous virus that will kill the people and destroy democracy in a very cold-blooded way. Recently, there have continually been scandalous news reports about a number of MPs. Concerning these bad stories, the newspapers have not intentionally created them as if they had evil intentions. Rather, these stories came about because of the actions of the MPs themselves. Regardless of whether they were involved in gambling or conspiracies with "godfathers," actued likd "godfathers" themselves or even sold themselves for large sums of money, the activities of such politicians have nothing to do with the interests of the nation. This matter has greatly tarnished the image of the MPs and clearly allows people to see that these people are in no sense representatives of the great majority of people. Rather, they have stumbled into the mire of being the tools of a few merchants and investors.

These days, probably no one would deny that politics is a matter of interests. But the thing that is worrisome is whether these interests are sought on behalf of the majority or on behalf of a few people who have gained the advantage. According to the ideals of the democratic system, the House of Representatives should represent the majority of the people. But the real situation is that our political system, particularly the laxness concerning political laws and the lack of pure and sincere ideas for the people, has caused a number of MPs to use this honorable institution for their own interests. They have allowed themselves to become like "oxen" that have been yoked with the rope of money and immediate gains.

Concerning the candition of the politicians, a condition that has become well known because of their fighting among themselves using illegal powers, their involvement in gambling, their selling themselves to the highest bidder and so on, even though only a tiny number of MPs are involved as compared with the number of MPs in parliament, these disgraceful actions reflect the strange political situation in Thailand. This stems from the fact that development has not been even and the country has long been under the dark shadow of a dictatorship. The common duty of those with good intentions toward the country is to try to nurture the existing atmosphere of "half" democracy. At the same time, they must fight so that this system develops and becomes a perfect democracy and resolutely prevent people from taking this opportunity and using these weaknesses to destroy [democracy] before its time.

NARONG KITTIKHACHON INTERVIEWED ON MILITARY AFFAIRS, PERSONALITIES

Bangkok KHAO CHATURAT in Thai 8 Feb 82 pp 24-28

[Interview with Colonel Narong Kittikhachon by "Chaturat" at his home on 21 January 1982]

[Text] As for this retired officer, it is not necessary to discuss his past in any detail. If anything is to be reviewed, it can be said that if the events of that day [14 October 1973] had not happened and, certainly, if nothing had happened after that and he had risen in rank at the normal rate of a step each year, Colonel Narong Kittikhachon would now be a lieutenant general. But this officer would not have risen in rank at the rate of only one step a year. That is, Narong Kittikhachon would have reached the rank of general 3 or 4 years ago.

There have not been very many major stories since the time he failed in his bid for election as MP from Muang Phet in 1979. But this is not the case for deeper stories. At present, Colonel Narong has become deeply involved in business circles but his desire to step into the political arena still smolders and is growing stronger all the time. What is important with the present situation in the army is that Colonel Narong is still highly respected by many powerful people.

"Chaturat" talked with Colonel Narong at his home on Sukhothai [Road], which is the same area where Field Marshal Praphat Charusathien lives, on 21 January 1982. Even though he has reached an age at which traces of grey can now be seen in his black hair, this retired colonel is still tough, which is reflected in his strong remarks. The following conversation was transcribed word by word from a tape recording.

The Military Must Have Greater Power Than It Now Has

Chaturat: I would like to discuss the military. At present, what is your opinion about the Royal Thai Army?

Narong: If we look at the army at present, speaking frankly, as a person who was a soldier for a long time, I am not too happy with things because

the officers have split into different groups. This has never happened before in the army. If the army is split into factions, how can it function as an army? I am worried about this. I hope that the present high-ranking commanders can solve this problem. But I do not know whether they have started to solve this problem or not.

[Question] This problem did not exist in your time?

[Answer] No.

[Question] If you still had power in the army and such a situation occurred, that is, there was a lack of unity in the army, to solve this problem, where would you begin and how would you solve the problem?

[Answer] We must find out what the disagreements are about. If these conflicts concern the work system in the army, we should call in the leaders of the various factions and create understanding. After they have been made to understand, they will stop separating into factions. But as far as I can tell, at present, political problems are greatly involved. Our soldiers have been involved in politics for a long time. These soldiers...later on most of them give up politics. Most soldiers want to stop playing politics but some groups still want to get involved. And some say that.... Concerning the various groups that have conflicts, I think that this concerns positions and duties. Those who do not get [the position they want], feel hurt and they are jealous when they see others advancing quickly. And so they split away and form their own group in order to have a bargaining point. They use politics as a tool in the army. I do not think that this is right.

[Question] But politics and the military cannot be separated because the military is one part of society.

[Answer] They cannot be separated. But, the soldiers will play politics...soldiers can play politics; they cannot be criticized for this. But they must play according to [the rules of] the game. They should play as a large group; for example, the entire army should have a single political path. This will make the army secure and there will be great unity in the army. The military will have greater bargaining power with the government than it does at present.

[Question] Does this mean that the military will have greater power than at present?

[Answer] Yes.

[Question] If it is not possible to have everyone in the army think the same way, with some groups being conservatives and others liberals, this will make it impossible for them to join together. What can be done about this problem?

[Answer] We must try to join together. We must try to adjust the thinking of each person so that there is unanimity. This can be done; it is not impossible. Except, there are intractable people who have gotten so far off the path that they cannot be recalled. They should be cut off and not kept.

[Question] But at present the military has great bargaining power with the government -- even greater [than that of the government].

[Answer] I do not think that one has much more than the other at present. The government has power. If soldiers are troublemakers and cause trouble, they can be discharged. The matter of bargaining between the military and the government has existed for a long time. But at present, we feel that it would not be good if the military gets too involved in politics or threatens or causes too much trouble for the government. This would make it impossible for the government to do its job, and the military itself would not be able to do anything. People will not be able to do anything. That is, at present, the military has many tasks concerning national defense -- more tasks than at any previous time. Therefore, if the military gets too involved in politics, I feel that it will fail to carry out its main duty.

[Question] Does this mean that what you said about bargaining between the military and the government....

[Answer] This still exists. There is still bargaining. Bargaining, bargaining power between the army and the government still exists. But I feel that, at present, the military has not used all its strength in bargaining with the government, and I feel that it has done the correct thing. It must consider its main duty first. If the situation in the country quiets down, the military can turn its attention to politics and no one will say anything.

[Question] Does this mean that, at present, under the system of semi-democracy, we will clearly split into groups or that there will be a split between the military and the government? Because, there are now people from the military in the cabinet.

[Answer] Those people are reservists. Who said regular soldiers? There are no regular soldiers [in the cabinet].

[Question] Concerning General Athit, it is said that the path taken by General Athit and his thinking are very similar to that of Field Marshal Sarit.

[Answer] I do not think they are very similar. The situation in the country is different. The era of Field Marshal Sarit was very different from today. During the period of Field Marshal Sarit, when he came to power, he first solved the economic problems. He was able to do this because he received full cooperation from the army and from various politicians. Even scholars gave him good cooperation. As for our scholars today, when they are asked to help carry out the work, from what I have seen, very few, very few, work very hard. Scholars during the time of Field Marshal Sarit gave completely of themselves and worked very hard.

[Question] Have you ever met General Athit?

[Answer] We have met many times. Usually we talk about ordinary matters. We have never discussed politics.

[Question] You have never discussed anything?

[Answer] No! No! No! When we meet, we say hello and chat about ordinary matters. We do not discuss matters concerning work.

[Question] Concerning Major General chawalit, what are your views about him?

[Answer] Chawalit is a good officer. We once worked together in Vietnam. He is a good worker and is fully dedicated to his work. He is a person who listens to the reasons of all sides. He is reasonable and is willing to listen to all sides. If he stays like this, his military future will be very bright.

[Question] Will he become the commander in chief of the army?

[Answer] If nothing changes, I think that he has a chance to become the commander in chief of the army in the future.

[Question] There has been much criticism that the army is a great source of corruption. Is this true?

[Answer] How can people say that! I think it is almost impossible to engage in corruption in the army. I was in the army for more than 10 years and I never found a way that people could engage in corruption. I do not know how money could be squeezed from the soldiers.

[Question] I am referring to the purchase of weapons and even the maintenance and building of such items.

[Answer] That may be. But there is no definite proof of this. We cannot say anything for sure. I was never involved with this.

Politics, Let Me Join the Parade Too

[Question] Concerning politics, at present, what preparations have been made?

[Answer] As for politics, at present we are trying to make contact with the leaders of various parties. And we are looking at political methods to see what effects they have and how effective they are. In particular, we are interested in seeing what the form of the political parties law will be. At present, we cannot decide for sure what path we will take. This law has not yet been promulgated.

[Question] When you said "what path we will take," does this mean that you are considering forming your own party or joining another party?

[Answer] As for forming my own party, this presents problems and is not possible at this time. I want to state directly that this is not possible at present. But I do not know about later on. In this initial period, if the political parties law is enacted, we must determine which party has policies that are compatible with ours. If the policies of some party are similar to our thinking, we may join that party.

[Question] Speaking as frankly as possible, at present, on what standpoint are your political views based?

[Answer] At present, few political parties have a definite standpoint. Few have definitely chosen whether to play the political game in a really democratic way or only semi democratically. My present standpoint is that we would like to build a democracy. We must have a strong democracy. Everything will come from elections if things are done that way. The present system is no good and is of no use. We can see that this half democracy has benefited the country very little, especially in the economic sector, as everyone has seen.

[Question] What is your view of the present political parties and party leaders, such as General Kriangsak, Colonal Thanat and Mom Kukrit?

[Answer] As for these party leaders, I think that they are all talented people. But how much talent there is depends on their teams. General Kriangsak, for example, is a talented person but the party members.... As for selecting people to join this party, he should select representatives who are honest. This would make this party strong.

[Question] Does this mean that the present [members] are not honest?

[Answer] It is well known that many of them are not.

[Question] From what you have seen, which party could you get along with the best?

[Answer] At present, as for what I have seen, I have not looked at the policies of other parties. But from what I have seen, I think I could get along with the party of Mr Samak.

An Economy Like This Must Be Eliminated

[Question] Suppose that in the next 10 years you enter the political arena and become prime minister, what is the first problem that you would tackle and how would you go about solving it?

[Answer] If we were responsible for national affairs, the first thing that we would have to give attention to is the country's economy and the poverty of the people. This is something that everyone is talking about but nothing has been accomplished. As for improving the economy, as I said, the first step is to ask for cooperation from the various capitalists and take an interest in the middle echelon merchants, especially those in the rural areas. These

middle echelon merchants in the rural areas are the ones who will help the farmers directly. We must first turn to the middle echelon merchants in the rural areas and support them. But they must not be allowed to take advantage of the farmers; they must help each other. This will help improve the rate of currency circultation in the provinces. When the currency circulation rate in the provinces has improved, the farmers will be able to get along.

[Question] If the big investors did not cooperate, what measures would you take?

[Answer] We would apply pressure. We have laws. We would not use power or anything [like that]. The laws could be used as a tool to inspect things. In the banks, the officials of the national bank could be used to inspect things and to determine for what and to which groups credit should be given. Is it fair to use the people's money and circulate it within their groups? Is this correct? We could inspect things using the laws as a tool. We would not have to use power as a tool.

[Question] And if using the laws failed?

[Answer] If using the laws and other things failed, why couldn't the government take control of the banks and operate them itself?

[Question] But these economic problems that cannot be solved stem from the fact that the economic situation throughout the world has deteriorated.

[Answer] We should not talk like that. Do not blame things on the world economic situation. This cannot be blamed. Thailand, for example....Suppose that various goods here are expensive. Shouldn't the government do something? The goods that we export are sold at high prices so that the merchants will make a profit. Can they be made to agree to take a loss by selling to the Thai people? When I was in government service, I did this. Take rice, for example. When I was working, the price of rice reached 40 baht. People all around the country complained. Every newspaper unspairingly attacked the government for being unable to control rice prices. The government entrusted me with the task of handling this matter. I did the job. I did this by forcing the world market price for rice higher and getting the merchants to take losses in Thailand. Rice was sold at 35 baht per tang [1 tang equals 20 liters]. But the government must help the merchants. At that time, there was a quota on rice exports. But the government had to help them find markets. I gave them permission to export one bag for every two bags that they placed in reserve with the government. And the government sold this rice to the people at low prices.

[Question] But now the merchants are unhappy about the reserve rice matter.

[Answer] As for reserve rice, there are complaints because the government has not given them any help concerning world market prices. Prices on world markets have fallen. Prices for Thai rice on world markets are lower than when I was working. If the world economy puts pressure on the economy of Thailand, prices on world markets will rise. But we are now selling rice

at prices that are lower than when I was working and so how can the world economy put pressure on the country's economy?

[Question] Because world rice production exceeds demand, export markets are limited and this has caused prices to fall.

[Answer] However, regardless of how mcuh rice is produced in the world, Thai rice is still popular throughout the world. And there are also many other things that we could make profits from but we are not doing so. Take ore, for example. We should have built our own smelting plants in the very begninning and taken very stern action against ore smuggling. Whoever smuggled ore out of the country should have been branded as a tritor to the counrty and shot. That would have made them afraid.

[Question] Does this mean that at the present time it is still necessary to execute people?

[Answer] In some cases if they involve undermining the country. In order to solve the economic problems, this must be done. This must be done.

[Question] Is it still necessary to take control of the banks?

[Answer] Yes. Aren't we going to solve the problems together? If they cooperate, we do not need to take action, but if they do not cooperate, this is necessary. At present, how much have we lost? During that period, all the newspapers and even Mom Kukrit himself attacked the government for selling out the country to the Temko Corporation. At that time, our government signed a contract with the Temko Corporation to mine ore in the south. We received 90 billion baht a year from Temko. What do we receive now from ore mining? Different groups are engaged in mining operations but the government does not get anything.

[Question] Speaking about capitalists, would you comment on Mr Bunchu Rotchanasthien?

[Answer] As for Mr Bunchu, there are many things to criticize. I do not understand how he implemented his policies. But concerning what he did.... He joined the government several times. I think he helped ruin the country's economy. He spent the government's money and now there is none left. And nothing was achieved in return. If he had used that money and made gains in return, this would have been of benefit to everyone and things would have improved later on. Take his policy of turning over money to the rural areas. I do not agree with this policy at all. What can be gained by giving 100,000 baht here and 50,000 baht there? Some laterite can be purchased to fill in the roads but when it rains the laterite will disappear and so will the 50,000 baht. Nothing will have been gained. But if we put all this money together we will have 100 million baht which can be used to build a new road or to develop the districts one by one. We can do this each year. By doing this, I think that in 20-30 years the rural districts would be more prosperous. Things would be better than at present. Thus, concerning the activities of Mr Bunchu, he hoped to benefit the people in the rural areas so they would have jobs. But

concerning people having jobs, did these activities help the majority? And were there any lasting benefits? We must consider every aspect. As for finding work for people, I do not think that this is difficult. It is not necessary to give money to the villages and let them spend this money. We have several programs that provide jobs for rural people and they receive money too. Isn't that true? It depends on the methods used. As for the economic and financial fronts, Mr Bunchu did not solve any of the problems. Capitalists are still capitalists.

Personally, Students Were Not Involved

[Question] I would like to turn to the past. That is, suppose that at present you still held a position in the army. If events such as those of 14 October 1973 occurred, how would you solve the problem or how would you let the problem unfold in order to be the victor?

[Answer] Our winning depends on many factors. Take 14 October, for example, If we had taken strong measures and used real force and real ammunition, we certainly would have won. But people would have been killed. This is not good. It should not be done. If at present...if such a thing happened again, I think that the best thing to do would be to discuss things with each other. Violence cannot be used. Nothing will be gained by using violence; there will only be losses, losses for all sides.

[Question] At that time, did you consider negotiating?

[Answer] We did negotiate (high voice).

[Question] But?

[Answer] There was a "third hand" involved.

[Question] Can you talk about this?

[Answer] I negotiated. At that time, everything had been settled. But a "third hand" interferred and brought in forces to cause trouble and played with both sides, the students and the military. This caused a misunderstanding and trouble broke out again. Actually, on 13 October an agreement had been reached. The students were breaking up. But the "third hand" got involved and would not let things stop. If things had stopped...the three of us would not have been ousted.

[Question] You were not aware of this beforehand?

[Answer] Yes, I was. I knew this all the time.

[Question] Couldn't you have done something in defense?

[Answer] My hands were tied. I could not do anything. I could not find a way to solve this problem.

[Question] What do you mean when you say your hands were tied?

[Answer] There were various pressures on me to do nothing.

[Question] Can you tell us who this "third hand" was?

[Answer] It was people who controlled some forces, but not the main forces of the army. They brought their forces in, with some dressed as students and some as soldiers. They did things to implicate both the students and the soldiers and to cause a misunderstanding so that the matter would continue. For example, the burning of the metropolitan police station was not the work of the students. This was the work of the "third hand."

[Question] Can you tell us who you were most angry at?

[Answer] There were many people. Many. There were those who had worked with us closely and then betrayed us. That was very painful.

[Question] Can't you forgive them?

[Answer] It is difficult...difficult.

[Question] This did not invovle the students?

[Answer] No. The students were only their tool. They were only a tool of our people who betrayed us. The students were not involved. They were only a tool. Thus, we cannot blame the students. And we were not forced to leave the country that time by the students but by memebers of our own group who had betgrayed us and who used the students as a tool.

[Question] Can you tell us who some of these people were?

[Answer] Some are dead now. Some are still alive. It would be better not to give names. But everyone knows who they are. Even in the military, it is known who they are.

[Question] I have asked about the events of 14 October 1973. I would now like to turn to the events of 6 October 1976. Because of the events of 14 October, you were forced to leave the country. When the students wwere suppressed on 6 October, did this give you personal satisfaction? I would like to ask this frankly.

[Answer] I did not feel anything. I did not derive any pleasure from what the Reform Council did. I do not know for sure what the students did. If they used force, what the government did was proper. But concerning this, I do not want to discuss this very much. I do not know what happened.

[Question] As for your property that was sequestered, at present are you still appealing for it to be returned to you?

[Answer] We have proceeded with this matter and asked for justice. During the time of the 1976 Reform government, a committee was formed to consider this matter. Finally, it was decided that the committee would issue a resolution that [our property] would be returned. But the government held back the matter and would not present it to parliament. Because this was something that had to be brought up in parliament. The next government established another committee and this committee too issued a resolution calling for the property to be returned. And again the government suppressed the matter. Now, the present committee has issued a resolution calling for our property to be returned but nothing has been done. They are still suppressing the matter.

[Question] Haven't you protested?

[Answer] We have protested continually. Things are like this. They have not done anything. You can write petitions until your fingers break but they do not do anything.

[Question] How much was sequestered?

[Answer] Everything! The house too. I am living in a house provided by the government. I think that if people such as we are treated unfairly, what chance is there that the little people will receive justice.

MUTUAL BENEFITS, CONFLICTS IN TRADE WITH LAOS NOTED

Bangkok KHAO CHATURAT in Thai 9 Jan 82 pp 6-12

[Article: "The Kip 'Barrier'"]

[Text] Who can deny that Laos, which is a natural market for Thailand and which is a market that Thailand has always had a favorable trade balance with, is in an alarming state of decline. Even though Thailand and Laos still have diplomatic relations with each other, even though transportation is very convenient as compared with other markets and even though Laos still clings to Thailand for carrying on everday life at present, during the first 6 months of 1981, the value of trade between Thailand and Laos declined more than 50 percent as compared with the same period in 1980, including Vietnam and Kampuchea too.

Kampuchea, the Black Market Seizes Power

Even though trade contacts between Thailand and Kampuchea are, as is well known, mostly in the form of "black market" contacts, the reduced value of the official trade [between the two countries] on which the government can collect customs tax is a clear indication of the dismal state of this market.

Kampuchea has problems concerning shortages of almost all types of consumer goods resulting from the confusion caused by the political games being played in that country. But the value of trade between Thailand the Kampuchea has not increased in accord with market needs; just the reverse is true. Thai markets here are depressed. During the first 6 months of 1981, the value of Thailand's trade with Kampuchea reached only 98.9 million baht. This is down 63.9 percent as compared with the same period in 1980, when the value of trade reached 273.9 million baht.

Of this amount, almost all, or 98.8 million baht, was exports.

Thus, during the first 6 months of last year, Thailand had a 98.7 million baht trade surplus with Kampuchea. This is down as compared with the same period in 1980 when Thailand had a 273.9 million baht trade surplus. This is a decline of 64 percent, or 175.2 million baht.

Full of Fighting or So Full of Hate That They Will Not Sell

As for Vietnam, things are even worse. During the first 6 months of 1981, the value of trade between Thailand and Vietnam reached only 3 million baht. This is a drop of 98.8 percent as compared with the same period in 1980. That is, trade fell from 249.7 million baht. This entire 3 million baht is a trade surplus since goods were not imported from Vietnam in any quantity that need to be included in the statistics. At the same time, this trade surplus is very little as compared with that of the same period last [year] when the surplus was 236.1 million baht. That is, the trade surplus declined 98.7 percent, or 233.1 million baht.

Considering exports during the first 6 months of 1980, Thailand was able to export goods worth 249.7 million baht to Vietnam. As compared with exports of only 3 million baht during the first 6 months of 1981, the value of exports fell 98.8 percent, or 246.7 million baht. This happened even though Vietnam is a country that must import large quantities of raw materials, clothing and food.

The Mekong River Border, the Kip "Barrier"

The answer given by officials of the Lao People's Democratic Republic to Thai merchants is the same. As for the question of "why the value of trade between Thailand and Laos during the first 6 months of 1981 fell more than 50 percent," the answer given was that "this is because the border was closed." Concerning the agreement that was concluded between Thailand and Laos during the time General Kriansak Chamanan was prime minister, the Thai government gave permission to open eight points along the Mekong River, but because of political changes, six of the eight points were closed and contact between the two sides was prohibited. The Thai government of General Prem Tinsulanon recently gave permission to open a third point at Mukdahan when Mr Phoun Sipaseut, the Lao deputy prime minister and minister of foreign affairs, visited Thailand on 2 December.

Both Thai and Lao officials are well aware that, until recently, trade between Thailand and Laos improved continually and that Laos is one market with which Thailand has always been able to have a trade surplus. But during the first 6 months of 1981, the graph that had constantly gone up began to change directions and fell sharply.

During the first 6 months of 1980, the value of imports and exports between Thailand and Laos reached 642.8 million baht. But during the same period in 1981, the value of trade fell to only 240.1 million baht, a drop of 402.7 million baht or 62.6 percent.

At the same time, the value of exports fell from that in 1980. In 1980, goods worth 610.6 million baht were exported but this fell to only 235.5 million baht, a drop of 61.4 percent. And the trade surplus fell from 578.4 million baht to 230.9 million baht.

Laos-Thailand, How Can They Trade With Each Other

As for the Thai merchants who can contact their Lao customers, besides having to use the transport services of the Express Transportation Organization of Thailand, which is the only transportation organization that the Thai government allows to transport goods to Vientiane, and besides having to deposit 100,000 baht with the Department of Foreign Trade as a guarantee, an important condition after they have received permission from the Department of Foreign Trade to trade with the LPDR Import-Export Company is that they must obey the following regulations of the Department of Foreign Trade that were issued on 25 June 1981:

1. Payments must be made only through the Thai Metropolitan Bank Ltd. Establishing a letter of credit (LC) of the non-withdrawal type is not permitted unless approval is obtained on a case-by-case basis.

2. Reports on trade with the LPDR must be sent to the Department of Foreign Trade by the 10th of each month.

3. In cases in which the goods delivered during any one month have a total value in excess of 500,000 baht, a guarantee for the amount over 500,000 baht must be posted at a rate of 20 percent [of the excess].

4. Those who have received permission to trade with the LPDR must submit [a letter stating] their desire to extend their period as an approved trader between 15 November and 15 December every year.

What Is the Reason?

"The other side intends and greatly wants to trade with us, but there has been much interference from our regulations and methods," said a Thai merchant who had switched from being a scholar to being a trader with Laos to Chaturat. His statement was a criticism of the Department of Foreign Trade's regulations on trading with the LPDR.

This merchant pointed out that there are many problems in trading with Laos. If a merchant is doing business with another country, he can contact and use the services of any bank. But in the case of Laos, the regulations force merchants to use the services of the Thai Metropolitan Bank only. "The Thai Metropolitan Bank makes us put up a deposit equal to the full amount of the purchase each time." And when the value of the goods exceeds 500,000 baht, the traders must put up a deposit equal to 20 percent of the excess amount as a guarantee. This is a very troublesome matter concerning which there has been many complaints. "Look, if we ship goods worth 2 million baht, for the excess 1.5 million baht we have to put up 300,000 baht as a guarantee before we can ship the goods."

Besides these regulations, which point out that a person who wants to trade with Laos must have a very secure financial position, concerning the Department

of Foreign Trade's regulations, which the merchants view as "irrational," there is another factor and that concerns having to send a monthly report to the Department of Foreign Trade. The merchants feel that the regulation forcing them to deal only with the Thai Metropolitan Bank makes it convenient for the Department of Foreign Trade to obtain the data it needs. It is not necessary to make the merchants go to the trouble of making another report. But officials of the Department of Foreign Trade feel that submitting this monthly report is not any trouble and that it should be done to facilitate things in trading with countries that have political problems. However, any merchant who fails to submit this report will immediately be prohibited from trading with Laos for 6 months.

Concerning the matter of the Department of Foreign Trade allowing merchants to use the services of the Thai Metropolitan Bank only, it appears that merchants once joined together and requested permission to use the services of other commercial banks. The Thai Metropolitan Bank was enthusiastic about this request and agreed with the merchants, and the Department of Foreign Trade said that it would revise the regulations and improve services in order to make things easier. "But, to date, nothing has changed," said a young graduate in engineering from Chulalongkorn University who is the manager of a company that trades with Laos.

For most merchants, the thing that they are most apprehensive about with regard to trade with Laos is political change. This is because events in both countries can result in the immediate closing of the border and this has an unavoidable effect on business. In fact, even when letters of credit have been arranged and preparations for shipping the goods have been completed, when the border is closed, this means that the goods are left "dangling" indefinitely.

The Full Dimension, the Indochina Market

Concerning the three Indochina markets, even though the value of trade with Thailand is not very great as compared with Thailand's total value of trade, this is a market with which Thailand has always been able to have a trade surplus. Thus, the sudden drop in the value of trade in 1981 is not an unimportant matter.

If we consider Thailand's foreign trade statistics, we see that, during the past 5 years, Thailand's trade has always sufferred a trade deficit:

1980: deficit of 60,421.1 million baht.
1979: deficit of 37,982.3 million baht.
1978: deficit of 25,838.8 million baht.
1977: deficit of 22,978.9 million baht.
1976: deficit of 12,080.0 million baht.

The Trade deficit has increased ocntinually.

But at the same time, when we consider the value of trade, in which there was a trade surplus, with Indochina, we see that the figures have risen continually. Thus, without these markets with which we have a favorable balance of trade, our total trade deficit would be even higher than it is. In 1976, Thailand's trade surplus with Indochina reached 342.1 million baht; in 1977, the trade surplus reached 481.8 million baht; in 1978, 532.8 million baht; in 1979, 1,188.1 million baht and in 1980, 1,764 million baht. If this is compared with Thailand's trade deficit, it can clearly be seen that this trade surplus with Indochina is not insignificant.

As for those who say that the value of trade with Indochina fell during the first 6 months of 1981 because of "black market" smuggling, which is impossible to record, if we consider the reverse side, it can be seen that this is very difficult to stop and that it is impossible to forbid countries that share a common border from trading with each other, even if they do have different political systems. Thus, establishing trade relations that recognize the actual situation is the best way out for exporting goods and collecting customs taxes in accord with the law.

Concerning the issue of trade with Laos, certainly, if relations were smooth, it would be possible to open all eight trading points along the Mekong River border. And if there was a proper relationship between politics and trade, the Thai traders would be able to distribute their goods easily. From a survey made in 1976, it was learned that closing the border had caused trade in the towns along the Thai bank of the Mekong River to decrease 78 percent. These towns include Nong Khai, Phibun Mangsahan, Mukdahan, Chiang Khan, Bungkan and Thauthen. There was a regular trade in consumer goods when relations with Laos were good.

At the same time, Thailand is the most important customer of Laos. More than 50 percent of the goods exported by Laos are exported to Thailand. Most of the goods exported are raw materials, which are things needed by Thailand. And being able to sell goods means that they in turn will have purchasing power to purchase Thai goods.

A 1981 year-end report on the economic situation in Laos, which is well known among the Asean countries, pointed out that the amount of timber that Laos will export to Thailand will not decline. This is because only 40 of the 80 sawmills in Laos are able to operate and industry in Laos has not developed very much. There is still a shortage of essential raw materials and there is not enough equipment and parts. Also, they still lack really skilled people. This situation has resulted in Laos being able to hit only 20 percent of its stipulated production targets. This means that there is still a great need for manufactured goods from Thailand and this is a basic need.

Economic Laws and Political Games

Some things indicate that, concerning promoting trade with Laos or the other countries of Indochina, few of the long-term benefits from this will fall to Thailand. This is because this will only help these countries develop at a faster pace. But other things indicate the reverse. Even though the political differences are so great that it will not be possible to agree on everything, the black market trade is thriving and these countries will definitely not wait for death. There will be a struggle and relations between Thailand and these countries will expand. The present situation confronting us is not so bad that we cannot be friends. Thus, there is certainly a way out that can benefit the people of both sides.

But there are also some things that have begun to generate understanding from the point that when politics controls trade, trade should have some part in controlling politics. Trade relations between Thailand and Laos will help strengthen relations and our mutual distrust of each other will disappear.

U.S. Assistant Secretary for East Asian and Pacific Affairs John H Holdridge told the Subcommittee for Asian and Pacific Affairs of the House Foreign Affairs Committee on 22 October 1981 that the "economic survival of Laos depends on [its] compromising with Thailand. Having relations with Thailand, which is a fraternal country, will separate Vientiane from Hanoi somewhat."

Nonsense!

Prachak Comments

"The markets that we must look to are the nearby countries, that is, the Indochinese markets. This will reduce the tension, reduce the political conflicts and enable us to sell our goods. Tying ourselves to the great powers without considering our national interests will make it impossible for us to solve our economic problems. The economic system must be separated from politics and international affairs. As for those great powers that do not want Thailand to establish ties with the countries of Indochina, I do not want to say the obvious. They fear that, if we open markets in Laos, we will later do so in Vietnam and Kampuchea and that this will strengthen relations between us and the countries of Indochina. They want Thailand to close the country and to not trade with Laos, which will cause the countries of Indochina to experience problems that they cannot solve. They want to isolate Thailand from indochina. As for Thailand, whatever we do, we must consider our national interests and not fall under the influence of the United States or China." Colonel Prachak Sawangchit made this statement to "Chaturat" on Sunday morning, 27 December 1981.

[Interview with] Samrit Phrompricha

Chaturat: First of all, would your give us your views on the closing of the border?

Samrit: Concerning the closing of the border, besides disturbing relations between the two countries, this will also harm trade between the two countries. As for exporting goods from Laos to Thailand or to other countries through Thailand, this will increase export costs because shipping costs will increase. For example, there is much timber in southern Laos. If for example, it must be shipped from Champassak Province, which is opposite the Thai province of Ubon Ratchathani, north to Vientiane and then shipped by way of Nong Khai, think how much shipping costs will increase. This will cause our income to decrease and we will not be able to export very much. This will affect the purchasing power of Laos and make it impossible for Laos to purchase Thai goods. And Thailand will not be able to sell the goods it has produced. It can be seen that, during the first 6 months of 1981, after the border was closed, Thai exports to Laos declined greatly. I think that if our relations are good and there are things we can agree on, we will be able to trade together. This will help improve our trade and the volume of trade will increase.

[Question] What are the most important factors for trade relations between the two countries? Or stated differently, what have been the points that are still problems?

[Answer] Concerning the necessary factors for greatly improving relations between our countries, one thing is that some of the goods in the controlled category should be reconsidered to see what we are really in need of. It should not be thought that we will obtain these things for the military. This delays things when we need items. And we are prohibited [from buying] some things entirely and this delays our various plans or projects and affects the interests of the nation. The important thing is that it should not be thought that we will use these goods for the military. For example, we asked to purchase a small quantity of steel plating for use in industrial plants. Our plans called for construction to start then but we could not begin construction and this caused other work to fall behind too. I would like to give another example. Take the case of the medicines. It took a long time for a small amount of medicine, which a progressive organization in the capitalist world helped us with for humanitarian reasons, to arrive. The needs of a sick person are of a limited nature. Suppose that a medicine is needed within the next 10 days for a person who has been sick for 2 or 3 days already. If it takes more than 10 days for the medicine to arrive, the patient may die or this disease may spread, which would affect us. This would be one factor that would help improve relations. This means that we must not persecute each other and must be understanding concerning what is urgent and what is not and concerning what things will be used for. This is how things must be understood if we are really to be called brothers.

[Question] Are there any problems concerning transportation or the collection of border transit taxes?

[Answer] We have discussed this. Laos has submitted proposals to Thailand many times concerning the border transit matter. It is felt that the transit fees are higher than they should be. And concerning some goods that have to be transported across the border, even though we want them for construction and post-war economic development projects, Thailand feels that we want these goods for the military and so they are not allowed to pass and are left behind for a year or more. Think how our projects have been delayed by this and what effects this has had on our country, which wants to live as a friendly neighbor in this region.

[Question] Would you give an example of goods that have been stranded for a year?

[Answer] There is the case of the equipment that was shipped across the border last year, equipment that was sent by the Soviet Union to support Ministry of Agriculture and Ministry of Information projects. These projects were in accord with development plans that the Escap Organization here approved and that it felt were necessary for Laos. The Soviet Union provided help in accord with the agreements between the two countries. The details of the agreement stated what goods were to be used by the Ministry of Public Health, what were to be used by the Ministry of Information and what by the Ministry of Agriculture. But Thailand probably thought that they would be used for military purposes and so they were held up for a year or more. Finally, they were released, with the exception of the oil. Concerning the oil, the Thai government will allow us to take only the oil; it will not allow us to take the drums. This would cause great difficulties and increase costs.

[Question] Where did this oil come from?

[Answer] This is oil provided by the Soviet Union in accord with the agreement mentioned above. More than 1,000, 1,032, drums have been left stranded. The Thai government will let us take only the oil. I do not know the reason for this. Most people do not know about this; you have to go to the port to find out.

[Question] At present what requests is Laos making in order to obtain the oil?
[Answer] We have asked that we be allowed to take both, both the oil and the drums.

[Question] But no agreement has been reached?

[Answer] It has been sitting there...for more than a year. There were more than 100 items that were allowed to pass, including steel, bridge construction materials and various other things. Our country is very mountainous and there are many streams. We used these materials for communications. Because concerning goods in the south, using rice as an example, there is a surplus in the south but it cannot be transported to Vientiane. It would be difficult to transport it there. But previously, for goods such as glutinous rice, sold through Thailand, the merchants took it and milled it and then resold it in Vientiane.

Some people have not told the truth and have spread propaganda. They say that this and that grade of oil will be used to operate tanks. As for the oil drums, it is said that they will be used to make grenades and other things. This is very amusing. How can such a small amount of oil be used for an invasion? As for these support projects, they have only that much building equipment, only that much oil and only this many vehicles. These things are used to help complete the projects quickly.

[Question] Mr Samrit, do you think that Thailand is a very important trade partner of Laos as compared with the countries in the socialist bloc?

[Answer] I think that the trade figures, as far as I know....For as long as I have been here, Thailand has been an important trading partner and there are some socialist countries that we have been trading with. But we have sovereign power to trade. No one can say, you must buy at such and such a price or that, while that person's prices are low and the quality is good, you do not have to buy from him. Buy only from me. That cannot be. We will buy those things that are cheap, that are delivered quickly and that suit our needs. For example, if Thai sugar costs 1,000 per ton while Cuban sugar costs 2,000 per ton, we will not buy [the Cuban sugar]. We will buy from where it is cheaper.

[Question] If such a situation continues, what do you think will happen to trade relations between Thailand and Laos?

[Answer] I do not think that the truth can be avoided. We have had relations for a long time. Closing [the border] or not allowing things to continue like this...this is impossible. There must be relations. It is essential for both sides that there be trade and contact with each other. This cannot be stopped. In the end, if the purchasing power of both sides increases, trade will improve too. What is produced here will be sold there. The raw materials there will be sold here. The purchasing power of both sides will increase, and trade will increase. If the border is closed, neither side will be able to sell anything and nothing will improve.

[Question] At present, what types of raw materials does Laos have that it can sell most easily to Thailand?

[Answer] At present, we have timber, both softwoods and hardwoods. And we have various types of herbs that Thailand wants. Sometimes, after being purchased, they are then exported elsewhere.

[Question] Concerning timber, at present, is Laos doing the cutting itself?

[Answer] Yes. We do some of the cutting. We have sawmills.

[Question] But you send only logs to Thailand.

[Answer] We send logs and hardwoods and softwoods that we have cut. At present, we are making contact and requesting that the border be opened...at Thamek temporarily.

[Question] Many people wonder why Laos wants to trade with Thailand when there are socialist countries, such as Vietnam and the Soviet Union, that will give aid.

[Answer] As I said, reality is like this. Our needs are like this. Concerning the goods that we need, we are free to choose the goods that we feel are attractive and that suit us. It is not a matter of forcing us to do anything. Socialism is not like that.

[Question] Does this mean that some of the things provided as aid by the socialist countries are not in line with your needs or preferences?

[Answer] There are certain things that our people do not like. They cannot use or eat certain things and do not want them. Take butter or other such items for example. The Lao people do not eat this type of food. This is their preference. Also, the Lao people do not like Soviet-style dresses. They prefer pha thung [simple skirts]. And shipping is more convenient.

[Question] As for trade with Thailand, does all of what you have said mean that trade relations have not reached a level that can be termed good?

[Answer] They are better...better. We understand each other better. But there are still certain groups that are causing trouble and that do not have good intentions toward relations. For example, it is inconvenient for us to transport rice from the south by truck. Transportation costs are high. When we ship it by boat, these people go and fire at the boats to cause trouble or they stop the boats and kill the people on board. They cause trouble because they want the border closed. They do not want large quantities of goods to cross the border from Thailand. But it is not we who are causing the trouble. We do not want to invade Thailand.

[Question] But viewed from another angle, when Laos is finally able to complete the various projects and agricultural production improves, this will cause trade between Thailand and Laos to decline. Isn't this so?

[Answer] We are not importing agricultural goods now. Please don't think that Laos lacks food. That is not true. We import goods that we cannot produce. Building materials, cement, steel plating, various items of clothing and all types of equipment, these are the types of manufactured goods that we import. Many people think that we import only agricultural goods. But in reality, trade figures show that we import only goods that we cannot produce. We import much clothing. You can go and see what types of Thai goods are at the markets in Vientiane. You will be proud if your country can produce and sell goods and so you should promote trade so trade improves. Even though we are a small market as compared with other countries, we are an important market.

A Comparison of Trade Between Thailand and Indochina From January-June 1981 and the Same Period in 1980 (millions of baht)

Country	Value of Exports and Imports									
	1981	1980	1981/1980 %	1981	%	1980	%	1981/1980 %	1981	%
Total:	184,082.1	161,901.0	-13.7	77,188.8	100.0	71,053.7	100.0	-8.6	106,839.3	100.0
Laos	240.1	642.8	-62.6	235.5	0.3	610.6	0.9	-61.4	4.6	0.0
Kampuchea	98.9	237.9	-63.9	98.8	0.1	273.9	0.4	-63.9	0.1	0.0
Vietnam	3.0	263.3	-98.9	3.0	0.0	249.7	0.4	-98.8	0.0	0.0

1980	%	1981/1980 %	1981	1980	1981	1980
90,847.3	100.0	-.17.6	-29,650.5	-19,793.6	-100.0	-100.0
32.2	0.0	-85.7	230.9	578.4

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

TURKISH TERRORIST GROUP BELIEVED OPERATING IN MELBOURNE

Perth THE WEST AUSTRALIAN in English 12 Jan 82 p 18

[Text]

MELBOURNE: Welfare workers believe that an international Turkish terrorist group is operating in Melbourne.

They say that the group, known internationally as the Grey Wolves, was responsible for a spate of fire bombings, shotgun blasts, smashed windows and death threats late last year.

The group is an extremist youth organisation aligned to the Turkish National Action Party, which was declared illegal last year.

It is believed that the underground group has called on small local organisations to recruit members and finance the party.

The welfare workers believe that there are about 50 "Wolves" operating in Melbourne and say that in the past year the group has moved offices several times.

Letters detailing terror tactics aimed at some Turkish community groups and their officials have been sent to Mr Peter Falconer, the MHR for Casey, and the Australian Railways Union.

The letters were passed on to the Minister for Immigration and Ethnic Affairs, Mr Macphee, who said that it was not an immigration matter.

The Richmond police confirmed yesterday that it was investigating attacks on an office of the Australian Turkish Cultural Association in Church Street, Richmond.

In April shots were fired through an office window and a fire bomb was thrown at the building.

Leaflets have been circulated in Melbourne promoting the aims of the Grey Wolves.

Part of the leaflet says: "This is a letter not to scare you; it is a letter to warn you because we have friends among us who have had their training in Nationalist China.

"These friends were in Sydney; now their duty is in Melbourne as a commander and a sergeant."

It is signed by the "army of Turks to free prisoner Turks."

BRIEFS

'GLOOMY' FORECASTS FOR UNEMPLOYMENT--There have been more gloomy forecasts on the prospects of Australia's unemployed. The prime minister, Mr Fraser, told newsmen in Canberra that he did not expect the rate of unemployment to fall this year. This was because of world economic conditions and moves for shorter hours and increased wages in Australia. In its monthly report on the economy, the National Bank has made a similar prediction. The bank also says there are growing doubts whether the present positive elements in the Australian economy--strong investments and steady consumer spending--can be sustained. [Text] [BK090951 Melbourne Overseas Service in English 0830 GMT 9 Mar 82]

THREAT TO BAN FRENCH GOODS--The Australian Council of Trade Unions has threatened to apply bans to French products unless France ends its underground nuclear testing program in the Pacific. President of the ACTU Mr Donlan said opposition to the nuclear program was growing steadily. Following the meeting in Melbourne of the Australia-New Zealand Trade Union Coordinating Council, Mr Dolan said trade union opposition would develop into bans on French goods if France did not agree to stop the nuclear tests. Trade unions in Australia banned French goods in 1973 to protest against French atmospheric nuclear tests in the Pacific. [Text] [BK160931 Melbourne Overseas Service in English 0830 GMT 16 Mar 82]

ECONOMIC TIES WITH NEW ZEALAND--The Federal Cabinet has decided to proceed with negotiations aimed at achieving closer economic relations between Australia and New Zealand. Radio Australia's Canberra office says the cabinet considers a submission from the Department of Trade and Resources on the talks that have already taken place between officials from both countries. Our office says the department has been asked to report on proposed extension to New Zealand's only steel mill which might mean a reduction in the amount of steel that Australia is able to sell New Zealand. Australian trade officials are to travel to Wellington later this month for a further round of talks. [Text] [BK160543 Melbourne Overseas Service in English 0500 GMT 16 Mar 82]

NORTHERN TERRITORY GAS FIELD--The Federal Government has given conditional approval for the development of the Palm Valley gas field in the northern territory. The project is foreign controlled with Magellan Petroleum of the United States holding an 81 percent interest in the field. Treasurer Howard said Australian equity in Palm Valley was about 34 percent. He said the government had approved the development provided Magellan and its Australian partners try to increase Australian equity and control to at least 50 percent

before January 1984. [Melbourne Overseas Service in English 0500 GMT 12 Mar 82 BK]

EEC'S SUGAR-DUMPING ATTACKED--The Federal Primary Industry minister, Mr Nixon, has renewed the government's attack on the European Economic Community for causing problems in the sugar industry. Mr Nixon was opening the annual sugar producers association conference in Brisbane. He said that unless sugar exports were brought under control there was a danger that the countries which had signed the International Sugar Agreement, including Australia, would continue to lose their share of the world market. The minister claimed that the EEC's sugar dumping was costing Australia between Australian $70 million and Australian $150 million a year, that's between $75 million and $125 million. Mr Nixon said there were now signs that the EEC would consider keeping to the International Sugar Agreement. However, if it is not then he hinted that the Federal Government might be prepared to retaliate in some way. [Text] [BK150956 Melbourne Overseas Service in English 0830 GMT 15 Mar 82]

LIBYA-ABORIGINE TERRORIST TRAINING--Information allegedly given to Queensland police says a group of six aborigines is to go to Libya to be trained in terror tactics that could be used to disrupt the Commonwealth games. Queensland Premier Mr Bjelke-Petersen made the disclosure today but he declined to give other details of the source of the information but said it was reliable. Mr Bjleke-Petersen said he told the prime minister of the report now 2 months old. He said police were now investigating a number of allegations. The chairman of the Queensland branch of the National Aboriginal Conference described the claim as rubbish. Mr Steve Mam says the claim was designed to stir people up. [Text] [BK101016 Melbourne Overseas Service in English 0830 GMT 10 Mar 82]

TRADE TALKS WITH NEW ZEALAND--New Zealand has called for an acceleration of talks on closer trading links with Australia. New Zealand's trade and industry Minister Templeton, who is in Canberra for talks on trade, said any substantial delay in the talks could harm the final agreement. Mr Templeton said officials from both countries would meet next month and it was hoped they would prepare a draft agreement for New Zealand Prime Minister Muldoon and Mr Fraser to sign in June. The New Zealand minister said import licensing in New Zealand would gradually disappear giving Australia a preferred position in the New Zealand market. [Text] [BK101014 Melbourne Overseas Service in English 0830 GMT 10 Mar 82]

DELAY IN NEW ZEALAND ECONOMIC PACT--New Zealand's prime minister, Mr Muldoon, says political uncertainty in Australia will probably mean a delay in negotiations on the proposed closer economic relations between the two countries. Speaking in Wellington, Mr Muldoon said it now appeared that the signing of a closer economic relations agreement, which was due to take place in June with Australia's Prime Minister Mr Fraser, could be postponed until September or October. Mr Muldoon said he was disappointed about the probable delay, but he could understand the Australian position. He said he still hoped the agreement could become effective as planned on 1 January next year. [Text] [BK121146 Melbourne Overseas Service in English 0830 GMT 12 Mar 82]

JAPANESE LOAN FOR GAS PROJECT--The syndicate of Japanese banks and insurance companies led by the Bank of Tokyo has signed a loan agreement to provide $108 million for western Australia's natural gas pipeline. The money to be repaid over 15 years will be used to pay a group of Japanese and Australian companies supplying steel and other materials for the pipeline from Dampier to Perth which will carry gas from the northwest shelf. [Text] [BK041227 Melbourne Overseas Service in English 0830 GMT 3 Mar 82 BK]

URANIUM PLANT GO-AHEAD--Traditional aboriginal landowners in tne Northern Territory have given their approval for the development of the Jabiluka Uranium Mine, about 250 km southeast of Darwin. Work on the mine, which will cost about U.S. $540 million, is expected to begin in about a month. The agreement was signed by negotiators from the Northern Land Council and Pan Continental Mining. Pan Continental estimates that the mine should be fully operational by 1985 and will be largest uranium in the territory with initial production of 3,000 tons of yellow cake a year and about 40,000 ounces of gold a year. The company expects the mine to produce for about 80 years. [Melbourne Overseas Service in English 0830 GMT 1 Mar 82 BK]

PHILIPPINE NEGOTIATIONS FOR URANIUM--The Philippines has confirmed that it's negotiating with Australia for the supply of uranium for its nuclear power station which is due to go into production in 3 years. Philippines energy Minister Velasco says the initial supply of uranium for the station will come from the United States but subsequent supplies will come from Australia. Mr Velasco said talks on the terms of supply were being held with Australia. The energy minister also said talks were in progress on buying equity in Australian coal companies. Mr Velasco said the Philippines was pushing both individually and through the Association of Southeast Asian Nations to gain a 10 percent share in a new coal development project in Australia. [Text] [BK021334 Melbourne Overseas Service in English 1230 GMT 2 Mar 82]

NEW ZEALAND-AUSTRALIA ECONOMIC TIES--The New Zealand prime minister, Mr Muldoon, says he hopes to sign a closer economic relations agreement with Australia in June. Speaking in the New Zealand capital, Wellington, Mr Muldoon said his government was ready to sign the agreement but there was delay in Australia. He blamed this on Australia's more complex federal system of government. Mr Muldoon said 3 years of work had gone into the proposed closer economic relations agreement. [Text] [BK080938 Melbourne Overseas Service in English 0830 GMT 8 Mar 82]

OFFICIAL MIDDLE EAST VISIT--A Federal Government minister says the Middle East offers valuable markets for Australian consultants and government-sponsored agencies. The minister for housing and construction, Mr McVeigh, said the main opportunities were in the fields of agriculture, construction and mineral exploration. Mr McVeigh was speaking in Baghdad after 2 weeks of talks in Saudi Arabia, Jordan and Iraq. In a statement released in Canberra, he said Arab governments had pointed to generous tax exemptions and other incentives for companies establishing offices in the region or entering joint ventures. He said the Iraqi government wanted long-term agreements covering wheat, barley, meat, sheep and livestock. While in Baghdad, Mr McVeigh, who was assisting the minister for trade and resources, signed an agreement with Iraq

on technical and economic cooperation. The official Iraqi News Agency said the signing followed talks by a joint committee. [Text] [BK071014 Melbourne Overseas Service in English 0830 GMT 7 Mar 82]

EEC AGRICULTURAL POLICY--Australia's Prime Minister Mr Fraser says he has received an assurance from the president of the commission of the European Economic Community, Mr Thorn, that he is committed to reforming the EEC's agricultural policy. Mr Fraser said he had been told by Mr Thorn, who recently visited Australia, that he wanted to see an end to the subsidizing of European farm exports on international markets and firm upper limits on overall European farm production. However, Mr Thorn had also said because of a bleak economic outlook in Europe, there were only limited possibilities of the 10 member countries of the EEC introducing significant early changes in industry and agriculture. Mr Fraser said Australia understood Europe's problems and was not asking the European commission to force farmers out of farming. Australia was asking that policies of excessive protection and assistance be reformed and that changes should not be deferred indefinitely. Mr Fraser also said he had agreed with Mr Thorn that trade disputes place additional and unnecessary strains on western unity. [Text] [BK071616 Melbourne Overseas Service in English 0830 GMT 7 Mar 82]

UNEMPLOYMENT AT 12 PERCENT--The federal opposition leader, Mr Hayden, claims that 800,000 Australians or 12 percent of the work force are unemployed. Mr Hayden said that true employment figures will not be revealed at the official level because large numbers of people have given up looking for work after receiving endless rejections to job applications. The latest Bureau of Statistics figures put the level of unemployment at 6.4 percent of the work force. Speaking in Hobart, Mr Hayden said the cost of unemployment and a loss of national income was conservatively estimated at more than A$8,000 million a year. He said it was morally outrageous that Australia with its abundant resources should be in what he called such a stricken condition. [Text] [BK270955 Melbourne Overseas Service in English 0830 GMT 27 Feb 82]

COAL EXPORTS TO JAPAN--Trade and resources minister, Mr Anthony, says Japan is turning away from Australia for its raw materials because of industrial disputes which disrupt supplies. His comment follows the release in Tokyo of figures that show Japan is taking less Australian steaming coal. Mr Anthony said Japan had reduced its steaming coal imports following strikes on the waterfront. The Tokyo figures show Australia as still the biggest supplier of steaming coal for Japan's power stations, but its share of the total market has dropped. Radio Australia's Tokyo office says that last year Japan's steaming coal imports more than doubled to 11.6 million tons. Australia supplied just under half of that compared with more than 60 percent the year before. Our office says that although there has been a rapid increase in Japanese coal imports from the United States, Canada, China and South Africa, Australia can expect to retain a major share of the market for steaming coal. [Text] [Melbourne Overseas Service in English 0830 GMT 24 Feb 82 BK]

PHILIPPINES COAL MINE INVESTMENT--The Philippine Government is considering buying shares in Australian coal mining companies. The Philippine energy minister, Mr Valesco, said six or seven Australian firms have offered to sell some of their shares but his government had not decided in which firm to invest. Australia exports 25,000 tons of coal to the Philippines each year. Mr Valesco revealed the proposal to invest in the Australian coal industry while announcing a 6-year energy development program designed to reduce Philippine dependence on imported oil. [Text] [BK280919 Melbourne Overseas Service in English 0830 GMT 28 Feb 82]

TRADE COMMITTEE WITH GUANGDONG--New South Wales has formed a joint trade committee with the Chinese province of Guangdong. The New South Wales premier, Mr Wran, announced the formation of the committee after talks in Guangzhou associated with the New South Wales trade promotion. Mr Wran said the committee would meet at least once a year to identify areas of trade which could be developed between Guangdong and New South Wales. He said the most hopeful areas for expanded trade were in joint ventures in quarrying, poultry breeding and agricultural equipment. [Text] [BK281519 Melbourne Overseas Service in English 0830 GMT 27 Feb 82 BK]

CREATION OF INDUSTRY UNIONS PROPOSED, OPPOSED--The federal government plans to introduce legislation in the autumn session of parliament to encourage the formation of industry unions. The minister for industrial relations, Mr Viner, says industry unions which cover all the employees of a particular company will reduce the frequency and likelihood of strike. Mr Viner says the multiplicity of unions in some industries makes negotiation and consultation more difficult. [Text] [BK051300 Melbourne Overseas Service in English 0830 GMT 5 Feb 82] The Federal Labor Party says proposed changes to industrial legislation will provoke union unrest. The party's national executive described the proposed laws as harsh, provocative and oppressive. Resolving to oppose all the legislation, the opposition said the new laws had doubtful constitutional validity. The proposed legislation includes automatic stand-down provisions in disputes, the formation of industry-based unions, support for voluntary unionism and complementary federal-state legislation on the deregistration of unions. [Text] [BK061037 Melbourne Overseas Service in English 0830 GMT 6 Feb 82]

OVERSEAS BORROWINGS TO INCREASE--The federal government is to increase its overseas borrowings by about $500 million. The treasurer, Mr Howard, said this would be in addition to the $500 million already raised during the current financial year which ends on 30 June. Mr Howard said it had been decided to increase overseas borrowings to bring about what he called an appropriate contribution to Australia's foreign currency reserves. He said the government was at present negotiating borrowings of about $350 million on the Swiss capital market. [Text] [BK280921 Melbourne Overseas Service in English 0830 GMT 28 Feb 82]

LIQUIFIED GAS EXPORT DELAY--There is expected to be a delay in the beginning of export of liquified natural gas to Japan from the northwest shelf project off western Australia. Under a memorandum of intent signed last June, a consortium of Japanese gas and electricity companies was to receive the first shipment of northwest shelf gas in 1986. However, Radio Australia's Tokyo

correspondent, Walter Hamilton, says sources on both the Japanese and Australian negotiating teams say it is now intended the exports will start from July 1987, about 1 year later than intended. Hamilton says it is expected that it will take 2 and 1/2 years instead of 18 months for deliveries to reach their peak volume of nearly 6 million tons a year. Our correspondent says the details of the agreement have yet to be finalized, but an Australian executive close to the project has confirmed they are basically correct. Hamilton says the plan is being revised because it has taken longer than expected to finalize the export sale contract and because the Japanese economy has slowed down. [Text] [BK260957 Melbourne Overseas Service in English 0830 GMT 26 Feb 82]

TRADE DISPUTE TALKS WITH EEC--Further talks are to be held between Australia and the European Economic Community to try to prevent a long-running trade dispute from erupting anew. The EEC has announced that it intends to drop tariff concession on some Australian goods, such as wood, fats and seafoods. The action is in retaliation for Australia's restrictions on motor vehicle and footwear export from the EEC. The community claims it has suffered damage equalling U.S. $15 million because of Australia's action. The EEC's formal notice of its action has come before the International Council of the General Agreement on Tariffs and Trade which has decided to seek talks between the two sides. [Text] [BK240251 Melbourne Overseas Service in English 0830 GMT 23 Feb 82]

DIAMOND MARKETING AGREEMENT--The South African mining giant, De Beers, has reached a preliminary agreement with the Ashton joint venture partners in Western Australia to maintain De Beers' monopoly in the world gem diamond market. Under the agreement, the partners are to sell to De Beers the 10 percent of diamonds from the Argyle deposit which constitute gemstones. De Beers is also to take 75 percent of the lower grade diamonds with the Ashton partners to offer the other 25 percent on the open market. Limited commercial production at Argyle is expected to begin later this year. [Text] [BK221533 Melbourne Overseas Service in English 1230 GMT 20 Feb 82 BK]

FOREIGN INVESTMENT INCREASES--Foreign investment in Australia reached a new peak last financial year. The figures released by the Bureau of Statistics show that foreigners invested about A$2.23 billion more than in the previous year. That is about U.S.$2.5 billion. Major areas of investment were the share market, mining the wholesale and retail trade, finance, property and business services. [Text] [BK241347 Melbourne Overseas Service in English 0500 GMT 23 Feb 82 BK]

HIGHER BUDGET DEFICIT--Federal Treasurer Mr Howard has said that there will be a shortfall in government revenue this year of about A$300-$400 million. In parliament, Mr Howard said that it was true that the budget deficit was going to be hundreds of millions of dollars higher than when the budget was brought down last August. At that time, the government predicted a deficit of A$146 million. Mr Howard claimed that the main reason for the worsening situation was the refusal of the Australian democrats to allow sales tax legislation through the senate where they hold the balance of power. He said that the industrial strife in the Bass Strait oil fields meant revenues from

that source would be less than expected. Wages and salary increases in some government departments had also been more than expected. [Text] [BK241347 Melbourne Overseas Service in English 0830 GMT 23 Feb 82 BK]

IRON ORE INDUSTRY'S PROFITS FALL--The federal government is worried about falling profits in the iron ore industry. Minister for trade and resources Mr Anthony told parliament that the federal government and the west Australian government had expressed concern to steelmakers in Japan. Mr Anthony said that the declining profits could not be blamed on inefficiency, but on prices not keeping up with inflation and importers playing a depressed market and keeping prices relatively low. Mr Anthony said iron ore mines had not been working full capacity but had to maintain the same overheads. The Japanese steelmakers had been told that if they wanted to preserve the secure base for importing iron ore from Australia there had to be continued investment in the industry. Mr Anthony said there would eventually be a shortage of supply of raw materials for the Japanese steel industry if the iron ore industry could no longer invest in future projects. [Text] [BK241347 Melbourne Overseas Service in English 0830 GMT 23 Feb 82 BK]

RESETTLEMENT OF EAST TIMORESE--President Suharto of Indonesia is reported to have told a visiting Australian delegation that general agreement has been reached on resettling East Timorese with relatives in Australia. The speaker of the northern territory's legislative assembly, Mr (Leslie McFarland), who was a member of the delegation, said on his return to Darwin that President Suharto had stated that the question of nationality needed to be resolved before any further significant progress could be made in the resettlement of East Timorese. Mr (McFarland) said that President Suharto had stated that it was necessary to determine whether refugees from East Timor were Portuguese or Indonesians and whether they wish to become Australian citizens. President Suharto was reported to have told the Australian delegation that officials of the International Red Cross would be entering East Timor for the first time this week to examine the situation. Mr (McFarland) said the visit by the Red Cross would be a significant breakthrough. [Text] [BK010926 Melbourne Overseas Service in English 0830 GMT 1 Mar 82]

BRITISH AIRCRAFT CARRIER PURCHASE--The federal government has decided to buy the British aircraft carrier "Invincible" ending a decade of debates on a replacement for the navy's aging flagship HMAS "Melbourne." The carrier will cost the government $478 million. That's more than U.S. $516 million, after a refit. When it reaches Australia late next year, it will be given a new name but the government has not yet said what it will be. Defense Minister Mr Killen told parliament the purchase would enhance Australia's capability to deter aggression in neighboring regions in the decades ahead. The opposition defense spokesman, Mr (?Scholes), branded the "Invincible" a white elephant while the Australian democrats promised to back a future labor government if it moves to sell the carrier. Mr (?Scholes) said that after the "Invincible" had been fitted with weapons and aircraft its cost would exceed $1,000 million. HMAS "Melbourne," which has been in service since 1945, is scheduled to end its operating life in 1985. [Text] [BK250932 Melbourne Overseas Service in English 0830 GMT 25 Feb 82]

CSO: 4220/313

EDITORIAL NOTES AGRICULTURAL SUCCESSES

BK071250 Rangoon WORKING PEOPLE'S DAILY in English 28 Feb 82 p 4

[Editorial: "Maintaining the Trend"]

[Text] Of the three political objectives for the forthcoming 1982 Peasants Day to be held on 2 March, the second calls on the peasants to try and implement the 1982-83 Agricultural Production Plan. The year 1982-83 is the first year of the Fourth Four-Year Plan, the production targets of which will be approved by the Second Session of the Third Pyithu Hluttaw [People's Assembly] scheduled to open on the 15th of next month. The estimates of agricultural output will be among the production targets to be set by the Pyithu Hluttaw next month.

The state has been paying top priority attention to the agricultural sector as it is the mainstay of the national economy performing the dual role of provider of staple for the people and top foreign exchange earner. Accordingly, the state has drastically increased the investment in this sector from K 144 million in 1962-63 to K 1,840 million in 1980-81. As a result the net value of output from the agricultural sector has more than doubled in the past 10 years from K 2,030 million in 1961-62 to K 4,520 million in 1981-82. The performance of the agricultural sector has been especially notable in the past three years when the sector's overall production rose by 7.7 percent in 1978-79, 5.2 percent in 1979-80 and 14.6 percent in 1981. Although final returns have not been compiled there is every likelihood that the planned estimates of the agricultural sector for this year, the last year of the Third Four-Year Plan, would be fully met if not surpassed.

The main contributing factors for the agricultural sector's steady development are increased application of state-supplied scientific methods, fertilizers, high-yield strains, pesticides and mechanical means of farming. While the state makes the mechanical services, know-how and inputs available, the peasants asiayones [organizations], under the guidance of the party organs and people's councils, educate and persuade the cultivators into accepting and using them in a most profitable way.

By far the most dramatic impact on the agricultural sector that has spurred it into an accelerated growth was supplied by the high-yield strains of rice. It was introduced in two townships in 1977-78 on an experimental scale and its

cultivation extended to 78 townships this year and contributed to a marked increase in the national average of paddy yield from 36.8 baskets [1 basket equals 46 pounds] per acre in 1977-78 to 52 baskets last year.

In addition to this the state has been handing out agricultural loans to cultivators on most generous terms. All these measures have made it possible for the farmers to harvest 638.3 million baskets of paddy in 1980-81 against 453.5 million baskets in 1977-78. It is the profound duty of the peasants asiayones at all levels to step up their agitational and organizational campaign with the aim of maintaining the upward trends already achieved in the agricultural sector, as called for by the second political objective of this year's peasants day.

BRIEFS

MINORITY GROUPS FIGHT GOVERNMENT--Mae Sot, Tak--Lt Gen Bo Mya of the Karen National Union (KNU) said yesterday the minority groups who are members of an anti-Burmese United Front will step up their military cooperation in the future. He also claimed during a press conference held opposite the border town here that if the minority groups unite militarily they would be able to seize power from Rangoon in 2 years. Seven minority groups have formed a so-called "National Democratic Front" to fight against the Burmese Government and Bo Mya claimed that it had a total armed force of 50,000 men and 15 million civilians. The front was formed 6 years ago but Bo Mya said no joint military cooperation had ever been conducted. Representatives from the seven minority groups were also present during the press conference which started at 11 am at a stronghold of KNU, about 20 km from here. Bo Mya said the United Front's aim was to establish a so-called "National Democratic Federal Republics." Journalists were yesterday prevented by local authorities from attending the press conference but they sneaked across the border into the stronghold in an area known as Kaw Moo Rah. The order to stop journalists from attending the press conference was reportedly made by the Interior Ministry to Governor Charoensuk Silaphan. MURTOPO SPEAKS ON UPCOMING ELECTIONS

BK120833 Jakarta ANTARA in English 0809 GMT 12 Mar 82

[Excerpts] Jakarta, 12 Mar (ANTARA)--The Indonesian National Youth Committee (KNPI) is the solid central mechanism of Indonesian youth which has been successful in its efforts throughout the country, it was stressed by Information Minister Ali Murtopo here Thursday [11 March].

The information minister, with reference to the coming balloting, also appealed that the youth groups from the three election contestants: the Partai Persatuan Pembangunan (PPP) and Partai Demokrasi Indonesia (PDI) political parties and the Golkar Functional Group should be compact and solidly united.

The general elections must end with success and the youths should be also responsible for the implementation of the "Festival of Democracy" in the efforts of political development, the political education of the people and the development of pancasila democracy in the country, Information Minister Ali Murtopo declared.

The minister commended KNPI for its success in setting up a much desired mechanism to the benefit of the Indonesian people and serving the interest of the country's youths. He said KNPI through consultations for years ultimately succeeded in consolidating its organisation. A few months ago it elected its new executive board followed by the opening of KNPI branches in the provinces and rural areas.

"The general elections must be a success and I join in prayers that PDI, PPP and Golkar book victories. PDI Menang (WIN), PPP Menang and Golkar also Menang," the minister prayed.

He argued that based on years of struggle founded on consultations and consensus, Golkar should not become the sole winner in the voting or win an absolute majority of 100 percent on national level.

"If Golkar were to win an absolute majority of 100 percent on the national scale, then I will set up a new Golkar," Minister Ali Murtopo declared.

He then said that he would fully agree to a majority win of 80 or 90 percent for Golkar but not 100 percent on the national scale. But the minister said that he would agree if Golkar would win 100 percent of the votes on the regional or provincial level.

SUHARTO'S VIEWS ON COMMUNISM, ECONOMIC DEVELOPMENT REPORTED

BK121213 Jakarta ANTARA in English 1112 GMT 12 Mar 82

[Excerpts] Jakarta, 12 March (ANTARA)--President Suharto declared here Friday that the Indonesian people could draw a lesson from the birth of the historic "March 11 Command" that with strong determination they could rid themselves of alien ideology, i.e. communism, which had by various means attempted to shackle them.

The "March 11 Command" known as "Supersemar" was given by the late president Sukarno on March 11, 1966 to Lt Gen Suharto (the president who was then minister/commander of the army) to act on the former's behalf and to take every action considered necessary to safeguard the security, tranquility and the stability of the government for the sake of national unity.

The head of state made this remark before a youth delegation led by chairman of the Indonesian Youth National Committee (KNPI) Aulia Rachman at the state palace Friday morning.

Communism has been totally and permanently rejected by the Indonesian people, Suharto pointed out. However that does not mean that this nation is free from challenges, the president reminded. He cited for example the challenge of national development which cannot be easily overlooked.

"We must work harder in order to catch up with our lagging in development and bring about prosperity to our nation," he declared.

President Suharto touched on the GBHN (broad outlines of state policy) and indicated that basic questions relating to development already found their answers in the GBHN which therefore had to be adhered to by the whole nation.

"It is an absolute necessity for us to stick to the GBHN because it was determined by the MPR (Consultative Assembly) which represents the entire people of Indonesia. GBHN has affirmed that at this stage of development, economy is on top of the list without, however, disregarding other sectors. Economic development is given first priority because it is the initial important step we have to take to March towards progress, happiness and social justice as the national ideals of the Indonesian people," President Suharto told the KNPI leaders.

He admitted that this goal could not be achieved overnight or even in one or two pelita (five-year development plan) but the groundwork for a just and prosperous society based on the pancasila would be attained after five or six repelitas in succession. Meanwhile national development had to be undertaken according to plan and in stages whereby people's interest should take precedence over other matters, he added.

According to the president, equitably distributed economic development will strengthen the sense of unity of the Indonesian people as well as their pride of a free nation able to improve their own future.

Economic development, polishing consciousness as one nation and one state, he said.

SUHARTO ADDRESSES GOVERNORS CONFERENCE

BK011410 Jakarta ANTARA in English 1232 GMT 1 Mar 82

[Text] Jakarta, 1 March (ANTARA)--President Suharto Monday requested governors and chiefs of regional administrations throughout Indonesia to take an active part in the current national drive to increase the country's exports of commodities other than natural gas and petroleum.

He told the provincial and regional administrators they could contribute to the drive by creating conditions and an atmosphere in their respective provinces and regions conducive to activities to produce export commodities in such areas as agriculture, commercial crop plantations, fisheries, textiles, cottage industries, etc.

Addressing provincial governors, chiefs of regency administrations and city mayors assembled here for a service conference, the chief executive said the non-gas and oil export drive could be promoted by eliminating undue obstructions and burdens that still restrict development of the non-gas and oil productive activities.

The president said promotion of the non-gas and oil exports was necessary as a way of preserving and drawing maximum benefit from the momentum that had been reached in the national development effort as a whole.

This momentum had to be maintained because the Indonesian economy now had a considerable degree of resilience and also the potential to make more rapid progress.

The president said that provincial governors and other regional administration chiefs so far had the task of accomplishing the government's development program according to a guide known as "the six successes." This guide calls for success to be achieved in programs to increase production of foodstuffs, rice and second crops in particular, livestock, fish and horticultural produce, implementation of certain special "presidential instruction" (Inpres) projects, development of cooperatives, especially rural cooperatives, population control, transmigration and family planning programs, popularization of the guide to understand and implement pancasila (the state ideology) and execution of a presidential instruction to let so-called economically weak contractors have a greater share in tenders to carry out big development projects.

Now, however, provincial governors and other regional administration chiefs had to be successful in two more areas: settlement of land problems and promotion of export of commodities other than natural gas and petroleum. In other words the six now had become eight successes.

Speaking about settlement of land problems, the president said efforts to clear up and establish order in the status and utilization of land needed to be intensified. The current drive to issue land titles en masse must be continued until its logical end. Ineffective land use must no longer be allowed occur and therefore land reform should be carried out in a more effective way.

'ANTARA' ON SUBROTO'S EUROPE VISIT, TIN STOCKS

BK120956 Jakarta ANTARA in English 0706 GMT 12 Mar 82

[Text] Jakarta, 12 March (ANTARA)--Minister of Mines and Energy Prof Dr Subroto will leave for Europe at the end of this week to consult West European leaders on the fate of the Sixth International Tin Agreement (ITA). Sources at the Ministry of Mines and Energy told ANTARA Thursday Prof Subroto would have discussions on the matter with British, West German and French leaders.

The consultations are considered necessary because the enforcement of the fifth ITA would expire at the end of June and the sixth ITA should therefore be made effective as of July 1. So far, however, only two consumer countries have decided to sign the sixth ITA, namely Norway and Switzerland, and four producer countries, namely Indonesia, Malaysia, Thailand and Australia.

After the series of consultations on tin in Europe, Prof Subroto will go to Vienna to take part in the special OPEC meeting scheduled in that city March 19.

In the OPEC meeting, he will be joined by director general for Oil and Natural Gas Prof Dr Wijarso, secretary of the directorate general for oil and natural gas Adimir Adin, secretary of the Commissioners Council of Pertamina Gozali and chief director of Pertamina Dr Joedo Sumbono.

Meanwhile ANTARA's sources at Pt Tambang Timah said that Indonesia had made it known that she is willing to pay her contribution to the international tin buffer stock to the amount of 1,972.50 metric tons at the value of M dollars 57,498,375.

This is in reference to the decision of the International Tin Council (ITC) in its March 8-9 meeting in London which asked the tin producing countries to pay the remainders of their contribution to the buffer stock, which amounted to 12,500 metric tons at the value of 87,046,107 pounds sterling.

On the basis of the fifth ITA, the producer countries agreed to set the buffer stock at 20,000 metric tons and they had contributed 7,500 metric tons to it. The contributions are fixed on the basis of the production percentage of the producer countries.

Malaysia as the biggest producer paid 5,245 metric tons at the value of M dollars 152,891,750.

The contributions are to be made in cash.

Director general for general mining Prof Dr Katili who led the Indonesian delegation to the London meeting had said Indonesia could understand the need to make the contributions in cash. The cash is needed by the buffer stock manager to tide over the current critical conditions of the market.

According to the London meeting's decision, the payment of the contributions should be made not later than March 23 this year.

On the side of the consumer countries, the United States had agreed to contribute 5,000 metric tons. But up to the present she had made an actual payment of only 1,500 metric tons. For the consumer countries, payment of contributions to the buffer stock is voluntary in nature.

ANTARA's sources at Pt Tamban Timah explained the reserve fund for the buffer stock was necessary to enable the ITC to execute its function more effectively. With cash funds in its hand, the ITC will be able to buy from the market when the price level goes below the floor price.

OFFICIAL ON PRODUCTION, PRICE OF LNG IN ACEH

BK011213 Jakarta ANTARA in English 0920 GMT 1 Mar 82

[Text] Banda Aceh, 28 February (ANTARA)--Liquefied naturai gas (LNG) and condensate from the Arun fields, Kabuapaten of north Aceh, which have been exported to Japan till the end of last February, has reached 238 LNG and 196 condensate tankers. This was revealed by K.A. Endin, director for general affairs of P.Pt. Arun, to ANTARA here Saturday.

He said that the daily output of condensate is from 70,000 to 75,000 barrels while the price is U.S. $37.5 per barrel. According to him, LNG shipment per tanker is averagely valued at U.S. $17 million.

Endin said that the price of LNG from Arun was not constant since 90 percent of it depended on OPEC fixed crude oil price and 10 percent on the commodity's price situation.

The Pt. Arun executive indicated that 20 percent of the Indonesian national budget derived from the LNG sales.

Based on the LNG sales agreement with Japan, export was calculated at 77 ships per annum, but last year it reached 84 ships and this year expectedly 86.

Meanwhile Bank Indonesia Banda Aceh branch circles revealed to ANTARA that LNG export to Japan in 1980 was valued at U.S. $1,212.8 million, against U.S. $226.1 million in 1979 and U.S. $66.7 million in 1978.

Endin made it clear that the first LNG refinery erected in 1965 has now become one of the most modern LNG plant in various LNG producing countries, like Abu Dhabi and Algeria.

He said that natural gas production in the Kabupaten of Aceh Utara may last for 5 years as a result of which Pertamina State Oil Company continues to exploit the current projects and search for new energy sources.

The existence of Pt. Arun in Aceh has greatly contributed to the development of this province considering that the infrastructural facilities built for the enterprise directly benefit the local communities, he said.

Furthermore, Pertamina Oil Corporation has provided funds for the setting up of (?TV) studios, television relay stations, communications facilities, etc.

Endin indicated that Aceh Province was currently being faced with a shortage of technicians to be derived from the local communities due to the sophisticated nature of modern technology.

Nevertheless, Endin said, expatriate technicians employed by Pt. Arun continued to educate Indonesians to run every branch of this modern industry.

CSO: 4220/313

'INDONESIA TIMES' ON REPORTS OF EAST TIMOR FAMINE

BK120629 Jakarta THE INDONESIA TIMES in English 8 Mar 82 p 2

[Editorial: "No Famine in East Timor"]

[Text] False news has been spread by Fretilin (Timor Revolutionary Front for Independence) which operates abroad and some interested parties that the youngest province of Indonesia, East Timor, is suffering from famine, poor health and insecurity. This false news has been circulated particularly in the United Nations and Australia to discredit the government of the Republic of Indonesia and besmear its name.

The International Red Cross Committee and former Australian prime minister, Gough Whitlam, have just returned from their visit to and inspections of East Timor.

According to the International Red Cross Committee there is no sign of famine in East Timor and it is of the opinion it is no longer necessary to introduce an emergency programme for the distribution of food similar to that of two and a half years ago. "What is necessary at present is to create a bufferstock to face eventual shortage of food in some areas (if it happens) and to consolidate efforts in the field of general health."

The International Red Cross Committee admitted that in carrying out its humanitarian operation it had to encounter many difficulties due to the difficult terrain of the province, but it had received full cooperation from the Indonesian Red Cross and the government. Contrary to the previous information that had reached it, it found only 13 military prisoners in "Comarca prison."

Former Australian Prime Minister G. Whitlam, after a four-day tour in East Timor stated of Friday that report about famine in East Timor was completely false. He is of the view that East Timor is now quite safe as evident from the fact that the Red Cross helicopter he was using did not hesitate to fly low over various parts of East Timor. According to information he got, at the most there are 100 to 130 Fretilin insurgents who are still hiding in the jungle hide-outs.

Speaking about the health condition of the East Timor population, G. Whitlaw said that the matter was truly in the good care of the Indonesian government and there appeared to be sufficient medical supplies. He observed development progress in the province, development projects, agriculture and fishery centres, and livestocks.

The two reports corroborate each other and give a big lie to the propaganda spread by Fretilin and its supporters abroad. The reports should be transmitted fully to all our diplomatic and consular missions abroad, especially our mission in the United Nations where for some years to come the question of East Timor will continue to be raised.

This information will strengthen our arguments to convince our African friends not to support the case of the insurgent Fretilin.

Of late we have invigorated our African policy and have opened more embassies there, for instance in Kenya and Senegambia. Our representatives in Africa and the United Nations may use this information by the international sources of high credibility to support our case in the international field. Though East Timor is our internal matter, yet it is annoying that the question is raised ritually in the United Nations every year.

'AFP' REPORTS ON 'BOAT PEOPLE' IN COUNTRY

BK280816 Hong Kong AFP in English 0537 GMT 28 Feb 82

[Article by Gilles Bertin]

[Text] Galang Island, Indonesia, 28 Feb (AFP)--Out of sight and all but out of mind 14,000 Vietnamese and Cambodian refugees are today encamped on a forsaken Indonesian island 10 kilometres (6 miles) long, just to the south of the Straits of Singapore.

They are--in the almost bygone expression--"boat people," the apparently endless tail end of that great sea exodus which reached crisis proportions in mid-1979 when refugees from Vietnam and Cambodia began arriving in other Southeast Asian countries at the rate of more than 50,000 a month.

The "boat people" are still arriving. The Indonesian government is again expecting many tens of thousand more Vietnamese and Cambodian refugees to sail south next month, once the monsoon season is over and the sea is calmer.

Galang (the Island of Duels) is where these two ethnically different refugee communities are mixed together in more or less harmonious co-existence in two crowded transit camps.

Galang-2 camp contains 7,500 refugees who are waiting out the long months for their appointed turn to leave for their new country of adoption--the United States, Canada, France, West Germany. Galang-1, where some 6,500 impatient Vietnamese are waiting, is a first asylum camp: its inmates have found no foster-country to accept them.

For the Cambodians and Vietnamese in Galang-2 the wait is between 7 and 18 months. For the people of Galang-1, it may take them a year just to get into Galang-2.

Though each family has one room and a kitchen, they are packed together with about 12 other families. Fights between neighbours are quick to flare. Incidents are routine between the Vietnamese and Cambodian communities in Gulang-2.

Many families have been separated from some of their members, dead or left behind in the homeland. Depression and nervous ailments are endemic. Suicides are frequent. A number of refugees died recently after drinking methanol fuel and one was left blind.

Fresh vegetables are scarce, mail deliveries are unreliable, and there is a nightly curfew between 10 pm and dawn.

The Indonesian government opened the island to the boat people in 1979. The camps are run by the army, with help from international humanitarian bodies, notably the Red Cross and the U.S.-based Save-the-Children Fund.

The Cambodian refugees on Galang have arrived from overcrowded transit camps in the frontier zone with Thailand where they had initially fled to escape the Khmer Rouge regime at home.

The Vietnamese on the island left their homeland for political or economic reasons. They are for the most part peasants or fishing people and a high proportion are Catholics, with many priests and seminarists among them.

For both groups the long sea crossing by small boat from the Indochinese mainland was a gamble with death. According to sources in Galang, one craft out of two making the voyage in the monsoon season between October and February is lost at sea. About 30 other boats have vanished without trace en route for Australia.

Last year one boat with 52 refugees aboard drifted for 6 weeks before being washed ashore with a solidarity survivor who had kept alive only by eating human flesh.

Pirates are another peril. One young Vietnamese woman told how the boat she was in was accosted by Thai pirates only a few hours after putting to sea. "We were robbed and the pirates raped 12 women and a nine-year-old child," she said. "The pirates held us for five days before abandoning us on an island, where other pirates found us later. Ten days afterwards we were sighted by a naval vessel, which escorted us to Thailand."

Though the two camps are run efficiently enough by the army and the refugees' own camp committees, and though the Indonesian Red Cross Organization has set a hospital on Galang, the boat people feel forgotten and abandoned.

Many of those who have hopes of settling in a new country are set on emigrating to the United States, though if their application is accepted they face a wait of up to 18 months.

Some of the delay appears to be the result of new restrictions on accepting boat people introduced by the Reagan administration.

1981 EXPORTS OF OIL, OIL PRODUCTS RISE BY 13 PERCENT

BK110723 Jakarta ANTARA in English 0703 GMT 11 Mar 82

[Text] Jakarta, 11 Mar (ANTARA)--Indonesian exports of oil and oil products rose by around 13 percent in 1981 to U.S.$15.174 billion in value from only U.S.$13.423 billion in the previous year. May represented the largest exports of oil in 1981 worth around U.S.$1.418 billion and February recorded the smallest amount of oil export value of only U.S.$1.118 billion.

In 1980, December saw the largest oil exports worth U.S.$1.275 billion and the smallest export value was earned in January amounting only to around U.S.$955.645 million.

Pertamina, the state oil company, accounted for U.S.$555,935,000 of the entire oil exports in 1981, not including oil products worth around U.S.$1,627 million, crude oil bought by Pertamina from contractors through working agreement with export price basis all worth U.S.$1,059 million and sales of crude oil coming from the Pertamina production sharing contracts with foreign partners worth U.S.$2,540 million.

The value of foreign contractors' oil exports were estimated at U.S.$5,518 million on working agreement basis in addition to U.S.$3,875 million on production sharing basis.

Foreign contractors remain to dominate oil business in the country led by American Caltex, Stanvac and Calasiatic and Topco.

Exports of liquefied natural gas (LNG) in 1981 rose by 10 percent from the previous year's level. In 1980, LNG exports were worth around U.S.$2,281 million as against U.S.$2,513 million in 1981, or rose by U.S.$232 million.

Indonesia began exporting LNG in 1977. LNG exports have continued to increase every year. In 1977, LNG exports were valued only at U.S$87.643 million rising to $543.681 million in 1978, to U.S.$1,123 million in 1979.

Indonesian LNG exports from the Badak Oil Field were worth U.S.$1,130 million and from Arun worth U.S.$1,383 million in 1981.

'ANTARA' REPORTS ON ARUN OIL FIELD PRODUCTION

BK121154 Jakarta ANTARA in English 1038 GMT 12 Mar 82

[Text] Arun, Aceh, 12 Mar (ANTARA)--The volume of condensate and LNG exports from Pertamina's Arun oil field is increasing every year. In 1978 condensate shipments reached 10,128,043 barrels (20 shipments) and LNG shipments 848,194 cubic meters, but in 1981 the figures rose to 26,731,463 barrels (68 shipments) and 10,383,823 cubic meters (83 shipments) respectively. The two commodities reached a total export volume of U.S.$1.5 billion each.

Ir Rahaju Oekon, head of the LNG project of Pt Arun, said Monday in 1979 average LNG production reached 18,759 cubic meters per day and condensate production 59,956 barrels per day. LNG and condensate production tended to increase continuously and was expected to reach the level of 32,100 cubic meters and 75,000 barrels per day respectively in 1982.

Until February this year the volume of exported condensate totaled 3,246,414 barrels and that of LNG 2,000,126 cubic meters (16 shipments) to Japan. In 1982 LNG exports are planned to reach 86 shipments from a total production of 11,287,500 cubic meters, he said.

The natural gas processed into LNG comes from the Arun field, north Aceh. Mobil Oil of Indonesia discovered the field in 1971 under a production sharing contract with Pertamina. The field was estimated to contain a natural gas reserve totalling 17.1 trillion standard cubic feet.

The LNG plant at Arun was built by an American company, Bechtel Inc. in 1974 and completed in 1978 at a total cost of U.S.$950 million.

According to Oekon, the three-train plant is capable of processing 282 million standard cubic feet of natural gas in order to produce 9,500 cubic meters of LNG and 75,000 barrels of condensate per day.

To meet considerably increasing demand from the buyers, Pertamina is expanding the LNG plant with two additional trains. The expansion is expected to be completed in 1984, Oekon said.

The main contractor for the two additional trains is Chyoda Chemical Engineering from Japan which is working in cooperation with an Indonesian joint venture company, Pt Purna Bina Indonesia (PBI).

Like the expansion of the Bontang LNG plant in East Kalimantan which was financed by the Buyers Group to the tune of U.S.$995.8 million, the Arun LNG expansion is also being funded by the Buyers Group, i.e., to the amount of U.S.$941.6 million. The sale of the LNG to be turned out by the two additional trains at Arun to Japan has been provided for in a 20-year sale and purchase contract, concluded some time ago. Under this contract Japan would buy 3.3 million tons a year from each of the two trains.

OFFICIAL REPORTS ON OIL PRODUCTION, PRICE, RESERVES

BK161444 Jakarta ANTARA in English 1320 GMT 16 Mar 82

[Text] Jakarta, 16 Mar (ANTARA)--Indonesia's crude oil production during the past 2 months dropped but not in an overall way, according to Judo Sumbono, president director of the national oil company, Pertamina.

Speaking to newsmen after a call on President Suharto here Tuesday morning, Sumbono said the production decline occurred because one of Pertamina's oil production contractors was unable to sell the crude it had drilled due to the prevailing oil glut and world economic recession. He could not say exactly how much the oil production level had gone down.

But Sumbono said he expected the crude output to rise again in ths month of March. "Our oil output sometimes rises and falls from month to month but the important thing is its average level," he said.

He disclosed that during the 1982-83 budget year Indonesia's crude production is targeted at 1.6 million barrels a day.

In reply to a question Sumbono said foreign interest in marking investments in oil exploration and development in Indonesia continued to exist.

About the world economic recession which was affecting the price of oil on international markets, Sumbono expressed the belief that one day this recession will come to an end and that people will continue to rely on oil for energy.

About Indonesia's oil reserves in the ground he said there were at present 40 concaves that still had to be developed intensively. These reserves have been tentatively estimated to total 84 billion barrels.

Sumbono met President Suharto to report his impending departure to Vienna where he is to join the Indonesian delegation led by mines and energy Minister Subroto to the OPEC (Organization of Petroleum Exporting Countries) meeting scheduled for March 19. He said at this meeting Indonesia would try to stave off a continuous decline in the OPEC oil price because such a development would harm the oil producing countries.

BRIEFS

NORTHERN AUSTRALIAN OFFICIAL VISIT--Jakarta, 27 Feb (OANA/ANTARA)--President Suharto Saturday [27 February] received the chief minister of northern Australia, Paul Everingham, who was accompanied by the Australian ambassador, F.R. Dalrymple and Agriculture Ministry Secretary General Abdul Kadir at Bina Graha. Everingham told newsmen at present northern Australia was stepping up its trade relations with neighbouring countries including Indonesia and had established a market for its cattle export in Southeast Asian region. At his meeting with the president, Everingham had expressed confidence that Indonesia will continue to maintain its good relations with northern Australia. Northern Australia had also been conducting trade with Bali, Ambon and Malaku which are located close to northern Australia, he said. Northern Australia intended to assist Indonesian cattle farmers by sending buffaloes and cows to them. Western Australia [as received] abounds in this kind of livestock. [Text] [BK271011 Jakarta OANA in English 0949 GMT 27 Feb 82]

SPANISH ENVOYS APPOINTMENT APPROVED--Jakarta, 27 Feb (AFP)--The Indonesian Government today approved the appointment of Don Eugenio Bregolat y Obiols as Spain's new ambassador to Indonesia. He is to replace Don Alberto Pascual Villar, who is to return home after a 4 and 1/2 year assignment here, the Foreign Office announced today. [Excerpt] [BK281517 Hong Kong AFP in English 0802 GMT 27 Feb 82 BK]

NEW VICE SPEAKER--Jakarta, 5 Feb (AFP)--Dr Hardjanto Sumodisastro has been named vice speaker of parliament replacing Mohammad Isnaeni who has been appointed Indonesian ambassador to Romania, a parliament spokesman said today. Dr Hardjanto, 55, is an executive of the Indonesian Nationalist Party (PNI) founded by the late president Sukarno 60 years ago. The PNI and four other parties have merged into the Indonesian Democrats (PDI) which will contest the May 4 general election facing the ruling Golkar (functional groups) and the PPP (the Muslim United Development). [Text] [BK090555 Hong Kong AFP in English 0356 GMT 5 Feb 82 BK]

AMBASSADOR TO SRV DIES--Jakarta, 14 Mar (AFP)--Indonesian ambassador to Vietnam Sudarsono died yesterday after a long illness, a Foreign Office spokesman said today. Mr Sudarsono, 54, died in hospital in Singapore where he had been treated for over a month for cancer. He was named ambassador to Hanoi in late 1980 to replace Kangmas Hrdi who had completed his assignment there. [Text] [BK150607 Hong Kong AFP in English 0245 GMT 14 Mar 82 BK]

LAST YEN LOAN FOR ASAHAN--Indonesia has signed a 4.2 billion yen loan agreement with the Japanese Overseas Cooperation Fund to finance the Asahan hydroelectric plant and the aluminium smeltering plant in north Sumatera. The loan is repayable in 30 years time with an 8-year grace period at an annual interest rate of 3 percent. This will be the last loan for the Asahan project approved by the Japanese government. The total amount of Indonesia's loan from Japan for the project is 61.55 billion yen. [BK150607 Jakarta Domestic Service in Indonesian 1200 GMT 12 Mar 82 BK]

TEXTILE QUOTA WITH EEC--Jakarta, 11 Mar (ANTARA)--The European Economic Community (EEC) has agreed that the remainder of Indonesia's textile quota of 1981 to the Benelux countries and Britain should be included as carryover in the 1982 textile quota. The amount agreed upon from the Indonesian proposal on the matter was 5 percent in agreement with articles in bilateral agreements and for amounts more than determined, agreement must be reached from EEC authorities. The agreement on the carryover was made known by EEC delegation leader Paul Luyten, deputy director general of the EEC Commission on Textile Affairs, in a meeting with the director general of foreign trade relations, Department of Trade and Cooperatives here in Jakarta recently. [Excerpt] [BK120657 Jakarta ANTARA in English 0722 GMT 11 Mar 82 BK]

GARUDA AIRWAYS' 1981 EARNINGS--Jakarta, 16 Mar (AFP)--Indonesia's national carrier, Garuda Indonesian Airways, earned 424.9 billion rupiahs (U.S. $680 million) in 1981, accounted for to a larger extent by external flights, the airline disclosed here. The larger share (57 percent) came from international flights with only 43 percent from domestic operations, a spokesman told ANTARA News Agency. Of the foreign-operations income, the largest slice was contributed by the Europe route at 34 percent, followed by the Australian line (24 percent), the line to Hong Kong (20 percent) and regional operations (to Singapore, the Philippines and Malaysia) 12 percent, he said. The line to Tokyo was the smallest contributor (at 6 percent) to the foreign income. Garuda has not deemed it fruitful to join the orient "YIP" (Yield Improvement Program), as its Asian members are used to engaging in undercutting, but it has entered the European YIP in an effort to protect the government fare between Jakarta and Amsterdam, without stopovers applying to only Garuda and the Dutch airline KLM, he said. [Text] [Hong Kong AFP in English 0305 GMT 16 Mar 82 BK]

TAX ACCORD WITH JAPAN--Jakarta, 9 Mar (ANTARA)--Indonesia and Japan, Monday [8 March] signed an agreement to prevent double taxation, the Antara correspondent in Tokyo reports. The agreement covers income, corporate, interest, dividend and royalty taxes. Indonesian Ambassador to Japan Sajidiman Suryohadiprodjo, who signed the agreement for Indonesia, said on the occasion the accord was the result of more than 10 years of talks. The agreement could be concluded because both sides were aware of the importance of creating conditions conducive to the improvement and development of their relations in the business and private spheres, he said. Foreign Minister Sakurauchi, who signed the agreement for Japan, described the event as a significant momentum and the groundwork for development of extensive cooperation between the two countries. He was hopeful that the agreement would stimulate further growth in the economic and other relations between the two countries. The accord would soon be forwarded to the Japanese Diet for ratification, Sakurauchi said. [BK100839 Jakarta ANTARA in English 0838 GMT 9 Mar 82 BK]

EDITORIAL NOTES IMPORTANCE OF CADRE SELECTION

Phnom Penh KANG TOP PADEVAT in Cambodian 25 Sep 81 pp 1, 6

[Editorial: "Organize Training to Finalize Combat Preparedness"]

[Text] We are facing difficulties in organizing, training and setting up our units since our army's actual task is to accomplish mass movement work in addition to the efforts of clearing out and crushing Pol Pot remnant troops.

However, if all units work actively in training and know how to schedule things with good training methods, highly appreciable results could be expected in combat.

Although the units do indeed have many activities, combat and guard patrols do not take place every day. Even if we have to ensure good apportionment, the abovementioned duties constitute only a part of what a unit has to do. Free time is for the troops to learn and work. For this reason, we must effectively organize training, schedule time for upgrading combat strategy and techniques and enhance the army's combat force.

In technical training, we must study daily the documents on weapons assembly and disassembly. We must constantly practice shooting both close range and long distance. In a unit, anyone carrying a weapon must teach others who have weapons. Combatants armed with 12mm machine-guns and DKH mortars must be good in figures calculation and able to use the AK rifle. Experienced cadres are to be selected for unit training in technical matters pertaining to grenades and mines. It is not necessary to train all troops together at the same time; they may be divided into small groups during the training period.

For combat training, a veteran fighter may be assigned to teach new recruits. Cadre and unit leaders must be trained in the units for all-round combat. Platoon and company cadres must give training in combat unit missions. School trained comrades should be appointed to supervise the training of units.

Before sending troops to fight, if time permits, study of documents on tactics may be arranged. Above all, this is aimed at strengthening army combat capability and improving combat results.

Specialized training like target practice, grenade throwing, mine detecting, and tactical training should be divided among small units and should take place in the vicinity of an army installation. After each specialized tactical exercise, we can set physical training and athletics, drills including the long-and high-jump.

The equipment can be made of wood by the army. For instance, we could rely primarily on vegetation and secondly on firewood logs and sandbags as weights to lift.

The above reflects a set of concerted opinions submitted to the comrade cadres for their consideration so that the training effort will not cease in order to upgrade the combat forces of each unit.

EDITORIAL DISCUSSES WEAKNESSES OF PARTY CORE ORGANIZATIONS IN ARMY

Phnom Penh KANG TOP PADEVAT in Cambodian 25 Oct 81 pp 1, 2

[Editorial: "Accelerate the Creation of Strong and High-Quality Core Organizations"]

[Text] After the Fourth Congress of the Kampuchean People's Revolutionary Party, the creation of core organizations within People's Revolutionary Armed Forces has been expedited. Thousands of new members have been brought to core organizations while hundreds of them became party members. Those core members are always models of success in combat and all tasks assigned them by higher echelons and conveying orders of higher echelons to cadres and combatants in their units. Moreover, providing guidance and showing the path of implementation of these orders has resulted in a number of units, cadres and combatants being praised by the higher echelons.

In spite of these results, the core organizations have not been at all successful in following party directives. Building core organizations is not yet widespread, quality is not yet improved and activities are not yet strong. Propaganda, training and mass work are not growing as planned. A review of the reasons for these shortcomings shows us that most Party cadres and members in branches still do not clearly understand the duties of the core organizations. For this reason, guidance, leadership and building core organizations is not done well. Some units use the excuse that they are too busy with the fighting and cannot find time to build core units. Such behavior is contradictory to the obligations we must fulfill, notably those of selecting good cadres and combatants who are exemplary in combat and work to be recruited and brought into core organizations. Furthermore, the building of core organizations is not yet strong and widespread. The quality of those units that have been organized has not yet been enhanced. Our cadres have still not enhanced efficiency nor do they have strong understanding of the core organizations.

With an eye toward the above, we must strongly boost the building of core organizations, raising their quality in order to fulfill the spirit of the 4th Party Congress. For this reason, we must do the following:

We must go ahead with cadres and combatants with good revolutionary characteristics in order to fulfill the above-mentioned goal. We will motivate

and assign them to core units, which should be broadly expanded to all army bases.

To help boost their quality and efficiency, we must correct their activities by scheduling periodic meetings to evaluate development, to discern whether there is progress or shortcomings through the process of criticism and self-criticism. This political life must take place every month and make plans for tasks on a continuous basis in accordance with our revolution's political goals in order to achieve unanimity in organization and in implementation. Serving as the communication channel between the party's leadership and the population, the core units must strictly comply with the party's decisions in conveying instructions and directives to all cadres and combatants within its unit. It must grasp all situations within its own unit to promptly take part in any endeavor to find a solution for anything that comes up. The core organization must maintain relations with masses and the party. For this purpose, the unit party Executive Committee has a monthly meeting with the core organization over the duties to inform the core organization of the situation and leadership tasks. To meet these tasks, a most competent core unit must be set up within each unit, school, and office as an example for others. Every member of the core unit must be always forthright in his work or combat doing a good job of each task while maintaining militant solidarity with the population and a firm determination to execute all the party's orders whatever the difficulties encountered.

From among its members considered to be totally progressive and faithful to the party, the Revolution and the people, each core unit must select a model whose name is to be sent to the party branch. The latter examines, promotes and enlists the nominee into the Party with the objective of creating a growing, vibrant People's Revolutionary Party designed to win victories in all spheres.

BRIEFS

CHINA TIMBER PURCHASE--China is to buy 4 million ringgit worth of timber from Sabah. The leader of a four-member Chinese timber mission, (Mr Gong Yinghai), said in Kota Kinabalu today, China had also bid to buy another 3 million ringgit worth of timber. This was subject to confirmation in 2 weeks. The delegation had also shown keen interest in buying more timber of good quality, such as (Langan Batu) as well as sawn timber. During its 4-day visit, the delegation held discussions with the officials of the Sabah Marketing Corporation, Sabah Foundation, Timber Association of Sabah as well as sawmillers under Timber Exporters Association. BARTER TRADE STUDY--The government will study the barter trade system with a view of stepping up trade with Islamic and developing countries. The deputy minister of trade and industry, Datuk Sharir Samad, said in Johor Baharu today the barter trade system would overcome exchange rate problems faced by these countries. His ministry would discuss with Pernas [national corporation] ways of stepping up two-way trade between Malaysia and these countries. He stressed that Pernas, as a government agency, could play a more effective role in the import of goods from Islamic and developing countries. In this connection, Pernas could set up clearing houses for these goods. [Text] [BK211227 Kuala Lumpur Domestic Service in English 1130 GMT 21 Feb 82]

IMPORT DUTY ON PALM OIL--Malaysia has asked Thailand to lift the import duty and surcharge on processed palm oil. Datuk Paul Leong [Malaysia's minister of primary industries] in his discussions with the Thai commerce minister, Mr Punmi Punnasi, said the removal of the duty and surcharge would ease inflationary pressure in Thailand. The minister also said that Thailand would not be blocking import from Malaysia because bilateral trade was very much in Bangkok's favor. However, Thailand was expected not to announce the decision soon. Thai officials said the duty and surcharge were introduced to protect the local groundnut industry and political factors would have to be taken into account before meeting Malaysia's request. [Text] [BK281219 Kuala Lumpur Domestic Service in English 0600 GMT 28 Feb 82]

FINANCIAL AID FOR BUFFERSTOCK--Rubber consuming countries have responded to Malaysia's call to stimulate sentiment and impart strength and confidence into the current weak rubber market. As a result, financial contribution of over 200 million ringgit would soon be called up from members to equip the bufferstock manager with more money to buy up the surplus rubber from the market.

The decision was made at the 2-day special session of the International Natural Rubber Organization [INRO] Council in Kuala Lumpur. The meeting also decided to extend the deadline for the ratification of INRA [International Natural Rubber Agreement] to the 15th of next month. Both producer and consumer countries unanimously agreed to extend the deadline, because, otherwise, the agreement could not become a reality. Meanwhile, the National Rubber Smallholders Association has welcomed the decision taken by INRO to call up a third round of financial contribution to build a bigger bufferstock. The vice president of the association said with more contribution from INRO members, the bufferstock manager would be able to purchase more rubber and stabilize price. IRON PLANT ACCORD WITH JAPAN--Malaysia and Japan today signed an agreement in Kuala Lumpur to implement the 1 billion ringgit iron billet plant to be located in Trengganu on the east coast of Peninsular Malaysia. Under the agreement, the joint venture company will undertake the production of sponge iron and billets. The company will have an initial paid up capital of 250 million ringgit. The project is expected to be completed in 1985. When completed, the plant will provide 850 job opportunities. The signing of the agreement marked Malaysia's real entry into heavy industry. [BK080553 Kuala Lumpur International Service in English 0800 GMT 6 Mar 82 BK]

MALAYSIAN-NORWEGIAN COOPERATION AGREEMENT--Malaysia has signed an economic and technical cooperation agreement with Norway, laying the framework for a joint economic commission. The agreement was signed on Monday [1 March] in Oslo by the minister of trade and industry, Tengku Ahmad Rithauddeen. The minister was leading a Malaysian investment promotion mission to Norway. The joint economic commission of Malaysian and Norwegian officials would discuss details of cooperative efforts for mutual benefits. [BK041229 Kuala Lumpur International Service in English 0600 GMT 3 Mar 82 BK]

THAI RICE PURCHASE AGREEMENT--Malaysia has signed an agreement with Thailand for the purchase of 350,000 tons of rice this year. The minister of agriculture, Datuk Abdul Manan Othman, says delivery of 50,000 tons monthly began last month until the middle of this year. The balance of 100,000 tons will be taken in the second half. [Text] [BK041229 Kuala Lumpur International Service in English 0600 GMT 2 Mar 82 BK]

JOINT EXERCISE WITH NEW ZEALAND--More than 2,500 New Zealand and Malaysian troops will hold a joint exercise on the east coast of Peninsular Malaysia from 16 March. A New Zealand military spokesman in Singapore said the 12-day exercise was conducted under the five-power defense arrangement. The exercise was aimed at training in joint operations in conventional warfare. Singapore, Britain and Australia would not be taking part in the operations [Text] [BK041229 Kuala Lumpur International Service in English 0600 GMT 4 Mar 82 BK]

RUBBER PACT RATIFICATION DEADLINE EXTENSION--Representatives of the natural rubber producing and consuming countries have agreed to extend the deadline for the ratification of the International Natural Rubber Agreement [INRA] from the end of this month to 15 April. According to Bernama, the decision

was taken at a special session of the International Natural Rubber Organization [INRO] Council in Kuala Lumpur presided by its chairman, Mr Jack Sumner, of Britain. It quoted conference sources as saying that the special session was convened at the request of the EEC to extend the deadline to (?enable) Italy and Belgium to obtain parliamentary approval to ratify the agreement. The conference expressed confidence that the agreement would come into force by the extended deadline with the required 80 percent support needed from both the producers and consumers. The agreement has already been ratified by 78.2 percent of consumers, in terms of their voting strength, and 79.5 percent of the producers. Thailand, one of the main rubber producers in the world, informed the special session that it would ratify the agreement by 15 April. [Text] [BK051241 Kuala Lumpur Domestic Service in English 1130 GMT 6 Mar 82]

MALAYSIA-THAILAND TIN PRODUCERS--Malaysia and Thailand have reached agreement in principle on the setting up of an association of tin producing nations. The minister of primary industries, Datuk Paul Leong, said the association will enable the countries to take action against any contingencies adversely affecting their interests. Datuk Leong was speaking to newsmen on his return from Bangkok today. In the Thai capital, he held talks with the Thai commerce minister, Mr Punmi Punnasi, and the minister of industry, Mr Chatchai Chunhawan. They discussed the Malaysian proposal to deal with development of the tin market. Datuk Leong held similar talks with the Indonesian minister of mines, Prof Subroto, last week. The three ASEAN countries together account for some 65 percent of the world tin production. Datuk Leong said producer nations had found it necessary to get together to protect their interests because of several unhealthy [words indistinct]. [Text] [BK271245 Kuala Lumpur Domestic Service in English 1130 GMT 27 Feb 82]

ASEAN-GCC COOPERATION URGED--Malaysia is making every effort to establish a link between ASEAN and the Gulf Cooperation Council [GCC]. Foreign Minister Tan Sri Ghazali Shafie said today through such cooperation greater contacts and exchanges in a wide range of fields, including economics and trade, could be drawn up by both groupings. He told a news conference that he had already notified the chairman of the ASEAN Standing Committee, Mr Dhanabalan of Singapore, to translate into reality the establishment of the link. The ASEAN foreign ministers at a meeting last year had agreed on closer contact between ASEAN and the GCC. Tan Sri Ghazali believed this link could act as a forum where dialogues to explain viewpoints from both parties and bilateral cooperation could be pursued similar to the ASEAN-U.S. dialogue. On bilateral links between Malaysia and the Gulf states, Tan Sri Ghazali said the present joint committee in his ministry would be expanded to include cooperation with the Gulf states. He said it was agreed that meetings should be held at least once a year to discuss issues on trade, investment, religion and other fields. [Text] [BK111506 Kuala Lumpur Domestic Service in English 1330 GMT 11 Mar 82]

LPG PRICE REVIEW--The price of liquefied petroleum gas [LPG] will be reduced through the government review of petroleum prices in the country. The minister of trade and industry, Tengku Ahmad Rithauddeen, who announced this in Kuala Lumpur today, said Malaysia's pricing system in regard to petroleum products as a whole could not depend on the prices of crude in the world markets. Based on past experience, such dependence could be disastrous.

Tengku Rithauddeen said Malaysia should set up its own pricing system. The government should consider the justification of any increases in its petroleum products. Factors to be considered would include the exchange rate, transport and dealer's commission. Earlier, the minister opened the 5-day conference of the Southeast Asia Iron and Steel Institute. He urged the participants to look into the idea of setting up an iron and steel industry marketing system similar to that of the ASEAN motor vehicle complementation program. By having a larger combined regional market, new areas in the industry not viable in the past could be ventured into. About 200 representatives from 17 countries, including Malaysia, are attending the conference. [Text] [BK151013 Kuala Lumpur International Service in English 0800 GMT 15 Mar 82]

TRADE WITH KENYA, AFRICAN STATES--Malaysia is looking into the possibility of widening its trade relations with Kenya and other African states. The deputy prime minister, Datuk Musa Hitam, says the government plans to send trade delegations to Kenya to identify trade opportunities in the African states. Datuk Musa said trade potential, though small at the moment, was growing. Malaysia would also look into the possibility of upgrading the present trade mission in Kenya to that of a high commission. He was speaking to newsmen after the chairman of the Kenyan African Union, Mr (Isac Omolo Okilo), called on him in Kuala Lumpur today. The deputy prime minister said the prime minister, Datuk Sri Dr Mahathir Mohamed, also plans to visit certain African states in the future. Datuk Musa said the visit was in line with the government efforts to diversify trade from that with developed nations to include developing nations. [Text] [BK161015 Kuala Lumpur International Service in English 0800 GMT 16 Mar 82]

NEW MEXICAN AMBASSADOR--Mr Juan Manuel Ramirez Gomez, the new Mexican ambassador to Malaysia, presented his letter of credentials to His Majesty the King in Kuala Lumpur today. Mr Gomez is also accredited to Indonesia. [BK110649 Kuala Lumpur International Service in English 0600 GMT 10 Mar 82 BK]

RAILROAD TRANSPORTATION FOR THAI RICE--Thailand has agreed in principle to transport its rice to Malaysia by train in the near future. The agreement was reached during a discussion between the Thai trade minister, Mr Punmi Punnasi, and the minister of public enterprises, Datin Paduka Rafidah Azis, in Kuala Lumpur today. At present, Thai rice is delivered by ship. Speaking to newsmen, Datin Paduka Rafidah said officials from the National Paddy and Rice Board, Malayan Railway and the Thai Authority would work out details for the new method of transportation soon. [Text] [BK110649 Kuala Lumpur Domestic Service in English 1130 GMT 10 Mar 82 BK]

NEW ZEALAND HIGH COMMISSIONER--The Yang Dipertuan Agung received credentials of the new New Zealand high commissioner to Malaysia, Harle Freeman-Greene, in Kuala Lumpur on 11 March. [BK120521 Kuala Lumpur International Service in English 0600 GMT 11 Mar 82 BK]

1981 FOREIGN TRADE--In the first 11 months of 1981, Malaysia exported 6,366 million ringgit worth of crude oil and 210 million ringgit worth of petroleum products. In the same period, the country exported 3,458 million ringgit worth of rubber. Trade deficit in the same period amounted to 581 million ringgit, mainly due to the import of machinery and transport equipment totaling 8,900

million ringgit. [BK170321 Kuala Lumpur International Service in English 0600 GMT 13 Mar 82 BK]

PALM OIL PRODUCTION--Malaysia's crude palm oil production for February is estimated at 202,000 tons, a 12 percent increase over January's revised production of 180,200 tons. The revised tonnage is 1 percent above the estimated figure given last month. A statement from the palm oil registration and licencing authority says that February production also compares favorably with the nearly 172,000 tons recorded for the same month last year. POLITICAL DEBATE CALLED 'PATHETIC GAME'

Islamabad THE MUSLIM in English 6 Mar 82 p 4

[Article by Sultan Ahmed]

[Text] PAKISTAN's political debate is becoming to look more and more like a game of mahjong, except the game is being played in a more noisy and tricky manner.

The one-sided game with the government sitting aloof and tight, has become a game of points, points for points, more points for less points, and now sub-points within the points. It has become a game in which some parties are trying to outpoint the others.

The public is baffled by all these. The profusion of points and proliferation of sub-points are beginning to nauseate the people. Even professional analysts and political writers are getting confused as they are being forced to take the trees, in fact prickly shrubs, for the woods. Wading through this sea of points and lakes of sub-points has become a frustrating task for them.

It all began simple with the four points of the MRD (Movement for Restoration of Democracy) which are direct and specific. They are: Lifting of Martial Law. Transfer of power to an interim government; revival of the 1973 Constitution and freedom of the Press and release of all the political prisoners.

The Jamiatul Ulema-e-Pakistan, which did not join the MRD but formed an ultra-Right alliance with Pir Pagaro's Muslim League, then came out with six points more or less like the MRD's four points. But recently the number of its points was raised to eight, making the last very ambiguous, and, in the eyes of its critics, quite mischievous.

The Jamaat-e-Islami, which is neither in the MRD or in the ultra-Right alliance, has now come up with seven points, which Mian Tufail Muhammad, its Amir, has described as the "National Charter." The basis of the Charter is Islam, says the first of the seven points. Establishment of a complete Islamic order on the basis of the Holy Quran and Sunnah takes precedes over all else in this Charter, and all parties wanting to negotiate with the Jamaat have to accept it.

Of the seven points, the first has five sub-points, and the last, too, has the same number. In fact, it is less of a charter and more an election manifesto.

The whole game is more like what happens at a market place: he who does not want to sell quotes a very high price, and he who does not want to buy quotes a very low price.

There is, however, broad agreement on the four points of MRD. The parties are for an end to Martial Law, revivial of the 1973 Constitution, early general elections, and Press freedom and release of all political detenues.

Of course, there are marginal differences like Pir of Pagaro wanting an amendment to the 1973 Constitution reducing the sweeping powers of the Prime Minister, and opposing an end to the Martial Law outright.

Maulana Shah Ahmad Noorani's eight points of which the last calls for "formation of an interim national government comprising political parties participating in the democratic struggle for holding genral elections according to 1973 Constitution and lifting of Martial Law", has raised a number of questions. It has become a fly in the political ointment in the talks between JUP and MRD.

Is this point aimed at keeping Jamaat-e-Islami out of an interim government because of JUP's strong dislike for the Jamaat? Is it an attempt to confuse the issue and create dissensions among the parties seeking to restore democracy in the country? What would happen to the democratic struggle if, as a result of official policy or reprisal, the movement takes a different turn?

The JUP's role has become darkly suspect after it formed an alliance with Pir Pagaro who earlier – in 1979 – said that elections were not possible before 1982 and recently urged the people to pray for elections by 1995.

JUP's & Pagaro connection becomes all the more intriguing as Pir Pagaro has been talking of his own connections with the GHQ, and of GHQ's responsibilities since 1953, and opposing an end to the Martial Law before the general elections.

Pir Pagaro and Maulana Shah Ahmad Noorani, it appears, would prefer an interim government under the Martial Law pending the elections. This position is not acceptable to the MRD parties as they fear that it may only result in the ouster of the interim government at some stage and continuation of Martial Law.

Such apprehensions have increased following the statement of the Interior and Political Affairs Minister, Mr. Mahmud Haroon, that elections could not be held as long the Russians were sitting on the other side of the border in Afghanistan. The President – has not disagreed with him in spite of persistent questioning by the Press.

The argument advanced by the political leaders is that in the face of the Russian presence in Afghanistan or any other possible threat, key elements in Pakistan must close their ranks. For that

purpose they want total participation of the people in the government through general elections, and a return to political normality through the 1973 Constitution.

But the President says that his efforts, instead, would be to bring about sanity in politics so that the country could get rid of the politics of agitation, negotiation and personal motives". In taking this position his views are opposed to those of Mian Tufail Muhammad who wants negotiations with the government and not confrontation.

If general elections are put off indefinitely, the possibilities of confrontation between the government and political parties increase. If confrontation has to be avoided there has to be neogitations. But if the politics of negotiations of compromise is to be avoided what next?

Gen. Zia himself has said that he is not in favour of a round-table conference of political leaders: he is meeting them individually. But clearly he would not call them negotiations but possibly as remaining in touch with friends like Pir Pagaro and Mian Tufail Muhammad.

Clearly, let a part the points and multiple sub-points in its, charter, the Jammat-e-Islami's approach to the future is a mixed and rather too confusing. While it wants revival of the 1973 Constitution, it demands elections within this year. Simultaneously it wants a code of conduct for the politicians; another code for the Press and a "suitable standard for candidates to the legislature in the light of the Islamic principle of candidature. And it wants revival of political activities only after the parties have remoulded their constitutions and manifestoes according to the Holy Quran and Sunnah.

Such omnibus demands of the Jamaat contradicts it simultaneous stand that the 1973 Constitution should be restored and settled constitutional issues should not be allowed to be reopened, and any vital amendment to the Constitution be made only be an elected Assembly in accordance with the Constitution. Clearly while the Jamaat wants to treat one set of issues as closed, it wants to reopen othe issues and impose its views, particularly in respect of religon, on all other parties.

The Jamaat's stand could carry some real weight if the other Islamic parties, the JUP and the Jamiatul Ulema-e-Islam, were in agreement with it at least in regard to the interpretation of Islam and its role in our polity. But they are not, and for good reason in their view.

The views of the President and Mian Tufail on the significance of terrorism in Pakistan are also dissimilar. The Jamaat says "due to the absence of political process people are trying to establish the politics of subversion and terrorism in the country. "But Gen. Zia does ot agree that the violence or terrorism in the country has any relevance to the political vaccum.

Maulana Shah Ahmad Noorani and Khawaja Khairuddin who is a leading negotiator on behalf of MRD, also have stressed that the terrorism sprang from the political vacuum in the country.

Meanwhile, Prof. Ghafoor, a pragmatist and realist among the Jamaat leaders, has been stressing that the ball is in Gen. Zia's court. In fact, it has always been there. So in the absence of the ball game the politicians are playing the game of points against the background of pervasive subversion and increasing national uncertainty.

FUTURE POLITICAL DIRECTION PONDERED

Karachi DAWN in English 7 Mar 82 p 7

[Editorial]

[Text] THE DEFUNCT political parties have for some time been going through rounds of talks and negotiations in an attempt to reconcile their differences and unite in the cause of democratic restoration. It is a sign of the times that some of the parties which until some time ago would not so much as exchange polite greetings with one another are on talking terms again and even exuding warmth and cordiality towards one another. Whether or not the current move for a broad-based alliance of the defunct political parties succeeds in the end, the pattern for a unified stand on the basic question of the restoration of the political and constitutional process seems to have been fairly securely set. It would be simplistic to think that the current flurry of inter-party contacts and exchanges signifies no more than the politicians' artful way of proclaiming their presence in the midst of prolonged political dormancy. Neither is the unity move to be seen and interpreted as the defunct political parties' trade unionist reaction to a situation of forced unemployment, threatening their very existence.

The desire for closing the ranks is not for reasons of self-preservation alone, although the awareness of such a need must have been rankling in the minds of the defunct parties ever since the formation of the Federal Council (Majlis-i-Shoora) which they had strongly opposed. Some of the major parties may have been piqued by the presence of a significant number of their office-bearers and members on the membership list of the nominated Council and presumably felt their internal unity and discipline threatened as a result of this and other likely moves. A more compelling motivation behind the unity move, however, is a growing realisation among the leaders of the defunct political parties of the serious political and constitutional implications of an indefinite prolongation of the present interim rule. It would be unwise to regard their concern on this score as a dislodged and disbanded group's propensity to take a cynical view of everything about a dispensation in which they have no role to play. One need not wholly agree with the politicians' perception of the possible risks arising from an over-extended constitutional deviation to see the logic of many of their app-

rehensions. The most worrying possibility to take into account concerns the fate of the nation's Constitution which has been worked only for four years and which has since been held in abeyance for a longer period, and for the time being at least, is superseded by the Provisional Constitution Order. What is more, during the period of suspension, it has been subjected to major amendments, touching off speculation and misgivings about its actual status and even prompting new demands from some quarters for further amendments to provide for greater autonomy for the federating units. The point to consider is whether the universally agreed framework of government and polity will emerge unscathed from a long spell of disuse and structural change. Politically, too, there must be a clear awareness of what to expect at the end of an unduly extended political pause which has inevitably kept the Government and the representative organisations of the people virtually poles apart, besides weakening the latter's links with the common people. There has been a blurring of the nation's focus of political orientation. And whatever sort of interim link the Local Bodies and the Majlis-i-Shoora might have provided between the government and the people, the political vacuum has not been filled. What prevents a vacuum arising is a working political system in which the functioning of political parties is crucial to the filtering of opinion, political mobilisation, the enforcement of the rulers' accountability and the setting of national direction. There simply is no bypassing the politicians in a normally working political system or even in a transitional phase leading to it.

From this point of view, there is much to feel disturbed about, seeing the widening gulf between the Government and the defunct political parties. The disquiet is all the greater because of what both the Government and the party leaders recognise to be a foul conjunction of a continually hostile external environment and a sudden downward slide in the internal law-and-order situation. The latter development is evident from the current large-scale arrests of antisocial and "subversive" elements and new moves towards a general tightening up of the internal security arrangements throughout the country. The issue here is not whether a political government can cope with such a situation better than an unrepresentative one in terms of the physical aspect of handling and the deployment of the official agencies provided for the purpose. The crucial factor is the active support and mobilisation of the people which is essential for dealing effectively with an external threat of the kind that Pakistan faces right now or the problems of public disorder and political dissension arising internally. It is not known how many of the arrested persons have been taken into custody for political reasons. But it is recognised that a challenge has come from elements threatening to cause subversion and indulge in acts of terrorism. In one aspect subversion and terrorism are a problem for the machinery of law and order. But in another aspect they can be seen to have political ramifications. A pool of stagnant water invariably emits a bad smell. The damming up of the flow of the stream of national politics can similarly breed sinister tendencies. The absence of an active political platform

has meant a lingering sense of uncertainty and drift and involved a denial of the normal means of airing dissent. Wisdom lies in recognising a particular problem for what it is and then trying to remedy it – which in the present case means starting a process gradually to revive normal political activity, to lift the curbs on free expression of opinion, to remove the constraints and mechanisms that foster alienation and despair and, above all, to work towards the inevitable national need for restoring representative rule within a specific and generally acceptable time-frame.

For such a scheme to appear credible and inspire wide confidence, it is important for the Government to take the initiative in removing the present barrier of misunderstanding and divergence of perceptions distancing it from the major political parties. The condition now seems very favourable for such a move. For while trying to find common ground, all parties, without exception, have reaffirmed their faith in the constitutional means for achieving their objectives and have categorically decried terrorism and violence as totally repugnant to their political philosophy and the country's interests. From a larger national point of view, the general agreement of opinion on elections and on the restoration of the 1973 Constitution can have the effect of largely neutralising the forces of violence and disorder and of reaffirming the people's faith in normal democratic and constitutional methods for achieving change and progress. An active process such as this can, indeed, serve as an effective check against extremist tendencies of malcontents and the perpetrators of anarchy. However, a lot depends on how the Government responds to the convergence of opinion among the defunct political parties on what they perceive to be the only safe and orderly way out of the continuing crisis. It is time for the Government and the political parties to stop talking and acting at cross-purposes and seriously consider starting a dialogue for arriving at a consensus on what is to be done.

ULEMA WARN PEOPLE AGAINST 'SELFISH POLITICIANS'

Karachi DAWN in English 7 Mar 82 p 12

[Text]

LAHORE, March 6: Five Ulema, belonging to various schools of thought, including three members of the Federal Council, have called upon people interested in the enforcement of Islamic system not to pay heed to the political demagogues who were noised against each other in the recent past but who are now trying to put up a facade of unity to cover their deep-rooted differences, for the sake of their factional and opportunistic designs.

In a joint statement here on Saturday, the Ulema expressed their surprise at the confusion being caused through statements by various leaders of the defunct political parties who were crying hoarse for restoration of democracy and holding of elections immediately. This demand, the Ulema maintained, was being voiced just at the time when the Council of Islamic Ideology and some other agencies were engaged in formulating recommendations about the future political structure and Islamic form of government in the country.

Paradoxically, the Ulema opined that for the sake of their demand, endeavours were being made for political alignments by such elements as had described in the past their newly-found companions as murderers of democracy, ill-wishers of Pakistan and enemy of Islam.

The signatories to the statement are Maulana Mohammad Malik Kandhalvi, member Majlis-i-Shoora Maulana Abdul Ghaffar Hassan, member, Majlis-i-Shoora; Dr Israr Ahmad, member Majlis-i-Shoora; Maulana Abdur Rahim Ashraf, Mohtihim, Idra-i-Taleemaat Islamia; and Maulana Mohammad Nazir Muslim, Khatib, Jamia Moti Masjid Rahimyar Khan.

SIGNATURE DRIVE FOR ELECTIONS FROM MARCH 23

Karachi DAWN in English 8 Mar 82 p 1

[Text]

ISLAMABAD, March 7: Chaudhri Arshad, a former Federal Minister and a leader of the defunct Pakistan Democratic Party, said here on Sunday that a signature drive will be launched from March 23 — Pakistan Day — on the initiative of the defunct political parties in MRD and outside, to register public support to the demand for general elections under 1973 Constitution and revival of parliamentary democratic life in the country.

Talking informally to the reporters in Islamabad, Chaudhri Arshad asserted that all the political parties including those in the MRD were unanimous in their demand that the Martial Law should be lifted, Constitution of 1973 be restored, parliamentary and assembly elections should be held, and power should be transferred to the elected representatives.

Answering questions, he claimed, all the parties were completely united in their demand for restoration of constitutional rule in Pakistan under the Constitution of 1973. However, he admitted that the differences still persisted among the parties as to the modalities for the transfer of power and the interim arrangement that should be made pending the holding of the general elections.

Chaudhri Arshad said that while the MRD was of the view that the present Martial Law Authority should immediately make arrangements for restoration of the 1973 Constitution and holding of fair and free parliamentary elections, the defunct Pakistan Muslim League (Pagaro Group) and the Jamiatul Ulemai Pakistan proposed that a national government of political parties should be inducted before the elections were held. The two parties believed that without induction of a national government prior to elections, it was not possible to expect fair and free polls under the present regime.

Chaudhri Arshad however, described these differences on the modalities as not major and said that the MRD and the like-minded parties outside it have nominated him, Mr Abid Zuberi of the National Democratic Party, and Mr Faridul Haq of JUP, to hold consultations and come up with a formula which should be acceptable to all the parties concerned. He hoped it would be possible to reach a consensus on the issue in next ten days.

He explained that the signature drive in support of the constitutional rule was one way to mobilise public opinion and demonstrate it. He told a questioner that neither the MRD nor any other political party favoured violence in political struggle which, he added, would remain peaceful. The MRD was for healthy political activity, he added.

Answering another question, he said, the Pakistan National Party of Mir Ghaus Bux Bizenjo had also agreed to join the movement for wider unity in support of elections and restoration of the Constitution. He said that the MRD agreed with the PNP in its demand for improving constitutional guarantees, and to ensure smooth implementation of the provincial autonomy provisions as enshrined in the 1973 Constitution.

Chaudhri Arshad said in reply to another question, the Majlis-i-Shoora had failed to meet the popular demand and should not last long.

REVIVAL OF POLITICAL ACTIVITY URGED

Karachi DAWN in English 7 Mar 82 p 3

[Text]

LARKANA, March 6. The Amir of the defunct Jamaat-i-Islami, Sind, Maulana Jan Mohammad Abbasi, has demanded that Press censorship be completely lifted, civil courts should have supremacy over Summary Military Courts, all political parties be allowed to function again, political prisoners be released and general elections be held this year so that elected representatives could solve people's problems effectively.

Talking to this correspondent at his residence on Thursday, he said that owing to the ban on political activity in the country and because of other policies of the Government, two major social evils had taken root in our society, namely, corruption and crimes. The current massive drive against anti-social elements, he said, was a confirmation of the fact that the administration had lost all control over law and order situation in the country.

He was, however, of the opinion that this campaign was not going to deliver the goods because those influential persons who patronised criminals and anti-social elements had been let loose. About corruption, the Maulana said it originated in government departments of public administration.

In reply to a question, he observed that politicians were in a good bargaining position with the Government and as such the latter had been seeking their cooperation for running the country's affairs. He said a large number of defunct PPP members had been nominated to the Federal Council, and added that they had betrayed their party and people.

About current parleys among political leaders, Maulana Abbasi said a move was under way to forge unity among different political groups. He said the Jamaat-i-Islami was working for peaceful transfer of power to elected representatives.

He said his party was demanding general elections in national interest. In a democratic society, he added it would be easier to mobilise public opinion in favour of Islamic system.

ZEHRI SAYS POLITICIANS, PEOPLE, GOVERNMENT DIVIDED

Islamabad THE MUSLIM in English 6 Mar 82 pp 1, 8

[Text]

RAWALPINDI, March 5: Nabi Bux Zehri, former Senator from Baluchistan and the Convenor of Jeeway Pakistan Party, has regretted that three big forces of the country, that is politicians, people and the government were divided on various national issues and there was no harmony amongst them.

In an interview with PPI, Mr. Zehri said all political parties agreed that the Restoration of democracy and the holding of general elections was the only solution of the crisis through which the country was passing. Yet, he said, there was no sign of unity of alliance amongst the parties.

Mr. Zehri called upon the politicians to get united by sinking their differences in the best interest of the country in order to work out an agreed plan to solve the problems and difficulties faced by the country.

Mr. Zehri said the situation was neither new nor worse as most of the countries in the world have gone through such crisis. The only difference is that they try to solve their problems through dialogue and discussion while we in Pakistan have no unity or understanding over vital issues.

In view of present situation, Mr. Zehri said, there should be an institution, group or class comprising cool minded moderate and patriotic persons who could be entrusted by the government as well as the politicians to bring the two parties near each other.

Mr. Zehri said with this spirit and aim various moderate political leaders and parties had forged an alliance under the name of "Pakistan Rabita Council (PRC)". He said talks with a number of politicians were in progress in this connection who had promised to inform about their final decision within the current week of this month.

Mr. Zehri said the names of the members and office bearers of PRC will be announced before the 10th of this month in Lahore.

PRC, Mr. Zehri said, would elaborate its point of view before the three big forces of the country through Press and media in all big cities. He said committees would be formed to contact the people, government and the politicians to take them into confidence.

SAFDAR SUPPORTS DIALOGUE WITHOUT PRECONDITIONS

Islamabad THE MUSLIM in English 6 Mar 82 p 1

[Text] LAHORE, March 5: Khawaja Muhammad Safdar chairman Federal Council today stressed the need for a dialogue between the politicians and the government to draw out a strategy to frustrate the internal and external threats confronting the country.

He was delivering his Presidential address at Hamid Nizami day held at the Jinnah Hall here today.

Khawaja Safdar said in view of the circumstances the country was passing through, the politicians should not insist on preconditions for initiation of the dialogue.

The Chairman Federal Council further stated that such a dialogue was inevitable to forge unity in the ranks of nation and to enable it face the dangers lurking on the borders.

Khawaja Safdar defended his decision to accept the chairmanship of the Federal Council and emphatically said he would not apologise over his decision since he was free to take any step which he thought fit in the national interest.

Referring to the differences on the issue existing between him and other politicians, he said they were based on honesty. However, he said, time would tell as to who made the just decision.

Khawaja Safdar again held responsible the leaders of the defunct Pakistan National Alliance for the imposition of martial law in the country

HOUSE BUSINESS: Khawaja Safdar said the members of the Federal Council were the sole source to bring before the House for discussion on private business days matters of national interests. These matters he added included original bills amendment bills, motions and all that the members of the National Assembly were entitled to present

The chairman Federal Council called upon the technocrats to brief the Federal Councillors on various issues since the latter were not experts in all fields.

PLEA FOR REMOVING LOCAL TAXES

Karachi BUSINESS RECORDER in English 8 Mar 82 p 1

[Article by Anwar Rajani]

[Text]

The imposition of taxes in various shapes by local bodies on a number of goods meant for export, has adversely affected the export trade, it is reliably learnt.

These taxes, called local taxes, are being levied by the Union Councils at talukka and district levels in Sind under the titles of "Export Tax", "Ravangi Tax" and "Zila Tax" on commodities meant for export.

Informed sources told "Business Recorder" yesterday that the levy of these taxes on the commodities going out of the area of a local body jurisdiction or in transit from one District to the other, is so indiscriminative that it affects the export base of these items.

For example, the export tax on molasses, a bye-product of sugar mills, in Badin District is Rs. 30 per truck-load while in Dadu District, the "Ravangi Mahsul" as it is christened, is over Rs. 300 per truck-load. As against this, it is over Rs. 150 per truck-load in Larkana District.

The sources said that the levy in Dadu amounts to 12.5 per cent of ex-mill price of molasses being lifted from Dadu Sugar Mills, while export tax on molassee from Larkana Sugar Mills works out to 5 per cent of the cost of goods. However, it is reported that in Badin District, it amounts to one per cent only.

It may be mentioned here that molasses already attract export duty of 25 per cent payable at the time of export on the basis of FOB price. The additional local export tax, according to exporters of molasses, would serve as a prohibitive factor for the export trade.

As contended by exporters, the volume of export of any goods depended on the constant movement of commodities from each district and the levy of these taxes is causing arguments and quarrels between the tax contractors and carriers which ultimately results in delay and monetary losses to exporters. The collection of these taxes has been allotted to contractors in the rural areas by the local bodies.

Exporters, it is learned, have made representations to the authorities to waive this tax on goods meant for export.

The sources said that this issue was also taken up in the meeting of the Export Promotion Board in the past and it was decided that this type of tax should be done away with completely.

It is also reported that this tax has been done away with in the Punjab.

MAHBUBUL HAQ FOR STRONGER PRODUCTION BASE

Karachi BUSINESS RECORDER in English 8 Mar 82 p 1

[Text]

ISLAMABAD, March 7: Dr. Mahbubul Haq, Deputy Chairman of the Planning Commission, said here today "we need both a strong production base and an equally strong social conscience", in order to develop the country and ensure welfare of the people.

This is the strategy which will be reflected in future development planning of Pakistan, he said in an interview here today. He said it will be premature to say anything at this stage about his concrete policy proposals.

Dr. Haq who took up his new assignment here today said, "it will take time to develop concrete policy proposals, and will require wide consultations within the system before these are announced.

"But", he said, "there is one thing which I would like to promise today". He said, "I will promise a new era of planned economic development—development which is humane, development which is socially conscious, development which reaches all our people, development which is reflected not just in abstract statistical numbers, but in the ordinary lives of our poor people", he said. He said, "we need both a strong production base and an equally strong social conscience".

Dr. Haq agreed that these are only general objectives. He said, these must be translated into specific programmes and concrete policies. "This will require a tremendous amount of courage, a good deal of hard work and wide consultations with my colleagues and associates".

The Deputy Chairman said, he is aware that there is "a heated controversy going on in this country about the relative merits of public and private sectors".

He said: "frankly my attitude is quite simple. I am not interested in the colour of a cow. I am only interested in whether it gives milk. I shall re-examine the balance between public and private sectors in the pragmatic spirit. I believe that it is likely to lead to considerable liberalization of the economy".

Dr. Haq said "it is our objective which must be fixed and not our means". He said: "our objective clearly is to take development directly to our people to make them fully participate in it, and to distribute among them the benefits of economic growth. We must, however, remain flexible. I do not regard inflexibility as a great virtue".

He said he will be open to advise from all sections of society. "In fact, I shall seek it out". "In the final analysis, I shall rather be judged by my actions than by any statement that I make today", he added.

Dr. Haq who has been heading the Policy Planning Department of the World Bank, and had been out of the country for more than 10 years, said, "it is a great feeling to be back home again". He said, "I am genuinely excited about the challenge I have and propose to devote my full energies to the rapid economic development of the country".

FEDERAL MINISTER ON BALUCHISTAN

Karachi MORNING NEWS in English 8 Mar 82 pp 1, 8

[Text]

SUKKUR, March. 7: Federal Information and Broadcating Minister Raja Zafar-ul-Haq said here today that no country could be considered as cimilised and make any progress unless all its regions and units made equala progress and marched hand-in-hand towards the goal of prosperity.

He was speaking at a civic reception arranged in his honour by the Sukkur Municipal Corporation at Sukkur Municipal Stadium here this afternoon.

Raja Zafar-ul-Haq said that President General Mohammad Zia-ul-Haq realised that God Almighty had given him a responsibility and considered it his duty to serve the people of all regions of Pakistan to the best of his knowledge and thinking.

He referred to the Sukkur Mayors of address of welcome wherein he had mentioned the injustices done by the previous Government to the Sukkur Division by keeping it backward in several felds and said the days of the previous Government were strange days because in those days no one could get anything without bowing before the then rulers.

WAR IN BALUCHISTAN

During that rule, which was called a democratic and political rule, there was continuously a state of war in the province of Baluchistan for four long years A very large number of the people of Baluchistan then were forced to leave their homes and go to the mountains he added.

The Minister said that after the present Government came to power not only the four-year war in Baluchistan ended but also 52 people who were detained by the previous regime because of their difference with the then rulers were released and the people who were forced to leave their homes and go to the mountains were given adequate compensation.

He said that President General Zia-ul-Haq during his first tour of Baluchistan found that the people there had a feeling of deprivation. The president then ordered all Federal Departments to invite applications for providing jobs to the educated people of Baluchistan. As there was a little ratio of literacy only 200 applications were received and out of them 125 people were given jobs immediately.

The sense of deprivation among the people of Baluchistan was thus removed, he added.

Raja Zafar-ul-Haq said that there was also the feeling of deprivation among the people of Baluchistan in the matter of providing them Sui gas. President Zia's Government arranged to provide Sui gas to Baluchistan by acquiring a loan of more than 500 crores from a foreign country. Fifty per cent of the work on this project has already been completed he said.

ANTI-STATE ELEMENTS

The Federal Minister for Information and Broadcasting said at Rohri this morning that it was the duty of every good government whether elected or otherwise to protect the lives, properties and honour of the people of the country.

Speaking as a chief guest at a reception arranged by the Istehkam-e-Pakistan Council Rohri shortly after his arrival

on a three-day tour of Sukkur Division during which he is scheduled to visit the districts of Sukkur Shikarpur Jacobabad and Khairpur Raja Zafar-ul-Haq declared that there had been considerable decrease in the incidents of crime such as bank dacoities during the last ten or 15 days since the Government launched its campaign against the anti-state subversive and anti-social elements throughout the country.

He said that the Government was determined to deal with the anti-state and anti-social elements with an iron hand and they would be dealt with under the ordinary laws and if need arose they would be dealt with under Martial Law regulations.

President General Mohammad Zin-ul-Haq had given directive to the Governments of all the four Pdovinces to deal with a heavy hand with the criminals and their harbourers he added. Raja Zafar-ul-Haq said that some politicians had given statements as to why these criminals thieves and dacoits were being arrested and observed that anyone speaking in support of a criminal was worse than the cdiminal itself. To give protection and support to any criminal was the biggest crime he pointed out.

The Federal Minister stated that the real strength of a person lay in the sympathy of good law abiding citizens and no strength could be achieved with the support of goonda and bad elements.

Raja Zafar-ul-Haq also referded to corrupt officials and urged the elected local councillors and the people to cooperate with the Government in the accountability of corrupt Government officials.—

ALI KHAN: MRD WILL NOT JOIN ANY INTERIM GOVERNMENT

Islamabad THE MUSLIM in English 4 Mar 82 p 1

[Text]

KARACHI, March 3: MRD would not join any interim government under the umbrella of Martial Law, declared Fatehyab Ali Khan, convener of te MRD for the current month, while addressing a Press conference at the Karachi Press Club here today.

Except for the defunct PPP, the heads and leaders of all the component parties of MRD, including Khawaja Khairuddin, were present at the Press conference.

Fatehyab Ali Khan said that he had held consultations with Begum Nusrat Bhutto and Sardar Sher Baz Mazari before addressing the Press conference.

Without mentioning the nine-point formula of Pir Pagara for the formation of a political government which could hold elections in the country, Mr. Fatehyab said the MRD would not join any government under Martial Law.

Replying to a question, he said there was no bar on any of the MRD leaders on having talks with other party leaders for co-operation for the restoration of democracy in the country.

He said some of the MRD leaders held meetings with Maulana Noorani and Pir Pagara in their individual capacity and they were free to exchange views on the MRD declaration of 1981.

He said the MRD leaders had held formal talks with the JUP chief, Maulana Shah Ahmed Noorani, and not with Pir Pagara.

To another question, Mr. Fatehyab dispelled the notion that the political parties in the country had failed to demonstrate unity on national issues.

He said for the first time in the history of Pakistan, political leaders had expressed unanimity of views on major issues such as the revival of political activities, holding of general elections of the earliest, preservation of the 1973 Constitution and release of all political leaders.

No party in the country had different views on these issues, he remarked.

Mr. Fatehyab said that four more parties had signed the MRD declaration and had expressed the desire to join it. The parties are: Awami Jamhoori Party, Pakistan Awami Tehrik, Pakistan Socialist Party and Muslim Conference.

GHAFOOR SAYS JI NOT AVOIDING POOLS

Karachi DAWN in English 6 Mar 82 p 10

[Text]

LAHORE, March 5: The Naib Amir of the defunct Jamaat-i-Islami, Prof Ghafoor Ahmad, has declared it as baseless and untrue that his party is avoiding a general election, and said that it was the stand of the Jamaat that elections should be held this year.

Talking to PPI here today, Prof Ghafoor said that even such allegation was no made by two PPP leaders, Mr Abdul Hafeez Pirzada and Mr Ghulam Mustafa Jatoi, with whom he had held a meeting in Karachi recently to apprise them of his party's point of view.

He said that no political party, including the Jamaat, was in favour of forming any alliance with other party for election purposes. "The thing which we want is to reduce the gulf of differences amongst various parties through holding meetings and negotiations with them in order to reah a consensus over maximum objectives to ensure the holding of general elections in the country," he added.

When his attention was drawn to a news item regarding the holding of elections at any time in the country, Prof Ghafoor said it was in the national interests that elections should be held at the earliest possible time. He opposed the idea of giving a long time to the political parties for election campaign, and added that elections should be held after a brief election campaign, giving a chance to all the parties to present their programme, manifestos etc before the nation on radio and television in order to level public opinion in their own favour.

Replying to a question, he denied that he had been contacted by any quarters in connection with the formation of a national government, and observed that such rumours were creating misunderstanding among the people.

Prof Ghafoor said the Martial Law had been imposed with a commitment that elections would be held soon. The Army should, as such now apprise the nation of its line of action regarding the holding of elections. In this connection the President could meet leaders of the political parties, individually or collectively, if he so liked, Prof Ghafoor concluded.

GHAFOOR FAVORS INITIATING DIALOGUE WITH GOVERNMENT

Islamabad THE MUSLIM in English 4 Mar 82 p 1

[Text] KARACHI, March 3: Prof. Ghafoor Ahmad, leader of the Jamaat-e-Islami, has suggested that negotiations should be initiated between the government and political leaders with a view to reviving the 1973 Constitution and holding of the general elections as early as possible.

If political parties, Prof. Ghafoor said, speak with one voice on basic issues, could come closer together, and refrain from mud-slinging, they would not only bring upon the government moral pressure to hold the general elections, but would also held in greating conducive atmosphere for the polls.

Talking to 'The Muslim' the Jamaat leader said, political parties have to start from a clean slate and develop a code of conduct so that they should not criticise each other for the sake of criticism and operate on healthy grounds. He said political process has not been allowed to develop in this country and this has retarted the growth of right type of politics in the country.

When censorship was relaxed, he said, political leaders made contradictory statements. He said after consultations and parleys they had now agreed and were speaking with one voice on the revival of the 1973 Constitution and the holding of general elections as early as possible.

Asked whether the political leaders were trying to work out a mechanism for the transfer of power, the Jama'at leader replied in the negative. He said it was our "wishful thinking' because of the repeated declaration by the government to hold elections.

In response to question whether a stable civilian government was possible, Prof. Ghafoor said, the danger of instability could not be ruled out if there was no majority party or a weak coalition emerged in the elections. If a weak coalition could not function, he said, fresh elections could be held. He said repeated elections would help stabilise the situation. He also underlined the need for a code of conduct for the political parties.

Prof. Ghafoor said if there were apprehensions that elections would generate heat and agitation, the election compaign could be restricted to the projection of manifesto and programme of political parties on TV and Radio and in the Press.

The Jama'at leader said he had presented the seven-point formula of the JI for evolving a concensus on basic issues for consideration of the MRD. The formula, he said, was based on declaration on Islam, revival of 1973 Constitution, a code of conduct for political parties, holding of elections within 1982, lifting of Press censorship, independence of the judiciary etc. He, however, highlighted the two points forming part of the formula which lays down that elections should be held on the basis of proportionate representation and separate electorates.

NOORANI CALLS FOR ARMED FORCES' RETURN TO BARRACKS, ELECTIONS

Islamabad THE MUSLIM in English 4 Mar 82 p 1

[Article by Salim Bokhari]

[Text]

ISLAMABAD, March 3: Maulana Shah Ahmed Noorani, chief of the defunct Jamiat Ulema-e-Pakistan and President of the World Islamic Mission, said here today if the country was faced with threats from outside, the Army should go to borders instead of running civil administration.

Speaking at a reception given in his honour by the Rawalpindi branch of the JUP and World Islamic Mission, he said there was no difference of opinion among the political parties that Martial Law should go once and for all. All parties wanted Armed Forces back in the barracks and make arrangements for holding of general elections, the Maulana said and added, "Martial Law is a law of jungle. Whenever it was imposed, the country had suffered a great national loss".

The Maulana said only an elected government could be effective as it had the support of masses and cited the example of Indian which had a popular government in 1971 enjoying support of 600 million people. "Had we an elected government then, we should not have suffered the debacle in East Pakistan", he said.

He said if Federal Council (Majlis-e-Shoora) could be formed, hockey and cricket matches played and local bodies elections held, what was the hitch in holding general elections. He termed the government, plea to hold pools at an appropriate time as meaningless.

Maulana Noorani said the JUP was striving hard to form an alliance which this time won't be an election alliance rather it would be formed to end Martial Law. It was not for the first time that JUP was making efforts to form an alliance. In 1973, formation of United Democratic Front was initiated by the JUP in Islamabad; In 1977, Pakistan National Alliance (PNA) was formed in the Lahore Office of the JUP, he claimed.

He said both the previous alliances had struggled hard for the restoration of democracy and implementation of Nizam-e-Mustafa "It was useless to repeat the past. I don't want to blame anyone. The struggle launched by the PNA will bear fruit one day", the Maulana said and lamented, "we are left alone in the Nizam-e-Mustafa movement because a few people have left Islam and have gone to Islamabad".

"The promise of holding general elections was made in the House of God and the same should be honoured", he said and added: "Holding of election is the key to all national problems. The present rulers should have learnt a lesson from the past".

He said the government claimed that it was doing hard to introduce Islamic laws but he could not see Islam anywhere from Karachi to Khyber. "There is no Islam even in Islamabad. Every possible effort would be made from the platform of the JUP for the implementation of Nizam-e-Mustafa", the Maulana assured. He rejected the claims of the government that there was no Dulai Camp now and said that Lahore Fort and a torture camp at Manpur Road in Karachi were worst than Dulai where several people were being tortured. The Maulana said it seemed that there was a police rule everywhere.

Maulana Noorani condemned

the statement of Amir of Jamaat-e-Islami that if any movement would be launched by any political party against the government, Jamaat would resent it. He said such statement could lead to a civil war. "I have seen that Al-Badr organisation was being reorganised and on my way to Kasur, I have seen the camp where Al-Badr men are being trained", he added.

The JUP leader said there was no question of any change in his party's stand towards the defunct People's Party. The JUP believed that PPP killed democracy in the country during its rule.

Earlier addressing the gathering, Maulana Sattar Niazi said according to him, "there could be no government without election and there could be no government without consultations". He said there was no concept of Martial Law in Islam and added it was a lawlessness in fact. There could be now law without the support of the masses.

Maulana Niazi said Communism and Socialism were non known as the 'brute forces' throughout the world. He said there was no better "ism" than Islam. He demanded that civil liberties should be restored forthwith, military courts be abolished and elections held because this alone could save the country from all dangers.

Another JUP leader, Maulana Akbar Saqi, said formation of Majlis-e-Shoora was no great event of the present regime and added, "it was so helpless that it could not elect its Chairman and instead he was nominated by the President.

He said there was no logic in imposing ban on the movement of political leaders within the country.

Presenting the welcome address, Pir Barkat said the JUP had reached an agreement with Muslim League for the restoration of democracy and implementation of Islamic order and it was also ready to join hand with any political party who was sincere to launching a struggle to end the Martial Law in the country. He said Maulana Nooram had attained the role of a peace-maker due to his sincere efforts for the cause of Islam.

NOORANI ON '1-MAN 1-VOTE' SYSTEM, CONSTITUTION

Karachi DAWN in English 11 Mar 82 pp 1, 10

[Text] The electoral principle of one-man-one-vote is not in conflict with the Islamic democratic system, Maulana Shah Ahmad Noorani, President of the defunct JUP, said in Karachi on Wednesday.

In support of his contention he pointed out that Hazrat Abu Bakr became the first Caliph with the "active consent" of the people. Therefore, he surmised, the right of a person to choose his her representative to manage the state affairs is enshrined in the traditions laid down by the Holy Prophet (peace be on him).

However, Maulana Noorani said in an interview, Islam allows flexibility as to the form of government which, by implication, means that whichever form is considered to be suitable to the genius of the people, may be adopted.

And, in Pakistan after a process of trial and error the parliamentary form of government has been adjudged to be the "most workable and easily understood system".

He advised the Government not to reopen the issues already settled. This might create an impression that the Government was trying to prolong its stay.

Maulana Noorani said it was undeniable that Pakistan came into being on the basis of a democratic struggle. And, under the 1935 Government of India Act the Muslim nation voted for Pakistan and later, under the Constitution as adapted by Pakistan, the governments at the Centre and in the provinces were set up on the parliamentary pattern.

It was under the parliamentary system that elections were held in East Pakistan, even though the ruling party was badly trounced. Likewise, the same system was followed in the elections held earlier in Punjab. In 1958 elections were due to be held when the first Martial Law was imposed. Again in 1970 and 1977 parliamentary elections were held on the basis of one-man-one-vote.

Maulana Noorani pointed out that the peoples of the subcontinent — India, Pakistan and Bangladesh — had, since the introduction of 1935 Act, been accustomed to a parliamentary form of government. Any innovation now, under whatever garb, will not be helpful, he said.

Maulana Noorani further contended that since Pakistan's creation the question of the system of government had been considered threadbare. Experiments were made in the parliamentary and presidential systems and finally the parliamentary system was chosen.

In this context, he cited the 1954 Basic Principles Committee Report, the 1956 Constitution, the 1962 Constitution, and the 1972 interim Constitution. Finally, in 1973, the National Assembly constituted a 25-member committee on whose recommendation the 1972 interim Constitution incorporating the Presidential system of government was rejected and in the 1973 Constitution the Parliamentary system was adopted.

The position today is that under the Provisional Constitutional Order (PCO) the Government may, on the recommendation of the Islamic Ideology Council, make changes in the system of government or in the mode of election. But all such changes will stand invalidated if the 1973 Constitution is restored in its original form.

UNANIMOUS DEMAND

Maulana Noorani, pointing to the unanimous demand for the restoration of the 1973 Constitution, said it was not advisable for the Islamic Ideology Council to undertake a job which, in his view, was outside its competence under the 1973 Constitution.

He pointed out that the Council under the 1973 Constitution was competent to consider any law which was deemed to be repugnant to the Holy Quran and Sunnah, and when the case was referred to it by the National Assembly. As for the Islamisation of laws a seven-year period had been provided for in the Constitution.

Asked about the principle of proportional representation, Maulana Noorani said, it had been borrowed from West Germany where its successful working has not yet been proved beyond doubt.

However, for the people of Pakistan, he said, it will be an innovation which had better been avoided. Nevertheless, Maulana Noorani thought that the Government and all the defunct parties, by common consent, may introduce the principle of proportional representation. The best course, however, will be to leave this question for the future elected legislature to decide.

GOVERNMENT'S ENERGY POLICIES QUESTIONED

Islamabad THE MUSLIM in English 3 Mar 82 p 4

[Editorial: "Energy Conservation"]

[Text]

PRODUCTION of oil in Pakistan is increasing by only six per cent. Increase in population by three per cent is reducing the increase in per capita output by three per cent. The Minister for Petroleum and Natural Resources hence wants energy consumption in Pakistan to be reduced by 10 per cent; but is this possible, and are appropriate steps being taken to reduce consumption?

Pakistan is now producing only 12 per cent of the oil it consumes. If gas did not meet 40 per cent of the energy needs of the country, its position would have been too critical; but while the efforts to find more oil and gas are slowly proving rewarding, are the efforts to reduce consumption proving a success?

Rao Farman Ali is not being rational when he argues that if the Western States can reduce consumption by 20 per cent, Pakistan can comfortably do that by 10 per cent. But is not the West reducing its over-consumption or sheer waste while the per capita consumption of energy in Pakistan has been hopelessly low?

We do not see the so-called organised programme for energy conservation formulated by the government which Gen. Farman Ali has spoken of making any headway. Illuminations at weddings are usually as lavish as ever all over the country. More and more private cars are coming and increasing the demand for petrol and lubricants. Large cars are still in vogue in official and non-official circles.

The VIPs seem to move in a cavalcade of cars when they go any where. Are so many cars really essential, and such large cars?

It may be argued that what can be saved through some of the economy measures in the official sector is not much. That may be true, and yet it has enormous symbolic value. Those who exhort others to conserve energy should be seen doing that themselves and doing that earnestly. If the masses have to suffer because of the energy conservation measures the officials, high and low, must be seen to be reducing their own demands on energy significantly.

The industries are facing shortage of power. In Karachi, for example, the working of the mills have to be staggered and shifts reduced so that domestic consumers can get power. Shops are closed by 6.30 p.m. inconveniencing

people a great deal so that the power saved can be used by the industries.

Such enforced saving in areas where the people are directly affected should be matched by the saving in the official sector and by the rich. If the energy conservation programme worked out earlier does not work, and is seriously flawed, let it be amended instead of being disregarded or held in contempt. If there is still a law or rule about illumination, let it be enforced for all and not only for some. Illumination for marriages or other functions is something that cannot be done quietly. It is done openly and lavishly in many cases, and often made to last for a week or more, depending on the resources or ostentatious spirit of the householder. All such anomalies, contradictions and discriminations have to go, and the rule must be uniformly applied regardless of the might or money of the offender.

The gas reserve of a hundred years or more that was talked of earlier is depleting too fast. Industries in key production centres are not able to get the quantity of gas they need. Infrastructure constraints, including shortage of water, have become major deterrents for industrial expansion. The Export Free Zone being set up in Karachi is critically affected by such shortages.

The Government has also to take a second look at its policy of allowing endless number of private cars into the country. Most of these cars are large in size, and not of the economy kind used in the West today to conserve energy. The Government may be interested in collecting the large import duties paid by persons getting the cars under the gift scheme and the revenue from the inflated price of petrol but can the country afford to pay the increasing oil import bill and the enormous amount of money needed for importing spare parts?

While the import of private cars is continuing liberally, public conveyance system is not being developed. Addition of a small number of buses here and there does not solve the problem. Today too many persons are being forced to buy a car at Rs. 100,000 or more simply becuase public buses and taxis are not available. Such pressures on the fixed income groups lead to increasing corruption, and sometimes crime as well. Hence Rao Farman Ali and others should, instead of merely fixing a percentage for reduction in energy consumption come up with positive measures and implement them resolutely.

GOVERNMENT URGED TO SEEK FINANCES FOR HOUSING

Karachi BUSINESS RECORDER in English 8 Mar 82 p 1

[Text]

The National Committee on Housing has recommended to the government to seek financial assistance from international agencies to finance housing projects in Pakistan.

The committee in its last meeting endorsed the view of the expert group that the United Nations Habitat Fund be approached to mobilise additional resources for investment in housing.

The committee has also expressed the view that Islamic Development Bank and Kuwait Fund should also be approached for this purpose.

The National Housing Policy is still under preparation which is expected to be finalised soon. Then it will become a part of the sixth Five-Year Plan to be announced by the government.

HOUSING FUND

The National Committee has also agreed about the establishment of the Housing Fund under the Federal and Provincial governments to encourage their employees to have their own houses. The committee has also recommended that this fund should also include the employees of semi-government and autonomous bodies of the Federal and the Provincial governments.

The committee is also of the view that the existing rent restrictions laws are inequitable and tend to discourage investment in housing and therefore these laws should be reviewed and rationalised.

MINISTER STRESSES AGRO-BASED PROJECTS

Karachi BUSINESS RECORDER in English 7 Mar 82 p 6

[Text] ISLAMABAD, March 6: Vice Admiral Mohammad Fazil Janjua, Minister for Food, Agriculture and Cooperatives here today stressed the need of stepping up development activities in the Barani (raid fed) areas to produce more food and uplift the socio-economic life of the people.

Inaugurating a week long "in service training course in agriculture' at the Rawalpindi Barani College, Janjua said the Barani area could not be developed by just improving crop farming but through an integrated approach covering all aspects of agriculture and agro-based industry.

The Minister dwelt at length in explaining the needs of farmers of the barani areas and told the field workers to devotedly serve the area, which was one third of the total area under cultivation in the country but producing much less than its potential.

FEASIBILITY STUDIES

The Minister asked the officials of the Agency for Barani Area Development (ABAD) to prepare feasibility studies on projects like sheep farming and processing of fruits and vegetables. He said majority of overseas Pakistanis belonged to the Barani Areas and they would welcome such feasibility studies which would enable them to invest and establish such an industry for export purposes and also to meet the local demand.

The Minister was of the view that integration of forestry, grazing and arable farming was must to exploit complimentarities in land use potential of the 5.89 million hectare barani area. He said livestock and forestry was as important for the farmers in the barani areas as crop yield. Noting that most of the people in the barani area were exservicement, the Minister said such a group of disciplined people could be easily motivated to participate and lead the cooperative movement. He said field workers should persuade farmers to form cooperative societies so that small farmers could also utilise mechanised farming and improve production technology.

He emphasised the need for strengthening, the linkage between education, research and extension through the concerted efforts of the teaching staff of the Barani Agricultural College, The scientists of PARC, and Agricultural Research Institute, Chakwal, and the extension officers and staff of ABAD. He said they should come out with the field tested research recommendations or evolve site specific production technology.

CONSIDERABLE GAP

The Minister regretted that there was a considerable gap not only between research recommendations and actual practices of the farm level, but there is also a big difference in the productivity of farms in the same locality and even in a village. The extension specialists and field workers must accept the challenge to minimize the existing gap between the actual and potential production through the transfer of tested technology in the shortest possible time.

He said the task of transfering new technology would be accelerated if the researchers, extension specialists and field workers jointly develop appropriate, adoptable and easily understandable extension message for the farmers.

RESEARCH NEEDS

Referring to the course, the Minister said the participation of researchers and extension specialists representing different disciplines provided an opportunity to identify and deliberate on various aspects of agricultural development during the week long inservice training course'. It is equally important that the extension officers provide feed back information to the researchers to redefine and redirect their research efforts to meet the research needs of the barani areas, he added.

Admiral Janjua said in the past the public investment to develop research infrastructure had been primarily focussed on irrigated agriculture resulting in almost complete neglect of barani agriculture. He pointed out that it was the present government had taken steps to accelerate public investment, to develop teaching and research infrastructure for barani agriculture. In this connection he mentioned the establishment of National Agricultural Research Centre at Islamabad and the Agricultural Research Institute, Chakwal. Such institutions go a long way in evolving research recommendations tailored to the needs of the barani farmers", he said.

Referring to reports of labour shortage in the barani areas, especially during harvesting seasons he said the problem of labour shortage has been attributed to inter and intra-country migration.

He said a careful analysis was needed to identify the extent of labour shortage so as to devise measures to overcome the problem. In this context, it may be necessary to develop agricultural machinery and farm implements to introduce selective mechanization of barani agriculture through village cooperatives, he added.

He said transfer of population had also a bright aspect because the out-migration from the ba-

rani areas has resulted in substantial home remittances. Efforts should be made to channelize the home remittances to agriculture and agro based industries development in the barani areas, he added.

Earlier Principal of the Barani College, Dr Mohammad Rafiq said by inaugurating the course, the Minister encouraged the field workers, who he said would devotedly serve the farmers and continue to improve their own knowledge also. He said about sixty officials were attending the week long inservice training course, organised with the assistance of the ABAD.

The ABAD Director General Brig. (retd) Muzaffar Ali Khan Zahid gave a resume of the activities of the ABAD and said that the barani areas have become self-sufficient in wheat and other food products.

He was of the view that the area had great potential for setting up of the agro-based industry and boosting crop production. He said barani areas could produce wheat enough to meet the requirement of Punjab if concerted efforts are made to fully exploit the land potentials.—

RURAL DEVELOPMENT TERMED CRUCIAL

Karachi BUSINESS RECORDER in English 7 Mar 82 p 2

[Editorial]

[Text] In view of the peculiar conditions of our country, our development pattern has got to be altogether different from others', particularly the Western countries'. Though there has taken place a change in the composition of the country's population during the last 35 years, the majority of the people still live in villages and depend on agriculture for their livelihood. Initially, the ratio between the rural and urban population was something around 90:10 or 15:85, but with the passage of time and some industrialisation in the urban areas, the ratio has now been reduced to 30:70. This has not brought about any radical, qualitative change. The overwhelming majority still lives in the villages and is engaged in agriculture. As such agriculture still remains the mainstay of our economy.

It was under the influence of the Western economies that whatever industrial development has taken place in this country during all these years, has been at the cost of agriculture. There has been a constant deterioration in this all important sector of our economy and it was indeed an irony that the country which was once known as the granary of the subcontinent had turned into a major importer of foodgrains. This had caused a lot of strain on our meagre foreign exchange resources, besides increasing our dependence on others. Apart from that, the new industries which were set up were to a great extent import based. This added to the difficulties instead of bringing out any real relief to the people. It called for a major shift in our development strategy.

In the late seventies the need for such a change was seriously felt and some measures were initiated to improve our agriculture. With the acceleration of efforts in this direction, conditions started improving. Our agricultural production increased which enabled us to reduce the imports of foodgrains.

Some of our cash crops which had also suffered great setbacks in the past, again emerged as major foreign exchange earners. But now it appeared that the previous policy was being reversed and agriculture was being developed at the cost of industry. Such a policy can be as injurious as the previous one. What we need is to create a balance between the two.

In the agriculture sector efforts have to be made to increase per hectare yield. We are glad to see that the problem is now receiving proper attention. So far increases in production have taken place on the basis of extensive farming which resulted in the diversion of land from one crop to the other. As a result, production of one commodity increased at the expense of the other. The need is to resort to intensive farming and get better results by applying better inputs.

As regards industrialisation, it should be based on the locally available raw materials. Agro-based industries must be given priority in the scheme of development. A number of industries can be set up in the villages on small or medium scale which would provide gainful employment opportunities to the seasonal agricultural labour. Such a policy would really diffuse the benefits of development to the common man.

The new development policy should, in short, make the village the centre of all development schemes. The Government should concentrate on providing the infra-structural facilities in the rural areas. It can provide incentives to the people who create their own infrastructures in rural areas. For instance, if someone sets up his own generator or arranges for water or even builds a small link road, he must be provided with tax exemptions. The objectives can be achieved easily if agriculture is allowed to be developed on the basis of industry. Time has come to set up agricultural joint stock companies, which we have been stressing all along In view of its importance, we hope, that steps would soon be initiated in this direction. The sooner we went back to the villages the better.

ELECTION COMMISSION'S MEETING BEGINS

Karachi MORNING NEWS in English 11 Mar 82 p 5

[Text] A two-day meeting of the Election Commission of Pakistan yesterday began in Karachi under the chairmanship of Mr Justice S. A. Nusrat, Chief Election Commissioner.

The meeting discussed administrative and procedural matters and also to have a first hand knowledge of the working of the Commission.

The meeting was attended by the four members of the Commission, namely: Mr Justice Mohammad Rafiq Tarar; Judge of the Lahore High Court; Mr Justice Saeeduzzaman Siddiqi, Judge of the Sind High Court; Mr Justice S. Usman Ali Shah; Chief Justice of the Peshawar High Court; and Mr Justice Abdul Qadeer Chaudhri, Judge of the Baluchistan High Court. Senior officers of the Secretariat, of the Commission also participated in the meeting.

The meeting commenced with the recitation from the Holy Quran followed by a resolution on the sad demise of the former Chief Election Commissioner, Mr Justice Karam Ilahee Chauhan. Fateha was offered for the departed soul.

The meeting of the Commission will continue tomorrow to complete its deliberations.

The condolence resolution passed on the demise of late Mr Justice Karam Ilahee Chauhan placed on record Election Commission's sense of profound grief and loss at the death of Mr Justice Karam Ilahee Chauhan, who served as Chief Election Commission and Judge of the Supreme Court of Pakistan with utmost devotion and distinction.

The resolution said: "In his death the country has lost an eminent jurist and the Election Commission a singularly able administrator. His sense of justice and fairplay and his unwavering devotion to the highest principles of law and equity will always be remembered.

"We pray that Allah, in His infinite mercy; grant him peace and comfort in the hereafter and give strength and fortitude to the members of the bereaved family to bear the loss."--PPI

EDITORIAL JUSTIFIES KARACHI'S COMMERCIAL IMPORTANCE

Karachi BUSINESS RECORDER in English 11 Mar 82 p 2

[Text] It seems that the Lahore Chamber of Commerce and Industry has still not been able to get rid of its Karachi obsession. We call it an obsession, because the Lahore Chamber keeps on repeating a totally baseless allegation that the business community in Karachi is getting more facilities from the banks than that of the Punjab. Attempts have been made to dispel the erroneous allegations at all authoritative levels and most recently by the National Bank's President in reply to the chamber's address. Because the allegation is baseless and the banks since nationalisation have been inhibited by provincial and regional considerations, their profitability and economic viability have suffered considerably. The fact of life is that the business community of the Punjab and the upcountry region as a whole, has been receiving a much larger proportion of bank advances than Karachi and the South-e region. The largest portion of advances of the size of Rs. 10 to Rs. 30 crore is up there and advances of the size of Rs. 30 crore and above are almost all with the business community in that area. Actually the business community of Karachi has not been finding it easy to get bank credit, with the result that a profitable private money lending market, inspite of the risks involved, is growing and flourishing here.

From the institutions like the chamber of commerce and industry, one expects a reasonable, responsible and knowledgeable attitude, particularly from those in the Punjab and, above all, from that of Lahore, since that region is the heart of Pakistan and Lahore is the queen city of the country. The statements that emerge from the Lahore Chamber are bound to have tremendous repercussions and it should always bear in mind that as a representative organization of the big brother, it bears a big responsibility which it cannot shirk. When it talks about Lahore, it should never forget the business community of Peshawar, Multan, Faisalabad, Quetta, Sukkur, Hyderabad and Karachi. It is inexplicable to us how any responsible citizen of the country can lose sight of the fact that Karachi is the only sea-port of the country. It is on all the international air trunk routes. And it is the only internationally known money centre of Pakistan. It is the only city of Pakistan with a unique population composition. Among the dwellers of Karachi the largest number is of our brethren from the N.W.F.P., then come those from the Punjab, then Sindhis of all vintage and the Baluchis. It is Karachi's Chamber of Commerce and Industry which has established a convention to elect its president, through rotation, from among the businessmen hailing from various regions who have their business interests in Karachi.

It was no accident that the birth of Pakistan took place in this city. It is Karachi's geography and its history that has attracted entrepreneurs not only from every nook and corner of the country but also from abroad. With its growth have grown its money needs

as well as its contribution to the country's revenues which is more than that of all other business centres of the country put together. It will be interesting to note that for most of the industries that are now coming up in other centres and towns, the sponsors' capital has been derived from their enterprises in this city. Also very naturally the up-country labour force is remitting not an insubstantial amount of money to their families in their native regions. Indeed, Karachi is the proverbial goose that lays the golden eggs every moment of the day. Let us not starve it. The prosperity of all regions of Pakistan is bound together. Every region's genuine needs must be attended to, but not at the cost of others. Let us not make odious comparisons.

STRATEGIES FOR EDUCATION SUGGESTED

Islamabad THE MUSLIM in English 6 Mar 82 p 4

[Article by Prof. Mrs. Salma Zaman]

[Text] EDUCATION is a growing and dynamic process and cannot afford to remain static and rigid. It has to regulate its pace with the needs and demands of the time and society.

The subject of education is usually more close to people than probably any other. Every body who is any body, therefore, regards it both as his right and duty to express his views on education for it encompasses in its fold children, young men and women, parents, the community, society, natural and social sciences, religion and technology alike. Every aspect of life influences education and is influenced by it.

Education and growth, therefore, are intertwined and hence the method, mode, contents, philosophy and aims of education have to be adjusted with the needs and requirements of a society. Except for the very basic moral and intellectual code which is essentially the same all over the world, the system and contents of education differ from one society to another, and from one age to another. A system which might have worked very successfully at a certain time, in a certain society, could become out of date and infructuous in another society at the same age or in the same society at different period of history. An educational system of one country transplanted thoughtlessly in another country without paying careful attention to the country's environmental needs, historical background, economic and social requirement is hardly ever productive.

It is for this reason that when we talk of educational reconstruction we have to be very careful. We may, doubtless, learn from the trials and errors of other societies in planning our own system, but we have to be extremely cautious not to repeat the same mistakes which, say, the British committed in the early nineteenth century and took several decades to make education free and compulsory, or the difficulties they had to go through in stopping young children from being chimney-sweeps or factory hands, or the problems they had to face in trying to equalise opportunities of education for the larger section of society. For at that particular stage of history, the British could afford to get away with this delay in their country's development, but no country today can afford to do the same. The methods and contents of education, too, have to keep pace alike with the norms, mores and economic needs of a society and cannot in totality be imposed upon another society. The details of philosophy, contents and methodology, too, have to be adjusted similarly. Educational policies for reconstruction of education, must, therefore, be rooted in the soil, of a country and should take their nourishment from its socio-economic climate.

In the context of our own country, therefore, we have to take into consideration the following points when we plan any strategy for the reconstruction of our educational framework.

(1) Pakistan is basically an agricultural country and most of our educational planning should be agriculture-oriented.

(2) By and large, our country is composed of villages. No scheme of education will be productive without first taking into account the needs of the rural people who constitute about 70 per cent of our total population.

(3) With the literacy percentage being as low as 20, no scheme of education can bear fruit without making the whole population literate in as short a time as possible. Bearing in mind the financial constraints, the old stereotype for the expansion of literacy will have to be given up and replaced by mobilising the youth to work in this direction while they are still in the process of getting their first degree.

(4) We are living in a highly competitive technological and scientific age and in order to keep pace with the scientific and technological development of the advanced countries of the world, we have to divert our energies and resources in removing all the backlog. We have, therefore, to fix our priorities in the right direction and have to decide here and now, whether it is more consequential to import luxury items like big cars, coloured TVs, VCRs or the like or to bend all our foreign exchange resources only to import items of light and heavy machinery which can be used for establishing and promoting our national construction and becoming self-sufficient as early as possible. Imposition of heavy duty rather than total ban on these luxury goods cannot be justified in a poor country like ours which is today importing even such items of daily need as needles and press-buttons. It is not just the economic but the moral philosophy of it all which has to be changed. If some persons can afford to pay heavy import duty in order to live in garish pompous and lethargic luxury while most of our people cannot make both ends meet, it is bound to pave the way for a dangerous social convulsion.

With balanced and planned development, the whole society should be slowly and gradually raised like a platform, so that it is not titled in one direction. This kind of development is slow but it is sure.

All gaps cannot be filled up with one single stroke but efforts can definitely be made to narrow down the social chasms as far as possible, or else the nation will remain divided on the basis of wealth and this division will continue to further divide the people intellectually, morally and socially. We must not forget that poverty and deprivation are the breeding grounds of all evils.

(5) Pakistan is a multilingual nation, but luckily all the languages are tied together with one dominant strand of Arabic, the language of the Holy Quran. It is a great unifying force in a country where 97 per cent of the population is Muslim. The scripts of all Pakistani languages are derived from Arabic and their vocabularies are dominated by Arabic words. Thus the apparent plurality of languages, if tackled with broad-minded and large-hearted justice, far from being a stumbling block to progress, can become a colourfully unifying force in its variety. Almost all Pakistanis are bilingual. Most educated people know at least three languages. In this respect, we are in a better position than many unilingual nations of the world. In the Provinces where more than one language is used, provincial/regional languages should be taught to children right from the earliest stages. Bilingualism is an additional mental adornment – an asset, not a liability. At the same time, the place of English, too, cannot be overemphasised for our intellectual and economic development. We cannot make worthwhile progress without learning at least one international language, and English can be that language for us.

(6) In order to make any strategy for reconstruction of education to bear fruit a phased implementation should be planned under the umbrealla of at least 4.6 per cent of the GNP (suggested by the UNESCO for developing countries) to be spent on education. Expenditure on education is an investment for future.

(7) Attitudes change slowly and implementers of policies find it hard to get coordination from various concerned departments. A number of good policies of education have been smothered to death by unplanned implementation, impractical bureaucratic haste and self-righteous, rigid and unacademic attitude of our pedagogues.

(8) All education, especially upto the higher secondary stage, must be action-oriented, rather than being theoretical and bookish as at present. Practical work in all kinds of arts and craft, carpentry, book-binding, tailoring, plumbing, refrigeration, book-keeping accounting, typing, stenography, etc., must be integrated with the usual syllabi of studies so that by the time the young students complete the higher Secondary stage at the age of 18, they are sufficiently ready to take up a vocation. A programme may at the same time be made for these school-leavers to get apprenticeship with the related industries.

All industries should be made to spend a certain percentage of their income on the apprenticeship of these young people. In return, the industries should be allowed some sort of incentives in the form of tax relief. Those interested in higher training, and according to their performance may get admission in polytechnics or technical colleges, where at least 50 per cent of the work should be action-oriented on a higher level. This would enable a large majority of our young men to get into lucrative vocations at an early age rather than having to wait for the usual university degree before they are able to make up their minds about a profession. It is these young people who grow into angry young men. Their higher education should be made practical by a significant amount of work in the slum areas of cities and in villages, where they should put in at least three months or more in an academic year as social workers, teachers, health visitors, technicians. They should be accompanied with their teachers to help and guide them, while keeping close contact with the less fortunate members their society. They would thus be making their own education fruitful, without making the social welfare programme very costly.

(10) The pace of education of women, presently, is slow with only 5 per cent literacy among them. This has to be speeded up by equalising opportunities for education as well as for jobs and changing the attitude of people. It has to start from the higher sections of society that are the pace-setters for progress. Educated women are an asset not only to the family but also to the whole society. "Educate a girl and you educate a family" is truer today than it had ever been before.

Islamic Studies and Pakistan Ideology, lately introduced as part of the college and university curricula should also be practice-oriented in the above-mentioned direction, for mere theoretical, learning without practical performance would again be nothing but dead weight, and would make no impact on the life of the community. Provincial, parochial or tribal prejudices are not in keeping with the true Islamic brotherhood or the Ideology of Pakistan which are two sides of the same coin. Religion is not merely an abstract reading of the Holy Quran, Hadith, or Fiqh, but a deep and unbending Faith in the essential Truth and Goodness of the Creator and His Messengers, the Holy Prophet (peace be upon him) enlivened by action Knolwedge unsopported by the grace of Faith has led some of the scientifically advanced countries astray, while our Faith, weakened by superstition and ritualism and unsupported by scientific knowledge and action has pushed us down into lethargh and degradation.

We have to be careful of these pitfalls when taking any decision about choosing strategies for reconstruction of our educational system in order to suit our national needs.

CSO: 4220/304

CONCERN VOICED OVER MASS ARRESTS

Islamabad THE MUSLIM in English 6 Mar 82 p 4

[Editorial]

[Text] Maulana Shah Ahmad Noorani and several other political leaders maintain that about 10,000 persons have been arrested since the round up of persons, variously described as anti-social elements criminals and vagrants, began a week ago. Newspaper reports say that prisons and police lock-up in the major cities of Sind and the Punjab as well as the countryside are full and the jail authorities, beginning with those of Kot Lakhpat, have refused to accept any more prisoners. Larger number of detainees are reported to be held in open camps, in this harsh weather.

Full official figures of the number of persons arrested throughout the country are not available. Whatever official figures given out speak of only a few thousand arrests. President Ziaul Haq said earlier that the actual number of arrests until last Saturday were 2,132. But if 615 persons were arrested in Hyderabad Division alone by Saturday, the wide sweep of the police action is evident.

Maulana Noorani and Mr. Ghulam Mustafa Jatoi along with several other leaders insist the barely five per cent of the detainees are criminals. The others include a large percentage of innocent or hapless persons and political workers. Political leaders speak of their relations being harassed and threatened, by the police. In a massive round up with such a sweep more innocent are likely to become victims of the police measures than tough criminals or professional mischief-makers.

Such block raids have not been uncommon in the past, but the dimension has never been so large and the number of arrested so many. Nor has the raids been sustained for so long. That is what makes the campaign so upsetting to political leaders and public alike. How long more will this campaign last, and with what results?

Should the police be praised for what they have done, or are the raids a clear reflection of the failure of the police in performing their normal duty? The police knew all along where the nests of the criminals were and where the vice dens, pleasure houses, opium joints and illicit distilleries were. Much of such immoral trade or criminal practices were being carried on with the knowledge of the police, and sometimes with their approval. If the police meant business why could they not bust such places earlier and apprehend the criminals? It cannot be that they have become wise, clever and alert in one day or one week. The real danger is that these very criminals and persons engaged in illicit trade may soon be allowed to return to their old trade and those among the police who patronise them may profit by that, as in the past.

Surely the hardened criminals or tough thugs have not been sitting in their lairs after the first night's massive round up. The real criminals must have gone underground after the first night and some might have received advance intimation of the raids to come on the night of Wednestay-Thursday. So a good deal of persons detained after that night could easily be people with no criminal records or not intend on committing any offence. Anyone walking around looking for a conveyance that is not easily available at night could not become a criminal, a habitual offender or a suspicious vagrant.

Religious leaders like Maulana Noorani assert that Islam does not permit persons to be arrested or jailed merely on the basis of suspicion. Western jurisprudence does not allow that either. So the innocent among the arrested must be released immediately. And those against whom there is nothing more than vague suspicion should also be let off.

Even those who had been convicted before cannot be detained only on the basis of their past record. Neither the Islamic jurisprudence nor any other legal system permits a man to be punished a second time for an old offence nor for him to be regarded as damned for ever. If persons who were convicted earlier are regarded as criminals for ever and arrested, or punished as a matter of course, such persons would not try to be reformed criminals after their release but return to their criminal trade under such compulsions. Let us not hence treat some persons as branded for ever.

Some of them are said to be habitual criminals. Are they habitual offenders under psychological compulsions or emotional pressures? Such men need psychatriac assistance instead of being arrested as a matter of course, time and again. If only the police were efficient, upright and alert we would have fewer crimes and less or number of hardened criminals in the country. Unfortunately the police themselves have been figuring in increasing number of crimes, from thefts and organised raids to sex crimes. So, the criminals could not be reformed and crime as a whole checked unless the police force is cleansed, really reformed and the bad eggs eliminated.

The number of crimes in the country would be far less if the judiciary, too, could deliver quick judgments instead of cases lasting for too long. The kind of judicial system, and the demoralising procedure we have help the criminals and harm the honest. Hence the problem of combating crime calls for more than block raids and summary punishment of a few who fell into the police net unwittingly.

The real fear is that in far too many cases the police may bargain with the arrested persons or their relations for their release. This had happened in the last, and there is no reasons why it should not be repeated now. In fact, such designs may prompt the police to arrest more persons. The government should, hence, intervene promptly, scrutinise every case quickly and release immediately the innocents and those against whom there are no positive charges. Those held on grounds of mere suspicion should also be let off.

The police cannot be, and should not be given unlimited authority to arrest and detain anyone. The normal law of the land should prevail in this regard, and so also the spirit of authentic Islamic justice and fairplay. So let not such raids be repeated, certainly not in this manner, the people subjected to needless police harassment and the floodgates of corruption and official improprieties be opened in this dramatic manner.

PAKISTANI LABOUR ABROAD BEING REPLACED

Islamabad THE MUSLIM in English 2 Mar 82 pp 1, 8

[Article by Saeed Qureshi]

[Text]

ISLAMABAD, March 1: Pakistani labour in the oil-rich Arab lands in being steadily replaced by men from other countries who are more disciplined and trained and demand lesser salary, a well-informed source told The Muslim today.

This new threat to the Pakistani workers is partly due to the unscrupulous recruiting agents and manpower exporters who had been sending raw hands to Arab countries; not only that the "exported labour" also failed to come up to the standards set by the host countries.

The highly-placed sources apprehended that very soon Pakistanis would start returning home while those wanting to go to the Middle East would be seriously handicapped in getting a clearance for the region.

The source attributed the lack of training facilities and a blind exodus of unskilled workers to the Arab countries for earning a "bad name", ultimately leading to their unmentonous return to Pakistan.

The source said that no sound and serious plan for investment of the 3 billion dollars rent by Pakistani workers was ever conceived by the private or public sector in Pakistan. While the private sector lacked proper guidance, the public sector was not in a mood to utilise the colossal amount which was pouring in Pakistan through remittances.

Referring to the proposal of the Minister for Labour and Manpower announced in London that investment wings should be opened in Pakistan Embassies, a financial expert said this was not practicable. Posing a question, he said who would arrange the enormous funds needed to run these extra wings?

Of the SEMF investment scheme floated by the government last year, the source said out of a total fixed capital of Rs. 280 million, London's contribution was barely Rs. 5 million.

The Pakistanis working abroad, according to the source, were confused and did not know where to invest their hard-earned money. Some of them were importing luxury goods, while a few wanted to import only plastic moulding and dyeing machines. The market for those type of industries was already started and the government could not allow import of machinery, the source added.

The Overseas Pakistanis Foundation, the technical expert said, had to draw feasible plans for investments of the Pakistanis working abroad.

He said there was tremendous scope for establishing industries in the northern areas and the money sent by the Pakistani workers could be justifiably utilised there.

It was erroneous, he said, to infer that private sector could never succeed. The case of flying coach service between Lahore and Rawalpindi was there to prove that organised planning could yield fruitful results, he added.

LETTERS FROM VICTIMS OF MONEYLENDERS PUBLISHED

Islamabad THE MUSLIM in English 2 Mar 82 p 1

[Text]

We received this letter from a money-lender's victim. Translation follows:

I AM a school teacher. I am not yet married. Father died five years ago. I have a brother and a sister. Mother does sewing and darning work. I get paid by the school. Two years ago, mother borrowed two hundred rupees from a money-lender without consulting me. But on the register on which she signed the amount shown was three hundred. She needed the money for the children's clothing and school fees. Out of shame she did not borrow from relatives or neighbours. For the last year, the money-lender has been coming on the 10th of every month. After night there is a special knock at the door that terrorises me and the children. Mother goes to the door with my younger brother and pays him forty rupees every time he comes after offering him their humble salutations.

We have paid about a thousand rupees in two years. At first, mother kept this a secret but when I came to know of it, I requested the money-lender to take the principal amount together with interest at one go. I told him I was willing to pay him a whole month's salary but he refused. God bless you.

There's one thing, however, that surprised me; a police officer has also contributed towards your report. Are there such officers in our police? There are tears in my eyes. How to give you my name and address? Just consider me a persecuted daughter of the nation who looks in helplessness at the sky while national leaders are busy making speeches and issuing edicts.

A daughter of yours.

UNBELIEVABLE

YOUR front-page report on the 1960 Money Lenders Ordinance (Feb. 25) gave me the shock of my life. Is it true? Believe me, I could not sleep the whole night.

For the last five years, we have held so many seminars and the one on Islamisation takes the priority. We have also collected Zakat. There is no end to our 'Fatwa', our seogans, speeches, etc. All this is a joke with His Book, wherein he says that 'Riba' is a war against Him and His Holy Prophet. May Allah forgive us?

Your Paper has done a commendable service by highlighting the problem. I pay Zakat and it should be the first duty of the State to take over the entire liability of the money-lenders' victims. I am prepared to pay a portion of my property to free the poor widows and orphans from this burden.—S.SALMAN, Islamabad.

YET ANOTHER ONE

WHO WILL HELP?

I HAVE no words to thank you for taking the trouble. The fact that you gave front-page coverage followed by an editorial shows how much chilling pain you have felt yourself.

I am a UDC in one of the Government offices and a victim. I borrowed Rs 350 from a sood khor three years ago. I have so far paid Rs 1,800, at the rate of Rs 30 a month but the principal is still due, as the soodkhor does not accept the principal. When he comes to my house on the first of the month I take him aside immediately, give him the money and thank him. No receipt is given to me.

I cannot disclose this even to my wife or children. I can't ask for Zakat. Where should I go? What should I do? But with tears in my eyes, I raise my hands towards the sky and then only listen to the speeches of Islamisation.—A POOR CLERK, Rawalpindi.

CABINET'S DECISION TO CONTINUE BAN ON POLITICAL ACTIVITIES BANNED

Karachi JANG in Urdu 17 Feb 82 p 3

[Article by Irshad Ahmad Haqqani: "An Unexpected Decision which has Raised many Questions"]

[Text] Contrary to general expectation, the federal cabinet has decided not to end the restrictions on political activity. It is true that a decision cannot be considered final until it is properly announced; and some political leaders expressing their reaction have said that they had not expected anyway that the government would allow political activity. The fact is that after the president's announcement that on Wednesday the federal cabinet would study the question of political activity, it was generally expected that the restrictions would be lightened. Thus, in addition to others, the leader of the defunct Muslim League Pir Sahib Pagara also observed that first expectations were raised, and then they were not fulfilled, thus creating disappointment.

It was thought that since martial law was imposed, so much water had flowed under the bridge that if it had not washed away the regulation entirely, it had at least eroded it to some extent, and had washed away some of the ink. But this did not happen, and the rule has survived in all its original vigor. It is still an enigma as to why this has happened, and why the cabinet reached this decision, an enigma that can neither be understood nor explained. One must console oneself with the saying that only the rulers know the secrets of their realms. When the cabinet deliberated for 10 hours, and a day earlier another high level meeting lasted almost as long, one would think that these wise individuals had studied all aspects of the problem and been led to this decision by their wisdom and patriotism. But those circles who were waiting eagerly to hear news of the end or lessening of restrictions on political activity are unable to judge the impact of the decision because they have not before them the arguments on which the cabinet based its decision.

It is customary that when decisions of public interest and national importance are made and announced, an explanation is offered as well. When such decisions are contrary to general expectation, explanations are considered even more necessary, because understanding the factors that contributed to the decision helps to win acceptance and the understanding of the decision. Whether the explanations fail or succeed in convincing anyone, they are

usually offered anyway. For example, the government has been saying for years that elections cannot be held because "conditions are not favorable." What these unfavorable conditions are has never been explained, and some people are still waiting for the explanation, but a reason has at least been given for not holding elections.

But no explanation, short or long, logical or illogical was offered for the decision to retain restrictions on political activity. It is true that the government did not have to offer an explanation, that it can take any decision it wants to and enforce it as well. But in civilized countries it is customary to explain important government and public decisions so that the people who have to abide by these decisions will understand their wisdom, utility and necessity. One does not understand why it was not thought necessary to explain this particular decision when it was announced. We will not say that the reason for not giving an explanation was that there was nothing to be said, or that what could be said was so weak that it was thought better to say nothing. It is true at any rate that the announcement of the decision answered no questions, but did raise many others. When questions remain unanswered, the question marks assume the shape of thorns in men's minds. The discomfort of such thorny questions in mens' minds can be easily imagined by those who have felt a thorn in their foot.

An explanation of the new government decision was especially necessary because there were signs and reasons for expecting a different ruling. For example, President Zia on his return from the recent foreign tour remarked, for the first time in this 4 and one-half years in office that, in spite of their lack of education, the people of Pakistan possessed high political sense, and that if given the power to make political decisions, they would reach the right conclusions. President Zia called political hopes a strong urge, and even went so far as to say that whoever tried to dam these strong feelings would be carried away by the torrent, and exhibit his ignorance of the new realities.

The president's tone had pleasantly surprised many and given rise to the expectation that the government would change its attitude. In an interview with JANG, the minister of Information also had talked of elections being not too distant in the future. When the president visited Lahore in the early part of the week, he talked of studying the question of political activity in a manner which conveyed the impression that he might allow such activity, especially as he remarked that if political activity was allowed, it should not be taken to mean that elections were imminent. He said the elections would be held, but people should not start counting the days till the announcement of the date. The president said at the same time that the establishment of the federal advisory council had set afoot a kind of involuntary political activity. In the cabinet meeting also satisfaction was expressed at the experiment of establishing the council. In this context, the one line announcement of retaining full restrictions on political activity is incomprehensible and unexpected. However, this is not all. The lack of any explanatory announcement makes it difficult to understand as to how long the decision is to stay in force and whether it will have any logical consequences in the same way as allowing political activity would have had as

a sign of further action. If limited and restrained political activity had been allowed, it would have meant that the government was gradually moving forward, and the goal of elections and a civilian government would slowly get closer. Since this has not happened, the question naturally arises as to what steps the government will take in the future: Will even the present talk of elections and democracy be ended? Will "some sort of political activity" set afoot involuntarily by the establishment of the council be continued or would it be considered unnecessary, purposeless, useless and hence ended. If this should happen, a large question will arise as to the political future of the country and the direction in which it wants to go. How long will political activity, the denial of the importance of which is, according to President Zia, a sign of the ignorance of modern trends and climate of opinion, remain the forbidden fruit? These are the questions which the decision raises, and some answers will have to be found sooner or later.

ZIA'S STAND ON POLITICS SUPPORTED

Karachi JANG in Urdu 17 Feb 82 p 3

[Editorial: "Constitution, Politics and Propriety"]

[Text] President Ziaul-Haq has said that after amendments are made in the 1973 Constitution from the Islamic point of view, the Constitution will be restored. At present the government is studying the parts of the Constitution concerning the form of government and elections to find out which of these contravene Islamic principles, so that those sections could be amended and the Constitution restored. The president also said that the Constitution under discussion started with a preamble on Islamic views and principles and if nothing should be found in it which clashed with Islamic principles, then it would be restored intact at a suitable time. An important point made by the president was that in future elections a standard of ability would be set up for the candidates so that the right kind of people would be elected to legislative offices. The president expressed his determination to bring decorum and decency to politics. He said," I want to bring the kind of decency into politics which would be worthy of a free country, and particularly of the Islamic Republic of Pakistan." The president thought that it was natural to have differences of opinion in politics, and said that if personal disagreements did not become political differences, decency would be automatically restored to politics. He also said that he bore no personal grudge against any particular politician, and that the politicians placed under restraint have their status reviewed from time to time. The president gave assurance that he would personally study the matters concerning the house arrests of retired Air Marshall Asghar Khan and Mairaj Mohammad Khan.

President Zia's statements regarding the restoration of the 1973 constitution are at any rate to be welcomed. This was a question on which the country's knowledgeable circles agreed almost unanimously. Undoubtedly, the 1973 constitution was the country's first such constitution written and passed by a parliament elected on the basis of adult franchise. It is a fact too that the constitution was signed by the elected representatives of the country's four provinces: and from the point of view of politics and democracy, it was unanimously approved. Although the representatives of some small provinces are not satisfied with the degree of provincial autonomy granted under the constitution, they nevertheless honor the constitution and would like to amend it through democratic process in order to obtain greater

autonomy for the provinces. President Zia has said that the government was studying the constitution from an Islamic point of view in order to amend any sections found to be contrary to Islam. There is no harm in studying the constitution from an Islamic point of view. We might as well decide once and for all whether any of the constitution's different sections contravene Islamic principles. But we would prefer that any amendments to the constitution be left to a future elected parliament. Of course, there is no harm in pointing out those sections of the constitution which are contrary to Islamic principles, but by leaving the work of amending the constitution to an elected president, we would avoid much mischief and opposition. If this issue is the sole obstacle to the restoration of the constitution, then President Zia should amend the constitution without delay and restore it. A future elected parliament can study the amendments and decide all over again whether it supports them or rejects them.

As far as restoring decency to politics is concerned, no thinking citizen can disagree with this objective. In our view, President Zia has every right to speak on this matter because his own most prominent trait is his decency. No man who respects truth will deny that since taking over the reins of government, the president has exhibited a specially high standard of personal honor, courtesy and decency, not only in the administration of the country but also in political matters. Hooliganism and personal vengeance in government are stories of the past. The president is quite correct in saying that personal differences should not be turned into political differences. We expect that the president will pay personal attention to the matter of politicians under arrest, and will not keep them deprived of the blessings of freedom for any length of time.

PRINCE HASSAN ON JORDAN-PAKISTAN TIES

Quetta BALUCHISTAN TIMES in English 27 Feb 82 p 1

[Text]

LAHORE, Feb 26:

Crown Prince Hassan has said, Pakistan and Jordan are part of the Islamic Commonwealth and Pakistan's strength in the field of science and technology as well as industry is Jordan's strength.

He was giving his impressions after his visit to the Laboratories of the Pakistan Council of Scientific and Industrial Research in Lahore today.

He said cooperation between the research organisations of the two brotherly countries could be further developed by exchanging experts in the fields of agriculture and industry.

He said he was impressed by the skilled manpower of the PCSIR, their dedication and sense of purpose and wide scope of the laboratories.

Earlier Crown Prince Hassan briefed the PCSIR Scientists about Jordan's projects in various fields.

He presented shield of the royal scientific society of Jordan to the Chairman of the PCSIR.

Recording his impressions in the visitors book, the Crown Prince said it was a source of inspiration to observe the activity of our colleagues in appropriate science and technology in Pakistan. He hoped that Pakistan and Jordan would be able to undertake joint programmes for self reliant economies.

During his visit Crown Prince Hassan saw various divisions of the laboratories where research is being carried out in different fields to cater to the technical requirements of various consumer industries including oils, Fate, vegetable dehydration, glass and ceramics. The roval guest showed keen interest in the experiments being carried out by the Solar Energy Division.

He was informed that the ultimate aim of the project was to produce solar electricity solar fuel and solar applicances. At present work is going on producing solar water heaters, solar airconditioners and solar water pumps.

The Crown Prince was also shown the dobby designed and produced by the laboratories as an attachment for the textile looms The dobby for which manufacturing licence has been given to a local firm will be available to the textile mills at one third of the cost of an imported dobby.

JOINT DECLARATION BY PARTIES BEING PREPARED

Karachi DAWN in English 9 Mar 82 pp 1, 10

[Text]

From the first inter-party contact in Karachi has emerged the idea of a joint declaration calling upon the Government to hold elections under the 1973 Constitution and enable the elected Parliament to assume power.

The call, according to relevant political quarters, is based on the argument that since the present government took over expressly for conducting nation wide polls, it should redeem its pledge.

The party leaders of their recent get-together are stated to have decided that efforts for drafting an agreed joint declaration be made by Prof. Shah Faridul Haq on behalf of the JUP-PML alliance and by Mr. Arshad Chaudhri and Mr. Abid Zuberi on behalf of the MRD.

Holding of elections under the 1973 Constitution is the minimum accepted demand by all the defunct parties. It meets the contention of the defunct Jamaat-i-Islami, JUP and PML (Pagaro group) which, in some form or the other, consider the retention of Martial Law as inevitable for the transitionary period.

However, a point sought to be stressed in the proposed joint declaration will be that elections should be held in the "quickest possible time". The MRD's time-frame is for three months, that of the defunct JUP six months or so, while Pir Pagaro feels that not less than a year and a quarter would be needed for the elections to produce "positive results".

Mr. Abid Zuberi has already met Begum Nusrat Bhutto and Pir Pagaro separately. Mr. Arshad Chaudhri is expected to return from Lahore any day and together with Mr. Zuberi will meet Prof Faridul Haq for a workable draft.

Within the MRD the attitude of the defunct PPP and NDP has softened quite considerably to facilitate a consensus on the proposed joint declaration.

The defunct PPP's Mr Abdul Hafiz Pirzada said on Sunday: "We feel we are nearer to consensus on immediate holding of elections under the 1973 Constitution."

Mr Pirzada was talking to the newsmen in Karachi on his return from a weeklong visit to Lahore, Islamabad, Mardan and Peshawar.

Mr Pirzada said, "in fact, this was the responsibility of the present regime to bring about the consensus through positive efforts. Unfortunately no efforts were made. On the contrary statements from various Ministers gave the impression to further divide a consensus."

Mr Pirzada maintained that there "are grave and serious threats to the survival of the country. Therefore the burden on political parties and political leadership is unique and unprecedented. They must not fail to mobilise public opinion and achieve a complete consensus. This is the time to be magnanimous and broad-minded and not to be narrow-minded in approach.

The doors for a political dialogue should not be closed. The search must continue with determination and perseverance."

Mr Pirzada said while in Peshawar he met Mr Yusuf Khattak, a leader of defunct PML.

CITIZENS BODY CRITICIZES POLITICIANS

Islamabad THE MUSLIM in English 28 Feb 82 p 3

[Text] RAWALPINDI, Feb. 27: The political parties of the country came under serious criticism by members of the Islamabad Citizens Committee.

Shakir Hasan, Chairman of the Islamabad Citizens Committee told a Press conference here this afternoon, that the Committee demanded the working pattern of the parties to be codified.

The President of the ICC (Islamabad Citizens Committee), Shakir Hasan emphasised the need to create a sense of honesty, ethics and abiding by the rules of Holy Quran and Sunna amongst the people.

He said the political parties so far formed in our country, have never codified their aims and objectives, and whenever elections were held they never disclosed their working pattern before they were elected, to form a government.

In this connection, he emphasised the acute need to codify the working pattern of political parties.

He added: "The Holy Prophet Mohammad (Peace be upon Him), was the last Prophet of God and with him, the process of God's messengers ended.

He said, that it is due to this, that we should regard the preachings of Hazrat Mohammad (Peace be upon Him), as the most comprehensive ones.

On this occasion, Shakir Hasan disclosed that a questionnare from the government had been delivered to the Citizens' Committee, and the replies were found suitable by the members of the Committee.

He said in reply to a question about the form of government, it has been suggested that in the government to be formed, two legislative houses, that if the senate and the parliament should exist.

He further suggested that the President to be elected, should be the Head of the government as well as the Public.—PPI

BALUCHISTAN GOVERNOR ON 'NEW ERA' FROM 1983

Karachi DAWN in English 6 Mar 82 p 4

[Text]

QUETTA, March 5 Lt-Gen Rahimuddin Khan, the Governor of Baluchistan, urged the officials to speed up the pace of work on all the federal projects throughout the province to complete on going schemes, much ahead of schedule. He expressed the hope that projects scheduled for completion in June 1983 would be completed by the end of December this year and a new era of prosperity will dawn with the start of next year.

The Governor said this while presiding over a two-day high level conference began here on Tuesday and concluded on Wednesday.

The second session which lasted for more than six hours on Wednesday reviewed in detail the projects undertaken by the Federal Government and other agencies and corporations on various parts of Baluchistan.

Addressing the meeting, the Governor said that working in Baluchistan for the benefit of this province requires emotional involvement and acceptance of chalenge by all of us. Unless the sense of dedication and zeal is not created, the targets for the development in the province cannot be achieved, he added.

The Governor was of the view that if we work in Baluchistan with full devotion and extra labour we would definitey feel satisfied on completion of the assignments. He said all of us are struggling against the time and should contribute our share like a missionary to bring this region at par with the other developed regions of the country.

In this connection, the Governor assured of all possible support and assistance on his own and on behalf of the provincial government to Federal Government departments and agencies engaged in Baluchistan in various development sectors.

He said that frequent visits of the representatives of the Federal Government departments in the remote and farflung of Baluchistan would certainly help in boosting the tempo of development activities in various parts of the province. By this, the concerned officials would also be in a position to solve the problems and bottlenecks on the spot which normally take much time if dealt with in routine, he added.

Gen Rahim informed the meeting that he would undertake the visits of various areas to see for himself the work being carried out on the Federal projects. He also stressed the need of standard and quality of work on various projects.

BIHARIS DEMAND SETTLEMENT IN PAKISTAN

Karachi DAWN in English 6 Mar 82 p 1

[Text]

About 3,000 Biharis in Bangladesh camps have gone on a 48-hour hunger-strike to press for their demand for early repatriation to Pakistan

The stranded non-Bengalis (about three lakh) say they had opted for Pakistan as their homeland when Bangladesh came into existence in 1971. In 1974, a trilateral agreement was signed between Pakistan, Bangladesh and India, under which about two-and-a-half lakh non-Bengalis went to Pakistan and settled there.

On the other hand, Pakistan says the non-Bengalis who are now in Bangladesh are not those who were given a right to settle in Pakistan under the terms of the 1974 agreement.

Leaders of non-Bengalis argue that the hatred against them in Bangladesh is the outcome of their support for Pakistan in the 1971 war and, therefore, their settlement in Pakistan becomes all the more necessary.

Bangladesh Interior Minister Prof. M.A. Matin had recently told foreign correspondents here that Islamabad had agreed to accept another 10,000 non-Bengalis. The Minister expressed the hope that in future more non-Bengalis would be able to migrate to Pakistan. The return to homeland was a continuous process, he said.

Explaining this, he said it was a moral duty of the Bangladesh and Pakistan Governments to make periodical review of the case of the non-Bengalis stranded in Bangladesh so that a way could be found for their settlement in the homeland of their choice.

Pakistani diplomats in Dacca admit that such a periodic review does take place, but they make it clear that such reviews are held in the light of the 1974 trilateral agreement, according to which only members of divided families, civil servants of former Central Government of Pakistan, and people having West Pakistan citizenship had a right to settle in Pakistan.

LEADERS PRAISE GOVERNMENT ON LAW AND ORDER

Karachi BUSINESS RECORDER in English 8 Mar 82 p 6

[Text]

QUETTA, March 7: Mir Gul Khan Naseer, former provincial education minister and president defunct Pakistan National Party, Baluchistan said here today the present government was far better than the much-trumpeted democratic rule of previous regime.

In an interview with the Baluchistan Times, he said there was complete peace and order in the entire province which ushered in an era of progress and prosperity in this part of country. With restoration of peace, the province (Baluchistan) during last four and half years achieved six times progress of what was made in the previous regime, Gul Khan Naseer added.

Elaborating his point Mir Gul Khan said eversince the military takeover, life, honour and property was secure in every nook and corner of the province. "Political life, too, is peaceful and nobody is shadowed by the intelligence agencies for political reason", Mir Naseer added. Peace, he said was pre-requisite to national progress and it prevailed in the whole province due to which the province witnessed a new era of prosperity.

He said everyone in the province, including traders and farmers were happy with the present government. "Only politicians feel uneasy who are clamouring for democracy", Mir Gul Knan remarked. But what was done in the name of democracy in Baluchistan during the previous regime was still fresh in the memory of the people and they would never be hoodwinked by the deceptive slogans.

Mir Gul Khan said, "during the past regime we were dubbed as traitors", subjected to inhuman treatment but the present government had restored honour and dignity in the province. The general amnesty was announced for those who fled the country during past regime, political cases withdrawn, political detenus released and hence a peaceful and honourable life has set in, Mir Naseer said. About democracy, Mir Naseer said, it should help solve social problems and redress people's grievances. He rejected Bhutto's brand of democracy that made hash of the whole nation and wherein personal whims reigned supreme over national interests.

MENGAL'S BROTHER

Mehrullah Mengal, younger brother of Sardar Attaullah Mengal, former chief minister of Baluchistan who sat beside the Mir Sahib while he was talking to newsmen, said the present government eversince it took over delivered goods to the people of this area.

So far the present government had only not done any wrong to the people of this province but it also tried to undo to the wrongs done by the previous regime.

Mengal said he and his colleagues were ready to cooperate with the government for it was the only government that had accorded us an opportunity to lead a respectable and honourable life. —APP.

PRESS COMMENTARIES ADDRESS POLITICS, REFUGEE ISSUE

Karachi DAWN in English 8 Mar 82 p 7

[Text] The government as well as the politicians agree that elections are the only recognised method of peaceful transfer of power. It has also been resolved that political activities will be revived before the elections. What remains to be resolved is what is the most suitable way for the revival of political activity and holding of elections.

President Zia has assured that the ban on the political activities would be lifted at an appropriate time. We believe that once the ban is lifted, the process of consultation between the government and the political parties could begin in an amicable atmosphere. The President appears to desire that political activities should be revived in such a way that internal chaos and confrontation is not created. He is desirous of bringing politics within the hold of Islam. The politicians, too, can be invited to give suggestions in this regard. What is required is that they should also adopt a constructive and compromising attitude.

The extraordinary interest the politicians are taking in the immediate revival of political activities and the holding of elections is understandable. But these issues cannot be solved by unilateral statements. There is also no need to bring out the people on the streets to achieve these objectives.

Most political parties are not in favour of a confrontation with the government. President Zia has also acknowledged the need for an understanding between the government and the politicians. In this situation, all issues can be amicably resolved through a dialogue.

—Mashriq, Karachi, March 2.

Vital questions

What will be the future political shape of the country? When will the polls be held? Will there be an interim political or national government with responsibility to conduct polls? Will the elections be held on the basis of proportional representation or the existing system would continue? Will the defence forces be given a new assignment or their status will remain what has already been determined in our constitutions? These are some of the questions the exact answers of which are not known to the nation.

Indications available suggest that the government is now considering the possibility of holding elections without any further delay. Perhaps the government is thinking that it is no more appropriate and possible to continue to postpone the establishment of a civilian government. President Zia has himself declared on a number of occasions that in the current times the political and democratic aspirations of a nation cannot be ignored for long.

We do not know if President Zia has any desire to enter politics at any stage and take part in the elections. But if he decides to enter politics, he will be most welcome. His stepping into the political arena will greatly benefit the nation which will gain from his wide experience and Islamic thinking.

But if he decides against this, all his efforts must be concentrated on the point that a clear political map emerges after the elections and a strong and stable government is formed. Our biggest ill is political instability. If the government makes a sincere attempt to reduce the possibility of political instability after the elections, the attempt will not prove to be a total waste.

—Jang, Karachi, March 6.

The homeless

President Zia has appealed to all peace-loving nations to extend generous help in alleviating the sufferings of the 2.5 million Afghan refugees forced to take asylum in Pakistan.

Though with the passage of time the seriousness of a situation tends to erode, the matter of Afghan refugees is becoming more critical. Pakistan today has the highest number of refugees anywhere in the world and their population is growing. Therefore, the world community should not only continue its assistance to them, it should also enlarge it.

A spokesman of the US State Department had recently said that although the western countries condemn the Soviet action in Afghanistan, they believe that the matter of Afghan refugees basically relates to the Muslim world. The statement appears to be selfish. But the Islamic world should consider the question: how and to what extent they are rendering their responsibilities in regard to the Afghan refugees. The Afghan freedom-fighters are not only fighting for their country, they are also offering their lives to save the neighbouring countries from the onslaught of Soviet expansionism.

The Muslim countries should also keep in view the fact that Moscow has long-term designs in Afghanisatn. A large number of Afghans are being sent to the Soviet Union to get schooling in communism. Side by side, the Soviet Union is increasing the number of its people in areas close to its borders with Afghanistan.

—Nawa-e-Waqt, Karachi, March 3.

MINISTER OF INFORMATION ON CENSORSHIP

Lahore CHATAN in Urdu 18 Jan 82 pp 12-18

[Interview with Federal Minister of Information and Broadcasting Raja Zafarul Haq by Akhtar Kashmiri; place and date not specified]

[Excerpts] [Question] I think I should start the dialogue formally now. May I?

[Answer] So you're thinking of interviewing me. I thought we were just going to chat. Why bother to interview me; it is not necessary.

[Question] Not an interview but a legal case, and it is an important one. You're a minister as well as a lawyer. But I will not talk with you in those capacities. In my view, you're a judge now. I have come before you with the case of weekly, fortnightly and monthly journals and the people connected with them. Now you have to give the verdict and pronounce justice.

[Answer] What is your case? Please go on.

[Question] The issue is regarding the recent decision of the government due to which the [daily] newspapers are free of censorship now but the journals continue to be under restrictions. This is a double standard of justice. May I remind you that the censorship appeared when [the Urdu daily] MASAWAT caused some problems. The government took measures against it, the serious segment of the press, in spite of its sympathies for the workers of MASAWAT, supported it and wrote editorials in its favor. However, the management of MASAWAT, while assuring the government of changing its modus operandi, continued to engage in violations. In this regard the general view of the press was that the workers of MASAWAT are oppressed and the administration is the oppressor. In any case, only MASAWAT should have been punished for what it did, but the government slapped the censorship on the entire press. One committed a crime and all were punished. In my view there was no justification for censorship in the entire country at that time. But, let us drop this issue since it relates to decisions before your assuming office.

What is the justification for the double standard you have created by your recent decision?

[Answer] We did not set a double standard. Our steps are being wrongly interpreted. I think that the decision that was made has not injured the exigencies of justice, nor has it created double standards. We made this decision with full honesty. The fact is that there is a difference between the journals and the newspapers and this decision has been made with that distinction in mind. You look at the decision but overlook this distinction which is instrumental to the decision. The difference between the newspapers and the journals is that the newspapers provide news while the journals offer viewpoints. In the first stage we have given the freedom of news. Since there is a difference between the two, we have made the decision about the one now but have not said that the decision will not be made about the other.

[Question] I accept that there is a natural difference between the journals and the newspapers, but I want to ask you: in your opinion, what is more important, news or the views?

[Answer] Aside from my personal opinion in this matter, the views of people connected with newspapers and journals are worth consideration. Instead of prevailing our views on them, we have made this decision in the light of their own views. The newspapers say news is important and journals say views are important. Right now literary journals are exempt from censorship. That leaves no more than 15 or 20 of the other type. On the contrary, the number of newspapers is 174. We thought they should be freed of censorship first; the rest will have their turn, too.

[Question] In other words, you have made the decision on the basis of majority. At the time of doing justice, one does not do a headcount, it is the right that is kept in view. What then is the basis of your decision?

[Answer] The decision has not been made on the basis of majority or numbers but on wisdom and logic. We thought that people should be kept informed about the country through news and the credibility of the press should be restored. The credibility of the news was affected but the credibility of views and journals is not yet affected. Therefore, facility was provided first to the affected group. As soon as the conditions improve a little, the journals will be given freedom as well for the propagation and expression of views. Action on this process has not gradually begun. Our intent is not to keep one segment of the press free and the other in shackles. There is no good in it. The government is a supporter of free press. We want to give freedom to the press. But we also expect the press to cherish this freedom and, being benefitted by this freedom, serve the people and the nation. Free press has great importance and our national press can play a positive and effective role in national affairs. This period of restrictions is not punitive, rather, it is administrative and instructive. Therefore nobody should believe that to keep the press under restrictions is our policy. The government is a supporter and admirer of free press. The President of the Republic himself has expressed this fact time and again. But the press should keep in view the parameters and restrictions of freedom and should use its talents for the service of the people and the nation.

[Question] What are the standards of the personnel appointed for censoring journals, or has the government not made any arrangement for setting any standards?

[Answer] The persons who censor the magazines are usually provincial officers. They are made such officers when they measure up to government standards educationally.

[Question] I can understand that there might be some educational standards for the officers, but the low-ranking staff certainly does not meet the standards. Are the officers authorized to delegate the work to their subordinates instead of doing it themselves, and let these subordinates do as they please?

[Answer] I don't think that is the case. And if it is, then I would say that the provincial officers should go through the articles themselves and make decisions about them honestly based on their conscience.

[Question] You say that it does not happen but I insist that it does. I present a few examples for evidence. I am holding in my hand a journal published from Lahore. I will not tell you its name, nor will I show you the title [of the article], because the purpose is not to say anything about the writer. In it the subversive elements have been proved as the patriots, and the ones rounding up the subversive elements are branded just the opposite of what they are. In addition, such words have been used through a policeman that I can neither say them nor print them.

[Answer] These words have been used about an earlier era.

[Question] Is it fair to say or write such things about all the rulers of the earlier periods? And then, things have not been said about the people of earlier periods only. For one thing, this sentence relates to the present, not past. And for another, its writer, writing elsewhere, has clarified that it is not about the past. He says: "Those are the enemies of the land of Koran who refer to Koran in every speech." References to Koran are made in your period. People of earlier periods did not even know how to read the Koran.

[Answer] I am glad that the writer straightened out this belief. And as far as the matter of reading the Koran is concerned, it is not true that the people of earlier periods did not read the Koran. They did and I can quote names.

[Question] Names are not necessary--I do get your point. I only wish to submit respectfully that the people censoring the journals are incompetent. Either the provincial officers should do it themselves or able people should be appointed for the job.

[Answer] The fact is that those who censor are human, with differences of views and disposition. It is not surprising. A decision is handed down in a

session court but it gets changed when appealed to the High Court and the Supreme Court. This difference of opinion and disposition is natural and there is no way to overcome this problem. When there is effort, there is discord.

[Question] Should I regard this a constitutional and a natural answer or a logical and necessary response of an intelligent minister? I think the government has found a good advocate in you.

[Answer] This is not the case. The head of the government is a pious man. God helps the people who work with him. The response I have given is not for the sake of a counter argument, it is a fact. This is the reason why the president allows firm expression of thought. The issues are resolved through active disagreement and also we get a chance to understand each other. I do not say what I have to say to convince others through the force of arguments. In fact, the policies of the government and its head are straightforward. Truth is usually precise and unequivocal.

[Question] Then, we should also have permission for truth and frankness.

[Answer] By all means. Who has stopped you? The president permits this and I do too. In fact, we welcome truth.

[Question] In response to who prevents us from truth, the answer is: the censors.

[Answer] I have already said that gradual action has begun. Lord willing, soon the decision about the journals will also be made.

[Question] What is the definition of gradual action? How will it be implemented and how will we receive freedom to write?

[Answer] Many people have asked me this question. I do believe that this action can take place gradually. Since one step has been taken, the other will also follow. I have good intentions and also I work in good faith. God will surely grant me success in my good intentions.

[Question] I have no doubts about your good intentions. I ask you with reference to those very good intentions to draw parameters of work.

[Answer] How?

[Question] Leave this matter to civilian courts. Those who violate the guidelines will be punished.

[Answer] If this is done, the editors will have nothing but court appearances. Work at the newspaper offices at night and running around the courts during the day.

[Question] It is happening right now. Newspaper offices at night and the censor board during the day. Courts would be far better than this.

[Answer] Is that really the case?

[Question] Absolutely.

[Answer] Then you are lucky.

[Question] I believe I did not make myself clear. What I wish to say is that the justice which can be gotten from the courts cannot be gotten from the censor board or any other place.

[Answer] If that is the case, then why are appeals made [against court decisions]?

[Question] You said that the journals will also be freed from censorship. When?

[Answer] Soon, God willing.

[Question] A time frame, date, promise?

[Answer] The promise stands but determination of duration is not possible. It depends upon the circumstances. However, efforts will be made to do it soon. Now when the newspapers are self-censoring, there is a flood of women's photos in them. What needs to be done in that regard will also be considered.

[Question] Is this criticism on the record or off the record?

[Answer] On the record.

[Question] The permission to the newspapers for self-censoring is your own decision or the government's?

[Answer] It is not my personal decision, it is by the government. First the matter is presented in the cabinet and then the decision is made. I presented this matter, the president listened to it intently and gave a favorable decision.

[Question] It means that you raised the issue and the president made the decision?

[Answer] Yes.

[Question] I hope you will also raise the issue of magazine editors.

[Answer] There is no cause to be disappointed.

[Question] Did the newspaper editors give you any assurance before you raised their issue before the president?

[Answer] All give assurances that they will abide by the prescribed rules.

[Question] If the editors of the journals give you assurances collectively, will you then grant them permission for self-censoring?

[Answer] This can be considered.

[Question] What are your views about the weekly magazines of the dailies?

[Answer] As a matter of fact, there are many problems in the race which is going on in Lahore. In the competition to publish photos, every newspaper is trying to outdo the other. Some newspapers publish 32-page weekly editions, and some makeshift continuity is provided in them. The lack of written material is made up by the photos. This harms the papers as well as the nation. It causes waste both in newsprint as well as in foreign exchange.

[Question] Have you not arranged for a meeting to deliberate on this matter?

[Answer] I will call a meeting of the editors of the dailies.

[Question] When?

[Answer] Soon after the meeting of the Federal Council.

[Question] Is there a possibility of the meeting of the editors of the journals as well after that?

[Answer] I cannot rule out that possibility.

[Question] When will you be able to call that meeting?

[Answer] Whenever God is willing.

[Question] You just said that the Lahore papers make up the lack of written material by photos. Thus you accept that they have nothing to write about.

[Answer] That is not the case. These papers have enough material to write about. They are free of censorship.

[Question] Now this must be the case for the last two or three days. Prior to this they must have been making up for the lack of print by photos.

[Answer] No, they are free for the last three months. No censorship. Just self-censorship. This policy though has been in force for the last three months and has recently been announced publicly.

[Question] If they had been practically granted freedom earlier, why did you leave the announcement to the Federal Council to be made now?

[Answer] No, we did not leave it to the Federal Council. Only it was made now and personally by the president.

[Question] In the beginning of the interview you said that the literary journals are exempt from censorship. This announcement was also made some time ago by the president. What distinction do you make between literary and political journals?

[Answer] Mr Akhtar, you must be joking. Don't you know the distinction between literary and political journals? Everybody knows that.

[Question] There are some journals which are literary but they adorn themselves with political editorials. And there are some which are political and they embellish themselves with a literary article. Now, it is very hard to say which is political and which is literary.

[Question] In certain religious journals Koranic scriptures or their translation is printed. But, quite often, the censor officials cut even those out.

[Answer] From now on we will not allow that. No question of censoring Koranic scriptures or the translation thereof arises.

[Question] I am not talking of writing or deleting names, sir. Such a mischief cannot be imagined of a Muslim. I am talking of whole verses. You can confirm it with the editors of religious magazines. Once in CHATAN itself the translation of scriptures by [the late] Maulana Azad [former education minister of India] became victimized by the censor.

[Answer] It is my wish that the teachings of the Koran should be spread as much as possible. It is fundamental to the setting up of Islamic structure. The government is struggling for Islamic system. But, if Maulana Azad finds the concept of United India through Koranic scriptures, then it is not appropriate. In my view, in spite of his great learning and scholarship, this political aspect of Maulana Azad is rather weak. Later on he had realized it himself.

[Question] The censorship of the verses I am speaking of, were with reference to justice, cruelty and barbarism.

[Answer] The concept of justice is also gradual as well as progressive. At one time freeing slaves in stages was justice. Later, not enslaving altogether became justice. The colonies came into existence by enslaving people, and the colonialists thought that enslaving people and then ruling over them was just. Whatever is happening in Afghanistan, to the Soviet Union is justice even though 116 countries of the world do not agree with the viewpoint. The Russian army declares Afghan refugees as cruel. Now what can be done about it?

[Question] The question does not even arise. It simply means, might is right. The powerful enslaves the weak and thus determines his own action to be just. If the oppressed asks for his rights, it is called violation of law. This is no definition or explanation of justice. It is such a multifaceted thing.

[Answer] Justice is a virtue. It is an act, such an act that every person makes the decision regarding it according to his conscience and ability. A person's thinking can be different.

[Question] It is a strange thing that the government reserves such preachings for itself. When the watchdogs from among the public impose such restrictions on the rulers, then it is found intolerable. This is also a double standard.

[Answer] The government does not impose such restriction unilaterally. Whereas it has taken support from laws for its dignity, respect and protection, it has also given support to people of its laws. The government has issued an ordinance that nobody can hurt the feelings of another, how can it be accused of such a charge. If the government does not allow unfair criticism of its high institutions, then it does not permit anybody to trifle or play with any citizen's integrity. In the eyes of the government both the ruler and the ruled are subject to laws. Who told you that the government mobilizes laws only for its own protection. The present government has the honor of protecting the honor of the individual. There is a law that if anybody will accuse a woman unjustly of a wrongdoing then a case will be instituted against him. Everybody has freedom to throw a punch but where my nose begins, his freedom ends. Freedom beyond those limits is not possible. This is not limited to Pakistan, it is true of the whole world. If the 'namaz' prayer is going on, a person does not have the freedom to read the Koran or sing praises of the prophet.

[Question] It is happening this way in the entire country. It is done insistently. You say it is not right. I cannot write this with my own pen with reference to you.

[Answer] Do please write all. If the prayer is on, speaking, reading, not even the Koran, is allowed. This is a matter of 'shariat', of religious laws and religion. These are the proprieties of our civilization and culture.

[Question] In regard to handing over the matters of the journalists you said that if it is done, these people (journalists) will face a lot of court appearances. In other words, you're doing a favor to them by keeping them out of the courts. Now you are saying that a person can be tried for accusing a woman. In such case a woman will also have to go to the courts. Even though a woman is weak, [according to your logic] she can still cope with going to the courts, then why not the journalists, who are strong due to being men.

[Answer] A woman is weak and therefore it is the duty of the government to help her. As it is a duty to help the weak, so it is a duty to check the power of the strong. We do both and thus help both groups.

[Question] In other words the real motive is not compassion, but to bring the powerful in line and to win over the weak.

[Answer] No. I think if your [i.e., the journalists'] matter is left to the courts, it will create many complications. The restrictions which are imposed on you are not laws. Whatever you are suggesting will take the character of law. The restrictions are temporary but the law is permanent. The restriction can be lifted anytime but not the law. You can easily go through the ordeals of restrictions but it would be hard for you to cope with the complications of the laws. Law is for the guidance of life. It plays the same role in society as does the soul in the body. Restriction is like medicine for the sickness; it is administered while the illness is present. On the contrary, the soul cannot be separated from the body. If the soul is separated from the body then the body will wither away. Therefore you should bear the restrictions like medicine. If a permanent law is made then there will be nothing but difficulties for you. Water is important, but in certain illnesses water is not allowed. Why? Its reasons are known only to a doctor, not to a patient. Therefore, it would not be appropriate for the patient to raise hell for water. The same is true of cultural maladies. Certain rules are instituted temporarily as a medicine for the ills, there is no need to worry about them. If I tell you about the sickness also then you will concur with me. As you may know, some time back the nation had become a victim of political chaos. No sector of our lives was spared by it. From the government employees to the shopkeepers, from the government officers to the cities and forests, the nation was divided in two parts. On one side was national unity and on the other, the People's Party. Because of their conflict the spirit of democracy had ended. Nobody was willing to listen to anybody. This fact is borne out by the speeches and statements of the leaders of that time. The leaders were talking of hanging each other in the public squares. Time was needed to end that chaos, to pick up the debris of that demolished building, and build anew a new building in its place. Thank God the upheaval is over. Efforts are being made to end its vestiges as well. Debris is being removed. Efforts are going on to erect the building. The avenues of statements and threats are barred. People are home minding their business instead of wandering the streets. The government is trying its best to normalize conditions in the shortest possible time. And this is its responsibility. It has no ambitions or objectives other than carrying out this responsibility. The work of the government will become easier as much as the political, intellectual and the serious forces will try to make the conditions favorable, and the destination of democracy will become that much nearer.

[Question] A federal council has been formulated for the restoration of democracy. Why isn't a council formed for the freedom of the press? Is it not possible to formulate a council with representatives from government and press with a view to its being a conductor of affairs, interpreter of policies, as well as the arbiter of conflicts?

[Answer] The press is not democracy that we need an institution for its restoration. Besides, the problems of the press and its owners are different. The problems of editors and the employees are different even from them. Finally, the problems of newspaper hawkers and delivery people are different from the rest. Thus, their problems are not only different from each other but quite often diametrically opposed. Things would have been different had

the issues been harmonious. Since the issues are so complicated the establishment of a press council, rather than being a source of solutions, can become a creator of new problems. We are still confronted with the old issues. Before we raise the new ones, we need to solve them. God willing, the status quo in regard to the press will continue and the issue will gradually be resolved.

[Question] What are the guidelines for writers?

[Answer] They have already been explained many, many times.

[Question] I need to ask you that again because there is no explanation of the guiding principles. There is a likelihood of difference in their interpretation.

[Answer] What kind of difference are you talking about?

[Question] You tell me what is the first guiding principle.

[Answer] The ideology of Pakistan.

[Question] What is the meaning of ideology of Pakistan? Some say it is Islam and some say it is secularism. If a censor official happens to be an idealogue believing in secularism, he does the censoring according to his own beliefs. This matter does need to be resolved.

[Answer] Islam and only Islam is meant by Pakistan ideology of Pakistan, and nothing else. There is no basis for any other interpretation. Pakistan has been created in the name of Islam and efforts are being made to create Islamic order. Islam is the guarantee of Pakistan's stability. Pakistan's past was connected with Islam, so is the present and so will be the future. Islam and Pakistan are inseparable. No explanation or interpretation is possible by separating them. This is the ideology of Pakistan.

[Question] What is the second guiding principle?

[Answer] No such material should be published about the friendly countries and their leaders which may endanger Pakistan's relations with them.

[Question] Is India included among those countries?

[Answer] What do you think?

[Question] It doesn't matter what I think. The need for explanation occurred because the news about Muslims with reference to India is often censored.

[Answer] Pakistan is desirous of good relations with all its neighboring countries. From day one it has been her effort not to have tension with any country and the countries which have spoiled relations with us we have tried to restore them on human, moral and legal grounds. Similarly, Pakistan has been desirous of good relations with India as well. In regard to India the

ground rules will be that no dialogue should be started which may be detrimental to the talks and harmful to the efforts of our government. This should not be limited to a neighboring country. Our writers should present their views in such a clear and succinct manner that even the enemies may not help but praise their logic. The issues which are to be solved by the government should be left to the government. Therefore what is said and written should be done carefully. Whatever is explained should be explained with care and understanding. Nobody has said that there is no freedom of speech on this or that matter. Another thing which needs to be borne in mind is that if we are trying to improve relations with a country, it is a joint venture between the masses and the government.

[Question] I dared to ask because as minister of information you need to remain informed. On the one hand, censorship is done unjustly, on the other you are provided wrong information about the writers. For instance, an issue of CHATAN was confiscated once because it contained two objectionable articles. One was the interview of Bani Sadr and the other was about conversion of Untouchables into Islam. On the basis of information provided to you, while giving a speech in Islamabad you said that had that issue been printed and hit the streets, the whole country would have been up in flames. Obviously you must have said that on the basis of some report. Now listen to a joke about one of the articles. The article about the untouchables was first submitted with the headline, "Rebellion of 90 Million Untouchables in India." The whole article was consored though only the headline could have been censored. The same article was resubmitted with the headline, "The Resurrection of Islamic Movement in India" the next week, was passed this time and published.

[Answer] As far as I remember, the article about the Untouchables was not objectiouable. About the other article, I had the report that it was rather harsh. How can we tolerate that something be printed about an Islamic country which may be controversial? Their differences are their business, but we need to be careful on our side.

[Question] You're absolutely right. Now the third guideline.

[Answer] The third guideline is that the armed forces and the judicial system of Pakistan be not criticized.

[Question] Is Yahya Khan included in this?

[Answer] I mean the present government. Yahya Khan is dead and now God is trustee of this matter. What can you say about him? Anyway, the guideline means what I just said.

[Question] Fourth guideline and its explanation?

[Answer] Pornographic material should not be published, nor the crime be reported in such a manner that the criminal may appear a hero and there may be a publicity of crime.

[Question] How something can be defined as pornographic, and on what material will this definition be applicable?

[Answer] I was asked this very question in England and Kuwait and several times in Pakistan. In the western culture pornography has not yet been defined. In one place one thing is determined as pornographic by one court while another court at another place finds it all right. But I do have its explanation, which is:

"If a father, mother, son and a daughter of the middle class sit together, read [a book] and look at [a picture] together, and not find it offensive to do so, then such material is worthy of acceptance."

[Question] But how can a writer, after writing something, arrange for bringing such four people together?

[Answer] He surely can do so in his mind. I mean that he should write keeping such four people in mind. If he thinks that those four people of a middle class family would not be adversely affected by reading his article, then it is all right.

[Question] Why have you put the limitation of a middle class family here?

[Answer] People in very high society do not have this standard of reading. They have different values in regard to pornography, and the very poor people have thinking diametrically opposite to this. Both these groups are far apart from an intellectual point of view. Whatever is regarded totally unacceptable among the poor is usually acceptable among the rich. Therefore, the thinking of the middle class is considered closer to reality.

EDITORIAL POINTS OUT CONTRADICTIONS IN MANPOWER POLICIES, FACTS

Islamabad THE MUSLIM in English 25 Feb 82 p 4

[Text] PAKISTAN, according to an expert who ought to know what he is talking about, is capable of increasing its farm output three times from the present 11.5 million tonnes to 33 million tonnes if farming is mechanised. The Pakistan Agricultural Research Council sowed wheat on 100 model plots and achieved a per acre output of 86 maunds against the current national average of 24 to 25 maunds. Similarly, PARC chose 12 villages in Gujranwala District and was able to achieve a 60 per cent higher than normal rice yield on 10,000 acres. The Council achieved these spectacular results through mechanised farming, efficient water management, scientific use of fertilisers, better seed, careful pest control and regular weeding. The food yield gap, defined as the difference between potential and actual production that we face today, is due, among other things, to poor agricultural management, lack of coordination between various government agencies, power shortages and breakdowns, lack of financial resources and, therefore, essential inputs. The reason why the country must go in for mechanised farming (according to the expert) is that of the 2.7 million Pakistanis working abroad, most are farmhands. Mechanisation is also necessary he feels, because the country's population will have doubled by the turn of the century. He says that there is room for improving agricultural management at district level. At present the extra-assistant director who heads the department at district headquarters has too much file-work to do. He cannot possibly attend to field work. It would be advisable, therefore, to separate the extension wing of the district department of agriculture so that it can really be of service to the farmers. The transfer of modern farming technology is the job of the extension wing and it must be streamlined. Under and over-use of water should be avoided and the marketing system improved. It was gratifying to learn from the expert that wheat production in the barani areas had increased by 30 per cent during the last four years.

The President, too, has been talking of agriculture. In a message to the First All-Pakistan Plant Scientist's Conference which opened in Karachi on Tuesday, Gen. Ziaul Haq said that the country was producing one-sixth of what it could if its agricultural potential was exploited scientifically. There was dearth of research workers in natural sciences and the nation's universities were producing less than a dozen Ph.Ds. Only 2.5 per cent of the research workers in 34 government institutes had doctorates in their subjects. A very sad state of affairs, indeed but why should people take up natural sciences when there's nothing at the end of their academic careers for them? Who would like to do post-graduate work in botany when he can earn thrice as much by going as an unskilled hand to the Middle East? Gone are the days when a white-collar job at the Secretariat used to be the end of a young man's ambition. That is only one aspect of the matter. Agricultural production must indeed continue to increase but the question must not be viewed in isolation. First there is the question of the 2.7 million working abroad. Have they gone out for good or will they return? If and when they do so, will they go back to the farm or seek urban (not industrial) jobs? If they seek industrial jobs, will we have industrial jobs for them? If they want to go back to the farm, will they not find that their place has been taken by the tractor, the thresher and other implements? And, even if we opt for total mechanisation, wishfully hoping that other factors will remain the same, do we have the means to do so? Where's the energy that will be required to run mechanised farms? Will the additional farm produce make up for the

increase in the energy bill and other inputs? It is questions such as these that make us think that perhaps manpower management is more important than achieving self-sufficiency in this sector of the economy or that. Let us suppose there is little or no unemployment but Pakistan has to import a couple of million tons of wheat. Let us suppose again that Pakistan is exporting a couple of million tons of wheat but there is widespread unemployment. What, of the two, is a more socially and politically acceptable option? This is a moot point and we are not making recommendations but we think economic planning should be man-oriented rather than target-oriented. The next five-year plan, we hope, therefore, will be geared to fulfilling need rather than desire, to creating more jobs rather than promoting jobbery, to serving man rather than the middleman.

EDITORIAL UNDERSCORES CONTINUING PRESSING PROBLEMS

Lahore CHATAN in Urdu 18 Jan 82 p 5

[Editorial: "Serious Problems"]

[Text] The members of the Advisory Council were announced, the Council was convened in session which, after a few days, was adjourned for an unspecified time. There were lengthy discussions about the Advisory Council from within as well as without. The formation of the Advisory Council was not the only subject of discussion--there was an appreciable dialogue about the status and reality of the defunct political parties. At present, the issue at hand is not the legality or illegality, need or absence of need for the formation of the Advisory Council. What would have happened had the Council not been formed? Life would have gone on or the usual busy method of filling the gaps would have been adopted. In this regard our views are not hidden from anybody. We have written even before in these columns that, in view of the international situation, we talk about the traditional democracy in an emotional way but we tend to ignore its exigencies and needs. Anyway, this is a different matter. To us, next to defense, the important issue is inflation and corruption. The tragedy is not that we do have a problem but that no positive step has been taken so far to alleviate it. Nor is such a remedial step in sight.

What happens is that the prices of consumer goods are increased periodically and all estimates of the budget go awry. Although [with price increases] the authorities promptly announce that the increases will not influence the public, this is never true. A new cycle of inflation begins and a lot of people get crushed under it. The increase in the rate of bribery is openly conceded and no decrease takes place in the crime rate.

Time and again the steps towards the institution of Islamic order are mentioned. It is claimed that the programs on the media are helping in evolving a national identity. Quite often, religious conferences are also held. But, with the passage of time, instead of lessening, the difficulties of people are increasing. People cannot sleep in their homes peacefully because of the fear of thieves and robbers. Now, even banks have become unsafe. Hoodlums roam around everywhere so the gentle citizens are helpless before their onslaught. Now the people donned in the national dress are

visible in the offices, prayers are held, but bribery and corruption is increasing. These are the matters which have also been discussed in the Advisory Council.

The truth is that if the people are contented then nobody can incite them or put them on the path of protest. If there is restlessness among people, then even a little thing becomes a cause celebre of a major disturbance.

Now the need is [sentence deleted] that nothing should be done in solving the real problems of people. Nor should it be believed that their patience is unlimited. The question is what are the obstacles in the path of strict measures for ending bribery and corruption. Why is something not done for stemming crime? The reason is clear. No change has yet taken place in the system; the cultural structure is as before, lack of action is being made up by words. If the difficulties of people will not lesson or end, they will certainly become restless. The preachers of dry sermons and those who make speeches from their high offices need to come down from their high pulpits, mix with people and feel their pain and misery--and then alleviate it. It will need solid and conclusive steps on their part.

EDITORIAL CAUTIONS AGAINST PLANNING PITFALLS

Karachi BUSINESS RECORDER in English 10 Mar 82 p 2

[Text] Let us welcome back Dr. Mahbubul Haq to the service of Pakistan. He has gained considerably in experience and stature as an economist during his stay abroad with the World Bank. To Pakistanis who remember Dr. Haq for his creation of the 22 families phantom which still haunts our politicians, planners and policy makers, he would now seem a very chastened man. Judging by his writings and recent statements, we have every hope that he would impart economic realism to our planning and would take care to see that the private sector entrepreneur is assigned at least such a place in our society where anybody who comes to occupy a position of some importance in the Government, would not find it easy to word-whip him only to seek headlines in the press.

BUSINESS RECORDER wishes Haq Godspeed and faithful adherence to his declaration wherein he said "I will promise a new era of planned economic development". We wish him all the luck. However, we advise him in all sincerity at this very stage before he involves himself in the planning exercise to clarify what exactly he means by such abstractionism as "strong social conscience" and development which is "humane development". For, it is our belief that there is no productive activity, particularly when undertaken by the private entrepreneur, which is not needed or required by a substantial number of consumers of goods and services in a society. Then, again, humanism is a very subjective phenomenon. What an individual or a group of individuals may consider humane, an equal number or more or less may not find so humane. In economic activity by an individual anywhere, you cannot take away the profit motive. Investment in the production field is not a philanthropic activity. And if there is no monopoly and no cartelisation and the consumers have money to buy, then no profit margin is unconscionable. Situations where profits become unconscionable, when more is not produced, prices do not come down and competition ends, are the creation of controls and unconscionable interference by the bureaucracy at every level in the day to day affairs of any and every business and industrial enterprise.

Having said all this as a friend and well-wisher, we would like to caution Dr. Haq against yet another pitfall. Over the years we have witnessed the perspective of some of our very brilliant men change with the change in

the seats they occupy. We do hope that the perspective Dr. Haq has developed about the role of private enterprise in the development of any economy will not change while he sits in Islamabad, flexibility or no flexibility, he should not allow the secretariat to blur his vision or distort his perspective.

DESAI STRESSES NEED FOR COOPERATION

Karachi JANG in Urdu 16 Feb 82 p 9

[Interview with India's Former Prime Minister Morarjee Desai by JANG correspondent in Bombay; date not specified]

[Excerpt] India's former prime minister and senior statesman Mr Morarjee Desai has said that Russia wants to seize Baluchistan in order to be able to establish its control over the area. "If Russia should get into Baluchistan," he said, "India would be in jeopardy as then Russia would become India's neighbour." JANG's special correspondent interviewed Morarjee Desai in his Marine Drive residence "Ocean" on the Bombay seashore. Mr Desai repeated his earlier statement that during Mr Brezhnev's visit to India when the Janata party was in office, he had instigated the Indians to teach Pakistan a lesson because it was helping Afghan refugees. Mr Desai said, "During my visit to Russia, I had several hours' private talks with the late premier Kosygin. I mentioned that Russia had the Afghan leader Daoud killed. But Kosygin denied the accusation, and maintained that Russia was in Afghanistan only because Afghanistan was in danger from Pakistan."

Replying to a question about India's atomic program, Mr Morarjee said that India would not make an atom bomb and he hoped that Pakistan also would not make an atom bomb. He said that there was no reason to doubt President Zia's assurances, because if Pakistan was foolish enough to build an atom bomb, India would destroy its installations in one day, since such installations could not be kept hidden. In answer to a question, Mr Desai expressed theview that there should not be fighting between India and Pakistan. He said that Mrs Indira Gandhi did not want war, nor was there any danger of a fresh war between the two countries. When reminded of Mrs Gandhi's sharp and bitter words, he said that Pakistan should pay no attention to them. He stated that as a sovereign country, Pakistan had the right to buy the weapons it needed, but he saw no need for Pakistan to stockpile weapons. If friendship were established between the two countries, in time of danger India could come to Pakistan's defense. He said that Pakistan should remain strong; India and Pakistan should engage in trade with each other and visa requirements between the two countries should be ended. He thought that visa requirements should be abolished not only with Nepal and Bhutan, but also with Iran, Sri Lanka, Bangladesh and Burma. "The big powers want to see us at each others' throats; but if we become united, not only will our safety be assured, but the big powers themselves will be afraid

of us." He said, "I have worked hard for friendship between Pakistan and India. Pakistan should move forward in this direction without allowing itself to be incited. Both countries will benefit from friendship, and Pakistan's benefit will be greater. As a result of such friendship, Pakistan will not be in danger from Afghanistan and Russia, and the problem of Afghanistan will also be solved."

When Mr Desai, who was one of the leaders of the Indian independence movement, was asked as to the basic reason for the strained relations between the two countries, he replied without hesitation, "Pakistan was not founded on love. Pakistan was created by enmity between the two countries. From the very beginning, there was hostility in Pakistan against India, whereas there were no such feelings in India." He said that Muslim brothers from Pakistan were now coming to India. "Muslims from India go to Pakistan to visit relatives, and return to India."

Commenting on the background to the creation of Bangladesh, Mr Desai said, "East Pakistan was the more populous part of the country. Officers from the other part were appointed there. Mujeebur Rahman won the elections, but was not allowed to become prime minister. If he had been made premier, Bangladesh would not have been formed. When Bhutto and Yahya went to East Pakistan, Bhutto kept Mujeeb in the dark, and gave him the impression that he wanted an agreement; while at the same time he kept inciting Yahya, so much so that Yahya wanted to hang Mujeeb. Bhutto saved Mujeeb from the hanging, and rightly so.

After Mujeeb's arrest, Yahya continued to blunder around blindly until the people were angered and declared a separation. Explaining the historical background on Kashmir from India's point of view, Mr Desai said, "We did not take Kashmir; rather, Kashmir came to us. Hari Singh [ruler of Kashmir] made the offer on his own behalf; Shaykh Abdullah made the offer as the representative of the public and its flleings." Mr Desai said that a referendum was no longer possible: "Pakistan has no right to Kashmir, and it should leave Kashmir and go away."

Mr Desai revealed that during his premirship, the British government had said to him that he should suggest an end to the quarrel by accepting the present boundaries of Kashmir as permanent. But Desai said that he refused because such a step would have recognized Pakistan's claim to Kashmir.

If Pakistan should make such a suggestion, then it could be given thoughtful attention. He said that if Pakistan's argument is accepted that because the Muslims are the majority in Kashmir, it should become a part of Pakistan, Indian Hindus would start driving the Muslims out of India, and this would destroy both India and Pakistan.

CONFLICT BETWEEN MANUFACTURERS, IMPORTERS VIEWED

Islamabad THE MUSLIM in English 28 Feb 82 p 4

[Text] INCREASING imports in Pakistan are producing sharper conflicts between the demands of manufacturers and importers. The importers want as few restrictions as possible on imports. They want to import as many items as possible and in very large quantities. So the overall imports of Pakistan are close to 5.5 billion dollars.

As the prices of many of these imports are cheaper than similar goods manufactured in Pakistan, even after paying heavy import duties and sales tax, the manufacturers demand protection. They want some of the items which are available in the country to be banned, and the quantity of similar goods reduced.

Undoubtedly there is merit in the protests of some manufacturers that they are paying far higher import and excise duties and sales tax on their manufacturers than importers do on the goods they import. Unfortunately the government has not looked into their grievances sympathetically as it is more interested in revenues than in fiscal justice.

The importers on their part are eager to import as much as possible and make large profits. When the prices of some items fall because of overimports the suppliers withhold such goods from the market and push up the price level again. This happens in respect of milk and a variety of other products when half a dozen major importers or agents of those products in Pakistan meet and decide to curtail the supplies to the market and keep the prices at a constant level.

At this juncture many manufacturers and importers have a common cause. This has happened as too many of the industrial houses have gone into imports and trading. They want to profit by the larger imports in Pakistan, following the adoption of a very liberal import policy. They are assured of sizeable profits quick through such trading instead of waiting for long for an industry to be set up. Hence a good deal of money that should have normally gone into industrial investment has now gone into trading.

But those who are primarily manufacturers find they are often being burnt at both ends. While taxation is very high at one end, they have to compete with the cheap and relatively lowly taxed imports at the other. The Pakistani consumer has a natural preference for the imported goods, and often for pretty good reasons. Hence the indigenous manufacturers can be losers.

The manufacturers are menaced by not only the regular commercial imports but also the irregular imports brought in by the over two million Pakistan emigre workers. They bring in a large variety of goods, often free of duty, and sell them in the local market. They may vary from domestic appliances and electrical goods to perfumes, apparel and plastic goods. Making the situation worse is the large scale smuggling of a variety of goods that still persist. All this is retarding the growth of domestic industry a great deal.

The Director of Industries and Mineral Resources, Sind, has now suggested to the government to ban the import of seven items on the basis local manufactures of such items are adequate to the country's needs. The items include ball point pens and refills, dry battery cells, electric bulbs, glass bottles for beverages, and conduit pipes and fittings.

If such items are banned for importing, will the prices of the local manufactures rise or their quality go down further? In the past, in the captive market conditions that prevailed because of severe restrictions on imports, consumers paid high prices for low quality products. The manufacturers did not make earnest efforts to improve their products as they had the consumer by the neck. So the consumers are apprehensive the same may happen

if imports of such items are banned.

Manufacturers of ball point pens, dry batteries and electric bulbs have to improve their products very substantially. Public discontent in these areas have been a prolonged one. Their quality did not go up while their prices shot up. The bulbs in particular have been terribly disappointing. They seem to have a short life compared to foreign bulbs while both face the same kind of power fluctuation.

The government banned import of honey following the plea of the industry that they can meet the country's needs. As a result, the price of honey shot up sky high, and too many of the Pakistani brands are suspect. Traders are now pleading for resumption of imports. The government should hence look into the merits of each case before the plea for banning the import of any item is accepted. If such ban means worse bulbs at higher prices, weaker ball point pens or more leaky battery cells with a shorter life, the country should be spared the costly ban.

The government should also make a study of the prices of all the products the import of which is banned in Pakistan. How much have the prices gone up, and how much has the quality changed for the better or worse? And is the supply adequate, and is it subject to periodic shortages brought about by manipulations and malpractices? It is the obligation of the government to keep down the prices of the items the import of which are banned. Otherwise the ban will abet the profiteers among the industrialists and their sole agents and dealers.

Industry must undoubtedly be helped, but not at the cost of all else, and not for ever. Trade, industry and labour must justify themselves on the basis of merit and performance. None of the three can be fattened or flattered at the expense of others. This should be made clear to all the elements not through words and lofty exhortations alone, but through positive policy formulations.

GOVERNMENT CONTROLS BLAMED FOR CORRUPTION

Karachi DAWN in English 8 Mar 82 p 4

[Text]

LAHORE, March 7: Mr A. K. Brohi, a former Federal Minister and Rector of the Islamic University, Islamabad, on Friday noted that excessive controls and the involvement of Government in various matters were virtually contributing to escalation of corruption.

He was speaking at a seminar held at WAPDA Auditorium here on Friday afternoon. Mr Brohi said the Government functions should be confined to dispensation of justice and safeguard of the geographical frontiers and all other issues should be entrusted to society.

"The best government is the government which controls least", he added. He expressed grave concern over the extent of corruption prevailing in the society and observed "it had become a way of life".

DISCIPLINED SOCIETY

As for the remedial measures to eliminate corruption, the former Federal Minister said a "disciplined society" should be developed with particular emphasis on the prevailing system of education, system of nurture as well as early society of children.

Elaborating the term disciplined society Mr Brohi said, it was the one comprising "Muttaqis" (those who ward off evil) with control over their anima impulse as stressed by the religion.

The whole of religion was, in fact, a Jehad against the inwardness, he said.

Mr Brohi said the prayer Zakat, fast and the pilgrimage consolidate the man's belief in Allah and save him from sins.

Recounting the further merits of the disciplined society, Mr Brohi said in this society there was not provision for rulership and the Caliph conducted the affairs of State according to Quran and Sunnah with not authority of his own.

Dr. Tanzilur Rehman, Chairman, Council of Islamic Ideology, said the promotion of moral values in the light of Holy Quran and Sunnah was the sole solution of the corruption menace.

He said, the practical implementation of Quran and Sunnah would not only elimmate this menace but would also solve the economic, political, social and all other problems confronting any society.

He further said that the present education system should be moulded into Islamic pattern.—

GROWING INCIDENCE OF CORRUPTION VIEWED

Karachi DAWN in English 8 Mar 82 p 7

[Text]

AFTER the one-rupee note, the currency notes of higher denominations will also now bear the premonitory inscription: "Rizq-i-halal ain ibadat hai". The State Bank of Pakistan has announced that notes of five, ten and hundred rupees, bearing this inscription in Urdu, will be put into circulation from time to time. This gesture is meant well and shows growing concern on the part of the authorities about the reach and extent of corruption in our society. In a sense, the currency notes will bear the same message that has also been articulated by some leading figures of the government. Individuals have been asked to reform themselves and desist from corrupt and unethical practices. Such advice can serve its purpose if it becomes part of a planned, systematic drive to curb corruption. Otherwise, as we noted in a recent editorial, sermons alone will not do. What is encouraging about spreading the message through currency notes, however, is that corruption will become a topic of even wider interest and concern. This, hopefully, will lead to more serious thought on how it should be tackled.

Already, the growing incidence of corruption in our society is being taken note of at various levels. Speaking in Lahore, Mr. A.K. Brohi, Rector of the Islamic University, Islamabad, conceded the other day that excessive government controls and the wide involvement of the officialdom in matters of day-to-day administration affecting the public are a major contributory factor in the spread and dimension of corruption. Speaking about remedial measures, Mr. Brohi, who seems eminently qualified to prescribe remedies, called for the establishment of a disciplined society. By this he meant a new social situation in which the conduct, thinking and outlook of the people would conform to the principle of piety as enjoined by Islam and the moral and ethical restraints that it prescribes. In this context, Mr. Brohi also emphasised the reforming role of the education system. This is a valid point. But, like most other institutions, education, too, is in a state of decline. Corruption and its logical consequences have touched and debased almost all aspects of human activity in our society. Technically, currency notes also serve as germs that spread the disease. Will those who are eager to grab them will henceforth pause to ponder whether their "rizq" is "halal?"

SHAHI FOREIGN POLICY MOVES PRAISED

Islamabad THE MUSLIM in English 22 Feb 82 p 4

[Editorial: "Reordering Foreign Relations"]

[Text] HOSTING a dinner in honour of the visiting President of the Chinese People's Association for Friendship with Foreign Countries, Mr. Wang Bingnan, Foreign Minister Agha Shahi said:

"We deeply appreciate the understanding shown by the People's Republic of China in the evolution of Pakistan's foreign policy away from reliance on military alliances to its formal accession to the Non-Aligned Movement. Pakistan has been able to re-order its international relations in conformity with the principles of the Movement without impairing its ties with its former allies. A good example of this process is the new relationship of economic assistance and military sales with the United States in place of the former framework of military alliance and military aid".

Mr. Shahi further said: "In the light of our past experience and circumstances of today, we feel that our relations with the two superpowers must be based on the observance of respect for our membership of the Non-Aligned Movement which embraces almost all the Islamic countries besides most of those constituting the Third World."

With particular reference to India, Mr. Shahi stated: "The States of the region which have been divided by disputes and conflicting perceptions of one another's motivations and interests, are now making concerted efforts to move towards new relationships based on harmony and mutual co-operation. Pakistan has made its own contribution towards this development with its recent offer of a non-aggression pact to India."

We quote somewhat extensively from Mr. Shahi's speech because it comes on the eve of his self-imposed relinquishment of the Foreign Ministership and sums up the significant ingredients of Pakistan's foreign policy, as the country moves into the mainstream of its re-ordered international life based on a realistic assessment of its geopolitical and security imperatives; and also because Mr. Shahi himself has played a critical and creative role in these developments and has blazed a trail in dynamic diplomacy, which will show the way to his successors.

It was appropriate to spell out these developments before our distinguished Chinese guests because China's understanding and friendship has been a strong and positive factor in the evolution of our foreign policy, and once again, Mr. Agha Shahi himself, particularly since the late sixties, has contributed greatly to the promotion of this understanding, as our Ambassador at the United Nations and in China, and during his long stewardship in the Foreign Ministry as Secretary, Secretary-General, Adviser, and Foreign Minister. Indeed, the Chinese Vice-Premier and Foreign Minister, Mr. Huang Hua has paid Mr. Agha Shahi a most fitting tribute by inviting him to visit China after he relinquishes office. We hope that Mr. Shahi will continue to be available for advice at the highest level in the conduct of our international affairs.

EDITORIAL WELCOMES LIFTING OF RESTRICTION ON U.S. AID TO PAKISTAN

Karachi JANG in Urdu 22 Feb 82 p 3

[Editorial: "American Aid to Pakistan"]

[Text] President Reagan has signed waivers officially lifting restrictions on aid to Pakistan. The United States government has thus formally lifted the ban on giving economic and military aid to Pakistan. To fulfill the legal requirements, President Reagan has sent the documents to the Congress, which can express opposition to the measure if it wishes to do so within the next 30 days, but congressional opposition is not expected. The question of the resumption of aid to Pakistan has already been debated at length in the United States Congress, which finally decided to amend the foreign aid restrictions rule and allow the President to exempt Pakistan from these restrictions. In his letter to Congress, President Reagan presented an effective case for resuming military and economic aid to Pakistan. He pointed out that after the Russian attack on Afghanistan, Pakistan came under great military and political pressure aimed at forcing it to accept quietly the Russian military presence and control over Afghanistan. Reagan's letter further stated that the main objective of American economic aid to Pakistan and the sale of weapons to it under a joint loan agreement was to boost Pakistan's defensive capability, which was important not only for Pakistan itself, but also for the entire Western Asia. In these critical times, he said, it was important to give foreign aid to Pakistan; not to do so would endanger America's important security interests.

An important point included in President Reagan's letter to Congress was that the United States should fulfill the legitimate security needs of its friends in order to help reduce the inducement to build atomic weapons. In fact, this was the reason for imposing restrictions on aid to Pakistan. Former President Carter was of the view that Pakistan was rapidly preparing to build atomic weapons, and that the easiest way to stop it was to end economic and military aid to Pakistan. The propaganda regarding Pakistan's so-called Islamic bomb was secretly organized by international elements led by the Jewish lobby which controls the European media of communication. Pakistan said then and continues to say now that it is not Pakistan's policy to make atom bombs. Pakistan's economy cannot afford the luxury of making atom bombs. Pakistan wants atomic energy for fuel, and will use its atomic capability for peaceful purposes. This has always been Pakistan's stand, and the proof of its sincerity is that several dates mentioned by Pakistan's opponents for Pakistan's atomic detonation have come and gone, and Pakistan has not exploded any nuclear devices;

nor does it intend to do so in the future. Another proof of Pakistan's sincerity is the statement of the director of the International Atomic Energy Agency that his agency had no evidence that Pakistan was using atomic fuel for non-peaceful purposes.

It is a proof of Reagan's realism that in spite of international propaganda he has accepted Pakistan's peaceful and sincere stand, and at the same time has felt and acknowledged the fact that if Pakistan's security needs are fulfilled, Pakistan will have no need to build an atom bomb.

It is a matter for satisfaction that as a world power, the U.S. has recognized the Afghans' struggle for freedom, and has felt the need to give economic and military aid to Pakistan to combat the Russian presence and reduce the load on Pakistan's economy caused by the more than 2.6 million Afghan refugees which it has accepted. Whatever Pakistan has done for the Afghan refugees is based solely on its sentiment as a brother Islamic country, and not at America's behest. In the same way, Pakistan is not the protagonist in the tensions exacerbated by the presence of Russian troops in Afghanistan. Rather, Pakistan declares openly that it has no quarrel with Russia, but wants good relations with that country. Pakistan's sole problem are the Afghan refugees. The day they return to their country will see complete order and peace in the area. The fact is obvious that Pakistan has not given any military bases to the United States in exchange for its aid. Under such conditions, the reinstatement of American aid to Pakistan is a pleasant action.

EDITORIAL CALLS ORDER TO LOCAL COUNCILLORS UNTENABLE

Karachi JANG in Urdu 19 Feb 82 p 3

[Editorial: "An Incomprehensible Order"]

[Text] The Punjab government's order to elected local councillors regarding the issuing of statements, membership in organizations, forming associations or criticizing the policies of federal and provincial governments can only be described in polite terms as unintelligible. Municipal councillors are the elected representatives of the people. Even though their election is on a non-political basis and their entrusted duties are limited to local offices, it is clear that these councillors are not government employees on whom such restrictions could be binding. These councillors are knowledgeable citizens, and various responsible individuals in the government have acknowledged that the performance of local bodies has been satisfactory. There is now talk of future municipal elections. In view of these facts, it seems incomprehensible to impose such wide-ranging and stringent restrictions on local councillors. We do not know whether these restrictions are part of the general decision to forbid even limited political activity in the country, or whether opposition to the government by the local councillors was feared. One thing is certain: the present councillors, who have been sifted through the fine mesh over and over again, will react adversely to the new restrictions, and the result will be that the usefulness and popularity of local offices will diminish considerably. We maintain that the bureaucracy is making these decisions and having them passed, arousing adverse reactions. Some time back a decision was made regarding mosques which is arousing justified anger. Now another decision has been made that is both unpopular and unseemly. The Punjab government should review it.

ALLIANCE APPROVES FARID'S FORMULA

Karachi DAWN in English 14 Mar 82 p 1

[Text] Leaders of the PML-JUP Alliance, after discussions spread over two sessions, have finally approved the formula prepared by the JUP's Prof. Shah Faridul Haq as the basis for negotiations with the MRD's component parties.

The meeting, which began at Pir Pagaro's residence in Karachi on Friday night, concluded on Saturday. Besides the host, Pir Pagaro, other participants included Maulana Shah Ahmad Noorani, Shah Faridul Haq and Mr Mohammad Khan Junejo.

Prof. Faridul Haq apprised the chiefs of the trends of his series of talks with the two negotiators, Mr Arshad Chaudhri and Mr Abid Zuberi, representing the MRD's coalescing parties. The Alliance leaders were also informed of the one-point formula given on behalf of the MRD, which called for the removal of Martial Law and the holding of elections under the 1973 Constitution

It was agreed that negotiations for a joint declaration should continue as before on the basis of the Faridul Haq formula which, inter alia, pinpoints the need for the formation of a political Government with the sole purpose of holding elections under the 1973 Constitution However, for the sake of continuity the Martial Law was to be retained until the actual transfer of power.

The MRD leaders have already made it clear that they would not join any government under the umbrella of Martial Law. At the same time, they said they would not stand in the way of other political parties forming such a government, though with the avowed object of holding elections "within three months" under the 1973 Constitution.

Meanwhile, Mr Arshad Chaudhri and Mr Abid Zuberi called on Pir Pagaro on Friday. On Saturday they were closetted with Maulana Noorani and Shah Faridul Haq. The talks held were described as "encouraging".

Maulana Noorani and Prof Faridul Haq left for Lahore on Saturday in connection with the JUP's Central Shoora at which some 150 members will be present. The Shoora will review the political situation, besides discussing matters relating to Tahleegh and the Organisation itself.

Chief of the defunct Qaumi Mahazi-i-Azadi, Mr Mairaj Mohammad Khan, who arrived in Karachi after his release from Kot Lakhpat Jail in Lahore, said that there was urgent need for a "united political front" in the objective conditions of today He reiterated his commitment to the MRD's four-point stand.

DELINKING OF RUPEE SAID TO BE HELPFUL

Karachi MORNING NEWS in English 7 Mar 82 p 5

[Text]

Sind's Industries and Finance Minister Mr Ashraf W. Tabani has said the government's decision to delink Pakistani rupee with USA dollar has started showing positive results and its full implications would be known to the business community in near future.

Inaugurating a two-day course on "export documentation and procedures" at the Karachi Chamber of Commerce and Industry here yesterday morning the Minister urged the business community to study minutely the implications of Government decision to fully comprehened its positive outcome.

A minute and in-depth study of Government's decision to delink Pakistani rupee with USA dollar he pointed out would reveal that export earnings would show improvement while import bill would be contained within manageable limits.

He suggested the Karachi Chamber to organise a seminar on the subject of delinking of dollar to comprehened all as- Pakistani rupee with USA pects of possible effects on the national economy.

Referring to the prevailing international recession which was adversely affecting the national economy particularly the industrial production in Pakistan. Mr Tabani urged the exporters to redouble their efforts and demonstrate aggressive salesmanship for boosting exports so as to minimise its effects.

He asked the manufacturers to pay due emphasis on production of quality goods and full utilisation of the available industrial production capacities in the country.

He expressed complete satisfaction on the fact that despite general recession prevailing world over and subsequent slumps in country's exports in first half of the current fiscal year the export of non-traditional and manufactured items have showed improvement.

He attributed the rise in export of non-traditional items to the various facilities and incentives given by the Government to promote the production and export of these goods.

The present Government Mr Tabani said has taken laudable steps for the industrialisation and in context of Sind efforts have been made to extend the benefits of industry to interior of the province.

As a result of facilities given by the Government to promote investment and industrialisation in the interior of the province which include tax holidays and allotment of plots the industrial and trade estate were running very successfully in Hyderabad Larkana and Sukkur.

Similar trading and industrial estates he pointed out are also being developed in Shikarpur Dadu and Jacobabad as small investors are responding very encouragingly to the facilities given by the Government.

Earlier the President of Karachi Chamber of Commerce and Industry Haji Abdul Razzak Janoo in his welcome address pleaded for suitable changes in the fiscal and taxation policies of the Government in light of the recent decision to delink Pakistan rupee with USA dollar.

He said though the decision to delink Pakistan rupee with USA dollar has been taken a bit late nevertheless it would help in improving export performance which was showing slump in first half of current fiscal year.

Despite the general slump in total export trade of country during first half of 1981-82 Haji Janoo said the redeeming feature was rise in export shown by the non-traditional items.

He therefore. pleaded for more fiscal incentives for manufacture and export of these non-traditional items so that the export base of the country is further enlarged.

Later the Chairman of Karachi Chamber's Export Committee Haji Mohammad Abdullah said some 204 businessmen have registered themselves for the export document and procedure course.

The course he said was ninth in series so far organised by the Karachi Chamber and is designed to provide basic information and elementary knowledge to the small businessmen.—PPI.

AGRICULTURAL EXPORTS MAY FACE STIFF COMPETITION

Islamabad THE MUSLIM in English 4 Mar 82 p 1

[Article by Sikander Hayat]

[Text] ISLAMABAD, March 3: Pakistan's exportable surplus in wheat, rice and cotton during 1981-82 wil have toface unfavourable conditions in international market, mainly due to near record world outputs in these commodities.

After two successive low productions and declining stocks a record world cereal crop of 1.489 billion tons is expected in 1981-82, as against 1.416 billion tons in 1979-80 and 1.43 billion tons last year.

This year, the world wheat crop is estimated at around 450 million tons, which is 11 million tons more than in the last year. Carry-over stocks in the five major exporting countries are expected not to go below 43.1 million tons.

The world trade in wheat is, therefore, expected to reach around 103 million tons compared with the 93 million tons in 1980-81.

Pakistan has fixed its wheat production target for 1981-82 at 12.2 million tonnes, which is 7.6 per cent higher than the estimated production of last year, giving rise to hopes of exporting some wheat.

It may be interesting to note that in view of this possibility, the government has already set up a study group. Timely rains and better supply position of inputs like seeds, fertilisers and water have strengthened this hope.

RICE: The world rice production is forecast at a record 274 million tons for 1981-82. The rise is expected due to increased planting in response to upward price trend early this year and to 'generally favourable growing conditions.

The world trade in rice, however, is expected to fall from 13.2 million tons in 1980-81 to around 12.7 million tons in 1981-82 due mainly to an expected reduction in South Korea's imports.

Although the rice production in Pakistan is estimated at 3.07 million tonnes in 1980-81 as against 3.22 million tonnes in 1979-80, it is expected to remain a major foreign exchange earner. Procurement of rice and paddy is going on successfully.

But the export of rice, which amounted 'to about 191 million dollars during the first half of 1981-82, is already down by 18 per cent as compared with 232 million dollars in the same period last year.

COTTON: The world cotton output is projected at a record level of 71 million bales for 1981-82 compared to 65.7 million bales in 1980-81. The sharp rise in output is partly due to recovery in production in United States, China and India and partly due to higher per acre yield.

On the other hand, prospects have deteriorated in a number of countries resulting in downward revision of global consumption to 67.3 million bales from 68 million bales. The international trade in raw cotton, therefore, continues to be affected by sluggish economic performance in many countries.

The trade volume which was about 20 million bales in 1980-81 is expected, however to record a modest increase of 0.5 million bales this year.

Pakistan's cotton production target for 1981-82 is fixed at 4.6 million bales which is 14.71 per cent more than last year's.

It may be recalled that the raw cotton exports in the first six months of 1981-82 have already recorded a slump of 65 per cent. During July to December 1981, the cotton exports fell from 171 million dollars to 59.3 million dollars.

LONDON INVESTMENT CELL TO BE EXPANDED

Islamabad THE MUSLIM in English 5 Mar 82 p 8

[Text] ISLAMABAD, March 4: Ghulam Dastgir Khan, Minister for Labour, Manpower and Overseas Pakistanis said here today that the Pakistan embassy in London had been authorised to issue licences for the import of machinery worth upto Rs. 10 million, in each case.

Talking to newsmen on his return from European tour, the Minister said, the concession was announced on a demand by the recently-held Manchester Convention of Overseas Pakistanis after he obtained President Ziaul Haq's approval on phone.

He said the overseas Pakistanis would face no difficulty in future in obtaining import permit to set up various type of industries other than those banned by the Pakistan government.

Describing his tour as "very successful", Mr. Dastgir, who led a high-powered delegation to the Manchester and Copenhegan Conventions, said numerous decisions were taken to solve problems of Pakistanis settled abroad. He also held talks with government leaders of the countries he visited and successfully negotiated the solution of different problems facing Pakistani communities.

The Minister said the London branch of the Investment Promotion Cell would be expanded to make readily available advisory service to Pakistanis on different aspects of industrialisation programme of Pakistan government and to seek more and more investment.

Another important concession which the Minister announced during his tour was the reduction in custom duty from 70 per cent to ten per cent on the import of spare parts of tractors.

He said overseas Pakistanis returning home would be allowed to pass through the green channel set up by customs at major international airports. Pakistani had complained that they were not allowed to use the channel even if they did not carry any goods liable to custom duty or taxes.

The Minister said the PIA would also extend some facility in transportation of accompanied baggage, presently restricted to 20 kilos.

Mr. Dastgir revealed that the government had also decided to reserve 10 per cent seats in educational institutions like Atchison College and Hasanabdal Cadet College for children of overseas Pakistanis. He said the Lawrence College located in Ghoragali had been given Rs. 20 lakh as grant-in-aid from the Overseas Pakistanis Foundation to enable it carry out expansion plans and admit children of overseas Pakistanis.

He said educational institutions for girls exclusively meant for dependents of overseas Pakistanis would be set up all over the country. He said to begin with a girls primary school which would be later upgraded, had been set up in Islamabad. He said school would have boarding and lodging facilities.

The Minister said the OPF would begin a legal service to pursue cases in local courts for overseas Pakistanis on a no-profit-no-loss basis. He said overseas Pakistanis had brought to his notice that they could not pursue their cases in different courts of the country. He said the OPF would later recover the cost of the service.

The Minister also referred to the agreement signed between Pakistan and Denmark, which he said would entitle Pakistanis the same old age benefits and other welfare facilities enjoyed by the Danes. The Minister also chaired a convention held in Copenhegan.

Organised by the Pakistani embassy, the convention was attended by 350 delegates.

In West Germany, the Minister said he discussed the issue of illegal Pakistani immigrants, in Scotland, the Minister said the Lord Mayor of Glasgow held a reception in honour of Mr. Dastgir in appreciation of the positive role played by the Pakistani community there.

BUSINESS AS USUAL

Islamabad THE MUSLIM in English 6 Mar 82 p 1

[Article by Salim Bokhari]

[Text]

ISLAMABAD, March 5: Strike call in sister cities of Rawalpindi and Islamabad received a half-hearted response from the people today. Only wagonwalas and suzuki drivers observed a complete strike, though a few wagons were seen on Rawalpindi-Islamabad route. Later, these wagons were parked on the roadsides.

The Government Transport Service remained operative throughout the day, while a few mini buses also plied between the two cities. Rawalpindi Bus Stand (Pir Wadai) was crowded as usual and buses for all routes were available. Taxi, Rickshaw and Tanga service was normal in Rawalpindi city.

All major markets were closed on account of Friday. However few shops like, general stores, barber shops, restaurants and bakeries were opened in both the cities.

The most surprising aspect of today's strike call was that the Jumma Bazar attracted unusual crowd despite heavy rain throughout the day. More people rushed to the Jumma Bazar on the understanding that other markets would be closed in response to the strike call. When contacted, a shopkeeper of the Jumma Bazar said, "we sold more today than usual".

It may be noted that the strike call was given by various organisations of Rawalpindi and Islamabad to protest against the terrorists attempt to sue Holy Quran as a 'Booby Trap'. This heinous plan was unveiled by the Peshawar police on Feb. 21. Two Kabul-trained Pakistanis, allegedly involved in this deplorable act, were also arrested.

Since the disclosure of the terrorists plan, a wave of resentment has swept the country. Strikes were observed and rallies held in Rawalpindi, Islamabad, Peshawar, Hyderabad, Karachi, Lahore and various other major cities and towns.

President Ziaul Haq, said on Feb. 25 than the elements involved in the deseceration of the Holy Quran would be brought to books, in accordance with the law of the land.

DECLINE OF 9.21 PERCENT IN TOURIST TRAFFIC

Karachi BUSINESS RECORDER in English 8 Mar 82 p 4

[Text]

ISLAMABAD, March 7: Foreign tourists arrivals in Pakistan during the period January-September, 1981 declined by 9.21 per cent, according to a survey carried out by Pakistan Tourism Development Corporation (PTDC).

Air tourists arrivals also declined by 23.5 per cent while an increase of 9.8 per cent was recorded in land tourists arrivals during the same period.

The decline in air tourism was mainly due to fall in overall global air traffic while land tourists arrivals increased due to rising number of visitors from India for religious purpose. Tourists coming via sea declined by 40 per cent.

The decline in the tourism in the first nine months of 1981 is attributed to the adverse political conditions in the neighbouring countries of Pakistan via Iran and Afghanistan, and adverse economic conditions in the main western tourists generating countries.

In South Asian region, data for the period January-September is available in respect of Sri Lanka and Iran. In Sri Lanka the tourist arrivals increased by 19 per cent. Major part of the increase was from western Europe and Asia.

In Iran, the total number of foreign tourists arrival showed an increase of 10.9 per cent. There, the highest number of tourists came in the year 1977 after which their arrival declined sharply.

An analysis of quarterly tourist arrival data shows that during the second quarter of 1981 the tourist arrivals declined by 18.5 per cent.

Except for South Asia, arrivals from all other markets declined during the first nine months of 1981. An analysis of quarterly arrivals from different markets shows that arrivals from America, Middle East and Africa improved during the third quarter of the year 1981.

During the first nine months of 1981, total foreign exchange earnings from tourists reported by the State Bank of Pakistan amounted to 89.114 million dollars. This shows a decrease of 22.1 per cent. Major part of the decrease occurred in the receipts from foreign tourists because of decline in arrival.

SHOORA TEAM'S ACTIVITIES IN UNITED STATES

Karachi DAWN in English 12 Mar 82 p 20

[Text] WASHINGTON, March 11: A 21-member delegation of members of the Federal Advisory Council, led by Federal Minister Mir Zafrullah Jamali, arrived here on Tuesday night for a two-week goodwill tour of the United States.

The members will meet U.S officials, some Congressmen and Senators as well as representatives of the news media to explain the functions of the Council.

On Wednesday, five members of the group met the Editorial Board of the U.S. News and World Report, a weekly magazine. They included Messrs Jamali, Hussain Haroon, Tariq Rahim and Fakhruz Zaman. The group was received by the Editor of the magazine, Mr Marvin Stone.

Later, the delegation called on Miss Betty Hietman, co-Chairman of the Republican National Committee and had an exchange of views with her. Later, the delegation members visited the Centre of Strategic and International Studies.

In the evening, they attended a reception hosted by Pakistan's Ambassador to the United States, Lt-Gen Ejaz Azim.

PPI adds: Two influencial Congressmen — Senator Mathias and Representative Pritchard— represented the Senate and House Foreign Affairs Committees at the reception. Also attending the function were senior Congressional aides, State Department functionaries, Pentagon officials, and US news media representatives. The 21-member Shoora delegation will also visit the House Foreign Affairs Committee room where, among others, they hope to meet Chairman Zablocki and then make a call on Chairman Percy and other members of the Senate Foreign Relations Committee. Accompanying them to the Capitol Hill will be Federal Minister Mahmoud Haroon and Ambassador Ejaz Azim. The Majlis-i-Shoora members will also attend in small groups, such Congressional Committee hearings as may be in progress at that time.

The trip to the Hill will be followed by a visit to the State Department where the Pakistan Shoora members will be welcomed by US Under-Secretary of State and ex-Senator James Buckley and Deputy Assistant Secretary of State, Peter Consabid.—APP/PPI.

HIGH-LEVEL FINANCIAL COMMISSION SOON

Karachi DAWN in English 11 Mar 82 p 1

[Article by Tariq Zaheen]

[Excerpt]

LAHORE, March 10: A high-level Financial Commission to work as an independent agency is likely to be set up soon to devise ways and means for a proposed switch-over to an open market-oriented financial system in the country.

It is being set up to ensure full participation of the private sector in capital availability and funds utilisation on the one hand, and to channel the overseas workers' remittances into industrial investment on the other.

Highly authoritative sources told DAWN that the proposed commission will work in co-ordination with the World Bank and cover the entire amoit of financial sector, including the tax structure, interest rate on loans and the role of commercial banking as the three main issues.

In this connection a high-level financial review mission of the World Bank is arriving in Pakistan on March 19. The mission will visit Islamabad, Lahore and Karachi to pinpoint the areas of improvement in the existing banking system, financial institutions, capital market and industrial financing. The members of the mission will hold discussions with the officials of the Chambers of Commerce and Industry and Stock Exchanges and meet investors, auditors, shareholders, etc.

According to sources, the World Bank has also finalised a programme for financing and assisting a research project in collaboration with the Pakistan Institute of Economic Study to carry out investigation on the above mentioned subjects.

Another report prepared by the economic experts has suggested that the public should have the right to know the extent of taxation and the budgets should not be above public accountability.

After the completion of its tour, the IBRD mission will prepare a draft proposal for the revitalisation of capital market activities and improvements of credit availability through the financial system.

Apart from this draft, short-term measures for improvement in the functioning of market and long-term structural changes to expand the capital will also be suggested to increase the volume of future capital formation and savings mobilisation in the country.

SHAHI DEMANDS APOLOGY FROM ISLAMABAD DAILY

Karachi BUSINESS RECORDER in English 11 Mar 82 p 3

[Text] ISLAMABAD, March 10: Former Foreign Minister Agha Shahi has issued a legal notice to the management of the daily 'Muslim' in Islamabad to publish an unconditional apology for calling him an "American man" within eight days otherwise he would file a defamation suit claiming damages amounting to Rs. one crore.

In the notice, dated March 8, sent by Shahi's counsel, Liaquat Merchant of Karachi, three top persons of the management have been made respondents—Chief Editor Agha Murtaza Pooya, printer Yawar Mehmood Butt and publisher Tahir Hussain Mashhadi.

Shahi, who left for Geneva yesterday after relinquishing the office of Foreign Minister, has informed the management of the newspaper that if a retraction was not published by the 'Muslim' in an equally important manner within eight days, he would file a libel suit only in Karachi High Court for Rs. one crore damages, which amount shall be donated to a charity approved by the court.

Shahi has described the allegation against him as totally unfounded, baseless, unjustified, mischievous, defamatory and libellous in nature.

The notice, inter alia, read as follows: On behalf and under instructions from our client Agha Shahi, we have to address you as under.

Our client resigned recently as foreign minister of Pakistan on grounds of ill-health. The President of Pakistan while reluctantly accepting his resignation on 16th February, 1982, placed on record his appreciation of our clients services to the nation and paid him warm tributes for his "outstanding contribution to the successful handling of Pakistan's foreign policy". The President went on to say—

"Throughout his long and distinguished career as public servant Agha Shahi held various high offices, including that of secretary general and adviser on foreign affairs. He served as foreign minister during a difficult time of Pakistan's history and dscharged his onerous responsibilities with great dedication and utmost devotion.

"By his dedication and sustained hard work Agha Shahi won great respect and honour for Pakistan in the comity of nations".

The President concluded his tribute by expressing hope that our client's experience and wise counsel will continue to be available to the country.

On 28 February, 1982 after the last cabinet meeting attended by our client, the cabinet decided to approve of his appointment as professor emeritus on international affairs in the universities of Pakistan and placed on record, "the meritorious services" of our client.

President Zia-ul-Haq and the cabinet ministers paid tribute to our client as the out-going foreign minister and particularly, "his selfless service, devotion and patriotism". They went on to state that—

"The foreign policy framed by Agha Shahi was truly in line with the aspirations of the nation and vastly enhanced the image of the country in the comity of nations —an independent and non-aligned policy in conformity with the national interest".

TRIBUTES PAID

Both during the tenure of his office and after the announcement of his resignation as foreign minister, tributes were paid to our client by the national and international press and other news media as well as by statesmen of world stature.

The independent foreign policy dedicated to the great purposes and high principles of the charter of the United Nations, the Organisation of the Islamic Conference and the Non-Aligned Movement reflected in a balanced relationship with the super-powers, improvement and stabilization of relations with India without derogation from Pakistan's sovereignty and independence, consolidation of relations with China, unswerving support of all Islamic causes and interests and commitment to the freedom struggle of dependent peoples are some of the examples of the policies expounded and pursued by our client within and outside international forums as well as in the context of bilateral relations.

Our client states that after his resignation as foreign minister, an editorial appeared in the Muslim of 18th February, 1982 under the heading, "Well played Agha Shahi". While purporting to praise the role played by our client as foreign minister, the editorial went on to make an allegation that our client has been regarded as the "American man" by many but that the benefit of the doubt was being given by you to our client. Our client states that the aforesaid allegation and/or aspersion cast on our client is totally unfounded, baseless, unjustified, mischievous, malicious, defamatory and libelious in nature.

Our client states that the aforesaid allegation/statement/aspersion has damaged our client's name, standing and reputation

both in Pakistan and abroad and is likely to continue to cause him serious harm, damage and loss of reputation and standing. The said allegation has also injured Pakistan's image and adversely affected the prestige of Pakistan.

The relationship which was built up and developed between the United States of America and Pakistan which recently culminated in the signing of an agreement for sale of military equipment and economic assistance was in the larger national interest and our client never hesitated to take up as stated against the United States of America when the national interest and Pakistan foreign policy which our client developed and maintained, required him to do so.

In the circumstances the allegation and/or aspersion contained in the editorial of the Muslim dated 18th February, 1982 and the subsequent publication in the Muslim dated 22.2.1982 under the heading, "I am no American man protests Shahi", which is a distortion of the off-the-record exchange with the press, are per se libellous and defamatory in nature and have been printed and published mischievously and maliciously without any basis or justification. Copies of the said publications were circulated all over Pakistan including Karachi. —APP.

FEDERAL MINISTER ON MANPOWER TRAINING

Karachi MORNING NEWS in English 11 Mar 82 p 3

[Text] Islamabad March 10: The Federal Labour and Manpower Minister Ghulam Dastgir Khan has called for training of the abundant manpower on more scientific lines to meet the requirements of the various sectors of the economy.

Addressing the in-service trainees of the 10th course on Development of Employment Income and Resources" at the Manpower Institute here yesterday the Minister said that for the best utilisation of the manpower it was essential that such policies should be made which could help in creation of more job opportunities. [as published]

He said whereas it was necessary that the investment in the development projects be increased simultaneously the judicious distribution of income and the proper utilisation of the manpower must also be given due consideration.

He said that President Gen. Mohammad Zia-ul-Haq had directed that the Manpower Institute should act as a research cell where experts should devise ways and means keeping in view the modern requirements of the manpower.

In this regard, Mr Dastagir said that we would have to bridge the existing gap between the rural and the urban areas which was only possible by accelerating the development of the rural areas. For this purpose, the communication system electricity educational institutions medical aid, technical education potable water and above all the development of the non-agriculture professions were the main requirements of our rural areas he added.

Tere other important factor for our policy was that the style of our progress should be labour-intensive and capital-saving. [as published] In this connection the Minister pointed out that we should acquire such technology which could be according to our atmosphere, economy material and human resources. This could only be achieved by moulding the local scientific and professional research on more positive lines.

/The existing scientific research and professional centres should, therefore be given proper patronage and financial assistance so that the country could

become self-sufficient in this fields he added. [in boldface] [as published]

He said that another most important sector which needed more attention was proper planning of the existing manpower available in the country for which a sound statistical base was essential. Such base could help in meeting the demand and supply of the manpower, he added.

Improper Manning

Mr. Dastgir further said "We all know that because of improper manning of the manpower the country is facing" lot of problems in this regard. On one side we have abundance of manpower while on the other hand, most of our development projects need suitable and qualified manpower which is not available. We will therefore have to maintain a balance between the qualitative and quantitative demand and supply of the manpower so that it can be suitably utilised.

He pointed out that the Ministry of Labour Manpower and Overseas Pakistanis was recognising the research work and efforts were being made to bring it on more sound footing. He hoped that in future all necessary facilities would be available with regard to various problems of manpower on more scientific lines which would help in formation of the effective policies.

He asked the Director of the Institute that he intake of the trainees for the future courses should be increased to about 50 so that the people trained in the institute could guide in proper planning in various fields. [as published]

As regards the abnormal increase in the population growth the Minister said that the Council of Islamic Idealogy [as published] in the light of the Islamic teachings should take stock of this grave problem and suggest suitable measures for its remedy.

Earlier welcoming the chief guest the Director of the Institute Mr. Abdul Ghafoor Mufti presented his report about the working of institute and the number of courses and seminar which had been organised by the institute since its inception.

He said that during the current 10th in-service training course the main emphasis was on the population and labour force of the country, increasing trends of population and their effects on the employment of labour force and their employment structure further opportunitites of increasing or decreasing employment basis of formation of development projects in the country, assessment of previous development plans and comparison between provision of employment opportunities.

The function, among others was attended by the Federal Secretary of Labour and Manpower Mr. M'A Kazmi.--PPI

SAFDAR ON GOVERNMENT-PEOPLE UNDERSTANDING

Karachi DAWN in English 12 Mar 82 p 1

[Text] LAHORE, March 11: Khawaja Mohammad Safdar, chairman of the Federal Council, has said that mutual understanding between the people and the Government was a must for the holding of the general elections in the country.

Talking to newsmen at the Lahore airport on his arrival here today, the Chairman said that as soon as some understanding was reached between the political parties and the government then there would be no delay in the election.

He said that national unity was a must for the prosperity and integrity of the country and it could only be achieved through the mutual understanding between the political parties and the government.

Khawaja Mohammad Safdar said that the committee set up for the Islamisation was expected to complete its report and submit it to the Council Secretariat by next month. He said that main job before the committee was to find out impedements in way of Islamisation of laws and to suggest ways and means to remove them.

The Chairman said that 23 standing committees of the Federal Council had been formed and the remaining four committees, on house and library, Cabinet, rules of procedure and northern region and Kashmir affairs would be constituted soon. The member had been asked to send their preferences for joining the committees.

He said at present the National Assembly rules of procedure were adopted by the Federal Council as far as possible pending the preparation of new rules.

He said that no date for the next session for the Council had been fixed yet.—PPI.

BODY TO BOOST ENGINEERING GOODS EXPORT

Karachi DAWN in English 12 Mar 82 pp 1, 20

[Text] An Engineering Manufacturers and Export Council will be set up with the purpose of diversifying production of engineering goods in existing units, encouraging establishment of new units and promoting export of their products.

This was stated on Thursday by Lt.-Gen. Saeed Qadir, Federal Minister for Production, Railways and the National Logistics, at a Press conference held at the National Fibres Limited in Korangi Industrial Area.

He said this decision was taken at a meeting chaired by the Finance Minister and attended by the Ministers for Production, Industries and the Governor of the State Bank.

The proposed council, he said, would meet at least twice a year and the execution of its policies would be the responsibility of an Executive Committee comprising Secretaries of Commerce, Industries, Finance and Production Ministries.

He said that in order to enable the engineering goods industry to compete abroad and to supply capital equipment to the domestic market at reasonable prices, a number of decisions relating to provision of imported raw materials at competitive international prices, were taken. These included extending the existing concessional duties applicable to principal manufacturers of assemblers to small vendor units which are currently not eligible for such concessions.

In addition, he said, the engineering industry (principal manufactures as well as vendor units) would be allowed duty-free import of raw materials and components in case the products were supplied to duty-exempt projects, organisations and areas.

The ministerial committee which took the decision for setting up the council, also decided that locally manufactured engineering products, when supplied to duty-exempt projects and organisations within the country, would also qualify for all incentives (including compensatory rebates) at present applicable to exports.

He said the committee noted that under the Export Finance Credit Scheme, exporters of engineering goods had the finances available to them at a concessionary rate of interest and the facility to pass on to the foreign buyer credit at concessionary rates for periods up to 12½ years.

The Minister said it was also decided that all public sector engineering units would set up their own export promotion cells.

He said four tractor manufacturing units would be set up, two each in public and private sectors, and their manufacture would start within three years.

Small cars, Suzuki pick-ups, vans and jeeps would be produced within the country, for which engineering industries were required to supply various spares.

Dealing with corporation sectors under the control of the Ministry of Production, the Minister said that from 1973-74 to 1976-77 the production index at constant prices of 1972-73 was showing declining trend from 131.4 per cent in 1973-74 to 121.8 per cent in 1974-75, 104.2 per cent in 1975-76 and 97 per cent in 1976-77. The overall increase up to 1976-77 over base year 1972 was 154.71 per cent, he added.

Gen Qadir said the trend started picking up since assumption of responsibility by the present Government in July 1977. The production index rose to 117.5 per cent in 1977-78, 107.5 per cent in 1978-79, 126 per cent in 1979-80, 101 per cent in 1980-81 and 111.8 per cent during the first six months of the current financial year. The production index during 1980-81 over base year 1972-73 increased to 259.74 per cent.

He said consequent upon increase in production and prices, the sales increased from Rs. 1806 million in 1972-73 to Rs. 6020 million in 1976-77 showing an increase of Rs. 4214 million (by 233 per cent). The sales during 1980-81 increased to Rs. 15,226 million showing an increase of Rs. 9,206 million (by 153 per cent) over 1976-77.

He said the sales during July-December 1981 was Rs. 8,125 million as against Rs. 6,799 million during the same period last year showing an increase of 19.5 per cent.

The profits increased from Rs. 18 million in 1972-73 to Rs. 59 million 1976-77 showing an increase of Rs. 41 million (by 227 per cent). The profits of 1980-81 increased to Rs. 745 million showing an increase of Rs. 686 million (by 1163 per cent) over 1976-77.

The net profit during July-December 1981 increased to Rs. 392 million as against Rs. 165 million during the same period last year showing an increase of 137 per cent.

The taxes and duties paid during 1972-73 were Rs. 198 million which increased to Rs. 1408 million in 1976-77 showing an increase of Rs. 1210 million (by 611 per cent). They went upto Rs. 3593 million during 1980-81

showing an increase of Rs. 2383 million (by 197 per cent) over 1976-77.

As on June 30, 1981, the net share holders equity was Rs. 3803 million. The pre-tax profit during 1980-81 was Rs. 754.52 million giving 20 per cent rate of return. The comparative figure for 1979-80 was share holders euqity Rs. 3350 million, pre-tax profit Rs. 585 million and rate of return 17.5 per cent.

The total investment including long-term liabilities as on June 30, 1981, was Rs. 8937 million on which rate of return for 1980-81 works out to 18 per cent. The total investment as on June 30, 1980, was Rs. 8679 million on which rate of return for 1979-80 worked out to 15 per cent, he said.

SILICONE TECHNOLOGY CENTER TO BE SET UP

Karachi MORNING NEWS in English 12 Mar 82 p 5

[Text] Lahore, March 11: Dr. I. H. Usmani Inter-Regional Energy Adviser to the United Nation, today said that Silicon Technology Centre would be set up in Pakistan in near future to promote research in the development of cheap solar energy. [as published]

Dr. Usmani was speaking on "a realistic energy-mix for Pakistan" at a meeting orgaused here this afternoon by the Energy Society of Pakistan. [as published] Maj-Gen Ghulam Safdar Butt, Chairman of the Water and Power Development Authority (WAPDA) presided over the meeting.

Dr. Usmani said that Pakistan would be the first country to have an exclusively Silicon technology centre financed by the United Nations. He said he had come to Pakistan to finalised the details of this centre. [as published]

Dr. Usmani paid tributes to the present Government for accelerating the pace of rural electrification in the country. The number of villages provided electricity during the past five years was more than the number of villages given this facility during the first thirty years of independence.

He said rural electrification could be greatly speeded up with the introduction of solar energy as a practical technology in Pakistan.

He said the approach of countries like Pakistan towards the energy problems should not be project oriented. He suggested establishment of a Central Institute for Energy in Pakistan to co-ordinate efforts of all agencies working in this field and to devise the frame work of a national energy strategy.--APP.

JOINT VENTURE PROPOSALS REPORTED

Karachi MORNING NEWS in English 11 Mar 82 p 6

[Text] The Federal Government has received 11 specific proposals of joint venture collaboration and supply of technical know-how in industrial fields from the American investors.

According to the official source the proposals have been communicated by some of the members of Pak-USA economic council delegation which visited Pakistan late last year and had showed keen interest in setting up joint industrial ventures and to supply technical assistance in certain specific fields.

One of the New York based company and a subsidiary of a world known multinational concern has offered to supply meat extract plants to the Pakistani investors.

Another American company based in Florida has expressed willingness to enter into joint venture collaboration with Pakistani businessmen for manufacture of chain saws in Pakistan.

The sources said that some of the delegation members have expressed the view that Sweden and Japan's technology in the field of ball bearing was more appropriate for Pakistan and have therefore suggested the Pakistani entrepreneurs to contact known and reputable companies like SKF in Sweden and Nippon in Japan.

European Technology

In matter of footwear the delegation members felt that European technology for footwear was much more suitable and that well known French and Italian companies be approached for acquiring relevant technology.

Similarly one of the members of the American investors team has advised the Pakistani pharmaceutical manufacturers to establish contact with well known Danish firm for acquiring technology to produce.

The delegation members who represented American based multi-nationals and reputable concerns engaged in manufacture and supply of diversified production lines have offered Pakistani investors a number of items like high

voltage switchgears, plants for extracting citrus juices, coal-tar fractionalisation plants, vegetable dehydration plants and special steel products.

The sources said that federal industries ministry has already communicated the names and addresses of all the American investors to the various Chambers of Commerce and Industry in the country so that Pakistani entrepreneurs could establish direct contact with them for entering into joint collaboration.--PPI

WORLD BANK TO AID IN RENOVATION OF CHANNELS

Karachi MORNING NEWS in English 12 Mar 82 p 8

[Text] Lahore: March 11: The World Bank is keen to assist renovation of Punjab irrigation channels; it was stated by Mr S. S. Kirmani; Director; World Bank for South East Asian and Pacific Regions; while addressing a seminar in "New Strategies in Irrigation at the Engineering University here.

Mr Kirmani disclosed that the World Bank had changed its priorities of assistance to the developing countries and now Rs 6000/- crore had been allocated for agriculture and energy development projects. Of this Rs 4000/- crore had been earmarked for agriculture development and Rs 2000 crore for boosting energy production. He disclosed that the world was faced with acute food shortage, and in 1982-85 it was feared that this deficit would be about 45 lakh tons. Mr Kirmani advised the irrigation engineers to make a reapprisal of the water distribution system and concentrate on intensive irrigation; as the new qualities of seed and large-scale use of fertilizers pre-supposes absorbition [as published] of large quantity of water.

He cited the example of Taiwan; Korea and Indonesia where the food production had been doubled due to intensive watering and levelling of fields. Punjab, he said; used to be the granary of the subcontinent and it would attain the same position if water distribution was made equitable and scientific. Water should not go waste and new areas of land in Cholistan should be brought within the command area of irrigation as soon as possible. [as published]

Mr. Mazhar Ali Mr Ahmed Tariq and Mr Munawer Ali Shah also addressed the seminar.

Mr A. B. Awan, Director of Centre of Excellence, thanked the chief guest for enlightening the engineers and the students of the university about the new techniques in water management.

BHOPALI ON 'HOAX' OF WIDER PARTIES' ALLIANCE

Karachi MORNING NEWS in English 12 Mar 82 p 9

[Text] Mr. Zahoorul Hasan Bhopali, a member of Majlis-i-Shoora, said here yesterday that the "hoax" of a wider alliance among the defunct political parties had been fully exposed and people could no longer be taken in by such negative tactics.

Addressing a Press conference at a local hotel, Mr. Bhopali said that he too wanted the restoration of democracy in the country. He believed that elections were "inevitable". But in his opinion the elections should result in a stable Government which might eliminate the chances of another Martial Law in the country.

Mr. Bhopali said that parties which were politically and ideologically opposed to each other could not form a stable government. People would never support any unnatural, illogical and baseless alliance. Only the ideologically-oriented parties could form an effective alliance for giving a stable and efficient administration to the country.

He said the issue of enforcing an Islamic system (Nizam-i-Mustafa) in Pakistan should be above all controversy and all Islam-loving parties should cooperate with the present Government in this respect irrespective of their political differences.

Mr. Bhopali said that if the Islam-loving parties failed to form an ideological alliance or suggest a formula for holding elections and transfer of power through peaceful means, the Majlis-i-Shoora would not be bound by the contradictory views of such parties and politicians. In that case the Government and Majlis-i-Shoora would be free to chart out a course of action of their own.

He refuted the allegation that there was a move to do away with the principle of "one man, one vote". Actually nobody was opposed to this principle, he added.

Mr. Bhopali said that defunct Pakistan National Alliance had in its own manifesto demanding a constitutional amendment to reduce the powers of the Prime Minister and the Chief Ministers in the provinces. Now the former

components of PNA were trying to present the 1973 Constitution as sacrosanct, he remarked.

Mr. Bhopali said the reports about dacoities, bomb blasts and subversion in the interior of Sind were without much truth. But there was an element "patharedars" who were kidnapping children, and even grown up persons and stealing cattle with the connivance of some big landlards. [as published] He suggested that the Government should take strict measures against these elements.

Mr. Bhopali said that the people in the rural areas should be given a greater sense of security that if they pointed out any injustice they would not be victimised by the petty officials. He said that SHO of a police station about which there were too many complaints or in whose area too many crimes were committed, should be suspended and an enquiry should be ordered against him.

Replying to a question, Mr. Bhopali said that if the political leaders failed to evolved a formula for a peaceful transfer of power, the Majlis-i-Shoora could pave the way for elections within a year.--APP [as published]

EDITORIAL CRITICAL OF SUPER POWERS IN INDIAN OCEAN

Karachi MORNING NEWS in English 12 Mar 82 p 6

[Text]

THE escalation of superpower presence in the Indian Ocean is very much in the news these days. The development is fraught with danger for those who live in this region. Heightened tensions and threatened conflicts in region could only result in a diminution of the ability to concentrate on development by the countries which belong to the area. It is this growing fear and threat that the Pakistan Representative expressed in the Ad-Hoc Committee of UN on the Indian Ocean, and described as disheartening and regrettable the polititcal and security climate in the Indian Ocean region.

It has been a decade since the UN General Assembly first passed a resolution declaring the Indian Ocean a zone of peace. The genesis of this concept can be traced back to the 1964 conference of Non-Aligned countries held in Cairo. The then Prime Minister of Sri Lanka put forward the proposal for declaring the Indian Ocean a zone of peace. The conference endorsed this proposal and supported the establishment of a nuclear-weapons-free zone in the Indian Ocean. Later in 1970, this proposal was also endorsed at the Lusaka conference and the Commonwealth Heads of Government Conference held in Singapore in January, 1971. In December, 1971, the UN General Assembly passed a resolution initiated by Sri Lanka calling upon the Great Powers to enter into negotiations with the littoral States with the objective of (i) stopping any further escalation and expansion of their military presence; (ii) removing all kinds of military installations, bases and logistical supply facilities. It also urged the littoral and hinterland States, the permanent members of the Security Council and other major maritime users of the Indian Ocean to consult each other for the purpose of implementation of this Declaration and to ensure that (i) the Indian Ocean is not used by a State for "any threat or use of force" against any littoral and hinterland State in violation of the UN Charter (ii) subject to these conditions, the

right to free and peaceful use of the Zone of Peace by the vessels of all States is not impeded: the Secretary-General of United Nations was asked to report to the next session of the General Assembly on the efforts made for the implementation of the resolution.

Since then conferences were held and grave concerns were expressed on the presence of superpowers in the Indian Ocean. The littoral states also time and again brought into light their anxiety on the threats being posed by the superpowers to peace and security of the region. Both the superpowers are actively pursuing their policy of domination in the Indian Ocean. If the present trend continues, both the great powers will further increase their military presence in the region. The situation has further deteriorated because of the Soviet military intervention in Afghanistan. The Pakistani Representative has rightly said: "The continued presence of the Soviet troops in Afghanistan and the festering crisis in that country have jeopardised the security of neighbouring States and carry grave implications far beyond the region." He also made it clear to the world how Pakistan looks at the situation. He said that Pakistan's peace zone concept took into account threats of both extra regional origins to the sovereignty, independence and territorial integrity of land-locked States. The first category related to the foreign military presence in all its manifestation, whether land-based or ocean-based in the region, as well as any military activity or build-up in the vicinity of the region which would constitute a threat to the security of those States.

Removal of that threat, therefore, would not only mean the elimination of foreign bases and naval presence in the Indian Ocean but also the withdrawal of foreign occupation troops on the territories of the littoral and hinterland states, as well as obligations on the part of outside powers not to engage in military activity detrimental to the security interests of the regional states.

Littoral States of the Indian Ocean region thus would do well if they cast off their differences, if any, and unite to fight against the threats that have been created by the superpowers. Their presence in the Indian Ocean will continue to pose danger to peace and security in the region.

EDITORIAL DISCUSSES REFUGEE BURDEN

Lahore THE PAKISTAN TIMES in English 7 Mar 82 p 4

[Text] The World Food Programme has decided to grant 11.3 million dollars more in food aid to Afghan refugees. Simultaneously Australia had announced that it will provide a further 10,000 tonnes of wheat valued at 1.9 million dollars for the refugees. Addressing a meeting of the Pakistan Red Crescent Society the other day President Zia-ul-Haq called for increased efforts at the international level for providing humanitarian relief to Afghan refugees. He said that the refugees, whom Pakistan had given shelter purely on humanitarian grounds, were neither a local nor a regional problem but a global one. He stated that the 2.5 million Afghan refugees now on the soil of Pakistan were the biggest concentration of homeless people anywhere in the world. He spoke of the tremendous burden the exodus of Afghan refugees had put on Pakistan's meagre resources and said that this country needed generous assistance from the world community to discharge its onerous responsibilities in this regard.

From a mere trickle in the beginning the number of Afghan refugees over the last two years and a half has increased to 2.5 million. The exodus is endless and at the rate they are coming into Pakistan the refugee population may well reach the 3 million mark by the end of 1982. The care of such a large number of homeless men, women and children has been no easy task. The refugees mostly consist of nomadic people, herdsmen, farmers and villagers for whom Pakistan has had to provide all kinds of services, including shelter, food and medical aid. In NWFP alone there are 210 camps, each accommodating about 5,000 persons. There have been severe problems of logistics involved in running the tent villages. More than 5,500 persons are at the moment engaged in the management of the camps. Schools have been opened, mobile and static dispensaries have been set up and training schemes started to enable the refugees to learn useful skills to be self-supporting. Besides, the refugees receive regular cash payments as maintenance allowance. All this costs the Pakistan Government hundreds of thousands of dollars everyday. Last year Pakistan had to find as much as 200 million dollars from its resources to spend on the welfare of the refugees. In going about the task Pakistan has been receiving aid from friendly countries as well as various international agencies, including UNHCR, WFP and UNICEF. Many non-governmental voluntary organisations have also been helping out. But, for every dollar that comes from abroad for the refugees, Pakistan has to find an equal amount from its own kitty. This year's expenditure on food, shelter, medicine and education alone is estimated at 218 million dollars. International efforts for the refugees have been of great help to Pakistan but they are still far from adequate and will become further so given the gradual increase in the refugee population. This requires that fresh worldwide endeavours should be made for mobilising

relief—both public and private—for Afghan refugees. Not only does UNHCR need to step up its activities but U.N. members too should individually increase the level of their assistance. The world can't afford to foresake the humanitarian cause of 2.5 million homeless Afghan people in their hour of distress.

EDITORIAL WELCOMES DECISION ON MACHINERY IMPORT

Lahore THE PAKISTAN TIMES in English 7 Mar 82 p 4

[Text]

The decision to ease the procedure of import of machinery by expatriate Pakistanis betokens a healthy attitude on the part of the Government towards the requirements of compatriots living abroad. The illogicality of treating expatriate enterprise with suspicion must be removed from our 'protectionist' bureaucratic procedures — protectionist because of their inherent obstructiveness, not by intent—and investment of expatriate earnings attracted back to Pakistan. By authorising the Pakistan mission in London to issue licences for the import of machinery worth up to Rs. 10 million in each case, the Government has rationalised a negative attitude of the past. Responding to demands put forward by the Pakistanis living in England the Federal Minister for Overseas Pakistanis, Mr. Ghulam Dastagir Khan, during his recent visit there promised to expand the commercial side of the embassy. In return, the Pakistanis have offered to build a Pakistan House in London to promote national products there, an extremely useful proposal.

We have perhaps not properly acknowledged the share of the expatriate Pakistani in our economic performance. We should not forget that half of our foreign exchange earnings annually is money sent home by workers abroad. It is some kind of failure on our part that this crucial contribution to our balance of payments is made by only 15 per cent of expatriate Pakistanis. The rest are obviously discouraged from saving and sending home money because of our difficult procedures. A cause for further worry can be detected in the fact that 63 per cent of the remittances are spent on non-productive ventures like real estate and luxury goods. The 13 per cent channelled into productive ventures indicates that we have not been able to guide foreign savings on the lines required by our economy. It is essential that we entirely overhaul our attitude about the remittances, remove impediments lying in the way of a free movement of money to Pakistan and make it overwhelmingly more profitable for our compatriots abroad to invest their savings in economically useful projects in Pakistan.

SAUDI AMBASSADOR ON REFUGEES

Lahore THE PAKISTAN TIMES in English 8 Mar 82 p 10

[Text]

ISLAMABAD, March 7: The Saudi Ambassador to Pakistan, Sheikh Samir al-Shihabi, has said that the fraternal and friendly relations between the two brotherly Islamic States really transcend all other forms of relations, whether political or commercial.

He expressed these views in a recent interview to a Jeddah daily 'Okaz".

Talking about the Pak-Saudi bilateral relations, the Saudi Ambassador said that these relations are excellent and distinctive at the same time. The two governments and the people have love and respect for each other, he added. He emphasised that there had never been any dispute between the two countries and even the stands of the two countries on all issues either local, regional or international have always been indentical and they have always supported each other at all international forums.

The Ambassador described the economic collaboration with Pakistan as tremendous and said that the economic co-operation in fact is part of the over-all mutual co-ordination between the two countries in all fields. There are many projects being carried out in the light of Pakistan's economic order and the Kingdom's financial potentialities, he added.

Replying to a question about Saudi co-operation with Pakistan in its efforts towards complete enforcement of Islamic Shariah, the Ambassador said: "Pakistan inherited some institutionalised laws from the British, yet it is moving fast towards the introduction of Islamic Shariah. The Kingdom also has offered all its potentialities in this regard. Pakistan is doing its best to utilise the Kingdom's know-how and information to accelerate the process of Islamisation. But as you know it needs time to change non-Islamic laws into Islamic ones".

Speaking on the Afghanistan issue and role of Pakistan, the Ambassador said: "I would like to state that this struggle is based on a strong faith in the Afghan's ideology Islam. Freedom-fighters are really sincere Afghans. I believe that it is not only the fighters but every Afghan wants to take part in this honourable struggle against the Soviets".

He further pointed out that despite its own limitations and financial constraints Pakistan was doing its best to perform its duties as an Islamic neighbour, by extending shelter, food and medical aid to more than 2.6 million Afghan refugees.

Regarding Indo-Pak relations, the Ambassador observed that Pakistan was not interested in conflicts or dispute with any country, particularly India, and that Pakistan was trying to improve its relations with India on bilateral basis.

Referring to the Western propaganda about Pakistan's alleged involvement in production of the Islamic bomb, the Ambassador said that it was in the interest of the enemies of Islam to hamper the development programmes being carried out by the Islamic States. Accordingly, they would like Pakistan to remain engulfed by economic and technological problems, so that it remained perpetually dependent on the Western powers.

He said: "I wonder why our enemies deny us our just right to enter the field of scientific research and acquire latest technology, even for peaceful purposes. Quite clearly, their intention is to prevent the Islamic world from making any progress and hence are using the bogey of the Islamic bomb as a tort to cover their real intentions. While our enemies know well that Pakistan has no intention of producing this bomb."

Talking about the view-points of the Kingdom and Pakistan on the issue of Indian Ocean, he said that both the countries are interested in the security of the Indian Ocean and it is our concern to keep this area free from international wranglings.

About the unity of Islamic Ummah, the Ambassador said: "I think the OIC has played a concrete role in achieving Islamic solidarity".—APP.

PLAN TO SET UP ISLAMIC MEDICAL UNIVERSITY

Karachi DAWN in English 11 Mar 82 p 1

[Article by Mujtaba Akhter]

[Text] ISLAMABAD, March 10: Dr Basharat Jazbi, Adviser to the President on Health today said the Government is actively considering a plan to establish an Islamic Medical University in Pakistan in collaboration with other Islamic countries.

Dr Jazbi in an interview told Dawn, the scheme had been favoured by President Mohammad Zia-ul-Haq who had desired a comprehensive report on its academic pattern.

He disclosed that the scheme was discussed with the Health Ministers of some Arab countries and Saudi Arabia, Kuwait, Bahrain, Qatar, UAE, and Aman supported the plan.

Dr Jazbi said a majority of the girls in Arab countries do not like to study in European medical institutions on religious and cultural grounds.

He said some of the Arab Health Ministers during the meeting had suggested that the Islamic Medical University should be set up in Kuwait but the idea was dropped as the majority of the participants voted for Pakistan.

Dr Jazbi said the Ministry concerned in Pakistan was busy preparing a future-oriented academic pattern for the proposed university. Other relevant agencies, such as the Ministry of Education the University Grants Commission and the Planning Division are also being consulted.

MEAT PRODUCTION IN BALUCHISTAN

Karachi DAWN in English 14 Mar 82 p 4

[Text] QUETTA, March 13: The meat production in the province has reached the figure of 49,600 metric tonnes while its consumption is within 6,000 tonnes, it was officially stated here on Wednesday.

Dr Faqir Mohammad, Director, Livestock (Extension) told APP, productionwise, Baluchistan was No 1 in the country which feeds the surplus quantity of meat to Punjab.

At the same time, most part of the surplus quantity of meat is smuggled out of the country, specially into Iran and neighbouring Gulf States, which caused price hike in the province. That's why the meat was highly priced in Baluchistan as compared to other parts of the country, he said.

According to Dr Faqir Mohammad meat in Baluchistan was priced at Rs 25 while in Punjab it was being sold at Rs 18 per kilo.

He said in the province, total number of cattleheads was 650,000 while the sheep and goat numbered over 11 million.

Annual offtake of sheep and goat numbered three million, he said. To raise the production of cattle and sheep and goat in the province, the Government was undertaking four big projects in the districts of Sibi, Nasirabad and Loralai. The government had also undertaken "ten projects area scheme" costing Rs 6 million in the three districts of the province, including Zhob, Loralai and Pishin. The Asian Development Bank was providing funds for this project.

Under this project, 40 fattening centres would be operative in the province where over 8,000 rams, lambs and their kids would be looked after.

Moreover, Dr Faqir said Sheep Research Centre, Yatebad (Loralai); Baluchistan, Sheep Farm at Usta-Mohammad (Nasirabad), and Beef Research Centre at Sibi were also at work in the province to raise the production.

The Government was also making efforts to have Bagh Nari breed crossed with the Australian breed named "Brought Master" which was early maturing and production wise healthy breed. The Brought Master, he said, an Australian breed which matured in two years produced over 500 kilos meat.

Dr Faqir Mohammad said over 220,000 Bhag Nari cattle were in the province and this breed was hard and powerful to pull the load and plough the land.—APP

POST-HARVEST FOODGRAIN LOSSES REPORTED

Islamabad THE MUSLIM in English 1 Mar 82 p 6

[Text] FAISALABAD, Feb. 28: The aggregate past-harvest foodgrain losses in case of wheat, rice and maize were found to be 15.376, 17.185 and 12.698 per cent respectively on national basis. This provides an estimate of produce-losses in all the four geographical regions of Pakistan at various stages of loss occurrence, from farmer's field to the consumer's table.

This was disclosed to 'The Muslim', by Dr. Mohammad Aslam Chaudhary, a reputed agricultural economist from the University of Agriculture, Faisalabad, who recently completed his well-acknowledged six volumes of the series on, 'Foodgrain Losses in Pakistan'.

He further asserted that when a significant preparation of what is produced, it gets wasted in one form or the other, which brings about inefficiency of resource use, under-utilisation of production potential, i.e., lower returns to the producer, as well as qualitatively poor and inadequate availability of foodgrains to the consumer.

Accurate indentification and location of the states of loss occurrence including various casual factors, therefore, assume everriding significance for researchers and planners both in future, at nation and international level, he said.

Aggregate losses in wheat he said were estimated at 1.47 per cent which are being contributed to stages of loss occurrence like storage 0.56 per cent and transportation: 0.48 per cent.

Similarly, the aggregate loss in rice (paddy) was estimated to be 1.37 per cent, which was shared partly by handling to the extent of 0.53 per cent and by storage to 0.35 per cent.

In case of maize, the loss was estimated at 1.35 per cent, being shared mainly by storage to the tune of 0.63 per cent and sundrying to the tune of 0.45 per cent.

He further stated that at the market-level, the aggregate loss in wheat stood at 7.884 per cent, being mainly contributed by losses at processing and ratail levels. As for rice, aggregate loss estimate stood at 10.640 per cent, which was again contributed mainly by loss-occurrence at the processing stage.

Similarly, losses in maize at market-level were estimated at 3.176 per cent, which contributed mainly to wastage, at the stage of process and village 'Beoparis'.

Aggregate foodgrain losses in the public sector were calculated to be 6.449 per cent for wheat, 4.199 per cent for rice and 3.05 per cent for maize. These contributed mainly to storage losses and only slightly by losses at terminal level.

At consumer level, aggregate losses were estimated at 7.97 per cent for wheat. These were contributed mainly to loss occurrence at the food preparation stage, losses at hotel and messes and losses during storage.

Losses in rice, he said were found to be 6.79 per cent, shared mainly by losses at the preparation stage. Losses at hotels and messes occurred at the sundrying stage.

As for maize, loses took place to the extent of 6.68 per cent.

Dr. Mohammad Aslam Chaudhary added: "Occurrence of foodgrain losses has considerable anti-developmental implications, involving private and social costs to the economy". The said private sector is hit by the loss and the individual owner of produce also suffers due to non-availability of foodgrains.

Final verdict on the quantum of loss-occurrence in wheat at the post-harvest stage indicates the annual loss of 1.28 million tons of wheat in Pakistan, valued at Rs. 153.42 crore which if converted into foreign currency units is equal to 154 million U.S. Dollars.

With the aggregate loss occurrence of 17.185 per cent in rice, the quaentum of wastage in this crop was estimated, to be 0.35 million tons valued at Rs.141.06 crore equal to 142.49 million U.S. dollars.

In case of maize, however, the loss stood at 104.25,000 tons valued at Rs.18.51 crores which is equivalent to 18.70 million U.S. Dollars.

The total of losses in foodgrains amounts to 1.44 million tons valued it Rs.3.13 billion, which if converted in to dollar currency eaquals, 316.10 million U.S. dolars.

From any international standard, it is an immense recurring loss, which the developing economy of Pakistan can hardly afford to bear, especially in view of it's highly-stressing requirements for developmental capital, and the urgency to attain self-sufficiency in all kinds of foodgrains.

Thus, the recurring loss of a commodity, like foodgrains must be minimised, if not eliminated, as it is likely to assume larger proportions in future due to expectations about rising population.

EXPENDITURES IN LESS-DEVELOPED NWFP AREAS

Karachi DAWN in English 6 Mar 82 p 4

[Text]

PESHAWAR, March 5: The provincial Government had spent more than Rs. 1,670 million for the development of the less developed areas in NWFP during the last four years. This was stated by Mr Salim Saifullah Khan, provincial Minister for Finance and Industries, on the occasion of the opening ceremony of a Marble Factory at Kalabat, near Haripur on Thursday.

The Minister said that out of this amount Rs. 430 million allocated to D. I. Khan, Rs. 540 million to Malakand and Rs. 700 million to Hazara division, including Mansbera and Kohistan districts.

The Minister said that through the efforts of the provincial Governor extensive incentives have been provided to the private sector for the installation of industrial units in the less developed areas of the province, which includes tax holiday for five years and duty-free import of machinary.

He said that industrial estates with the required infrastructure had been set up in various parts of the province and counters of IDBP had been opened in D. I. Khan and Abbottabad to extend loan facilities to the entrepreneurs.

Mr Saifullah said that more than Rs. 1100 million had been invested in the private sector in NWFP during the last two years which was a good omen in the formation of private investment in the province. He said that the IDBP had advanced Rs. 500 million so far to help entrepreneurs to invest in various industries.

Reviewing the progress made in various fields in Hazara division the Minister said that more than Rs 98 million had been spent on the Ayub Medical College, Abbottabad, which would be completed at a total cost of Rs. 800 million.

Besides, he said a engineering university was being established at Tarbela which would go a long way in the expansion of technical education in the area.

The Minister said that a comprehensive project was being implemented to develop the forest resources of the province which would cost Rs 190 million. He said that forests were a major sources of revenue in the provincial budget which accounts to 35 per cent of the total revenue.

He said that Rs 300 million had been spent on Dir Forest complex while Rs. 200 million would be spent on the exploitation and excavation of Hazara phosphate.

The Minister also referred to the industrial development of Haripur Tehsil and said that 12 industrial units had been installed in private sector at a cost of Rs. 210 million in Haripur, while an investment of Rs. 530 million had been made in the public sector in the area excluding the Harpur Uria Fertiliser factory which had been completed at a cost of more than Rs. 600 million and would go into production by the end of current month.

The Minister said that NWFP had vast resources of marble and at present 91,000 metric ton of marble were being excavated as against 700 metric tons exploited in 1970. He said that 12 marble factories were working in NWFP and the marble product were being exported to foreign countries in large quantity.

DRILLING OF TWO OIL WELLS IN ATTOCK BEGINS

Karachi DAWN in English 14 Mar 82 p 12

[Text] Tut, March 13: The Federal Minister for Petroleum and Natural Resources, Maj-Gen. (Retd) Rao Farman Ali Khan, on Saturday inaugurated the drilling of two oil wells in Attock district.

Both the wells would be drilled by the Oil and Gas Development Corporation (OGDC). Presently, five rigs of OGDC were operating simultaneously in different parts of the country. The other and the sixth rig of the Corporation would also be put into operation next month.

The two wells were inaugurated at Dakhni and Tut. The Minister, speaking on both the occasions, lauded the services of the OGDC for endeavouring to promote prosperity in the country.

He said the government keenly desired to make OGDC a model organisation in the country.

The Minister was informed that Dakhni was a new area where extensive seismological survey had been undertaken. It was further explained to him that four companies had failed to discover oil in this sector during the last several years, but the Corporation was very hopeful of the result.

The drilling had been undertaken with the help of Canadian International Development Agency (CIDA), which had supplied very sophisticated equipment for the purpose.

The Minister, during his visit to the Tut oilfield, also inspected Tut Well No. 13, where drilling was making satisfactory progress.

The Minister was informed that special diversion had been carried out 2350 metres depth. This was done due to some problems in the well. The operation, known as window cutting, was not unusual during such operations.

This was also the first occasion during which drilling of two wells had been inaugurated on the same day.--APP.

PROBE ORDERED INTO COOKING OIL ADULTERATION

Karachi MORNING NEWS in English 6 Mar 82 p 3

[Text]

ISLAMABAD, March 5: The Government have ordered a probe into the marketing of solid cooking oil in the guise of vegetable ghee in the country which triggered a wave of public concern and anger, APP reliable learnt here yesterday.

"The whole affair will be examined by the Ministry of Industries after it gets laboratory analysis reports from the Ministry of Health to whom it had referred the matter," an cincial said.

"The mater warranted the urgent attention of the government in order to put an end to some private millowners playing with the human health for their monetary gain through manipulation trickery and fraud," he said.

The state-owned Ghee Corporation of Pakistan (GCP) has advised the public to refrain from using solid cooking oil which is "injurious to health".

According to the GCP, the solid cooking oil does not conform to the standards of the preparation of vegetable ghee or cooking oil. The solid cooking oil is a mixture of palm oil and sterine. Sterine is a mixture of setric and planitic acids, which are used in the manufacture of soap. "Human stomach cannot digest it easily as its melting points is about 10 degree higher than the normal temprature of the human body," the corporation says.

Apart from being a health hazard, many other aspects of this affair need to be thoroughly investigated by the Government.

According to information available here palm oil was imported in the country in the middle of 1980. It was cheaper than the hydrogenated edible oil sold in the market as vegetable ghee.

There were reports that palm oil was being sold in a number of counrties as vegetable ghee. India, Ceylon and Malaysia are reported to be using it as a cooking medium without further processing thus saving expenses occurred an its blending.

However, in Pakistan the palm oil was first blended and then marketed but now it is being sold as "ghee" without processing. "How the manufacturers surreptitiously abandoned the orginal practice of blending and resorted to cheat the consumers by selling a supurious item?" officials here are asking.

The government are also granting some concessions to the manufacturers for making vegetable ghee and cooking oil. The imported edible oil is exempted from import duty. If the oil is sold without hydrogenation as cooking oil, it is exempted from exercise duty also.

Viewed in this context, concessions granted by the Government to the millowner to keep the consumer prices down are not only being misused by the mills but the people are being also duped as the item is being sold on a price that is almost equivalent to the price of vegetable ghee. In practise, the price of cooking oil should be lower than the ghee because of a lower cost of production and tax exemption.

The comments of nutrition expert run counter to the authoritative advice of the state-owned Ghee Corporation of Pakistan (GCP) which expressly called upon the general public not to use the solid cooking oil.

While the figures of the import of the palm oil are not available with the Ministry of Commerce here, yet according to an estimate some three lakh metric tonnes of palm oil is being imported in the country as revealed by the Chairman of the Pakistan Cooking Oil Manufacturers Association.

Several statements of consumers representatives have appeared in the Press asking for withdrawal of solid cooking oil from the market.

The consumers also demanded that the Government should invoke the Pure Food Act and Pakistan Standard Institution Order 1960 (as amended) to deal with those elements who are out to play with the human health.--APP

THIRTEEN MORE CEMENT PLANTS TO BE SET UP

Karachi MORNING NEWS in English 12 Mar 82 pp 1, 9

[Text] The Federal Government has sanctioned 13 cement plants, including four in public sector, to meet the deficit in its production in the country, Lt.-Gen. Saeed Qadir, Production Minister, said here yesterday.

Addressing a Press conference, he said that ten cement factories were operating inethe country producing four million tons annually.

He said that the annual import of ten to 15 lakh tons of cement was not a healthy sign when all the raw materials are available in the country and its plant could be manufactured locally.

The Minister said that a new cement plant would be set up at D. G. Khan with the financial assistance of the Asian Development Bank.

Gen. Qadir described as incorrect the Press report that the production of cement has been curtailed because of the glut of cement in the market as a result of its import.

He said that cement was available every where in the country in abundance. Its black-marketting had come to an end.

He said that both public and private sectors should import cement for check and balance in its price. He added that it was also not true that public sector imported cement at higher cost. In fact, he added, cement imported under barter was generally costlier. But it was a two way traffic. The items from Pakistan are exported under barter at comparatively higher rates.

The Minister told another correspondent that 97 per cent of the total capacity of the cement factor is utilised in the country. All factories are running well.

To another question, he said that they felt difficulty in the movement of cement. 32,000 tons of cement are in stock in Zeal Pak Factory.

The Minister said that the Government had decided to dis-invest Shahdadkot Textile Mills which is running in loss.

The Government he said, soon would call bids. He hoped that some private party would come forward and buy it.--APP

FIFTY PERCENT FALL IN COTTON EXPORTS REPORTED

Karachi DAWN in English 9 Mar 82 p 8

[Text]

The export of cotton yarn has decreased by about 50 per cent during the last two months following the delinking of the rupee from the dollar and slackening in world demand.

Textile sources said the delinking has further accentuated the already shrinking demand in the wake of record world cotton crop. The currency adjustment factors owing to frequent downward revisions of the rupee during the last two months forced the foreign buyers to hold back their orders till the rupee finds its real value at a reasonably stable level.

The export registration of cotton yarn, they said, therefore, declined sharply to 9,740,000 kgs. in January and 8,406,000 kgs in February 1982, from 16,481,000 kgs. in December 1981. Average unit price of cotton yarn also recorded a fall of nine cents per kilo from 2.09 to two dollar per kilo during the same period. The comparable figures for January and February 1981 were 20,310,000 and 12,467,000 kgs respectively.

The export of cotton cloth also showed a sizeable decline, falling from 98,380,000 square metres in January to 74,918,000 square metres in February. Average unit price of cloth also recorded a sharp fall of nine cents per metre from 48 cents in January to 39 cents in February. The corresponding figures for the same period last year were 101,805,000 and 108,931,000 square metres respectively.

Textile sources, however, appeared to be optimistic that the exports of cotton yarn and cloth might begin to pick up towards the end of March, when the rupee value is expected to stabilise slightly above Rs 11.00 per US dollar. Already, foreign buyers are in the market and new deals are expected to be signed at a relatively higher price, compensating the losses suffered over the past two months.

SURVEY OF DESERT WATER RESOURCES

Karachi BUSINESS RECORDER in English 11 Mar 82 pp 1, 6

[Text] RAINEE RIVER (Sukkur district), March 10: The Sind Governor Lt-Gen. S. M. Abbasi today directed for carrying out a joint survey by the irrigation, forest and agriculture departments to identify the water resources in desert areas of upper Sind and their utilization for agriculture, fisheries and livestock purposes.

The Governor, who arrived here alongwith the provincial food and agriculture minister Sardar Ghulam Mohammad Mahar, gave the directive at a briefing held on desert irrigation and agriculture with the revival of abandoned Rainee River about 115 miles from Sukkur this morning.

The Rainee River was stated to be abandoned some 138 years ago.

The chief engineer irrigation Sukkur informed the Governor that surplus water was generally available during flood months of July and August which wherever available diverted through a channel into the Rainee. This water may be stored in its bed and adjoining lands through small check dams.

He said that ranches and pastures could be developed with this stored water by pumping or through tubewells for livestocks, farm fisheries and forest.

He said this area has potential for development of livestock, fisheries and forest.

The Governor further directed that the joint survey should be completed by the end of December this year and the report be submitted to him.

In the light of that report specific plans would be chalked out for developing the water resources.

The joint survey will identify the potential of water resources, the duration of their consumption and the specific sector for which this could be utilized.

The chief engineer irrigation Gudu Barrage informed the Governor that despite committed supplies for already developed land, surplus water was not available for raising Kharif or Rabi crops.

While surplus water was available during July and August there was shortage in early and late Kharif season and as such no irrigation was possible in the Rainee area in Kharif.

He said that in Rabi water was not available during most of the season and as such no Rabi crop was possible either.

While briefing the newsmen about the decision taken at the meeting, the Commissioner Sukkur division Syed Mohibullah Shah said that under the joint survey the summer months would be utilized for collection of data while physical survey of the area will be undertaken during winter.

Abbasi was presented a set of traditional Sindhi rallies, bed sheets and pillows made by the local women folk by the provincial food and agriculture minister Sardar Ghulam Mohammad Mahar at "Khedey Wari Go Talab", the place where a briefing was held on the Rainee River scheme today.

The Governor appreciated the craftsmanship of the local rural folk and observed that there was tremendous talents which can be used for developing the traditional handicrafts industry of Sind.

PLAN TO IMPROVE SLUMS STEPPED UP

Karachi DAWN in English 14 Mar 82 p 12

[Text] Islamabad, March 13: Acting on a directive of the Federal Government, all provincial Governments have stepped up implementation of a plan to improve Katchi Abadies in the major cities of the country, before January, 1978. [as published]

The directive is believed to have been issued after a recently-held meeting of the Inter-provincial Committee with Air Marshal Inamul Haque, the Minister for Housing and Works and Urban Affairs in the chair.

President Mohammad Zia-ul-Haq is very keen on speedy regularisation of the Katchi Abadies and Air Marshal Inamul Haque is vigorously pursuing the matter with provincial Governments for its expedition.

A committee was also set up to co-ordinate the plan at Federal level and have an effective control of Federal state land and ownership, removal of encroachments and its transfer to the provincial Governments for settlement and development.

The committee will meet here on March 15 to speed up the Katchi Abadies regularisation plan and to apprise the President on the present situation.

The implementation of the plan had begun a few years ago and till this day, thousands of people have already benefited through the regularisation and development of Katchi Abadies at the cost of million of rupees.

The provincial Governments were asked to direct the district and municipal authorities to regularise Katchi Abadies on state lands established before Jan 1 1978.

For this purpose the existing Katchi Abadies were demarcated and the remaining issues of conferring property rights on such residents are in the final stages.

In populous Punjab province, the provincial Government had also decided that prices of land would be paid at the rate of Rs 20,000 per acre to the official departments for the establishment of Katchi Abadies on the state land.

Punjab

Following is the situation on Katchi Abadies in different cities:

Lahore: Lahore Development Authority have already completed development work on 20 Katchi Abadies the development on 10 additional Katchi Abadies is in progress, after completion of development work, provisional proprietary rights have been granted to the residents of the Katchi Abadies of new Crole, Basti Saidan Shah, Liaquatabad, Mela Ram Park, Nasirabad Islampura Shahdra and Shah Shamas Colony.

To provide alternative accommodation to residents of various Katchi Abadies, 3,500 quarters have been constructed by the Lahore Development Authority in Kot Lakhpat.

Multan: There are 84 Katchi Abadies in the jurisdiction of Multan Municipal Corporation and Development Authority, development work in 26 Katchi Abadies has been completed by Multan Development Authority, while work in two abadies is in progress and would be completed during the next quarter, survey of 43 Katchi Abadies out of 84 has also been completed development work of 16 Katchi Abadies would also be taken up during the current financial year. Provincial proprietary rights have been granted to 108 families.

Faisalabad: Out of 9,537 families, allotment orders have been given to 5,996 families of 12 Katchi Abadies, the remaining allotment order will be issued after resolving the disputed cases, in factory area and old Sabzi Mandi, 4,401 families out of 10,686 have been allotted quarters constructed in Allama Iqbal Colony.

In other district towns, 55 Katchi Abadies have been developed and are mature for conferment of leasehold rights, an amount of Rs 31.75 crores has been allocated by the Punjab Government for development of Katchi Abadies and improvement of slum areas from 1976-77 to 1980-81. Funds have also been made available for payment of cost of land under Katchi Abadies belonging to different departments.

The Governor of Sind issued MLO 110 in December 1979 which reflects the policy decisions of the Government of Sind towards regularisation of Katchi Abadies detailing procedure for conferment of proprietary rights leasehold charges.

Organisational set up, creation of revolving fund procedures for survey, the work of regularisation of Katchi Abadies is in progress in the province of Sind under the said MLO.

Sind

According to the survey carried out, total number of Katchi Abadies in Sind are reported to be 757 covering an area of 12,580 acres.

The progress so far achieved with regard to regularisation of Katchi Abadies is as follows:

Karachi: There are 362 Katchi Abadies in Karachi spreading over an area of 11,200 acres out of which an area of 7,938 acres, comprising 290 abadies, is regularisable. In consultation with the local councillors, 115 settlements were notified for regularisation. A grant of Rs 20 million was also sanctioned by the Federal Government for the Regularisation and development of Katchi Abadies. This is to be utilised for the improvement of Baldia scheme and setting up of a revolving fund, since Government land in Baldia and Gulbahar stands transferred to KMC, adequate progress is being made in respect of regularisation works, field offices have been established and strengthened to expedite the work.

Progress so far achieved in the Karachi division is: Net regularisable area of 290 Katchi Abadies: 7,938 acres; Area surveyed and schemes completed: 4,022 acres; Area in survey stage 955 acres; Area where survey is required: 2,961 acres; Number of leases issued: 25,500.

Hyderabad: There are 110 Katchi Abadies within the limits of Hyderabad Municipal Corporation, covering 1440 acres. In all 19 Katchi Abadies, covering 224 acres, have been regularised.

The remaining 91 Katchi Abadies occupying 1,216 acres were taken up for issuing entitlement slips to residents, nearly 7,000 families have been granted proprietary rights.

In 61 Katchi Abadies, detailed physical survey has been carried out. In order to expedite regularisation work a sub-registrar has been posted in Hyderabad Municipal Corporation, providing facility of registration of documents to avoid any inconvenience to the public.

The Revenue Department has transferred 97 acres of land to Katchi Abadies under MLO 110. An amount of Rs 2.7 million has so far been incurred for development.

Sukkur Division: There are 294 Katchi Abadies, comprising 1,27,135 families, out of which 254 have been regularised and leases to 124 families issued. Further work on regularisation of Katchi Abadies has been initiated as per MLO 110.

He said Environment and Urban Affairs Division could take such matters with the Federal Ministries concerned.--APP

POLICE ROUND UP 31 FROM CAMPUS

Karachi DAWN in English 12 Mar 82 p 16

[Text] At least 31 persons, including Mr Mahmud Ghaznavi, President of the Karachi University Student's Union, were rounded up from the Administrative Block of the Campus for allegedly obstructing the normal functioning of the University.

A group of students, agitating for acceptance of their demands for withdrawal of rustication orders of some students and release of a number of students arrested in criminal cases, tried to seize the Administrative Block at about 11 a.m.

A strong police posse headed by the SP and DSP Jamshed Quarters waited outside the Campus until the Deputy Commissioner ordered action.

The students were arrested on the charge of 'obstructing the normal functioning of the University, keeping University employees in' wrongful confinement', and "creating law and order situation".

The police said they were verifying the alleged involvement of Shahid Islam, an employee of PIA's Sales department, in the firing incident in 1979 in which a student, Mr Yunus Shad, was gunned down in the Campus. Shahid Islam, an ex student of the University, was among those arrested during the round-up.

The police, did not allow the buses to enter the campus and the students got down at the main university road.

Parents of a number of arrested students, according to official sources, were approaching the authorities and expressing their readiness to furnish sureties for the detained students.

Barring a few minor scuffles, no incident occurred during the police efforts to disperse students. It took about half an hour.

EXAMINATIONS

Later, the General Secretary of Karachi University Students Union, Mr. Shakilur Rehman said at a Press conference that the students would not allow further terminal examinations at the University.

He urged the Vice-Chancellor to help release the two students who were bailed out and cancel the rustication orders against others. However, according to him, the Vice-Chancellor expressed his inability to do so.

The Press conference was also addressed by the Karachi Nazim of Islami Jamiat-i-Tulaba, and the presidents of NED, SMC, and DCET students unions.

DEMONSTRATION AGAINST STUDENT ARRESTS REPORTED

Karachi DAWN in English 14 Mar 82 p 1

[Text] Karachi University remained tense on Saturday as the Students Union demonstrated against the arrest of students from the University on Thursday and the continuing detention of two students who were later granted bail.

The students gathered outside the Administration Block at about 11-45 a.m. and forced the University employees to leave the building which they later locked. The Vice-Chancellor and other University officials who were in a meeting had to leave the Administration Block.

A truck load of policemen appeared on the scene but left without taking any action. However, a police jeep remained inside the Campus watching the protesting students.

The supporters of the United Students Movement also gathered outside the Administration Block and criticised the Karachi University Students Union for boycotting the examinations. They called for the continuation of terminal examinations and opposed the closure of the University for ten-week vacation.

They deplored "police intervention" in the Campus, demanded release of all students and withdrawal of rustication orders of all students irrespective of party affiliations.

In the Arts Faculty most of the examinations were held according to the schedule while in the Science Faculty, some boycott cases were reported.

The KTC buses were not allowed by the Police to enter into the Campus and were stopped on the University Road, outside the Campus. The students had to walk all the way to the Campus.

A "protest day" was also observed at the NED University. Classes were suspended after 11 a.m. and a protest meeting was held under the auspices of Islami Jamiat-i-Tulaba, NED Unit. However, the examinations at the NED were held as scheduled.

OFFICIAL VERSION

PPI adds:

No untoward incident was reported on Saturday from Karachi University when students were asked by the students Union of Karachi University to observe a black day, official sources told PPI.

Official sources said 80 per cent papers were held in the Campus, Economics Department of Arts Faculty boycotted the examination, but majority of the students in Arts Faculty appeared.

The students however, said that the examinations in Science Faculty were totally boycotted.

Official sources added that Police did not allow any bus to enter the Campus on Saturday, all students disembarked from the buses at the entrance gate from where they walked to the campus on foot. Same was the procedure for returning to homes.

Meanwhile the students at all the NED University and colleges on Saturday observed the black day to protest against the intervention of police in the University.

EXAMINATIONS POSTPONED, STUDENT UNREST REPORTED

Karachi DAWN in English 14 Mar 82 p 8

[Text]

The General Secretary of Karaci University Students Union, Mr Shakilur Rehman, has said that the boycott of terminal examinations at the University has been put off for 48 hours on the assurance of the teachers who have "assured us of their fullest cooperation in solving our genuine problems".

Addressing a Press conference on Saturday, he said "we have been assured that the Vice-Chancellor will give a definite reply within 48 hours regarding the withdrawal of rustication orders against the students'.

He said the administration has informed that the 32 students who courted arrest are being released.

He further said that of the two students who were "baied out yet detained, Farrukh Saeed was released yesterday while orders of Zarar Khan's release have been issued".

The Vice-Chancellor has "recommended the withdrawal of rustication orders of three students — Zarar Khan, Saeed Ahmed Khan and Abdul Malik", he added.

The President of Dawood College of Engineering and Technology Syed Mohammad Bilal, who also addressed the Press conference, said the police yesterday lathicharged the students of the college who were demonstrating "peacefully".

He said five students including the union president and joint secretary were detained "briefly."

He alleged that a student was stripped by the police and was tortured at the police station.

He condemned the incident and called for an inquiry into the matter.

The Karachi Nazim of Islami Jamiat-i-Tulaba and the President of NED University Students Union also addressed the Press conference.

MINISTER SEES SUI GAS AS RAW MATERIAL ONLY

Karachi DAWN in English 11 Mar 82 p 6

[Text] LAHORE, March 10: Gen (Retired) Rao Farman Ali Khan, Federal Minister for Petroleum and Natural Resources, on Monday stated that the Sui gas in future will be supplied only to industries where it was used as a raw material and would not be supplied for mere burning if alternative fuel was available.

He was talking to reporters after a meeting with the senior officials of the Sui Northern Gas, aimed at evaluating its performance during the past decade.

Rao Farman Ali said the switch over to the new policy was aimed at conserving the gas reserves and extending their depletion till the new energy resources, for which all efforts were being made, were explored and discovered.

He indicated that industrial units at present burning Sui gas would be asked to switch over to other fuel resources.

He said all industrial units using gas in either form would be obliged from the next year to remain closed for a particular period.

He did not specify the duration but added the temporary shut-down would serve dual purpose, i.e. affording them an opportunity to maintain themselves as well as conserve energy.

MARI RESERVES

Rao Farman Ali said the gas reserves at Sui amounted to 7 trillion cubic feet and would suffice upto the year 2010 if consumption was confined to one thousand million cft per day. At present, gas consumption was at 750 mcft per day.

About the Mari reserves, the Minister said they were equivalent to 6 trillion cft and would last another 30 years at the present rate of consumption.

He assessed the Pir Koh reserves at one trillion cft and the production therefrom about 72 mcft till 1994.

As for Dhodak, he said, the gas extracted was pushed back into the wells to increase the pressure for oil extraction, which was mixed in these wells.

He said the tentative gas reserves in Dhodak wells were about 40 mcft.

Oil reserves in the same well, he said were about 38 million barrels.

KHASKHELI FIELD

Rao Farman said that oil production at Khaskheli would reach 16,000 barrels a day by June.

The Minister said there were other wells in the country with 0.9 trillion cft gas reserves in each of them.

To develop gas from these fields simultaneously he said, Rs 1700 crores were required during the next five years.

About the expenses required to meet the gas pressure in Sui and Mari, the Minister said they were equivalent to Rs 450 and 500 crores respectively.

Rao Farman Ali Khan claimed that Rs 2.5 crore were being saved every day by using gas instead of the imported oil.

The gas-consumption equalled to 100,000 barrels a day.

He defended the recent rise in gas prices and added it was necessary for future investment required for gas development.

GAS FOR BALUCHITAN

The Minister for Natural Resources said gas would be supplied to various cities of Baluchistan for which pipeline was already being laid at a cost of Rs 600 million.

The Minister expressed satisfaction over the performance of the Sui Northern Gas Company.

The Managing Director, SGNPL, briefed the Minister about the SGNPL activities. He said that gas consumption rose to 320 mcft in 1981, as against only 150 mcft in 1972.

The peak demand was 415 mcft, he added.

The SGNPL chief attributed the increase in gas consumption to increase in population and urbanisation.—PPI.

COMMENTARY SAYS SOCIAL SYSTEM FAILING

Karachi DAWN in English 11 Mar 82 p 7

[Article by Ghazi Salahuddin: "Do the Bells Toll?"]

[Text] THERE is something about the month of March that kindles hope as well as apprehension. It has been one of the most eventful months in our history – after launching the very concept forty two years ago. The month, over the years, has seen some great endings and momentous beginnings. Somehow, it has been marked by a touch of violence. For instance, Ayub Khan abdicated in 1969 and the Bangladesh ball was set rolling in 1971.

No, I am not asking you to beware of the Ides of March. Nor am I influenced by the ominous signs that the astrologers are reading, though soothsayers are less unanimous about what the stars foretell than politicians are about the 1973 Constitution and the urgency for holding elections. I am concerned about what is happening now in the relevant perspective of recent years. We have again intimations of violence not only in the assassination of Arbab Sikandar Khalil but also in the massive arrests of anti-state and anti-social elements.

What about the spring that I had foreseen some weeks ago? Well, let me quote Mir: "Phir mauj-i-hawa paichan ay Mir nazar aaee/Shayed key bahar aaee, zanjeer nazar aaee". I should have quoted Josh or Firaq, but this is the couplet I had quoted last year at about this time. Remember last year's March?

Or let us go back a little farther. In March 1977, elections were held and seeds of Martial Law were sown, which matured quickly enough in July. In March 1978, former Prime Minister Zulfikar Ali Bhutto was sentenced to death by a full bench of the Lahore High Court. Incidentally, political activity was prohibited for the entire month of March 1978 and the ban was extended indefinitely on March 29.

In March 1979, the President declared (on the Pakistan Day) that general elections would be held on November 17 the same year. The next day, the Supreme Court dismissed Mr. Bhutto's petition for a review of the Court's earlier verdict.

In March 1980, a coup attempt was made in Pakistan, though it appeared to be a minor affair. Still, the President himself said – and I am quoting from a report published in Pakistan on March 18 – that "he had firm conviction that the coup attempt could not have taken place unless there was a foreign hand in it".

Terrorism

So we come to last year when terrorism was planted with the hijacking of a PIA Boeing. The shadow of terrorism has lengthened since and, after the murder of Chaudhry Zahur Elahi in September, counter moves continue even now. Terrorists not yet arrested are being pursued vigorously and security arrangements have become very tight.

It is interesting to note that while last year's nerve-shattering hijack drama began on March 2, another attempt to hijack a PIA Jumbo was made on the same date in 1978, soon after the plane had left Islamabad. Also in March 1978, I was writing about human violence as Karachi was trapped in the trauma of little girl Tarannum's murder. I remember interviewing two psychiatrists on the issue and much of what they said has been certified by the obvious rise in personal tensions.

But the subject of violence really burst forth last year. It hasn't left us since. In fact, Arbab Sikandar's assassination and the large-scale arrests of anti-social elements has given it a new edge now. We may revive the discussion with fresh emphasis on rising crime and widespread feelings of insecurity.

Typically, arrests of many hundreds of criminals have not stopped the series of armed robberies in Karachi. I have repeatedly been told by serious social observers that the recent surge of violent crime was political in nature. Now the Federal Information Minister has confirmed this view. Speaking in Sukkur this week, he said that terrorists were committing dacoities with the help of criminals and anti-social elements.

Clean-up operation

The clean-up operation in Karachi has also touched ordinary citizens. Martial Law and police officials have been making surprise checks of vehicles at different intersections, often early in the evening. I have encountered it twice. I was impressed by the show of force and the sense of high emergency that the operation reflected.

It is surprising how they can get hold of scores of criminals by just standing on the road and checking all those who pass. Even after the initial raids, sixty and seventy culprits can be picked up in a single day. Do we have so many anti-social elements even after fifty-six months of strict Martial Law, dedicated to rooting out crime and corruption? Karachi's DMLA provided some food for thought when he said this week that there were three thousand proclaimed offenders in the City.

Crime and corruption, in fact, are becoming dominant issues in our lives. At another level, threat of terrorism and the renewed strivings of the political parties to restore democratic institutions have raised serious questions about our destiny – if the existing ban on politics is continued. Martial Law, as those who wield it have stated a number of times, is a purely interim measure. What lies ahead – after Martial Law?

I have no space here to list all the minor incidents and developments that combine to create a great feeling of disquiet. Even cricket is not the tranquilliser that it used to be. We have rebels there, too, blocking the cricketisation of Pakistan. We have rebels in the local bodies and though the curtain has momentarily fallen on the Hyderabad Municipal Corporation drama, it is easy to sense that the surface calm covers a deep inner disquiet.

This stormy month of March may enhance the feeling of things falling apart but the danger signals are loud and clear. Please, I am not speaking in terms of politics or short-term prospects of what might happen.

Social system

The question we have to begin asking in right earnest is whether our social system is disintegrating bit by bit. Martial Law and whatever else is happening around us may be taken as mere symptoms. Look at corruption, the blind pursuit of wealth, the defiant lack of commitment by individuals to our cherished values, the gulf between sermons and the actual environment. Is this a revolutionary situation?

Social scientists have known that conflicts that cannot be resolved or eliminated in accordance with a society's values lead to violence. What are our values and have we not created conditions that could destroy them totally? After all, a social structure is not to be maintained by armed men and cannot be salvaged through terrorism.

It seems – and we should have the courage to face it – that our society has lost its equilibrium. The signs are too glaring. But what kind of opportunity or threat is presented by the failure of our social system? Will our intellectuals have time to study this trend towards self-destruction?

TRADE UNION CONFERENCE INAUGURATED

Karachi DAWN in English 14 Mar 82 p 7

[Text] LAHORE, March 13: The Federal Labour Minister, Mr Ghulam Dastgir Khan, said on Saturday that the welfare of the workers should be one of the foremost considerations before a private entrepreneur.

He was inaugurating the 18th biennial delegates conference of the All-Pakistan Federation of Trade Unions at Labour Hall. Delegates from all the four provinces are attending the moot chaired by Mr Bashir Ahmed Bakhtiar.

Mr Dastgir Khan said that Islam protected the rights of the have-nots and the down-trodden more than any other ideology on religion, and a Muslim industrialist could not be called a true faith if he denied his labour their rights.

The Labour Minister said that the Government had taken concrete steps to rebuild the economy of the country which had been ruined by the previous regime. The confidence of the private capitalists had been regained and they were coming forward to make investment in the industrial field. This would help increase the country's production and bring prosperity, he added.

He said that the efforts of the Government could bear fruit only if there was total peace and harmony in the country.

About some criticism on the large scale import of cars in the country, the Minister said, the Government had restricted the import of cars and most of the cars reaching here were being sent by the Pakistanis working abroad under the Gift Scheme. He said that during his recent tour abroad, he had appealed to the Pakistani emigrants in other countries to invest their earnings in industries or other productive channels so that Pakistan's economy could be strengthened.

Earlier, Mr Bashir Ahmed Bakhtiar, in his address of welcome to the Minister, assured the Government of full backing ofthe workers in its efforts to enforce Islamic system as this guaranteed the right of workers more than any other creed. He also called upon the Government to take stringent action against those indulging in subversive activities.—APP

BRIEFS

MUMTAZ TALKS WITH BHUTTO--Larkana, March 11: Begum Nusrat Bhutto held talks with Mr Mumtaz Ali Bhutto today in Garhi Mirpur Bhutto, about 25 kilometres from here. When contacted, Mr Mumtaz Bhutto declined to disclose what he discussed with Begum Bhutto. Sources close to the defunct people's Party told DAWN that the meeting lasted over an hour. They also later lunched together. [Text] [Karachi DAWN in English 12 Mar 82 p 20]

JAMAAT NOT TO JOIN--Muzaffargarh, March 11: The Secretary-General of the defunct Jamaat-i-Islami, Qazi Husain Ahmad, has said that his party would not join MRD as agitational policy may harm the national integrity and solidarity and that the Jamaat was "deadly against creation of tension or confrontation" with the Government. Addressing a Press conference here today, he said the present Government was keen to introduce Islamic order in the country. He expressed his dissatisfaction over the law and order situation in the country. He demanded that teachers' demands be accepted and said that the Government should upgrade their living standard so that teachers could contribute their best for promotion of academic standards. Qazi Husain reiterated his party's demand regarding the holding of general elections. He said elections should be held on the basis of proportionate representation and separate electorate. His party was not in favour of any alliance for election purpose he said, and added that it was in national interest that elections should be held at the earliest possible time. In reply to a question, the Jamaat leader said his party had presented a seven-point formula for developing a consensus on basic issues for consideration of the MRD.--PPI [Text] [Karachi DAWN in English 12 Mar 82 p 20]

SAFDAR REFUSES TO COMMENT--Lahore, March 13: "I am not a part of the Government", replied Khwaja Mohammad Safdar, Chairman, Federal Majlis-i-Shoora when the reporters asked him on Saturday as to when the elections would be held--whether after implementation of Islamic law in the country, as was stated by the Government, or after mutual understanding between the politicians and the Government, as announced by him. When asked as to what the Federal Majlis-i-Shoora would do in case of difference of opinion between it (Shoora) and the Council of Islamic Ideology about the form of government, Khwaja Safdar replied, it was a hypothetical question and hence needed no reply.--PPI [Text] [Karachi DAWN in English 14 Mar 82 p 1]

CII MEETS, CONSIDERS COMMENTS--Islamabad, March 13: The Council of Islamic Ideology, at its meeting held on Saturday, under the chairmanship of Justice

Dr. Tanzilur Rahman took up consideration of various comments received from constitutional experts, Ulema and other intellectuals on the question of political structure of an Islamic State with reference to elections in Islam. The meeting, besides its members was also attended by the Chief Justice of the Supreme Court and the Chairman of the Azad Kashmir Council of Islamic Ideology as observers. The current session of the Council will continue till March 18.--APP [Text] [Karachi DAWN in English 14 Mar 82 p 1]

MINISTER ON TEACHERS' DEMANDS--Islamabad, March 13: Muhammad Ali Khan of Hoti, Federal Edcuation Minister, on Saturday said the demands raised by the primary teachers, currently on strike, involved financial implications which could not be met immediately. The government, he said, was, however, trying to determine what could it do within its resources to resolve the problem. The Minister told DAWN that a fair number of recommendations concerning the teachers problems have been examined. The recommendations were made by all the provincial secretaries, including Azad Kashmir education high-ups. This, he said, will be presented soon before the provincial governors, who, in consultation with the provicial Finance Ministers, will give final decision. Asked about the nature of incentive, likely to be given to the teachers, Mr. Hoti said the Government had not yet finalised any such incentive. To a question, Mr. Hoti said President Mohammad Zia-ul-Haq has appointed a task force within the Ministry to locate factors responsible for the deteriorating academic setup. The task force, consisting of noted educationists, he said, will give details of various academic issues facing primary schools, including the shortage of buildings, equipment and libarary [as published] in the country. [Text] [Karachi DAWN in English 14 Mar 82 p 1]

JUP MEETS--Lahore, March 13: The general council of the defunct Jamiat-ul-Ulema-i-Pakistan will meet here tomorrow under the chairmanship of Maulana Shah Ahmad Noorani, President of the party. The council, which will remain in session for two days, will discuss political situation of the country, out come of negotiations for alliance with other parties and organisational matters of the party.--PPI [Text] [Karachi DAWN in English 14 Mar 82 p 10]

DRASTIC EDUCATION CHANGES LIKELY--Islamabad, March 13: The present higher educational set-up in the country is likely to undergo some drastic changes soon. Most competent sources told DAWN on Saturday. [as published] The University Grants Commission (UGC) has been directed to draw a comprehensive plan for this purpose. A task group in this connection has also been established in UGC, which will examine all the four similar reports on education submitted in the past. The four reports, which contained a number of proposals, had been dumped after submission. The reports named: S. M. Shafiq Commission Report, Retd. Air Marshal Nur Khan Report, Justice Cornelius Report and a comprehensive PPP Report. The major academic issue the UGC wants to rectify is "noncombination of curriculum" up to B.A. level. It is reported that the subjects which were being taught do not support each others. The sources said that in the present system mathematics is not a compulsory subject for those studying economics or chemistry. The UGC has specifically been asked to suggest measures by which more colleges could be

upgraded to master level. The Government wants universities to function as purely research-oriented institutions. [Text] [Karachi DAWN in English 14 Mar 82 p 12]

ARRESTED FOR TERRORIST ACTS--Rawalpindi, March 13: The New Town police arrested one Sarfaraz Hussain, alleged to be a member of Al-Zulfiqar, and recovered different types of firearms from him today. According to details, the police had been tipped that Sarfaraz Hussain was alleged to be involved in terrorist activities. Consequently, a team of police officials under the supervision of Sardar Nasim, DSP, New Town Circle, was formed. The team in a raid here last night arrested the accused, Sarfaraz Hussain. During investigation, the police recovered firearms of various types, including one sten gun, two grenades, ammunition and detonators from him. Investigation is continuing.--PPI. [Text] [Karachi DAWN in English 14 Mar 82 p 12]

MEETING ON ARBAB'S MURDER--Peshawar, March 13. The defunct National Democratic Party will hold a meeting in the historic Chowk Yadgar on Sunday in connection with the murder of Arbab Sikandar Khan Khalil, Party sources said on Saturday. The authorities, on the other hand, are believed to have advised the Party that it should not hold the meeting in Chowk Yadgar but elsewhere, such as, Jinnah Park on Grand Trunk road. The situation of Chowk Yadgar is such that it can become overcrowded by a small gathering. Even a few thousand men will pack the Chowk and several bazars leading to it, giving the impression of a mammoth crowd while even one lakh men will occupy only one-third of the space in Jinnah Park. The PDP, however, refused to accept this advice and expressed determination to go ahead with the meeting in Chowk Yadgar, come what may. Meanwhile, the Government of NWFP issued the following Press Note here on Saturday night: "It has come to the notice of the Government that a defunct political party intends to hold a Public meeting at Peshawar on March 14 1982 for political purposes. The public is reminded that holding of public meetings and taking out processions is banned under the existing laws and contravention of law is liable to action as prescribed". [Text] [Karachi DAWN in English 14 Mar 82 p 12]

BEGUM BHUTTO ON POLLS--Larkana, March 13: Chairman of defunct PPP, Begum Nusrat Bhutto, said on Saturday that all political parties of Pakistan, including Jamaat-i-Islami want elections in the country under the 1973 Constitution. Talking to this correspondent at Moenjodaro airport, where she had come to fly to Karachi, Begum Bhutto claimed that the lawyers, students, teachers and all sections of the population are unanimous on holding general elections in Pakistan as soon as possible. [Text] [Karachi DAWN in English 14 Mar 82 p 12]

HARVARD TO ASSIST UNIVERSITY--Lahore, March 13: The Harvard University of America has pledged technical assistance to the Aga Khan Hospital and Medical College in Karachi which has been conferred a university status by the Government of Pakistan and is now known as the Aga Khan University of Health Sciences. This collaboration between the two institutions was the first phase of a general cooperating agreement signed in Boston during December last. The agreement calls for the collaboration in areas of major concern

to both institutions, in particular health and medical education. A second agreement was also signed, whereby the Harvard University will provide assistance in faculty development and curriculum design.--PPI [Text] [Karachi DAWN in English 14 Mar 82 p 12]

JAPANESE AID FOR REFUGEES--Tokyo, March 13: The Japanese Government today decided to extend 800 million yens (3.3 million US dollars) to aid refugees in Pakistan and Chad. The decision came at a Cabinet discussion on a request by the World Food Programme (WFP), the Foreign Ministry said. [Text] [Karachi DAWN in English 14 Mar 82 p 10]

PLANS TO IRRIGATE 1.3 MILLION ACRES IN BALUCHISTAN--Quetta, March 8--The Government has undertaken "on farm water management" programme to irrigate over 1.3 million acres land in the province, it was officially stated here on Saturday. The programme would help check waste of irrigational water which now comes to 50 percent of total available water resources. Under the programme, the land would be levelled and water channels would be paved and cleared of the silt and other weeds inhibiting the water flow. It would not only help save 30 percent water resources but also cause 70 percent rice in production. The programme was initially being undertake in seven districts of the province including Quetta, Pishin, Loralai, Nasirabad, Kachhi, Kalat. In the next year three more districts of Turbat, Khuzdar, and Lasbela would be brought under this program. Meanwhile, work on Bolan and Mirani, (Mekran) dams was going on rapidly and with the completion of these two dams, the agriculture sector of this province would witness a new era of progress. With the completion of Mirani Dam alone over 20,000 acres land would be irrigated in Mekran which is a dates growing area of the province.--APP [Text] [Karachi DAWN in English 9 Mar 82 p 4]

AZAD KASHMIR MAJLIS-i-SHOORA--Sialkot, March 8--The Majlis-i-Shoora of Azad Jammu and Kashmir is expected to be formed by the end of this month (disclosing this, the Information Adviser to Azad Kashmir Government, Mohammad Khan Kiani, told PPI here on Monday that the proposed Majlis-i-Shoora would consist of 42 members. But partial increase in the said number was also under consideration of the state government, he added. The AJK Adviser said that the Majlis would include the politicians apart from non-political figures, which would be taken from all schools of thought, he said, adding that particularly preference would be given to those who had played prominent role during the freedom movement of Kashmir. He further said that competent representatives of Jammu and Kashmir refugees settling in Pakistan would be nominated for the Majlis as well.--PPI [Text] [Karachi DAWN in English 9 Mar 82 p 6]

STUDENT LEADER'S PLEA--The Nazim of Islami Jamiat-i-Talaba Pakistan (Sind Province), Mr Rashid Nasim, has said in a Press statement that the unrest among students in the province was the result of "unrealistic policies of the Government." Unless an Islamic system free from social and economic exploitation was introduced, a sense of deprivation among people would persist. He said, adding that the causes and factors leading to unrest among the students in the interior of Sind should be studied so that the problem could be solved properly. [Text] [Karachi DAWN in English 9 Mar 82 p 10]

BENAZIR'S DETENTION TERM EXTENDED--Larkana, March 10: Term detention of defunct PPP leader Miss Benazir Bhutto has been extended by three months, it is learnt. The previous term of detention was to expire tomorrow. There were some speculations about her release after March 11. Begum Nusrat Bhutto had arrived at Larkana on March 7 and the personal car of Miss Benazir Bhutto was reported to have been brought. [Text] [Karachi DAWN in English 11 Mar 82 p 10]

MAIRAJ RELEASED IN LAHORE--March 11: The President of the defunct Qaumi Mahaz-i-Azadi Mr Mairaj Mohammad Khan, was released here today from Kot Lakhpat Jail after a detention of about 13 months. He was released against a personal surety of Rs 50,000, furnished by party Vice-President Parvez Saleh. Mr Mairaj Mohammad Khan was arrested on Feb 26 last year from the residence of Mr. Mahmood Ali Kasuri, Acting President of the defunct Tehriki Istiqlal, when all MRD leaders had gathered there to attend a meeting. On his release today, Mr Mairaj demanded release of all political leaders and workers. [Text] [Karachi DAWN in English 12 Mar 82 p 1]

COUNCILOR'S ARREST REPORTED--Larkana, March 11: Mr Abdur Razzak, a Naodero Councillor, was arrested by the police two days back reports reaching here said. He was allegedly involved in party politics, unpermissible for civic Councillors. It is also learnt that Pir Pinjal Shah Jilani of Gambat who was arrested a few days back in Kambar, was released on bail on Thursday. Pir Sahib was reportedly detained during an operation against anti-social elements in Kambar. [Text] [Karachi DAWN in English 12 Mar 82 p 1]

ARBAB'S MURDER CALLED 'CONSPIRACY'--Mr. Abid Zuberi, Central Information Secretary of the defunct NDP, said on return from Peshawar where he attended the funeral of late Arbab Sikandar Khan Khalil. That it was the result of a "conspiracy" and is corroborated by "evidence gathered from independent sources". [as published] He said that the alleged assassin, who had confessed, belonged to a particular "religious school of thought" and was of Afghan origin. His family had migrated to Pakistan during the rule of Sardar Daud Khan. Besides speedy investigations into the case he also demanded "steps to arrest the "present trend of lawlessness in the country." [as published] [Text] [Karachi DAWN in English 12 Mar 82 p 1]

GOVERNMENT REFUTES ISHAQ'S RESIGNATION--Islamabad, March 11: A Government spokesman today categorically contradicted a news item reported by a section of the Press that the Federal Finance Minister, Mr. Ghulam Ishaq Khan has tendered his resignation. The spokesman described the report as "baseless and mischievous" which "seems to have been circulated to engender instability and uncertainty in the country".--APP [Text] [Karachi DAWN in English 12 Mar 82 p 1]

PARLIAMENT TEAM TO VISIT--Strasbourg, March 11: A three-man delegation of the Parliament of Europe will visit Pakistan at the end of April to discuss with Afghan refugees the Soviet occupation of their country. The Vice-President of Parliament, Mr Egon Klepsch announced this here today on his return from the United States. He had attended, at the invitation of U.S. President Ronald Reagan, a ceremony marking the proclamation of March 21 as "Afghan Day"--an event initiated by the European Parliament.--DPA [Text] [Karachi DAWN in English 12 Mar 82 p 1]

MRD CHARTER FORMULATED--MRD's Central Action Committee at a meeting held in Karachi on Wednesday formulated a seven-point charter, its convener, Mr. Fatahyab Ali Khan, told newsmen in Karachi on Thursday. The Committee, he said, will meet again to consider its "line of action" for the implementation of the demands contained in the Charter. Others present at the briefing held at the residence of Khwaja Khairuddin were Mr. Zainul Abadir, Mr. Iqbal Hyder, Mr. Narees Siddiqui Qari Sher Afzal, Maulana Ehtiramul Haq Thanvi and Mr. Abid Zuberi. Mr. Fatahyab Ali Khan said defunct NDP representatives Mr. Sherbaz Mazari and Mr. Abid Zuberi did not attend the meeting as they had gone to Peshawar to attend the funeral of late Arbab Sikandar Khan Khlil. The first demand reportedly relates to "immediate and unconditional release" of all political prisoners. On socio-economic issues the Charter demands alternative jobs to all those sacked in autonomous bodies, taken-over industries, educational institutions, newspaper industry etc. Besides, it calls for the rehabilitation of all those who have been dispossessed of their hutments and deprived of their daily earnings as a result of the removal of encroachments. Other demands relate to a 25 per cent cut in the prices of essential commodities, diesel and petrol as well as railway and public transport, fares, withdrawal of restrictions on movement of citizens and non-interference in academic affairs by the administration and the police. [Text] [Karachi DAWN in English 12 Mar 82 p 1]

REFUGEES IN QUETTA--March 11: Over half a million Afghan refugees were camping in Quetta division of the Baluchistan province. The main thrust of the refugees was in district Pishin where about 300,000 refugees were inhabited. About one lakh refugees were camped in district Chaghai which outnumbered the locals as well. The Government was annually spending over Rs. 4000 million on the up-keep of the refugees.--APP. [Text] [Karachi DAWN in English 12 Mar 82 p 8]

WHEAT RESEARCH WORK PRAISED--Noble prize winner, Dr. Norman E. Borlauge held a meeting in Karachi on Wednesday with Sind Food and Agriculture Secretary, Mr. S. M. Wasim, at the end of his two-day study tour of Sind, and appreciated the wheat research programme in progress with special emphasis on the methods of training being imparted at the Agricultural Research Institute, Tando Jam. He was highly appreciative of the work being done in Sind on two new wheat varieties namely TJ-78 and Sind-80 which he examined during his tour, says an official handout. [Text] [Karachi DAWN in English 12 Mar 82 p 16]

DECLARATION CANCELLED--Rawalpindi, March 11: The District Magistrate, Rawalpindi has through an order issued on March 9 announced that the

declaration of DAILY HAIDER, Rawalpindi, is no longer valid on account of the violation of the provisions of Section 9 (3) of the West Pakistan Press and Publication Ordinance by the publisher.--APP [Text] [Karachi DAWN in English 12 Mar 82 p 20]

NEGOTIATORS HOLD TALKS--Defunct PDP's Arshad Chaudhri and defunct NDP's Abid Zuberi--had their first get-together with PML-JUP negotiator Prof. Shah Faridul Haq in Karachi on Thursday. During their two-hour long talks various aspects of the party leaders' recent informal exchanges at Maulana Shah Ahmad Noorani's residence were discussed. Shah Faridul Haq, later sent his draft formula to Mr. Abid Zuberi, who said that its copies would be circulated among the MRD leaders. In reply to a question Mr. Zuberi said that from his side there was no need to hand over any formula to prof. Farid. "Ours is a simple one-point formula, viz, removal of the Martial Law and elections under the 1973 Constitution", he pointed out. [Text] [Karachi DAWN in English 12 Mar 82 p 20]

'NO BUGTI TRIBESMEN KILLED'--The allegation carried by a section of the Press that a number of Bugti tribesmen were killed in a joint operation by the Sind and Baluchistan police in Jacobabad district is completely baseless, says an official handout. The action of the law enforcing agencies was directed solely against the dacoits of the area in which no Bugti tribesmen were killed or injured, it added. As a result of the operation a number of persons were arrested and 11 shot-guns, three 7.mm rifles and 86 cartridges were recovered. [Text] [Karachi DAWN in English 12 Mar 82 p 20]

PNP LEADER CHALLENGES ACTION--Quetta, March 11: Mir Gul Khan Naseer, a leader of the Defunct Pakistan National Party (PNP), has challenged the reported decision of the party chief, Mir Ghaus Bux Bizenjo, to suspend the membership of three leaders of the PNP. He told newsmen here that it had come to his notice that Mr Bizenjo had suspended him and Mir Meharullah Mengal. Mir Gul Khan Naseer claimed that Mr Bizenjo, or any other individual, had no right to expel or suspend membership of any member of the party. Such an action was undemocratic. He further claimed that the party's Secretary-General, Mr Qaswar Gardezi, had a telephonic conversation with him from Lahore and said that Mr Fasihuddin Salar, Information Secretary, and Mr Yusuf Masti Khan, President, Karachi, PNP, respectively, had no right to give statement against any party member or threaten to suspend their membership. Mir Gul Khan Naseer said the defunct PNP was a democratic party and he was assured by Mr Gardezi that no undemocratic action would be taken. He said it was strange that while Mr Bizenjo held meetings with Begum Nusrat Bhutto, Mr Abdul Hafeez Pirzada, Mr Mumtaz Bhutto and even Federal Industries Minister, Mr Elahi Bux Soomro at the residence of Mir Nabi Bux Zehri, there was no reason to be critical over his (Mir Gul Khan Naseer's) meeting with Jam Ghulam Qadir, Vice-Chairman, Federal Council.--PPI [Text] [Karachi DAWN in English 12 Mar 82 p 20]

FARID SPELLS OUT TERMS--The Secretary-General of the defunct JUP Prof. Shah Faridul Haq, has said that the proposed all-party alliance will not join any national or political Government unless it signs an agreement with the Government on the holding of general elections in the country. Talking to newsmen on Wednesday, he said the agreement would include a firm date for holding of general elections and a clear procedure for the transfer of power to elected representatives. Prof Farid said that the draft handed over to his party chief, Maulana Shah Ahmad Noorani, envisaged the holding of general elections. He said he was now waiting for drafts from other parties who wished to join the proposed alliance.--PPI. [Text] [Karachi DAWN in English 11 Mar 82 p 10]

VISA OFFICE IN BOMBAY--New Delhi, March 10: The Pakistan Embassy will open a temporary visa office in Bombay from March 15 to 21 for intending visitors from Bombay and adjoining areas, it was announced here.--PPI [Text] [Karachi DAWN in English 11 Mar 82 p 1]

BUSES DETAINED BY STUDENTS--Supporters of Karachi University Students Union yesterday detained about 40 KTC buses at the campus for several hours in protest against the "detention of three students who were earlier granted bail by the court". The students drove the buses to the Convocation ground where they deflated their tyres. The police entered the Campus at about 4.15 p.m. and soon the students dispersed. The last detained bus drove out to the terminal at 5.35 p.m. Some one fired a blank shot in the air when the Police entered the campus to free the buses. The police has seized the empty and registered a case. [as published] [Text] [Karachi DAWN in English 11 Mar 82 p 8]

REPATRIATION OF BIHARIS OPPOSED--The Central Secretary General of Jeay Sind Students Federation, Mr. Shahnawaz, has opposed the repatriation of more Biharis from Bangladesh fearing that they would be settled in Sind and Baluchistan. In a statement, he said that the population in the two provinces has already increased owing to the migration from Punjab and Afghanistan. [Text] [Karachi DAWN in English 11 Mar 82 p 8]

CALL FOR PRESS FREEDOM--Mr Minhaj Barna, Chairman of APNEC (Barna group) has stressed the need of Press freedom and good management-worker relations for healthy journalism and growth of newspaper industry, says a Press release. Speaking at a function held to felicitate the new office-bearers of the daily AMN workers union on Tuesday he expressed the hope that the newly elected union officials would do their best to achieve both goals, and urged the Government to restore Press freedom. [Text] [Karachi DAWN in English 11 Mar 82 p 8]

SERVICES OF FARAZ TERMINATED--Islamabad, March 10: The Government has terminated the services of poet Ahmad Faraz. He received the termination notice in Islamabad on Tuesday. Ahmad Faraz said here today he had not been communicated the reason for his termination in the notice. He was appointed Director General of the Academy of letters in 1976. [Text] [Karachi DAWN in English 11 Mar 82 p 10]

SHOORA TEAM IN WASHINGTON--March 10: The Pakistan Majlis-i-Shoora delegation began their first day here today with a succession of challenging engagements. Early this morning they held a long briefing session with Ambassador Ejaz Azim and other senior embassy aides, followed by luncheon discussions with the Editors of the celebrated American weekly US NEWS AND WORLD REPORT that belongs to the same league as TIME magazine and the NEWSWEEK. Even tougher intellectual challenge taken on by the Pakistan delegation was the exchange-of-views session with the academics of the Georgetown University's Centre for Strategic and International Studies. This has been the traditional think-tank for US administrations, having provided such luminaries as Henry Kissinger, Zbigniew Brzezinski and Admiral Moorer. The Pakistan Interior Minister, Mahmoud A. Haroon is flying into Washington later today to join the delegation in its meetings on the Hill with US Congressmen.--PPI [Text] [Karachi DAWN in English 11 Mar 82 p 10]

SCHOLAR SHOT DEAD--Faisalabad, March 10: Major (Retd) Mian Mohammad Aslam, a religious scholar and leader of the defunct Jamaat-i-Islami, was shot dead in Baltimore, USA on Sunday and his body was thrown under a bridge. Deceased Mian Mohammad Aslam belonged to Faisalabad and had shifted to the US three years back as a preacher of Islam under a contract with the Saudi Government. The body of Mian Mohammad Aslam will be brought to Faisalabad by a PIA plane on March 11. Major (Retd) Mohammad Aslam used to visit Baltimore every Sunday. A day before the murder a large number of Americans embraced Islam and some of them invited him to visit Baltimore again on Sunday. He was later informed on phone that the car engaged for bringing him to Baltimore had developed some defects near a bridge and requested him to reach there. He left for his destination where he was shot dead. The police later in the evening handed over the body to the members of his family residing with him. Mian Mohammad Aslam has left behind a widow, three sons and a daughter. He will be buried in village Pakhowal (Chak No 183-GB) near Philore Adda in Tehsil Toba Tek Singh. [Text] [Karachi DAWN in English 11 Mar 82 p 10]

ACTION AGAINST PNP LEADERS--Mr. Ghaus Bakhsh Bizenjo, President of the defunct Pakistan National Party, on Wednesday suspended Mr. Gul Khan Naseer, Mr. Mehrullah Mengal and Mr. Gohar Khan Zarakzai from the party. At the same time he appointed Mr. Noor Mohammad Khan Achakzai as Acting President of the Baluchistan PNP and asked him to call a meeting of the provincial working Committee to consider the matter concerning the three suspended party members. In a statement Mr. Bizenjo said that Mr. Gul Khan Naseer and his two colleagues have supported the Government while the PNP stands for democracy and is opposed to any unrepresentative government. "The activities of these party members amount to a clear violation of the policy of the party and a defiance of the unanimous decision of the party's Central Working Committee", he added. Mr. Bizenjo clarified that pending a decision by the Baluchistan Provincial Working Committee, the PNP will have nothing to do with any statements issued by Mr. Gul Khan Naseer and two others or their activities. "If they do so, it will be considered as further violation of the party discipline", he said. [Text] [Karachi DAWN in English 11 Mar 82 p 10]

STUDENTS PROTEST ON KASHMIR--Faisalabad, Feb. 28--A group of 150 students in the campus of the University of Agriculture staged a demonstration on Kashmir issue but were dismissed peacefully. The students raised slogans against the alleged nefarious tactics of the Indian Prime Minister to bring the area of Azad Kashmir under the sway of the Indian Government. They urged the Pakistan Government not to succumb to the threats of Indira Gandhi and called upon the government to liberate the area of Occupied Kashmir. [Islamabad THE MUSLIM in English 1 Mar 82 p 1]

PAMPHLETS, PERIODICALS FORFEITED--Karachi, Feb. 27: The Home Department of the Provincial Government have forfeited copies of a number of periodicals and pamphlets containing milacious [as published] & contemptuous propaganda against the government and also fanning hatred between various sects, under the West Pakistan Press and Publications Ordinance. They included weekly INQUILAB volume 2, No. 7 (Jan. 9-15), published from 33, Leysourne House, Shoreditch High Street, London, monthly Urdu magazine AL-SHAHEED (Issue No. 7) published from Tehran, Urdu monthly digest ROOHANI DIGEST (Nov. 81 issue), Urdu weekly JEDDO JEHAD (Jan. 2 issue) published from Holland, Urdu pamphlet "Fitna-e-Karbala" published by Riaz Ali Shah of Jhang, weekly ECONOMIST (Dec. 12, 1981 issue) published from London, Sindhi pamphlet "Jang, Jang Aahey, Mohnji Tusan Jang Aahey", Urdu pamphlet "Hairat Haiy Hairat Haiy", cyclostyled speech and poem of Mr. Nasrullah Khan Nasir, president of the defunct Pakistan Democratic Party, a booklet containing resolutions passed during a Seerat meeting held at Khaliqdina Hall recently and published by the Pakistan Sunni Council and monthly Gujrati magazine AKHAND ANAND, published from Ahmadabad (Ind.). According to an official information, some of the forfeited material also tended to prejudice Pakistan's relations with a number of foreign countries.--A.P.P. [Text] [Peshawar KHYBER MAIL in English 28 Feb 82 p 5]

MOTOR VEHICLES IN PUNJAB--There has been a rapid increase in the motor-vehicles of different types registered in the Punjab. According to a source of Transport Cell 6,31,619 vehicles were registered up to December 31, 1981 as against a total number of 5,75,794 vehicles registered during the corresponding period with the registration authorities of the various districts of the Punjab, says a handout on Saturday. According to latest survey, Lahore district has the largest number of vehicles, motor cars 42,914; Jeeps 3,939; station wagons 1,722; pick ups 4,687; buses 8,150; mini buses 828; taxi cabs 2,071; 15-seater wagons 320; motor-cycles 1,29,639. Rawalpindi district is the next city having the largest number of vehicles, 25,970 cars; jeeps 2,078; station wagons 1,957; pick ups 2,158; mini buses 2,172; taxies 920; station wagons 1,039; motor-cycles 27,596. Multan district has registered cars 6,038; jeeps 905; station wagons 378; pick ups 382; buses 1,832; motor-cycles 34,190. In Faisalabad district, there are 3,858 cars; jeeps 280; station wagons 523; pick ups 1,200; buses 4,045 and mini-buses 552; taxi cabs 21; 15-seaters 4; motor-cycles 34,190. [Text] [Lahore THE PAKISTAN TIMES in English 7 Mar 82 p 8]

UN-ISLAMIC PROVISIONS IN CONSTITUTION--The Council of Islamic Ideology is drawing up a list of articles of the 1973 Constitution which it considers repugnant to Islam, CII sources told PPI in Lahore on Monday. The Council will submit the list to the President along with recommendations to Islamise them, the sources added. After final approval by the President, the said articles would be Islamised accordingly. Asked how much time the Islamisation of all laws would take, the sources said it would be completed during the current term of the CII, expiring in 1983. The laws to be Islamised in addition to certain articles of the 1973 Constitution include the Civil Procedure Code and the Pakistan Penal Code. [Text] [Lahore THE PAKISTAN TIMES in English 9 Mar 82 p 1]

SIND CANE CROP--Hyderabad, March 8: The sugarcane crop in the province has surpassed the total crushing capacity of sugar mills in Sind, specially in the south zone. According to the Sind Chamber of Agriculture, there are fears that the excess crop might be destroyed if not crushed in time, thus adversely affecting the growers, particularly incentive-wise. The best and only way to avert such an eventuality, the Chamber has stressed, is that the declared Government policy of introducing mini sugar mills be implemented forthwith in consultation with it and not with the Chamber of Commerce and Industries. The Chamber also criticised the Sind Agriculture Seed Supply Organisation for supplying inferior, adulterated DAP fertilisers. If such practices are not checked, it said, agricultural production in Hyderabad would suffer badly. [Text] [Lahore THE PAKISTAN TIMES in English 9 Mar 82 p 6]

ASAD INVITED TO VISIT--Islamabad March 11: President General Mohammad Zia-ul-Haq replying to a question said here tonight that the President Hafiz Al Asad of Syrian has accepted his invitation to visit Pakistan at the time convenient to him. In reply to another question whether PIA plane hyjackers problems also came under discussion during his meeting with the President Hafiz Al-Asad of Syria the President said he has thanked the Syrian President and did not mention about our expectations at that time. It was better not to talk of such thing on this occasion, he added. [Text] [Karachi MORNING NEWS in English 12 Mar 82 p 1]

FAIZ OFFERED AMBASSADORIAL POST--Rawalpindi, March. 3--Faiz Ahmad 'Faiz, the renowned poet and the recipient of the Lenin Award, has been offered an ambassadorial post in some foreign country. According to Weekly 'Hurmat', the government has recently hinted to Faiz that if he wanted he could happily live in Pakistan. Besides, if he wanted to serve the country and the cause of Pakistan, he could be offered an ambassadorial post. Thirdly, it was hinted if he wanted to permanently settle down in Pakistan he could be offered a suitable post. [Islamabad THE MUSLIM in English 4 Mar 82 p 3]

DAULTANA DENIES CONTACT--Lahore, March 3--Mian Mumtaz Mohammad Khan Daultana told Nawa-i-Waqt in an interview that he was neither contacting political elements nor preparing any list of sympathisers. He termed the news item appearing in some papers to this effect as "baseless". Mr. Daultana said certain

friends had come the other day whom he entertained to tea. After formal talk they left, Mian Sahib said. The aged politican said Pir Saifuddin Makhad and Hamid Raza Dilani were among those who met him. [Islamabad THE MUSLIM in English 4 Mar 82 p 12]

EXPORT UNITS READY--Three industrial units in the Karachi Export Processing Zone (KEPZ) are on the take-off stage. Of them, one unit, being set up by a party from UAE, will manufacture perfume etc. Its buildings are in an advance stage and the unit is expected to go into production by about July next. The other two units will manufacture electronics and ready-made garments. The electronic unit is being set up jointly bv two parties one each from Japan and Singapore. The ready-made garments unit is being set up by a party from Korea and some Pakistanis living abroad. The parties have deposited money for the purhcase of the land and the construction work is expected to start soon. The land has been sold to them at the rate of 7 dollars per sq. meter. It may be mentioned here that the authorities have so far sanctioned 20 projects in EPZ. More parties who have got their sanctions are expected to come to the Zone shortly. All infra-structure facilities--water, gas, electricity, tele-communication etc.--have been provided to the investors in the zone. [Karachi BUSINESS RECORDER In English 6 Mar 82 p 1]

SUI GAS SUPPLY RISE--The transmission and istribution network for the supply of natural gas from Sui registered a growth of 60 per cent during last five years. According to natural gas industry sources, the demand and production of Sui gas has grown by appro imately 65 per cent. The gas supply network including transmission, distribution and service line measured about 5 600 miles in June 1976, which rose to approximately 9,000 miles in June last year showing an increase of 60.7 per cent. Sui field supplies gas to both northern and the southern regions of Pakistan. While in the northern region the gas supply an distribution is handled by Sui Northern Gas Pipelines, the gas transmission in sou hern parts is managed by Sui Gas Transmission Company and its distribution is handled by Indus Gas Company and Karachi Gas Company, [Karachi BUSINESS RECORDER in English 8 Mar 82 p 6]

MAHBUBUL HAQ IN ISLAMABAD--Islamabad, March 6--Dr Mahbubul Haq, who was until recently Director Policy Planning Department of World Bank, has arrived here to assume his new assignment as Deputy Chairman, Planning Division. Dr Haq visited the Planning Division today and held informal meetings with the officials. Dr Mahbubul Haq whose status will be of Minister of State, is expected to take oath of his office by March 15. [Karachi MORNING NEWS in English 7 Mar 82 p 1]

COUNCILLORS FOR STUDY TOUR--Bahawalpur, March 6--The Government has nominated three local councillors for going abroad on study tour of two months, from March 23 to May 22, this year. The nominees include Sardar Fazal Ahmad Langah, Chairman Zilla Council, Bahawalpur, Malik Habib Khan, Chairman, Municipal Committee, Jhang, and Mrs. Parveen Sheikh Municipal Councillor Wazirabad. The nomination has been made by the Government strictly on the basis of ability, capability and over-all performance of the councillors in their respective local councils. The Councillors will first fly to the Hague and will later visit Canada, Belgium and Denmark. They will undergo a training course pertaining to local councils arrange at The Tague. The purpose of sending these councillors

on the proposed tour is to utilise their talents for furtherance of local councils system introduced by the present government. On their return, they are supposed to be assigned more responsibilities within the sphere of the local councils system. It may be mentioned that the working of the Zilla Council Bahawalpur has been marked as examplery, because all of its decisions are arrived at unanimously and there has never been any voting or controversy on any issue whatsoever. [Karachi MORNING NEWS in English 7 Mar 82 p 8]

PAKISTAN SCIENTISTS FOR SUDAN--Faisalabad, March 7--Sudan will acquire the services of Pakistani scientists for its agricultural and scientific development, Professor Abu Zia, leader of the four-member Sudani delegation, said here today. He said his country wanted to send maximum of its students to Pakistan for higher studies in the field of agriculture and Science. Prof. Zia who is also the Vice-Chancellor of the Juba University, Sudan hailed the Pakistan Government's gesture for allowing them to select Pakistani researchers and scientists for services at the Juba University He said for this purpose they were touring various universities in Pakistan. [Karachi MORNING NEWS in English 8 Mar 82 p 3]

FACTS BOOK PUBLISHED--Islamabad March 7--Pakistan--basic facts 1980-81 was published yesterday by the Economic Adviser's Wing of the Ministry of Finance. The 253-page book is the 19th edition of the series and covers major developments in various sectors of the economy in their historical perspective, but with focus on the fiscal year 1980-81. "It contains an analysis of recent policy measures and reviews the sectoral growth trends extended as far back as possible depending on the data availability'. says Dr Mushtaq Ahmad Joint Economic Adviser in a preface to the book. The document includes a comprehensive series of statistics on performance indicators relevant to each sector.

INDUSTRIES IN SIND BACKWARD AREAS--Jacobabad, March 7--The Sind Small Industries Corporation has launched a thre-year plan (1981-84) since July 1981, which envisaged a total investment of Rs 283 million including Rs 225 million and Rs 58 million from private and the public sector respectively. This was stated here by Ashraf W. Tabani, Sind Minister for Industries, Finance, Excise and Taxation, while addressing the councillors of municipal committee Jacobabad today. He said, the federal government has allowed 5-year tax holiday and exemption from payment of import duty in respect of three districts of Sind including that of Jacobabad district with a view to promoting industries in the backward areas of the province and to avail of the facilities, the corporation was establishing a small industries estate in the district during the next financial year at a cost of Rs one million, he added. The minister observed that the corporation was introducing a training programme and to meet the object a wood work training centre was being set up at Jacobabad at a cost of Rs 25 million during 1982-83, having a capacity of absorbing 20 trained stipendary persons a year. The persons trained from the centre would be free to establish their own small production units for which financial assistance and on the spot guidance would be provided to the small entrepreneurs by the corporation. The corporation would also be establishing a district office at Jacobabad during the next financial year.

DIVISION OF TAXES CONSIDERED--Islamabad, March 2--The National Finance Commission at its fourth meeting, held here today, considered various proposals for sharing divisible taxes between the Federal government and the provinces. Federal Finance Minister, Ghulam Ishaq Khan, who chaired the meeting apprised the Commission of the latest resource situation of the country. He stressed the need for judicious utilisation of available resources and mobilisation of additional resources to meet growing development requirements of all parts of the country. This, he observed, was utmost to cater for greater demand for social services and to achieve better regional balance. The National Finance Commission is likely to finalise its recommendations soon. The meeting, which lasted six hours, was attended by Kh. Mohammad Safdar, Ghulam Farooq Khan G.D. Memon, Minister of State for Food and Agriculture, Finance Ministers of Punjab, Sind, and NWFP, Federal Secretaries for Finance, Planning and Economic Affairs and Local Government and Rural Development, Finance Secretaries of the four provinces and senior officials of the Finance and Planning Divisions. TRADE ACCORD SIGNED WITH GERMAN DEMOCRATIC REPUBLIC

Manila BULLETIN TODAY in English 9 Mar 82 p 14

[Text]

The Philippines and the German Democratic Republic (GDR) recently signed a trade agreement covering import requirement from both countries this year, the bureau of foreign trade (BFT) announced.

The accord was aimed to further develop and strengthen RP-GDR relations in accordance with their development and trade needs and objectives on an equitable and mutually beneficial basis, according to BFT director Edsel T. Custodio who signed the trade agreement with GDR director-general for foreign trade Horst Marx.

Under the agreement, the Philippines will sell to GDR local products worth US$27 million from January to December 1982. At the same time, it will import machinery and equipment including chemical products of the same amount.

Products to be sold by the Philippines to GDR as specified in the accord include coffee, desiccated coconut, coconut oil, copra, veneer and sawn lumber, textile and garments, marine products including canned tuna, canned pineapples, tobacco wrappers, and fruit puree and powder.

On the other hand, GDR will sell to RP machine tools, permissible types; machinery and equipment for rice and grain handling; spinning plants, combers, circular knitting machines and other textile machinery; printing plants and equipment; typewriters and office equipment; boilers, steam generators and diesel generating sets; scientific instruments and equipment, medical and laboratory apparatus; X-ray, amateur and cine film; chemical products, including soda ash, pesticides and pharmaceuticals; urea; muriate of potash; steel products; and viscose rayon staple fiber.

GDR expressed interest to supply the Philippines with machineries and equipment for the country's industrial development projects including transfer of technology and training of local personnel.

The offer was made by the former during the Fourth Session of the joint committee of the Republic of the Philippines and the German Democratic Republic held early February in Manila.

FILIPINO MUSLIMS REJECT MISUARI

Manila BULLETIN TODAY in English 8 Mar 82 pp 1, 10

[Text]

Filipino Muslims in Saudi Arabia declared their support for President Marcos' "policy of reconciliation and development for Muslim Mindanao," in a manifesto that repudiated Muslim rebels who have taken sanctuary in the Middle East.

Middle East observers said the group's action in effect withdrew the last semblance of support for Nur Misuari, head of the Moro National Liberation Front (MNLF), and his remaining followers.

The manifesto, signed by Muslim engineers and architects working in Saudi Arabia, expressed trust and confidence in President Marcos' efforts for peace and progress in the south and offered to work with the government to solve the Southern Philippine problem.

The Muslim professionals reaffirmed their belief in the "sincerity of the President's commitment to the well-being of Muslim Filipinos."

They cited the restraint the Philippine government has exercised since the 1976 ceasefire by holding back full military operations despite provocations from remnants of the rebel movement in Southern Philippines.

They hailed the forthcoming state visit of President Marcos to Saudi Arabia and expressed the hope that it will contribute to the peaceful solution of the Southern Philippine problem.

As a source of contributions for various projects of Filipino Muslims in the Philippines, including those of rebel expatriates, the group wields considerable influence within the Filipino Muslim community in Saudi Arabia.

In a televised interview after the presentation of the manifesto to Philippine Ambassador to Saudi Arabia Benjamin Romualdez, the Muslim professionals said secession is no solution

to the problem and further fighting would only increase the sufferings and misery of Muslim Filipinos.

They, therefore, called for a halt to further bloodshed, saying that a majority of the Muslim Filipinos abhor it "because there is so much to do by way of rehabilitation and reconstruction" of their ravaged land.

Pendatun Macarambon said the manifesto represents their "moral reponsibility as citizens of the Republic of the Philippines to contribute to the peaceful solution of the problem."

Other members, including Mamintal Adiong, Sanny Alonto, and Edres Tamano, said they are concerned with the problem in Southern Philippines because "we and our families are directly affected."

They said the only way out of poverty and social backwardness in Southern Philippines is "to bring peace to the land first and then allow the development of its rich potentials."

Among those who signed the manifesto were Legui Ilupa, Mandangan Decampong, Nasser Mohammad, Berua P. Alauya, Manap T. Sangcopan, Isam D. Satar, Camar K. Mangondato, Casan C. Usop, Sinombra M. Pangonotan, Esmayatin Z. Pumbaya.

Pendatun C. Macarambon, Edres D. Tamano, K. P. Mapandi, Tagoranao D. Campong, Macaurog R. Batabor, Ali P. Guro, Nagaranao Macawadib, Mitokur G. Ianalan, Mababaya M. Mamalampac, Rakin P. Abaton;

Sacaria D. Pario, Amoran B. Marzoc, Mamintal M. Adiong, Suleiman M. Palala, Cosain Dalidig, R. D. Mamao, Sanny P. Altono, Casan Darapa, and Achmad Badron.

NATION TO SET UP ISLAMIC LAW COURTS

HK130034 Manila Domestic Service in English 2300 GMT 12 Mar 82

[Text] President Marcos has set into motion the creation of Islamic courts in the country. The president opened the Philippine Sharia Institute, which will train lawyers and judges for the administration of Muslim laws. The Muslim code has been part of the country's judicial system in earlier presidential decrees. Initially the Sharia will train 180 Muslim lawyers for the Islamic courts. Its creation in a predominantly Christian country is the first in the world.

Addressing the initial trainees, the president stressed the underlying spirit of unity that should bind all Filipinos together, regardless of faith. [Begin Marcos recording] If we are to achieve the objective of national unity, if we are to pay more than lip service to the constitutional principles of religious freedom and respect for cultural diversity, it may well be that much time will pass before we succeed in accepting the institution of the code. This we shall gladly undertake, in order that our Muslim brothers may partake more fully in the mainstream of our national life. I urge you to therefore look to these matters during this training period. It is on each of you that we rely to bring to our Muslim brothers a sense of our abiding concern for their welfare. Through the institution of the Sharia, we commit ourselves to the preservation of their way of life, and with all the other development projects we wish to share with them the benefits of our unitary nation. [End Marcos recording]

The Sharia training program will last 2 months, after which those who complete it will be sent to administer the Islamic code in Mindanao. Two million Muslims in the two autonomous regions of the south will be covered by the Islamic courts.

MARCOS ORDERS GOVERNMENT CORPORATIONS TO RETRENCH

Manila BULLETIN TODAY in English 6 Mar 82 pp 1, 8

[Article by Willie Ng]

[Text]

President Marcos, adopting a retrenchment program, ordered yesterday all government firms to stop remodelling their offices and to suspend repair of buildings.

He issued Letter of Instructions No. 1198 directing all government corporations to submit detailed expenditures of their funds for the construction, repair, improvement, rehabilitation and modernization of their buildings and offices one month from receipt of the LOI.

The LOI also stopped the acquisition of furniture and the purchase of equipment.

The President said expenditures under the new LOI incurred without public bidding as provided by law should be explained in writing if they are presented.

On the other hand, the President issued Letter of Implementation No. 139 to speed up implementation of capital outlay projects of the autonomous regions in Mindanao (Regions IX and XII) to spur their development.

He gave impetus to the implementation of capital outlay projects in Regions IX and XII by delineating the powers and responsibilities of the Speaker of the Sangguniang Pampook (regional assembly) and the Chairman of the Lupong Tagapagpaganap (regional executive council).

LOI 139 provides guidelines for more effective implementation of Presidential Decree No. 1618, which implemented the organization of the Sangguniang Pampook and the Lupong Tagapagpaganap ng Pook in the two autonomous regions.

Capital outlays refer to appropriations for the purchase of goods and services, the benefits of which extend beyond the fiscal year and which add to the assets of government.

Region IX comprises the provinces of Basilan, Sulu, Tawi-Tawi, Zamboanga del Norte, including the cities of Dipolog and Dapitan, and Zamboanga del Sur, including the cities of Pagadian and Zamboanga.

Region XII comprises the provinces of Lanao del Norte, including the city of Iligan, Lanao del Sur, including the city of Marawi, Maguindanao, including the city of Cotabato, North Cotabato and Sultan Kudarat.

Within the framework of the national sovereignty and territorial integrity of the Republic of the Philippines and the Constitution, internal autonomy shall be established in the autonomous regions with legislative and executive machinery to exercise the powers and responsibilities specified in accordance with the provisions of the Constitution and the laws of the Republic.

The top officials of Region IX: Speaker Hussein Ututalum and Chairman Ulbert Ulama Tugung;

Region XII top officials: Speaker Abul Khayr Alonto and Chairman Simeon Datumanong.

In the Letter of Implementation, the President directed that:

1. The speaker of the Sangguniang Pampook and the chairman ot the Lupong Tagapagpaganap ng Pook shall be jointly responsible for the implementation of all capital outlay projects undertaken by the Regional Autonomous Government.

2. In order that they may effectively implement and monitor the disbursements of the aforementioned capital outlay projects, the Speaker and the chairman shall jointly act on, sign and approve all vouchers, checks, treasury warrants and other papers relating to capital outlay disbursements of the Rgional Autonomous Government.

Accounting and auditing guidelines would be prepared by the director-general of the office of budget and management in close coordination with the chairman of the commission on audit.

MARCOS DISCUSSES PHILIPPINE COMMUNIST PARTY

Manila PHILIPPINES DAILY EXPRESS in English 7 Mar 82 pp 1, 2

[Text]

PRESIDENT MARCOS said yesterday that while the Communist Party of the Philippines is no longer outlawed, it would probably take some time before it can develop into a political force.

The President told newsmen covering him that like any other group seeking political power through peaceful political means, the CPP or whatever it may be called, will have to go through the routine of organizing, participating in nationwide elections, and capturing a certain percentage of the votes before it could be accredited as a political party.

The Chief Executive pointed out that under existing laws, a political grouping will have to get at least ten percent of the votes in a national election before it could be accredited by the Commission on Elections.

He said that unless the law is amended, the CPP and all other groups will have to satisfy these basic requirements.

And there is no indication right now that the party in power, the Kilusang Bagong Lipunan, is ready to amend the law, he added.

* * *

THE PRESIDENT made the statement when asked what would be the immediate effect of his earlier pronouncement that there was no legal impediment to the organization of the Communist Party here.

In a speech before the Mayors League of the Philippines last February 28, the President had categorically stated that citizens can freely organize and form themselves into political parties and contest political leadership via the electoral process.

There is no legal impediment to the establishment of a communist party which will seek political power by parliamentary or democratic means," the President told the mayors.

* * *

IN THE same interview, the President also said the CPP leaders may have to revise their party's charter or platform and renounce their previously avowed objective of seeking the attainment of political power through the violent overthrow of the government if they wanted to be recognized as a political party.

The President said if the same charter which had been the basis for the CPP's being outlawed under the Anti-Subversion Law of 1957 continues to exist, then the party will continue to be considered illegal.

"Whether it is communist or not, if it utilizes violence or subversion or any means of deceit to overthrow and undermine the government, then it is illegal," the President said.

He stressed that the decision to amend the Anti-Subversion Law and thus enable groups like the Communist Party to organize legally, did not really reflect a change in policy.

"It was merely an alteration of a legal situation where the old

Congress had declared that the Communist Party of the Philippines was per se illegal because the Communist Party had declared that its purpose was to overthrow the government by violence in its charter, in its constitution and by-laws," he said.

* * *

THE Anti-Subversion Law of 1957 was aemended by Presidential Decree No. III issued in 1976. The decree contains no specific provision outlawing the Communist Party of the Philippines by name. Instead, it generally bans associations or parties which aim to overthrow the government by force.

The President said he decided to amend the Anti-Subversion law after the country normalized diplomatic relations with the two leading communist countries, the People's Republic of China in 1975 and the Soviet Union in 1976.

According to the President, the amendment eliminated the term "Communist Party" as being outlawed. In its place, a provision was adopted outlawing any organization that seeks to overthrow the government by force, violence, or subversion.

Under this provision, the president pointed out that if the present Communist Party were to seek recognition as a political party, it must first satisfy the question: What are the provisions of its constitutions, its charter?

"If the same charter is valid and is being utilized, then it is illegal because it seeks to overthrow the government by force," the President said

COCONUT, CACAO INTERCROPPING URGED. COCONUT EXPORT FIGURES GIVEN

Manila PHILIPPINES DAILY EXPRESS in English 9 Mar 82 p 8

[Text] A DRAMATIC increase in coconut farmer income can be achieved by intercropping coconuts with cacao trees according to a report made public recently by Rafael P. Creencia of the Department of Horticulture UP Los Banos.

According to Creencia, intercropping is an old and widely distributed practice which has long been advocated by agricultural economists who look to this approach as an effective approach of increasing the productivity of coconut lands and of increasing the income of coconut farmers.

At present the practice of intercropping is scattered in patches of localized communities and comprises about 50 percent of the total area planted to coconut.

The practice, Creencia said, permits crop diversification so that the risk of the farmer is spread over more crops eliminating the dependence of income on a single crop.

INTERCROPPING with perennial plants has not had any adverse effects on the yields and growth of coconuts. As a matter of fact, Creencia said, the practice actually augments instead of depresses the yield of the coconuts.

Creencia noted that in Malaysia, coconut farmers were able to increase their coconut yield per hectare by as much as 30 percent after they had intercropped with cacao. Similar increases were also observed in Davao and in Papua New Guinea.

Two years after coconut plantations in Davao were intercropped with cacao trees, the yield per tree per hectare increased from an average of 60 nuts to 90 nuts. While in Papua, New Guinea, the copra yield per hectare increased by an average of 25 percent

RP Coconut Exports Hit 1.9-M Tons

THE PHILIPPINES exported 1.92 million tons of copra and coconut products in 1981 against 1.71 million in 1980, statistics from the United Coconut Association of the Philippines (UCAP) showed.

Of the 106,385 tons of copra exports last year, 99,640 tons went to Europe, 5,250 tons to the Soviet Union while 1,495 tons were exported to other countries.

Coconut oil exports totalled 1.05 million tons of which 461,210 tons were exported to Europe, 367,528 tons to the US, 52,240 tons to the Soviet Union, 24,892 tons to China, 36,359 tons to India and 104,394 tons to other countries.

POWER GENERATION SECTOR REDUCES OIL DEPENDENCE

Manila BULLETIN TODAY in English 9 Mar 82 p 15

[Text] The Philippines has reduced the use of imported oil in the generation of electric power.

The harnessing of alternative energy sources such as coal, hydro and geothermal for power generation has brought down the share of oil-based power plants to 65 per cent in 1980 from 77 per cent in 1977. The power sector hopes to pull this farther down to 30 per cent in 1985 and 18 per cent in 1990.

Energy Minister Geronimo Z. Velasco said the gains in the power sector are credited to the cooperative efforts given by the people to industry authorities in accelerating the 10-year energy program to five years.

The program's primary goal is to achieve 50 per cent energy self-reliance by 1985.

This is also underscored in the revised five-year development plant of the country making the energy sector as the conerstone of the country's industrial and agricultural development programs.

The power sector, being the largest user of fuel oil, has likewise hastened its program not only in the development of alternative power sources but also in the construction of power grids to distribute electric power to all parts of the country.

The National Power Corporation (NPC) which is assigned indirectly to bring electricity to every residential, commercial and industrial households, has programmed to complete the power grids in seven major islands (Luzon, Mindanao, Visayas, Cebu, Bohol, Negros and Panay) by the end of 1985.

The Luzon grid will generate power from hydro, geothermal, nuclear and coal plants, some of which are now under construction and the others to start construction in the next four years.

About eight generating plants will be constructed to give a total of 1,910 megawatts.

The Mindanao grid, on the other hand, will largely generate its power from hydro energy specifically from the Agus river complex.

In addition to the two existing hydro power plants (Agus 2 and 6) which are supplying the Mindanao some 400 megawatts, Agus one, four, five and seven will start operating between 1983 and 1985. The operation of the Agus plants will give 339 megawatts additional power to the Mindanao grid.

However, in anticipation of the establishment of two big industrial plants in Mindanao — an aluminum and a steel plants — NPC has programmed the construction of Pulangi IV, another hydro plant and four coal thermal plants, giving additional of 780 megawatts power.

The Visayas grid will get power from thermal diesel and geothermal plants of about 829 megawatts.

OIL AGREEMENT WITH INDONESIA TO BE RENEWED

Manila PHILIPPINES DAILY EXPRESS in English 5 Mar 82 p 11

[Text] **THE** Philippines will renew today an agreement with Indonesia to import an undisclosed amount of Indonesian crude oil.

Energy Minister Geronimo Velasco, who is now in Jakarta, is also expected to renew with the Indonesian state-owned oil firm, Pertamina, an agreement first signed in March 1980 under which the Philippines refined 20,000 barrels a day of Indonesian crude for re-export to Indonesia.

The refined crude oil was distributed by Indonesia in its eastern islands.

Last year, the Philippines imported over 5 million barrels of curde from Indonesia under a government-to-government agreement.

MEANTIME, Mining and Energy Minister Subroto said Wednesday that Indonesia will maintain its oil price level in accordance with last year's Organization of Petroleum Exporting countries' unified price decision set at the Abu Dhabi meeting with a daily oil production of about 1.6 million.

OPEC has authorized its members to sell their products between $34 to $37 a barrel depending on the quality and distance to buyer countries.

Subroto, who is former president of OPEC, told news reporters that Indonesia will always obey OPEC's decision concerning the oil price.

OTHER developments:

• Bahrain, – OPEC president Mana said Al-oteiba has told the 13 member states that, pending talks this month, they should not join a round of price-cutting by non-OPEC producers led by Britain, which slashed North Sea oil prices from $35 to $31 a barrel on Tuesday. OPEC faces an oil glut of unprecedented scale, western oil industry executives in London said. They added that, to meet the situation, Saudi Arabia's huge oil output will have to decline sharply and OPEC will probably have to made a tactical retreat by lowering some, if not all, its prices.

• London – Britain's decision to slash the price of its North Sea oil by $4 to $31 a barrel could trigger a price-cutting war in the Organization of Oil Exporting Countries, energy specialists speculated Wednesday. London's move Tuesday means Britains has for the first time taken the lead in fixing world oil prices. The British proposed that the price cut, bigger than expected, be frozen until June in an apparent bid to bring a measure of stability to the increasingly erratic world oil market.

• Cairo – Egypt has cut its oil price by $1, its second such reduction in the face of the current world clut this year, a spokesman of the Egyptian General Petroleum Corp. said.

He said the price of a barrel of Egyptian Suez blend had been reduced on March 1 from $33 to $32. An earlier one-dollar cut was made on February 1.

BRIEFS

SUBVERSION IN TRADE UNIONS--Labor Minister Blas Ople has warned trade unions against subverting the government by using the greater freedoms they now enjoy. In a speech to the businessmen's conference, Minister Ople noted that freedoms enjoyed by local unions are considered [word indistinct] in neighboring countries. He said the new strike law had established a framework of freedom and responsibility in labor relations. But Minister Ople warned against trade unions who would abuse the great amount of freedom they now enjoy. The labor minister declared however that the government guarantees to all Filipinos the exercise of their freedom, regardless of ideological persuasion. [Text] [HK140107 Manila Domestic Service in English 2300 GMT 13 Mar 82]

MILITARY PRESENCE IN STRIKES--Defense Minister Juan Ponce Enrile forged yesterday an agreement with labor leaders regarding the presence of military and police personnel in strike-bound companies. The agreement provides that peacekeeping details will be established in strike-bound firms when so ordered by the courts or at the request of the Ministry of Labor. However, they will be stationed outside a 50 meter range from the picket line, and shall be there only to maintain peace and order. [Text] [HK120033 Manila Far East Broadcasting Company in English 2330 GMT 11 Mar 82]

FOREIGN AGENT LIST--The Labor Ministry will submit today to the Defense Ministry the list of foreign communist agents who slipped into the country last year and held secret meetings with leftist Filipino labor leaders. Deputy Labor Minister (Arturo Lauriel) said the list includes Indians and Vietnamese. He said the list of local labor leaders who met the foreign communist agents will also be submitted to the Ministry of Defense. He did not reveal details of the secret talks. However, (Lauriel) said, the Labor Ministry is exerting efforts to ferret out communists and subversives from the ranks of labor unions in the country. [Text] [HK160125 Manila Far East Broadcasting Company in English 2330 GMT 15 Mar 82]

EXTRADITION TREATY WITH JAPAN--Minister of Justice Ricardo Puno proposed yesterday an extradition treaty between the Philippines and Japan. He made the proposal at the United Nations Asia and Far East Institute in Tokyo, as part of a regional approach to the suppression of criminality. Puno explained that negotiations for an extradition treaty between Japan and the Philippines are timely, because both countries belong to the same regional community, and criminals these days recognize no geographical boundaries. He also said the

treaty will complement each nation's enforcement of criminal laws. The Philippines recently signed an extradition treaty with the United States. [Text] [HK050115 Manila Far East Broadcasting Company in English 2330 GMT 4 Mar 82]

MARCOS EXPROPRIATES ISABELA HACIENDA--President Marcos yesterday ordered the expropriation of Hacienda (Tabacalera) in Isabela for distribution to the thousands of tenants there. The president ordered the distribution and resale of the estate to some 5,000 tenant occupants and other farmers in order to resolve the social unrest fomented by subversive agitators in the area. Speaking in Ilocano, the president advised the farmers not to permit the communist ideology to mislead them. He mentioned some priests and clergy who try to foment unrest among the people by preaching that the government is deaf to their problems. [Excerpts] [HK050111 Manila Far East Broadcasting Company in English 2330 GMT 4 Mar 82]

NORWEGIAN LOAN--A $5 million loan agreement was concluded today between Norway and the Philippines. Under the agreement, a 5,000 kW mini hydroelectric plant will be put up in the province of Bohol. The power-generating plant is expected to be operational by 1984 to supplement two wood-burning plants of 3,000 kWs each. [OW041243 Quezon City RPN Television Network in English 1100 GMT 4 Mar 82]

MINDANAO'S HAMLET PROGRAM ABOLISHED--The hamlet program, carried out by the military in Mindanao, is ordered scrapped. Defense Minister Juan Ponce Enrile gave the order today to AFP [Armed Forces of the Philippines] Chief General (Pubiamber) and PCINP [as heard] Chief Lt Gen (Fidel Ramos). [Excerpt] [OW021213 Quezon City RPN Television Network in English 1100 GMT 2 Mar 82]

FOREIGN INVESTMENT--Foreign investment in the Philippines has scored a major breakthrogh in the past 2 years. President Marcos said the government's inventive package has brought in $25 million in annual investment over the period, compared to only $63 million a year in the previous 10 years. Addressing members of the Stanford Research INstitute, the president said foreign investments will continue to be a vital part in the nation's growth, as long as they are in tune with the country's priorities and interests. At the same time the president urged the advanced countries to ease protectionist trade policies. [HK260537 Manila Domestic Service in English 2300 GMT 25 Feb 82 HK]

COMMUNIST PLOT FOILED--Armed forces Chief of Staff General Fabian Ver said a Communist Party attempt to create chaos in metro Manila this year was foiled with the capture of 3 top-ranking communist leaders and 22 others. "One of the arrested leaders, Noel Etabat has confessed to military authorities that Communist Party leaders have been meeting in metro Manila to build up an intense communications network in preparation for a full-scale offensive against the government. This confirmed an earlier military report indicating a dissident plan to plot a war against the military sometime in May this year. In a talk with newsmen on their way to Cotabato City, General Ver said Etabat also revealed a plan of the Communist Plan of the Philippines to firm up links between the Central Committee with field commanders in the Visayas region." [Summary from poor reception] [HK070104 Manila Domestic Service in English 2300 GMT 6 Mar 82]

LEBANESE, SOMALI ENVOYS--President Marcos this morning received the letters of credence of the new ambassadors of Lebanon and Somalia to the Philippines. The president received their credentials at the ceremonial hall of Malacanang, witnessed by Foreign Minister Carlos Romulo and other officials. In presenting his credentials, the Lebanese Ambassador Joseph Naffa' noted the progress made by the Philippines under the leadership of President Marcos. He pledged to continue further the task of expanding bilateral relations. In response, President Marcos expressed his appreciation for these observations and noted the improving relations between the Philippines and Lebanon. He assured the ambassador of his assistance for the successful implementation of his diplomatic mission in the Philippines. Later, President Marcos received the credentials of the ambassador of Somalia, Sharif Salah Mohamed Ali. The Somali ambassador noted the Philippines' key role in the Association of Southeast Asian Nations and in maintaining peace in the region. In response, President Marcos took note of the improving relations between Somalia and the Philippines, especially those concerning economic and cultural relations. [Text] [HK080448 Manila Domestic Service in English 0400 GMT 8 Mar 82]

MUSLIM AREAS IN MINDANAO--A large group of Filipino Muslim professionals in Saudi Arabia has overwhelmingly supported the Philippine government's policy of reconciliation and development for Muslim areas in Mindanao. The group also renounced any semblance of support for Nur Misauri, the self-styled leader of the Moro National Liberation Front, his minions, and the MNLF objectives. The endorsement by the group was made in a manifesto presented to Philippine Ambassador to Saudi Arabia Benjamin Romualdez. The group said, secession is not the solution to the Mindanao problem, stressing further fighting will only increase the suffering of Filipino Muslims. The manifesto declared trust and confidence in the efforts of President Marcos to achieve peace and progress in the southern parts of the Philippines. [Text] [HK080031 Manila Far East Broadcasting Company in English 2330 GMT 7 Mar 82]

TECHNICAL AID PACT WITH CANADA--The Philippines and Canada today signed an agreement on a technical assistance project in the Cagayan Valley. Signing for the Philippine government was Prime Minister Cesar Virata while the Canadian side was represented by Ambassador Edward Bobinsky. Under the agreement, the Canadian International Development Agency will contribute half a million dollars for technical assistance in the form of Canadian experts and awards for practical and academic training of Filipino personnel in Canada. The project aims to improve the standard of living among small-scale farmers who are members of Cagayan Valley cooperatives established under phase one of the Cagayan Valley cooperatives development program. [Text] [OW101211 Quezon City RPN Television Network in English 1100 GMT 10 Mar 82]

AGRICULTURAL PRICES--The president and the cabinet have approved increases in the price of sugar to offset production costs. The increases take effect immediately. As approved, refined sugar will be selling 85 centavos higher per kilo, and brown sugar will sell 80 centavos higher per kilo. The price hike in sugar was the first in 3 years. The price adjustment will enable planters to meet rising production costs and implement overdue wage settlements for sugar workers. The increases were supported by the Philippine Sugar Commission, the National Sugar Trade Corporation and the Labor Ministry. In bulk,

sugar will now be sold at 165 pesos per picul, up by 55 pesos from the old price. The revised selling prices are retroactive to February 1. In another move, the president and the cabinet approved a program for an increase in overall sugar production, to maximize milling capacities and production efficiency. Meantime the president and the National Economic Development Authority decided to defer action until May on the proposal to increase the prices of rice and pillai. Instead they decided to concentrate on long-range measures to cut down production costs of rice. These include the use of substitutes to shave fertilizer costs by as much as 15 percent. ECONOMIC SURVEY FOR 1981 STATISTICS REVEALED

BK011616 Singapore Domestic Service in English 1100 GMT 1 Mar 82

[Text] The economic survey of Singapore for last year says the republic remained one of the few bright growth areas in the world together with other noncommunist countries in the West Pacific basin. Its gross domestic product [GDP] grew by 9.9 percent. It was a diversified economic base and export market that had again helped Singapore attain this high growth.

The survey, published by the Ministry of Trade and Industry, says the leading growth factor last year was again financial and business services with a contribution of 27 percent to the overall GDP growth. The manufacturing sector remained the second largest contributor with 22 percent, followed by transport and communications with 21 percent. The trade sector contributed 13 percent to the GDP growth and construction, 9 percent.

In terms of growth rate, however, most of the sectors did not do as well as in the previous year. Construction was the only sector whose growth rate was higher than a year before. It grew by 17 percent.

The financial and business services sector was still the fastest growing with an 18 percent growth rate. The survey attributed the high growth mainly to strong demand for finance and banking services.

Singapore's external trade achieved an 8 percent growth rate. The recovery of the petroleum industry was the main reason for the growth. Petroleum had actually accounted for one-third of the republic's total trade.

Turning to economic restructuring, the survey said although the final result of the program could only be seen in the long run, there were already encouraging signs of industries responding well to it. Overall productivity increased more than two-fold over 1979 to 5.4 percent last year. This, the survey said, was due to the conscious effort made by industrialists and businessmen to invest in capital equipment and machinery. This was more visible in the manufacturing sector whose productivity grew by 9.5 percent last year, almost twice that of the previous year.

The survey noted that the republic continued to be a very attractive place for foreign investment. As in June last year, total foreign investment in fixed assets in the manufacturing industries reached 8 billion dollars, an increase

of 16 percent compared with the year before. Local investors committed a record high of 610 million dollars during the year. This was almost three times that of 1980 and five times that of 1979, when the restructuring program was introduced. The share of local commitment also rose from 14 percent in 1980 to 31 percent last year.

Where inflation was concerned, it was found to be easing slightly. Consumer prices grew more slowly by 8.2 percent as against 8.5 in 1980. The survey expects prices this year to rise even more slowly in view of an unexpected decline in world inflation, the weakening oil prices and falling prices of food commodities, such as rice and sugar.

The survey also made a projection of the world performance in 1982. It said the immediate outlook for the OECD countries was for a deepening recession with the U.S. economy expected to recover only around the middle of the year. Singapore could hope to feel the beneficial impact of this recovery towards the end of the year. As for the Singapore economy itself, it should grow more slowly than in 1981.

SPLO CASE DETAINEES RELEASED AFTER REPENTING

BK101348 Singapore Domestic Service in English 1100 GMT 8 Feb 82

[Text] Five persons, who were implicated by the core members of a clandestine group, the Singapore People's Liberation Organization [SPLO], in their conspiracy to overthrow the government through the use of arms and other acts of violence, were released from detention today.

A Ministry of Home Affairs statement says the five, who have given voluntary handwritten statements admitting their involvement in the revolutionary group, have also expressed repentence. They now realize that they have been misled by the four core members to become party to a plan to turn the country into turmoil. Since they are not the prime movers in the group and have generally repented, the government released them today.

The four core members--Zainulabiddin Bin Mohamad Shah, Hashim Bin Mukayat, Abdul Rahim Bin Abdul Rahman, Sulaiman Bin Mohamad Shariff and a fifth person, Hamid Bin Hussin who printed subversive pamphlets for the group--are now serving jail terms arranging from 2 to 4 years after they pleaded guilty last month to charges under the internal security act.

They had planned to create communal unrest by distributing subversive pamphlets and to perpetuate acts of arson as well as planting of bombs in public places. The group had also intended to solicit aid from foreign powers.

Particulars of the five released today and the extent of their involvement were given by the ministry.

Mohamad Isa Bin Abdul Aziz is a 24-year old (?HDB) car-park supervisor and a member of the Workers Party. He was used by Hashim Mukayat to recruit Malay youth from the Jalan Eunos and Kaki Bukit areas, ostensibly for the Workers Party but who would later be used by the group for a revolution.

Mohamed Fossil Bin Mohamed Yahiya is a 38-year old Indian Muslim. He is an (?ex-SDF) captain and is now a [word indistinct]. In October last year, he was approached by Zainulabiddin to form a clandestine group to distribute anonymous pamphlets to discredit the government. He was also asked by Zainulabiddin to solicit funds for the group from the Russian embassy in Singapore and the Libyan Embassy in Kuala Lumpur.

Fossil, together with Zainulabiddin and Sulaiman, had prepared and circulated copies of three secret, anonymous letters between 1978 and 1980. These letters accused the government of suppressing the Malays and the Islam.

Othman Bin Abdullah, age 47, is a proprietor of a small firm. From 1966-1971, he was actively involved in Pertubohan Kebangsaan Melayu Singapura [Singapore Malay National Organization], PKMS. He was a Workers Party candidate for the 1972 and 1976 general election. He is currently a Workers Party cadre member. He attended a meeting in October last year, in which Zainulabiddin first mooted the idea of forming a clandestine group to wage a revolution. He agreed to recruit members for the group.

Air Ali Bin Mohamad, 34 years and an Indian Muslim, is a wharf clerk. He was involved in Persatuan Melayu Singpur [Singapore Malayan Association] and United National Front, the UNF. He was a UNF candidate in the 1972 general election. He is currently a Workers Party Central Executive Committee member. He informed the meeting of last October that he knew a silat [Malayan self-defense art] instructor who could help them in the revolution. He also suggested that the group should try to penetrate the youth section of Jamiyah, the Muslim Missionary Society of Singapore, and make use of its method to achieve the objective of their struggle.

The fifth person released today, Abdullah Bin Salam, age 33, is also an immigrant. He is a free-lance canvasser and a Central Executive Committee member of PKMS. He agreed to help in the distribution of subversive pamphlets when asked by Sulaiman to do so.

The home affairs statement, which announced the release of the five men, reiterated that the government will not hesitate to act resolutely against any individual or group who poses a security threat to the country.

BRIEFS

HUNGARIAN, ROMANIAN ENVOYS--Singapore, 5 Mar (AFP)--The Hungarian and Romanian ambassadors to Singapore today presented their credentials to President Devan Nair. The Romanian ambassador, Ioan Cotot, who is also his country's ambassador to Indonesia, resides in Jakarta. The Hungarian ambassador, Istvan Debreczeni, is also accredited to Indonesia and resides in Jakarta. [Text] [BK080553 Hong Kong AFP in English 1126 GMT 5 Mar 82 BK]

BUDGET ESTIMATES--There will be no new taxes or rising of the rates of existing taxes for the next financial year. Presenting his budget to parliament today, the minister for trade and industry, Dr Tony Tan, announced instead four concessions for individual taxpayers covering (CUB) bills and the full pension and provident fund, aged dependent relief and estate duty. The budget estimates for the next financial year provide for a total expenditure of $12,440 million. Of this amount, $7,156 million or nearly 60 percent is for education and manpower training, infrastructure, industrial and commercial development as well as public housing. The recurrent expenditure of government programs will total $5,591 million. This is 22 percent higher than that for the financial year 1981 and, according to Dr Tan, should be adequate to cover rising costs as well as expansion of the central functions, such as, education and manpower training. Dr Tan told the house that the objectives of the budget are to increase the supply of skilled, technical and professional manpower needed to facilitate the restructuring and upgrading to the economy, set up infrastructure, industrial and commercial development so as to sustain economic growth and promote economic restructuring and accelerate the public housing construction program to meet the rising demands for housing units. FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

DETAILS OF 12 FEB CABINET CHANGES REPORTED

Portfolios Designated

Dacca THE BANGLADESH OBSERVER in English 13 Feb 82 p 1

[Text] Ten Ministers and Eight Ministers of State werw sworn in at Bangobhavan on Friday at a simple ceremony. President Sattar administered the oath of office to the Ministers and State Ministers at the Credential Room of the Bangobhavan.

The President appointed the 18-member Council of Ministers with Shah Azizur Rahman as the Prime Minister. The other Ministers are: Professor M. Shamsul Huq, Mr. Abdul Halim Choudhury, Mr. Shamsul Huda Choudhury, Dr. Fasihuddin Mahtab, Prof. M. A. Matin, Mr. A. K. M. Mayeedul Islam, Mr. T. H. Khan, Professor Yusuf Ali and Khondokar Abdul Hamid.

The State Ministers are: Mr. Amirul Islam Kalam, Mr. Sunil Gupta, Choudhury Kamal Ibne Yusuf, Mr. A. K. Faizul Huq, Mr. Oli Ahmed, Mrs. Kamrunnahar Zafar, Syed Manzoor Hussain and Mr. Awng Shwe Prue Choudhury.

Khondokar Abdul Hamid and Mr. Awng Shwe Prue Choudhury were out of the capital and they were sworn in the afternoon at a simple ceremony at Bangobhavan.

Deputy Prime Minister Mr. Jamaluddin Ahmed, Ministers Mr. Abul Hasnat, Mr. Abul Kashem, Mr. M. Saifur Rahman, Mr. Abdur Rahman, Mr. Mustafizur Rahman, Major General (Rtd) Majedul Huq, Mr. I. K. Siddiqui, Kazi Anwarul Huq, Mr. Abdur Rahman Biswas, Mr. Abdul Momen Khan, Mr. Emran Ali Sarker, Mr. Abdul Alim, Mr. Reazuddin Ahmed have been dropped. Among the State Ministers Maulana Abdul Mannan, Mr. Abdul Baten, Mr. Abdul Mannan Sikder, Lt. Col. (Rtd) Jafar Imam, Dr. Aftabuzzaman, Syed Mahibul Hasan, Begum Taslima Abed, Mr. Nur Mohammed Khan and Mr. Iqbal Hussain have been dropped.

President Justice Sattar dissolved the 42-member Council of Ministers in a move to free the administration from corruption and inertness on Thursday night.

BSS adds: Khondokar Abdul Hamid, Mr. A. K. Faizul Huq and Mr. Oli Ahmed, all BNP Members of the Parliament were the three new inductions in the new Council of Ministers.

Mrs. Kamrunnahar Zafar and Syed Manzoor Hossain who were Deputy Ministers in the previous Ministry were promoted to the rank of State Ministers in the new one.

The new Council of Ministers so far has no Deputy Ministers.

All the new Ministers excepting three--Prof. M. Shamsul Huq, Prof. Yusuf Ali and Dr. Fasihuddin Mahtab--are Members of Parliament.

The swearing-in ceremony was attended by Vice-President Dr. M. N. Huda, Chief of the Army Staff Lt. Gen H. M. Ershad, Chief of the Naval Staff, Rear Admiral M. A. Khan and Chief of the Air Staff, Air Vice Marshal Sultan Mahmud.

New Health, Welfare Minister Hamid

Dacca THE BANGLADESH OBSERVER in English 13 Feb 82 p 3

[Text] Khandakar Abul Hamid was born at Sherpur town in Jamalpur district on March 1, 1981.

Obtaining graduation from Calcutta University in 1940, Khandakar Abul Hamid took up journalism as profession in Calcutta. He was leader writer and editor of different dailies, including daily Ittehad for 34 years. He was Chairman of the Editorial Board of the now-defunct daily Millat from 1953 to 1956 and of the daily Azad in 1969. He was also connected with 'Weekly Chashi' of Mymensingh and started a Bengali weekly "Bangladesh" in London in 1976.

In 1977, he was awarded the 'Ekushey Padak' for his outstanding contribution to journalism.

Khandakar Abul Hamid worked as Chief Script Writer in the then Radio Pakistan, Dacca for 5 years. He is member of the Management Board of Press Institute of Bangladesh and Press Council.

Khandakar Abul Hamid joined politics in 1953 and was elected member of the then Provincial Assembly in 1954 and again in 1965. He was appointed Political Secretary to the Chief Minister in 1955 but did not join. He was also Secretary of the parliamentary party in the then East Pakistan Assembly from 1956 to 1958.

In 1954, he was detained as a security prisoner under 92-A of the Emergency Rule during the Government of General Iskander Mirza.

Khandakar Hamid was a member of Pakistan delegation to the U.N. General Assembly in 1968. He visited Britain and Scotland in 1976 on the invitation of British government.

He was elected a member of the Jatiya Sangsad from Sherpur in the general elections in February 1979.

Prior to his first appointment as Minister, Khandakar Abul Hamid was the senior leader writer and columnist of daily Ittefaq. He used to write the popular column "Manchey-Nepathye" under pseudo name "Spastabhashi". He also wrote post editorials in daily Azad under the pen-name "Mard-e Momin".

Khandakar Hamid represented Bangladesh as one member delegation Asia--Pacific national cultural integration conference on Manila in February-March 1981.

He is Chairman of Board of Directors of the Bangladesh Krishi Bank. He is also chairman of the Parliament's Standing Committee on Public Undertakings in the public sector.

Khandakar Abul Hamid was appointed Minister for Youth Development in April 1979. He resigned in April 1980.

In February 1982 he was appointed Minister for Health and Population Control, and Labour, Manpower and Social Welfare.

Prior to his joining the Council of Ministers, Khandakar Abul Hamid had returned to journalism. He joined Dainik Desh as Chairman of its editorial Board and wrote post-editorial column under pseudo name "Spastabhashir Kalam".

He performed Hajj in 1979.

He is married and has one son and five daughters.

New Minister of State

Dacca THE BANGLADESH OBSERVER in English 13 Feb 82 p 3

[Text] Born in 1939 in the 'Kutub' family of Chandanaish, Chittagong, Mr Oli Ahmed obtained BA degree from National College, Karachi.

He joined erstwhile Pakistan Airforce in 1959. While studying Law he joined the Pakistan Military Academy and was Commissioned in 1965 when he was posted to 4th battalion of East Bengal Regiment.

He was appointed first Quarter Master of the Eighth East Bengal Regiment in Sholashahar Chittagong. On 25 March 1971, he took up arms against Pakistan under the leadership of Shahid President Ziaur Rahman. Commonwealth Parliamentary Association (Bangladesh) a member of Sports Writers Association, Mohammedan Sporting Club, Brothers Union and a member of Bangladesh Photographic Society.

He visited many countries in Europe Asis and Africa.

He is married with four children.

CSO: 4220/7871

WEEKLY REPORTS FOOD SITUATION 'CRITICAL'

Dacca HOLIDAY in English 14 Feb 82 pp 1, 8

[Text] Despite the government's continuous efforts to procure foodgrains from the local sources and from abroad and to distribute them through ration and open-sale centers the overall food situation of the country remains to be critical.

The rural areas of the country, particularly in the northern districts, are the worst affected. The prices of most of the essentials including rice and wheat have gone up substantially and is beyond the purchasing capacity of the middle and the lower middle class people.

As a result of this there is a continuous influx of rural destitutes into the cities. They have been taking shelter in the slum areas and sometimes in the railway and water transport terminals of the town.

Dacca Municipal Corporation has started distributing rice from 26 open-sale centers in the city at 5.50 taka per seer. The centres are being managed and supervised by the local commissioners.

It has been decided that about 100 maunds of rice would be distributed through each of the open-sale centers everyday. But, it is gathered that none of the dealers are distributing more than 40 maunds of rice per day and selling the rest in the open market at a comperatively higher price.

This correspondent found at Mirpur market that the rice of the open-sale centers were selling at 7.25 taka each seer. When asked, the salesman said he procured those rice from the ration card holders and through 'some other processes' at the rate of 6.75 taka to 7 taka per seer.

Long queues of people in the open-sale centers have become a very common feature in the city. In some of the open-sale centers it was alleged that the distributors gave only one seer of rice against each ration card instead of two seers on the plea that they had shortage of rice in their stocks.

The open-sale rationing system has so far been confined in the city areas and the people in the rural areas continue to suffer and have been pouring into the cities. Some of such families from Faridpur, Sylhet and Mymensingh have taken shelter near the railway station of Kamalapur.

When contacted Awal Ali of Moksedpur in the district of Faridpur who has taken shelter near the Shahjahanpur railway colony adjacent to the Kamalapur railway station maintained that he had come to Dacca some three days ago in search of food and livelihood.

Hurmat Banu, head of a four-member family including three minors said that at least five families had left their village home at Guingargaon at Sylhet since they were unable to cope with the present critical situation there.

Nalin Sen of Ajmiriganj came to Dacca some one week ago in search of a livelihood because he was unable to face the near famine situation prevailing in his area. He said that due to draught and the attacks of pests about 80 per cent of the aman crops in his locality were damaged. He had no way but to migrate himself to the city in search of some food.

Meanwhile different political leaders of the opposition and also of the government party have issued statements narrating the critical food situation in the country.

Abdus Samad Azad, a member of the Presidium of Awami League (H) after his recent visit to Sylhet stated that the haor areas of Selhet and Mymensingh were the most badly-affected areas due to shortage of food and increasing high price of essential commodities. He urged the relevant authority to declare the sub-divisions of Sunamganj, Kishoreganj and Habiganj as distressed area and to send there food in an emergency basis.

Mizanur Rahman, President of Awami League (Mizan) said that the people at villages were affected and were being deprived of having any rationing facilities. He said that purchasing capacity of the village-dwellers had gone down and urged the government to take effective measures.

Mahmudur Rahman Manna, former Vice-President of DUCSU in a speech at Sylhet demanded a white paper on the food situation in the country.

Major (Retired) Jalil, President of JSD in one of his speech asked the government to declare the country as a distressed one and proposed to form a famine prevention committee to face the prevailing food crisis of the country.

Meanwhile, United Peoples Party (UPP) has decided to hold a hunger procession at Dacca on February 18 and to organize public meetings and rallies on the same day throughout the country.

CSO: 4220/7873

PRIME MINISTER CLAIMS FOOD SITUATION SATISFACTORY

Dacca THE BANGLADESH TIMES in English 24 Feb 82 pp 1, 8

[Text] Prime Minister Shah Azizur Rahman told the Jatiya Sangsad (Parliament) on Tuesday that the food situation in the country was satisfactory.

He categorically said that there was no food crisis in the country nor Insha Allah would there be any, so long as the present government would remain in power.

The Prime Minister, who is also the leader of the House, was replying to the Leader of the Opposition, Mr. Asaduzzaman Khan who blamed the Government for what he called "present food crisis" while participating in a debate on the adjournment motion moved by JSD leader Shahjahan Siraj.

Besides the mover of the adjournment motion and the Food Minister Mr. Abdul Halim Chowdhury, nine other members participated in the two-hour long debate. The participants included Mr. Rashed Khan Menon of Gonotantrik Andolan, Mr. A.S.M. Solaiman of Krishak Sramik Party, Mr. Md. Asaduzzaman of Awami League (Hasina), Prof Serajul Huq, Al-Haj Shafiqullah and Mr. Mozammel Huq of Islamic Democratic League, Mr. Almas Hossain of Muslim League and Mr. Mohammad Toaha of Bangladesher Samyabadi Dal.

Describing the recent rise in the prices of foodstuff as temporary, the Prime Minister said that situation cropped up due to machinations by the hoarders. Prices had already shown a downward trend and more fall was expected due to stern measures taken by the Government in this respect, he said.

The Prime Minister said that taking advantage of the attificial food shortage, the opponents to the Government wanted to drive political gain by raising the issue of food crisis in the past. But, he added, all their attempts had failed. None died of starvation even during 1979 when the country faced a severe drought due to pragmatic policy of the Government, he said.

The Prime Minister said that beside adequate stock in hand, sufficient quantity of foodstuff was in the pipeline. While internal procurement was going on, efforts were being made to import food from abroad.

He said that situation had been improving the the future prospect was good.

The Prime Minister said that the government was fully aware of the situation and none would allowed to die of starvation.

Pointing the difference between food shortage and food crisis, the Prime Minister said that shortage of food always existed in the country. There was no food crisis, as being claimed by the opposition, he said.

Canal Digging

Referring to the countrywide canal digging programme launched by the late President Ziaur Rahman, the Prime Minister said that about 1,000 canals excavated or re-excavated during the last two years, made tremendous impact on the people.

The Prime Minister said that the people had realised the benefits of canals and they were voluntarily participating in the canal digging programmes. He advised the Opposition members to visit villages, talk to the farmers and then criticise the government about canal digging.

He reiterated his government's commitment implement the 19-point programme of President Ziaur Rahman to attain autarky in food sector.

Refuting the Opposition charges of election rigging and misuse of funds, the Prime Minister said that the foreign journalists who came to Bangladesh to cover the presidential election had reported that the polling was free and fair. "It seems strange that even Mr Mohammad Toaha, polling some 10 to 11 thousand of votes has been claiming that he would have won the election if it was free and fair", the Prime Minister said.

Referring to JSD programmes of professional representation, the Prime Minister said that these would not be accepted by the people even during the next 20 years. "Are not the voters peasants and workers," he asked.

He said that the demand to exempt taxes and loans appeared unrealistic. How the country run without revenue, he asked.

Agri Input Prices

Pointing to the high prices of agricultural inputs, the Prime Minister said that the reason lay on the worldwide inflationery trend. "In India, the price of fertilizer is more than in our country. Because of this fertilizer is being smuggled out to India", he said.

The Prime Minister discarded the suggestion to hold an all-party food conference. "There are about 100 political parties and therefore, the suggestion is untenable," he said.

Asaduzzaman Khan

Speaking on the motion, Leader of the Opposition Asaduzzaman Khan said that corruption, inefficiency, lack of timely measures, high cost of agricultural inputs were responsible for the present food crisis.

He said that the Government had failed to tackle the situation and as such it had right to remain in power.

Mr Asaduzzaman Khan criticised the Government for "concealing facts before the people". Even when the Treasury bench members were demanding that certain areas should be declared as calomity area, it was unfortunate that the Government was not taking the people into confidence.

Mr Asaduzzaman Khan said that the food deficit stood at 28 lakh tons as against Government claim of 10 lakh tons made earlier. He said that the production target of food was never achieved since 1975.

He said that the Government plan of canal digging had failed since the area of irrigated land remained unchanged since 1975.

He said that the Government was not aware of the food stock of the country. He criticised the Government for selling foodgrains at subsidised rate just before presidential election. "This was done for soliciting support for the ruling party candidate", he said.

Mr Khan said that they had never tried to politicalise food issue and was ready for cooperation with the Government in solving the problem.

Halim Chowdhury

Food Minister Abdul Halim Chowdhury said that the present food deficit stood at 21 lakh tons only and not 28 lakh tons as claimed by the Opposition members.

He said that with the replenishment of the existing stock by imports, ultimate food surplus would stand at 3.15 lakh tons.

The Food Minister catagorically denied the allegation that there was any famine condition in the country. The food situation was not in any way "critical," he said.

Urging the Opposition to extend their cooperation in tackling the food problems, the Food Minister reiterated Government's firmness in stablising the food market in the country.

Describing the food shortage as temporary the Food Minister said that stern actions were being taken against the hoarders who were found responsible for it.

Mr Abdul Halim Chowdhury denied the allegations of corruption in procurement and distribution of foodstuff. He said that steps were being taken to remove certain anomalies in the distribution of foodgrains.

The Food Minister denied the allegation that power pumps were not supplied after canals were excavated. He also refuted the charges that there was no account of foodgrains stored with the Gram Sarkars.

He said that it was not true that people in some areas of the country were taking in edibles for survival. He expressed his readiness to visit such areas along with the Opposition members.

Moving the adjournment motion, JSD leader Shahjahan Siraj described the food situation as alarming and said that about 90 per cent of the people in the country did not have any stock of food.

He said that the Government's politics of production had been proved to be a hoax since production had fallen in all sectors.

The JSD member said that the food problem could never be solved without land reforms. He called upon the Government to stop expenditure in non-productive heads, provide job or food to the unemployed ones, introduction of country wide food rationing and equitable distribution of wheat under Food for Work Programmes.

Mr. Rashed Khan Menon criticised the Government for its too much dependence on Western bloc for food supply.

Mr. A.S.M. Solaiman called upon the Government to settle the Farakka issue with India. It was due to Farakka that eight districts of the country were turning as deserts. Food problem could not be solved without ensuring water for these eight districts of the country, he said.

Al-Haj Shafiqullah said that the people were scared when they recall the famine of 1974 when lakhs of people died of starvation.

He urged the Government to take necessary anti-hoarding measures according to Islam and give exemplary punishment to the law breakers.

After Food Minister Abdul Halim Chowdhury gave his reply to the adjournment motion Speaker Mirza Golam Hafiz declared that the motion was talked out".

TEXT OF SATTAR'S 15 FEB ADDRESS TO PARLIAMENT

Dacca THE BANGLADESH OBSERVER in English 16, 17, 18, 19, 20 Feb 82

[16 Feb 82 p 3]

[Text] The following is the unofficial rendering of the address before the Jatiya Sangsad by the President, Mr. Abdus Sattar, on Monday, reports BSS.

In the name of Allah, the great and merciful honourable Speaker and distinguished members with the blessings of Allah the merciful, and the sincerest attempts of all the people of the country, we are able to meet in the present session of the great Jatiya Sangsad. On this auspicious day, I extend my heartiest thanks to you all whose devotion sacrifice and tireless attempts have made this session of the Sangsad possible with the objective of continued sustenance of the democratic process.

On this day of the auspicious month of February 1, first of all, remember with respect, the immortal Shaheeds who had made invaluable contributions in establishing the present independent and sovereign Bangladesh by their supreme sacrifices and thus enabling the growth of national consciousness. I remember with great respect those known and unknown heroic freedom fighters who did not hesitate to sacrifice their last drop of blood for the achievement of independence and sovereignty of the motherland and establishing democracy. I remember with honour the heroic soldier of the Liberation War and the greatest freedom fighter of the country, Shaheed Ziaur Rahman, the beloved leader of the nine crore people of Bangladesh. The proud example set by him in preserving independence and sovereignty and restoring the snatched away rights of the people by reinstating democracy, is rare not only in our country but in the history of the world. This pioneer of Liberation War fought till the last day of his life to make the hard earned independence meaningful to all through achieving economic emancipation and ensuring democratic rights. The nation will ever remember his great contribution with due respect.

I also remember those who at various times and states inspired the people with the ideals of Bangladeshi nationalism and independence.

I also remember with respect those mass leaders veteran politicians and other distinguished persons of various fields of national life, who died after the last session.

It is a matter of great pride for us that this session is being held in the newly built bhavan of the Jatiya Sangsad. This new Sangsad Bhavan is not only an extraordinary example of construction and architecture, but also a time honoured symbol of the determined confidence and respect of the whole nation toward democracy.

It is known to you that after the death of our beloved leader Ziaur Rahman on May 30 last at the hands of a few miscreants, the nation was thrown deep into a crisis. The determination the patriotic people and the Armed Forces had demonstrated and the hard work and tireless attempts they maintained to sustain the democratic process in those critical moments will be a matter of great pride for the whole nation. I congratulate all the countrymen for the success we achieved in preserving the democratic process and in safeguarding independence and sovereignty through honesty, devotion and tolerance in that crucial juncture of the nation. Without active cooperation of the people it would not be possible to attain the unprecedented success. You know like many other countries of the Third World, attacks were made many a time on democracy in our country, but we resisted those attacks in the past in cooperation with the patriotic people and Inshaallah we shall do the same in future also.

The people of Bangladesh have firm confidence in democratic ideals. They never lagged behind in facing any sort of challenge in upholding democracy. The latest manifestation of this is the last presidential election. Amidst numerous adverse conditions, the holding of the most fair and free election in living memory remains marked as a great victory of the people and democracy. So this election not only reflected the hopes and aspirations of the people, but also created a rare opportunity for full functioning of the democratic process. The credit for all this goes to the patriotic people of the country. We are making allout attempts during the post election period to implement with faithfulness the revolutionary programmes that our beloved leader Shahid Ziaur Rahman undertook for political and socio-economic development of the country. But due to negligence, corruption, irresponsibility and attempts ar realising self interest on the part of a few people placed in various responsible capacities had created numerous problems in social and state lives creating a bar on the way of advancement of the nation by generating dissatisfaction, frustration and chaos in the life of the commonman.

For the greater interest of the country and the nation and for showing respect to the confidence of the people the government had to take various emergency measures to bring an end to the situation. It is the great responsibility of the respected members of the Sangsad to sustain politics of production and to bring a new spirit and inspiration for work at all levels of the national life by demonstrating devotion and sincerity in discharging one's duties and responsibilities. I hope you will not hesitate to perform the task with devotion keeping in mind the bright days ahead.

It is needless to mention that peace and stability are the precondition to national development efforts to achieve that objective tireless cooperation of all irrespective of party affilations, religion and colour is needed. I

firmly believe that the people from all walks of life will continue to render their unstinted support to the wide programme for national development and advancement.

You know it is the people to decide the success or failure of the Government and there are adequate provisions for that in our sacred constitution. The people can change Governments according to their wish under constitutional provicions in cosonance with the great tradition of democracy.

You have the right to express opinion on behalf of the people because according to the democratic practices you are the representatives of the people there is no denying that there remains a scope for differences of opinion in a real democracy and that is usual but there should not be differences of opinion or debate in respect of greater national interest.

I believe that as elected members of great Jatiya Sangsad you will try to uphold democracy by showing unity and coherence regarding national interest.

To conduct democratic procedures and for their full manifestation a responsible and active opposition party's existence is inevitable. Now it is our great duty to develop a proper parliamentary procedure and unity through tolerance to others opinions and mutual respect.

Two important elements of our basic policies are to maintain economic stability side by side with investment and expansion of production in national economy. The task to maintain a balance between the two objectives of economic growth and stability in the face of continuous changes occasioned by the influence of various internal and external forces, is sometimes easy and dometimes difficult. In the present condition national and world economy the complexity of the task has increased many times. We have to proceed by admitting this hard reality.

The developed countries have been passing through an economic depression, inflation, slow rate of industrial production, high rate of unemployment, increase in interest rate etc., in combination have heavily affected the international trade. The conservative budget policy and monetary policy adopted in the industrially developed countries have adversely affected the export income and external resources accumulation of the developing countries. This adverse affect has been seriously reflected in the oil importing nations especially.

In this overall economic situation our import expenditure has increased significantly but our export earning has not increased as expected due to the reduction of the demand for our exportable commodities and lowering of their prices. The quantum of economic aid from the industrially developed donor countries and various agencies have also decreased as a result, heavy pressure has been imposed on international payments of Bangladesh, like other developing countries.

Along with inadequecy in the arranging money for imports, the internal resource accumulation from the taxes on import has also be reduced.

In this adverse circumstance the Government has undertaken conservative policies in regard to foreign exchange and internal resources. The requirement of commodities and raw materials was met by the conservative use of limited resources and this will be done in future too.

To face the present economic situation in the country the Government have adopted a policy of cutting down spendings in various fields. A special watch is being kept on the money supply situation. Efforts are being strengthened to increase production in both the public and private sectors. A special drive is already under way to gear up internal resource mobilisation. The Government is determined to ensure smoothe supply and distribution of essential commodities.

It is necessary to keep in mind that our economic situation is inseparably linked with the global economic situation. That is why we all must show patience and be prepared to make sacrifices. We all must show restraint individually and collectively to cross the test of sacrifice and endurance.

At this moment of national crisis, each and everyone in the society whether fortunate or not must be prepared to stop wasteful expenditures and maintain austerity to stand up to the test of sacrifice and endurance in the greater national interest I hope, we shall be able to face, with grace this challenge having mutual respect, fellow feeling and compassion and the determination to build a strong country.

[17 Feb 82 p 3]

[Text] The following is the second part of the text of speech delivered by President Abdus Sattar at the Jatiya Sangsad on Monday.

The draft Second Five-year Plan was made public in May 1980, with the approval of the National Economic Council for consideration by the people and eliciting their opinion. Prepared on the basis of the 19-point programme the plan attached priority to improvement of condition of the people of the country, expecially standard of living of people in the rural areas increasing the employment opportunities, achieving self-reliance in food, reducing the rate of growth of population and removal of illiteracy. It gives priority to development of communication in the rural areas, rural electrification expansion of cottage industries and extension of health and education facilities in the rural areas.

The problem of resource mobilisation which arose at the very beginning of the implementation of the plan is a matter of concern for our development. It has been mentioned before that there has been a reduction in foreign assistance due to continued recession and deterioration of economic condition of the donor countries. On the one hand a fall in export earning and inadequate foreign assistance was compelling a cut in imports on the other, it has created an adverse effect on production and in the field of internal resource mobilisation.

ADP

The original allosation for Annual Development Programme for 1980-81 was Taka 2,700 crore. But the actual expenditure stood a Taka 2,364 crore due to shortage of resources--both internal and external. The expenditures for the Annual Development Programme for 1981-82 has been estimated at Taka 3,015 crore. But it might not be possible to fully achieve the objectives set in the programme due to shortage of resources. The revised annual programme of Taka 2,715 crore has already been approved by the National Economic Council.

The Late President Ziaur Rahman had launched a peaceful revolution for the overall development of the country. The success of this revolution are clearly evident in all spheres of national life that is, in the fields of agriculture, industry, education, culture, public health, family planning and administrative structure. The main objective of the peaceful revolution of Shaheed Ziaur Rahman is to build a strong country self-reliant in all fields. Spontaneous participation and voluntary labour of the people are the main tools for attaining the objective. As you all know that this revolution, which is an indispensable aspect of our life, has to be made a success through peaceful and democratic means with active participation of the people. It is my firm belief that as elected representatives of the people you will continue your efforts in extending this peaceful revolution to all spheres of national life.

Internal resources mobilisation has a very important role in the development of the national economy. No country can hope to expedite the development of its national economy depending mainly on foreign assistance in the current uncertain and adverse international economic situation. The government, in this context has given special importance to increasing internal resource mobilisation, savings and investments. An all-out effort for internal resource, mobilisation is necessary now in the interest of national development although some improvements is being marked in this regard due to the different steps taken by the government.

The limited internal resources are rather inadequate in meeting the requirements of endemic trade deficits, capital investments and application of improved technology for raising the growth rate to the desired level. Side by side with increasing the quantum of internal resources in strengthening the foundation of the country's economy the need for foreign aid in meeting the shortfall is essential.

Grants, Loans

Bangladesh Government is taking grants and loans from different donor countries and organisations as foreign aid on the basis of mutual sovereignty to accelerate its development efforts. It is not Bangladesh Government alone which is taking foreign assistance for the development of the country's economy. Other developing countries also like Bangladesh take foreign aid for their economic development. As a matter of fact transfer of resources or foreign aid is a result of the persistent demand being made since the

sixties by different developing countries including Bangladesh. The global uncertainty over the last one decade has created the scope for a new international economic order and a fresh thinking for restructuring the economic rights and responsibilities of the countries of the world. Despite the extreme uncertainty prevailing the world over regarding foreign aid, the quantum of aid committed to Bangladesh during the current year will not be less than the previous years because of the correct policy adopted by the government.

The Government of Bangladesh has been following with special care its foreign aid policy in the utilisation of external assistance. Basically, the main stress in the policy is to accept as far as possible grants and loans with soft terms and avoid credits with hard terms so that the repayment responsibilities do not create an increasing pressure on our limited foreign exchange availability. Our allout efforts aim at overcoming the food deficit through proper utilisation of the foreign aid in raising food production and fast industrialisation, so that a self-reliant economic could be developed by the turn of the century to reduce dependence on aid.

Farm Uplift

We have enormous problems in the agriculture sector. Principal among the problems are the absence of a land reform needed to face various obstacles, fragmentation of land holding because of the laws of ingeritance, and limited agricultural knowledge due to lack of education.

The satisfactory progress which achieved in the agriculture sector with much effort and hard work during 1979-80 and 1980-81 has suffered considerable setback during the current year due to drought, untimely rains and a rise in the prices of agricultural inputs in the global market. But it will not do if we sit idle in facing the drought. That is why we want to extend irrigation facilities to 72 lakh acres of land by the year 1985 so that the farmers raise crops without depending on rains. We want to develop a faultless mechanical irrigation system throughout Bangladesh of deep tubewells power pumps and shallow tubewells depending on the canal river and ground waters. This will be the appropriate solution to drought.

In raising agricultural production ensuring supplies of chemical fertilizers and improved varieties of seeds are essential side by side with developing the irrigation facilities. Despite many problems we have ensured an uninterrupted supply of fertilizers on a priority basis. The country will require ten lakh tons of chemical fertilizers during the current fiscal year. We are now capable of producing fifty-five per cent of the demand in Bangladesh. Arrangements have been made to import the remaining quantity at a high price and supply them to farmers with a subsidy of about Taka 104 crore.

[18 Feb 82 p 3]

[Text] Following is the Third Part of the text of speech delivered by President Abdus Sattar at the Jatiya Sangsad on Monday:

Side by side with the efforts for raising food production the government has already adopted an overall policy and well planned programmes for improvement of food management.

A programme has been taken up under the interim food production plan to raise total food production to two crore tons by the year 1985. Food production this year has fallen due to a long drought. Inadequate soil moisture and an untimely excessive rainfall. But record quantity of foodgrains stocked in the beginning of the year and additional imports will enable us to meet the deficit and build up the required reserve stock. Necessary steps have already been taken for this.

The internal food procurement drive has been playing an important role for the last few years. The main objective behind the programme is to provide incentive for production to the poor and small farmers by ensuring fair price and also to ensure a stable market price. Till the first week of February of fiscal 1981-82 the government succeeded in making internal procurement of about three lakh tons of foodgrains. Although the procurement drive this year was not fully successful its main objectives have been realised.

Canal Digging

A programme has been under taken to dig and reexcavate canals through voluntary labour all over the country under the leadership of late President Ziaur Rahman in 1979-80 to increase food production. Being inspired by the first year's success the programme has been expanded further in 1980-81. Dry season irrigation facilities have been made available to a vast area of arable land under this programme during 1979-80 and 1980-81. As a result positive development in wheat and boro rice cultivation have been achieved. The programme has been going on in full swing during the current season and people from all walks of life are participating in the programme for increasing food production.

Extensive progarmme has been undertaken for developing the water resources and making proper use of the resources for attaining food autarky with a view to improving the standard of life of the countrymen. The Ganga Kobadakh Project, Chandpur Irrigation Project, Barisal Irrigation Project, North Bengal Tub-well Project and Barisal Patuakhali Project will make significant contribution in this regard. The Teesta Barrage Project, Embankment Project on the right bank of Brahmaputra river, Muhuri Irrigation Project, Monu River Project, Kharnaphuli Irrigation Project and the Ganges Barrage Project are the significant projects in the water resources development sector. Of these work of the Manu River Project, Mohuri Irrigation Project and the Kharnaphuli Pro-Irrigation Project are in the concluding phase.

Besides the flood control and drainage system in 19 lakh acres of land in Rangpur Bogra and Dinajpur districts would be improved by the Teesta Barrage Project. The primary construction work of the Barrage under the project is progressing fast.

The food-for-work programme help in stabilising food price in the domestic market beside providing work for the unemployed labourers. A total of two lakh fifty three thousand tons of wheat as grant was received from various international agencies and friendly countries for the food-for-work programme. The Government has sanctioned one lakh five thousand ton food from its own resources for this programme.

Seventyfive per cent of the country's total requirements of cloth are being produced by handlooms. The Bangladesh Handloom Board is putting in efforts to make the country self-sufficient in cloth improve the lots of the weavers and to create extensive rural employment. The Government policy in the cloth production sector is to make the four and a half lakh unutilised and running looms productive instead of setting up new textile mills. The yarn mills in the public sector are being used to meet the requirements of yarn of the handlooms to attain this objective.

Meantime permission to set up forty yarn mills in the private sector was given in persuance of Government policy to encourage private sector side by side with the public sector. It is expected that the country will attain self-sufficiency in yarn production and will not have to spend a huge amount of foreign exchange to importing yarn when these mills will go on production by 1984.

The Government is giving importance to earning of foreign exchange by exporting cloth and not only producing it. To attain this objective readymade garments worth eight crore Taka were exported last year and it is expected that readymade garments worth Taka twenty crore could be exported this year.

Introduction of realistic education system suited to the time is essential for the development of socio-economic doncition vis-a-vis the national life. With this end in view special importance is being attached to building up skilled manpower through education suiting the need of the independent and sovereign Bangladesh.

The Government has introduced universal primary education and mass literacy programme in the Second Five Year Plan in view of its constitutional duty to create scope for minimum education for all citizens. Practical steps have been taken to materialise the mass literacy programme to free the society from the curse of illiteracy.

Literacy Drive

Target has been fixed to make four crore people literate in four years by 1985 under the mass literacy programme. Thirtyfour lakh people have already been given the knowledge of letters till today.

Not only in primary education sector we have in hand far-sighted development programme in secondary and higher education system.

Project has been taken to introduce science education at the thana level colleges for developing science education in the rural areas. The madrasha

education has been made suitable of the age through integration of technical and science education with the religious education curriculum. Steps have been taken to introduce science and technical education in sellective madrashas in this regard.

An Islamic University has been set up in the country for expansion of Islamic education. There is arrangement for imparting science and technical education along with religious curriculum in this university.

It cannot be denied that correct and successful application of technology is essential for solving various problems facing the national life and also for the overall welfare of the people. There are seventyfour research laboratories in different parts of the country to carry on research in various fields of science and technology. Projects for setting up more research laboratories on specialised subjects are being taken in hand.

The Bangladesh Atomic Energy Commission has stengthened activities in atomic research and development work for improving the lots of the people through peaceful use for atomic energy.

The Bangladesh Science and Industrial Research Council has so far innovated and invented about eighty formulas and given lease of those formulas to the industrialists for commercial production. A few commodities produced as per the formula have been marketed in the meantime. Besides the Council has undertaken a far-sighted programme to search for alternate source of energy to face the present energy crisis in the country. Health is one of the basic ingredients for improving the qualitative standard of life and for this reason much importance has been given in the health sector within the frame work of the development programme. The Government is determined to ensure minimum medicare facility for every citizen within the shortest possible time. The objective of health for all by year 2000 is closely linked with our health programme. The Second Five Year Plan is the first step to attain this target.

Health Care

The main features of the health programme that has been formulated for the last few years include building up extensive health system in the rural areas prevention of diseases attachment of more importance for the development of indigenous health system and integration of the system on scientific foundation manufacturing of essential medicines in the country and ensuring availability of these at fair prices and providing people's participation in the government programme.

Special importance has been attached on successful implementation of the population control and family planning programme for sustaining the country's economic development process and keeping aloft the objective of improving the lots of the people. Hopeful response has already been found among the people to resist the population explosion successfully.

Ceaseless efforts are being continued to bring down the rate of population growth from 2.36 to 1.8 per cent by 1985 and substantially increase the numbers of recipients of population control inputs.

The Government believed that the key to country's overall development and progress lies in the materialisation of the rural development programme.

[19 Feb 82 p 3]

[Text] Following is the Fourth Part of the text of speech delivered by President Abdus Sattar at the Jatiya Sangsad on Monday.

The Government has given much importance to clear-cut decentralisation of power giving more power to people's organisations like local government and cooperative institutions and formulating plan at the local level. The Government in this context has taken a few important programmes during 1980-81 the most important of these projects is the introduction of Swanirvar Gram Sarkar.

The Government has taken a bold step to realign the cooperative organisations on a new line with a view to improving the economic life of the rural population. Work is now in progress reconstitute the national level structure of cooperatives so that it can undertake effective role to improve the economic life of the rural population in real term. The main object of this restructuring will be to undertake effective and suitable programme for the poor and lower income group of the rural population.

The accommodation problems is becoming acute day by day and specially for the lower and middle income groups of people in Dacca and other towns along with creation of connected problems of offices and courts due to increased influx of people from villages to the towns and the population boom. It is very hard to solve the accommodation problems by constructing buildings at private levels under private ownership and also by the limited resources of the government. Above all various short and long term projects are being implemented to solve this problem to the best. The government in principle, has given priority in the Second Five Year Plan to solve the accommodation problems of the low and middle class people.

Housing Problem

In different programmes are under implementation for the solution of the housing problem of the low and middle income group of people side by side with the building of residential houses, the government and taken up the work of the development of lands in Sylhet Noakhali Rangpur Barisal Patuakhali Tangail Khulna Kushia and Faridpur district headquarters under another programme town centers are being set up in thana headquarters.

In the industrial sector, production had started recently in Ashuganj Zia Fertiliser Factory and in sanitary were and insulator factory in Dacca, besides, the work for setting up a urea fertiliser factory in Palash (Ghorashal) and a fertiliser factory in Chittagong as has been taken up.

It is hoped that the production of sugar during the current crushing season would be sufficient to meet the requirements of the country.

The government has been putting special emphasis on setting up industries in the private sector. So far six thousand industrial units were given sanctions since 1976.

Target of exports has been fixed at 1500 crore Taka keeping in view the trend of increased exports during the last few years and the possibilities of production in agricultural and industrial sectors. The six months export earning from July 1981 to December 1981 was Taka 606 crore and 90 lakh last year export earning for the same period was Taka 572 crore and 43 lakh.

The government has taken up different production oriented programmes for creating exportable surplus. Special programmes have also been taken up for creating export awareness and for importing training to the exporters on export techniques. In a bid to increase exports, steps have been taken to set up a good number of export oriented industries. Besides Bangladesh has been taking part in different international export fairs and arranging export fairs within the country.

Keep-ng this objective in view, the work for establishing and export processing zone in Chittagong has been progressing.

Trade

The efforts for expansion and development of our ever increasing trade has been continuing through bilateral trade and barter agreements. So far bilateral trade agreements were signed with 25 countries on the basis of mutual understanding and discussions are in progress with a good number of countries for such agreements.

Huge quantities of mineral resources including gas and oil has yet to be exploited. Steps were being taken to gear up the exploration of these mineral resources.

The laying up of the Chittagong Bakhrabad gas line will be completed by March next year with the assistance of the World Bank for supplying gas to industrial, commercial and domestic consumers of Chittagong. Gas connections were already given to different industrial units of the country for increasing the use of natural gas in the industrial sector.

Feasibility study is underway for supplying gas to the western part of the country.

To increase the production capacity of the Chatak Cement Factory by 75 thousand tons annually a scheme had already been taken in hand to set up a new kiln in the factory. Besides the work for examining the possibility of extracting limestone in Jaipurhat has been going on while the work for implementation of the hard rock project has already been taken up.

The work for the modernisation of the country's only oil refinery Eastern Refinery has been taken up already.

All possible measures are being taken to increase the quantum of export of jute and jute products and earnings in view of the fall in the demand and price of jute and jute goods abroad as a result of the economic depression in the world market.

The government has taken necessary steps for stabilising the prices of jute at growers level. As a result the prices of jute remained stable to the highest level during the current season in comparison to the previous year. The efforts of the government will continue so that the jute grower get fair prices.

The demand for power has been gradually increasing with the increase of national development activities. Keeping this in view, a 50 megawatt power station was commissioned at Kaptai. Besides the work for setting up new power stations at Ghorasal Khulna Ashuganj and Chittagong has been progressing fast. Among the construction of power transmission line projects, most significant one is the east west inter connection project, which will be completed within this year. It will be possible to ensure power supply to entire western region of the country when this project will be completed.

Rural Electrification

The work for providing electricity connections in the rural areas is in progress through regionally formed rural electrification samities for achieving the objective of rural development.

Different steps were taken for the development of the country's overall transport network, during the Second Five Year plan period, bridges on the main railways and rails of the Bangladesh Railway will be rehabilitated. The rehabilitation work of the rails and bridges of the Dacca-Chittagong sections are progressing well. As a result of the implementation of these projects, the security and speed of transporting passengers and goods will increase considerably. The work for setting up heavy diesel engine repairing factory at Santahar and a factory for manufacturing concrete slippers at Bhairab Bazar will be taken up this year. This two factories will reduce our dependence on foreign countries.

Plans were inscribed in the Second Five Year Plan for the construction of over two thousand miles of new roads development of two thousand miles of old roads and bridges and culverts. Keeping in mind the special importance of the road communication in the rural areas, projects for the construction of 250 village roads were included in the current year's development programme. Depending on the local technology bridge has already been built and similarly projects for building Gumti, Buriganga and Surma bridges were taken up.

Ferry system has been improved for making transport easier between the western and eastern regions. Four ships have already started plying for

improving the communication system for the islands and coastal areas of the country.

The fleet of the Bangladesh Shipping Corporation has been increased to 24 ships with total carrying capacity of three lakh and 76 thousand tons. Besides, there are eleven ships in the private sector. Experimental dredging is nearing completion in the Karnafully river to examine the feasibility of berthing ships in Chittagong port which ply in deep waters. Initiatives are being taken to construct two multi-purpose jetties in Chittagong port.

The aircraft of the Bangladesh Biman are now flying to seven cities within the country and 20 cities on its international routes. The rate of fare in the domestic routes are much less than the other airlines of the world.

Step was taken for the construction of a separate domestic terminal building in Zia International Airport, Saidpur airport has already been opened. Rajshahi Airport is expected to be commissioned within this year. Besides necessary improvements were done to Sylhet, Chittagong and Jessore airports. In view of the ever increasing demand, particularly of the tourists and foreigners a highly modern 350-room Hotel Sonargaon was constructed. Besides measures were taken to provide different facilities for attracting tourists and to build youth hostels in different parts of the country.

[20 Feb 82 p 6]

[Text] Following is the concluding part of the text of speech edlivered by President Abdus Sattar at the Jatiya Sangsad on Monday.

The establishment of Talibabad earth station in our bid to attain self-sufficiency in the telecommunication sector bears the testimony to our yet another success. Various development projects have been taken in hand for the improvement of telecommunication system including giving new telephone connection. The telecommunication system of the country in connecting with international centres and specially with the Muslim countries has been improved substantially. We have proceeded further ahead in attaining our future target of establishment of one post office for every two thousand people through setting up of more post offices.

Sufficient measures have been taken for implementation of various development projects of different organisations under Information and Broadcasting Division.

Effective steps have been taken to enable the Radio Bangladesh and Bangladesh Television the two powerful mass communication media to play more active and important role in national construction.

Press Freedom

Full freedom of the Press exists in the country. Its proof is the publication of series of new newspapers and their editorial policies. Never before such a large number of newspapers and magazines was published in Bangladesh.

The Government has accepted in principle the proposal for the establishment f a Press Commission for the development of newspaper industry and identifying the problems of the people working in this industry and to recommend their solution to the Government.

The Press Council set up in the past has been working independently. The Press Institute has been organising training with local and foreign experts to improve the efficiency and skill of journalists and other associated with newspaper management.

Despite various economic probelms and development oriented activities being given top priority activities in the sports and culture sector have been strengthened enough.

The Government has been putting in extensive efforts to formulate a plan and its implementation for creating job opportunities both at home and abroad by transforming the vast population into manpower. The Manpower Bureau has undertaken an extensive training programme to meet the demand of skilled labourers both at home and abroad.

It was revealed from a survey that during the last six years more than one and a half lakh of Bangladeshi citizens got employment abroad and they have earned foreign exchange worth nearly Taka two thousand crore. Work of Islamic Technical Training Centre under the Islamic conference had started at Joydevepur since June 1979.

With a view to mobilising youth forces to the activities of increasing national production by organising them a Youth Development Ministry was created in 1978 which had undertaken training programmes to improve skill of the unemployed youth and create job opportunities. More than ninety thousand youth were imparted training under these programmes.

Youth Development

While speaking about the youth community as well as the countrymen a special mention must be made about our valiant Freedom Fighters. Late President Ziaur Rahman had undertaken a number of development projects for the overall welfare of the Freedom Fighters and it was under his initiative a committee called Freedom Fighters Complex Fund was formed for the rehabilitation of the war-affected Freedom Fighters.

This committee has already taken in hand the construction work of a multi-storied building at Mirpur with a view to permanently rehabilitating the war affected Freedom Fighters and the construction of this building is expected to be completed by this month.

The half of our population is female and the government has undertaken extensive programmes to involve this vast population in the nation-building and national development activities and create opportunities for them to take their right place in the society. These programmes include establishment of women cottage industries and production centres in twenty thanas, vocational

training for the war affected women for their rehabilitation and implementation of development programmes in 52 wards in the Dacca city, 32 subdivisions and forty unions under the Jatiya Mahila Sangstha.

Direct cooperation between the Government and the people is very essential to the activities of overall national development. With this end in view certain effective measures have been taken to decentralise the administration and making it people-oriented.

Faulty service structure of the colonial regime has been thoroughly recast and 28 service sub-cadres have been introduced. Appropriate training for the officers of all services have been arranged and in many cases those were made compulsory.

The objective of the present Government is to reach maximum benefit of administration to the people by increasing its efficiency and skill. As a step in this regard, the Government has already created a new Bandarbon district in the Chittagong Hill Tracts.

Corruption is another serious malaise which has entered in all spheres of our social life and has made the social structure weak and helpless. Creation of massive public opinion is essential to check corruption.

Law and Order

As elected representatives of the country's nine crore people it is only you who could create mass awareness with a view to freeing the nation from the curse and malaise of corruption. I hope that you all will extend all out cooperation to the government in discharging this national responsibility.

Except occasional deterioration for various reasons, the overall law and order situation during 1981 was satisfactory and under full control of the government. The law-enforcing agencies have succeeded in maintaining law and order even in the face of obstacles and threats. The great example of this is the peaceful holding of Presidential election on November 15 last.

Police, Bangladesh Rifles, Ansars, Village Defence Party, and Municipal Defence Party played a significant role in improving the law and order situation and checking smuggling.

Our armed forces are the sentinels of national independence and sovereignty. The defence forces extend their active cooperation to civilian administration in time of crisis simultaneously being engaged in their regular training and exercise for improving professional standard. The members of our armed forces are always ready for controlling movement of foodgrains to the country's remote areas, checking smuggling in the border, protecting marine resources and in relief and rehabilitation works.

We do not believe in aggression, but we will resist at all cost any attempt on our independence and territorial integrity.

Our defence forces are always vigilant. The contribution of our armed forces imbued with the spirit of welfare of the people the country and in solidarity with the people in defending the national sovereignty and upholding democratic values was a unique example in the history.

The political and economic situation of the present world are very alarming. The unsettled political disputes, the growing tension in many parts of the world and the conflicts has become a great threat to international peace and security.

In the context of this international situation the success of our foreign policy which was pursued under the able leadership of our late President haheed Ziaur Rahman was well-known to everybody.

The fundamental objectives of Bangladesh foreign policy firmly on the basis of preservation of her constitution, following the Charter of United Nations, closer friendship with the Islamic countries, total solidarity with the countries of the Third World and non-aligned nations is to preserve and consolidate the hard-earned independence and to expedite international cooperation for our national development.

Friendship With All

Keeping these aims and principles in view the present government is determined to expand friendship and cooperation with all countries and to make them manysided. We are also determined not to interfere in the internal affairs of others and to settle disputes through peaceful negotiations and follow the principle of sovereign equality and non-alignment.

We have given special attention to establish good relations with our neighbouring countries. It is to be mentioned here that the farsighted approach of the late President Ziaur Rahman for regional cooperation of the South Asian countries has made remarkable progress in implementation.

Bangladesh, expressing her solidarity with the developing countries of the world, is continuing her support in the struggle against colonialism, recism, aggression and expansionism. The friendship and brotherly relations with the Muslim states are getting closed day by day.

Bangladesh is playing active and constructive role in the different international agencies. Bangladesh is the member of Non-Aligned Bureau and 15 other important bodies of the United Nations. Bangladesh is also the member of the four member Jerusalem Committee of the Islamic conference and Islamic peace commission. Bangladesh has become well known as strong advocate of the less developed Third World countries for solving the main problems of the contemporary world like food, security, energy, resources and its cooperation for their development. The role of Bangladesh in this regard was highly accepted in the recent 22 nation rich and poor summit at Cancun.

Foreign Policy

The significant outcome of our bold dynamic pragmative balanced and constructive foreign policy is that the Bangladesh has not emerged as a self-respecting and peace-loving democratic country in the international arena.

Honourable speaker and respected members, we are passing through a crucial stage of our country's history the severe unsettled condition in the international political and economic sectors has serious effects on our livelihood like other Third World developing countries. But we have no scarcity of manpower as well as in the eagerness of our people to work for the country and also in resources. So, we should not be disheartened and should not stop the trend of our progress in view of any crisis. We must reach our cherished goal by keeping faith on Allah the Almighty and with courage and determination and by upholding the spirit of national unity and nationalism.

I have faith that the people of the country will leave no stone unturned to consolidate the hard-earned independence and sovereignty and to establish real democracy to ensure economic freedom. I am also confident that the honourable members, who are the elected representatives of the people, will extend all help to achieve the difficult goal. We should not forget the greater national interest for narrow individual and party interest, let the merciful Allah help us.

Khoda Hafiz, Bangladesh Zindabad.

SATTAR ADDRESSES MEETING OF BNP MP'S

Dacca THE BANGLADESH TIMES in English 15 Feb 82 p 1

[Text] President Abdus Sattar on Sunday emphasised the imperative need for consolidating complete unity and harmony in the Bangladesh Nationalist Party (BNP).

President Sattar, who is also the Chairman of the BNP was addressing a meeting of the BNP Parliamentary Party (BNPPP) at the Old Sangsad Bhaban.

Briefing newsmen after the two-hour meeting, Leader of the BNPPP Prime Minister Shah Azizur Rahman quoted the President as saying that "in every democratic party there may be differences but these have to be resolved through consultations."

He further told the BNP Members of the Parliament that the democratic system in the country must be stabilised and the multi-party system must function to help sustain full democracy.

President Sattar reminded the MPs that the BNP had a great responsibility in this regard.

The President said that steps had been taken to further democratise the BNP. The committee entrusted with the task of formulating recommendations for democratising the party constitution had submitted its report to him which would be scrutinised by the BNP Standing Committee and finally adopted by the party's National Council.

Regarding the new cabinet, Shah Azizur Rahman quoted the President as telling the meeting that a few more members might be added in due course.

Short Session

The Prime Minister said that in his speech the President spoke about the business of the House and pointed out that the session would be a short one.

He, however, said that the Parliament would again meet in the beginning of May to continue up to June 30 for transacting legislative business as well as the budget.

The meeting of the BNPPP earlier condoled the deaths of five Parliament Members including Khan A. Sabur, Phani Bhushan Majumdar, Nawabjada Hasan Ali and Al-Haj Serajui Huq.

The meeting was also addressed by Mr K.M. Obaidur Rahman, Mr Maudud Ahmed, Mr S.A. Bari A.T. Mr Zahiruddin and Mr Siddiqur Rahman.

In reply to question regarding threat of boycotting the President's speech today (Monday) by party dissidents, Prime Minister Shah Azizur Rahman said that he did not observe "any tendency of boycott." He said that Mr Maudud Ahmed in his speech had said that they were dissenters not rebels.

Confidence in PM

Shah Aziz said that Mr K.M. Obaidur Rahman also said they did not challenge his leadership and pointed out that the signature campaign to express confidence upon the leader of the house by BNPPP members was not necessary.

Shah Aziz in this connection said that already 205 MP's belonging to the BNP in a letter to the party Chairman had reaffirmed their support to his leadership. He said that he did not organise the signature drive but the members did not spontaneously.

Meanwhile, according to sources close to the dissident MPs of BNP, Mr Maudud Ahmed in his speech at the meeting called for maintaining unity at all levels of the party to help it survive. He also called for no political victimisation in the party and urged all to resolve differences inside the organisation.

He also called for accepting the demands put forward by dissidents for democratisation of the party.

BANGLADESH-INDIA BORDER TALKS END IN DACCA

Dacca THE BANGLADESH OBSERVER in English 19 Feb 82 p 1

[Text] The three-day Bangladesh-India border talks concluded in Dacca on Thursday with both sides expressing their firm determination to tighten up measures to curb crimes and smuggling along the border, reports BSS.

The talks, according to an official sources, also centred on the problems of the infiltration of criminals who cross the border for sanctury to escape punishment.

Both sides also agreed to take necessary steps to deal with the problems effectively, the sources added. The session on Thursday lasted for about four hours.

Earlier in the morning, the Indian delegation led by the Director General of Indian Security Forces (BSF), Mr K. Ramamurti called on Home Minister Prof. M.A. Matin at his Secretariat office.

The Home Minister expressed the hope that periodical meetings of the senior officials of the two countries could help evolve the measures to reduce and eliminate tricky problems along the border and maintain peace and tranquility.

The Indian delegation also met the Home Secretary, Mr. M.M. Zaman. The delegation left for Calcutta in the afternoon. It was seen off at the airport by the Director General of Bangladesh Rifles (BDR), Major-General M. Atiqur Rahman, who led the Bangladesh delegation at the talks.

TEXT OF DENIAL OF PRESS REPORT ON TALPATTY

Dacca THE BANGLADESH OBSERVER in English 13 Feb 82 p 1

[Text] Government on Friday dismissed as "baseless and misleading" a report alleging that Bangladesh has given up its claim on South Talpatty Island, reports ENA.

A government hand out issued in Dacca on Friday night said that Bangladesh and India discussed the question of ownership of the Island, the two sides agreed to discuss the matter again at an early date with a view to taking further necessary steps for peaceful solution of the problem.

Following is the text of the handout:

Attention of the Government has been drawn to a report appearing in a local Bangladesh weekly taking its cue from an Indian vernacular newspaper published from Calcutta and alleging that Bangladesh has given up its claim to the South Talpatty Island. This report is totally baseless and misleading.

It may be recalled in this connection that the Foreign Ministers of Bangladesh and India in their meeting in New Delhi on September 13, 1981 had reiterated their agreement to take further necessary steps to remove remaining causes of tension and resolve the issue. For this purpose they had agreed to early talks at the level of Foreign Secretaries to examine all available data and report to the Foreign Ministers for further necessary steps to be taken with a view to an early and peaceful solution of this problem.

In pursuance of this decision the Foreign Secretaries of India and Bangladesh met in New Delhi January 12 to 15 1982 to discuss the problem. This was the first time that detailed substantive discussions were held between the two countries. In conformity with their mandate the two sides exchanged additional information for indepth examination on the basis of relevant facts and principles. They agreed to discuss the matter again at an early date with a view to taking all further necessary steps for early and peaceful solution of the problem.

SOVIET TRADE ASSOCIATIONS HOLD DACCA EXHIBIT

Dacca THE NEW NATION in English 13 Feb 82 p 3

[Text]

An exhibition of technical prospects and catalogues of USSR Trade Associations was opened in Dacca on Wednesday at the show room of Soviet goods by Secretary, Foreign Trade Division, Mr. S.A. Khasru.

Speaking on the occasion Mr. Khasru said the trade relations between Bangladesh and USSR was characterized by mutually advantageous exchange of goods.

Referring to Soviet assistance during the War of Liberation, the Foreign Trade Secretary said the Soviet Union occupies a special place in our heart because it had valuable help in the post-independence days by providing precious raw materials, fuel and other important goods.

The exhibition is intended to acquaint the local business circle with the large number of Soviet export goods those could be of interest to Bangladesh.

The USSR Ambassador in Bangladesh, Mr. V.P. Stepanov, expressed his hope that the exhibition would help further develop the friendly relations between the two countries not only in trade, but in other spheres also. He said trade occupied an important place in widening the bilateral relationship between Dacca and Moscow initiated by the signing of a trade agreement in March 1972.

The trade turnover between the two countries increased more than three times during the last ten years, from 24 million dollars to 80 million dollars as of last year, he said.

He said both countries profitted from the mutually beneficial trade relations and were eager to expand it further.

The exhibition was followed by a short documentary show on Soviet exports.

MINISTER RETURNS FROM ISLAMIC INDUSTRIAL PARLEY

Dacca THE BANGLADESH OBSERVER in English 17 Feb 82 pp 1, 12

[Text] Bangladesh has proposed the creation of a Task Force to work out a comprehensive policy on industrialisation at the Ministerial meeting on industrial cooperation among Islamic countries now being held in Islamabad, Finance Minister Fasihuddin Mahtab said in Dacca on Tuesday, reports BSS.

The Minister who returned to Dacca on Tuesday after attending the meeting told newsmen at the airport that Bangladesh had emphasised the need for developing technical training and design centres as well as some institutional arrangements to cater to the requirements of the OIC member states.

He said the proposed Task Force would look into every aspects or industrial cooperation among the Islamic countries. Mr Mahtab also stressed the need for optimal utilisation of resources of the Islamic countries--both oil-producing and non-oil countries.

The Ministerial consultation on industrial cooperation among Islamic countries began at the Pakistani capital on Sunday and is scheduled to conclude today (Wednesday).

The Finance Minister led the Bangladesh delegation at the meeting.

Elaborating, Prof. Mahtab said the proposed Task Force would identify some bilateral as well as multilateral programmes in the field of industrial development towards the ultimate benefit of 1000 million people of the Muslim World.

He emphasised collaboration on multilateral basis so that "benefits may accrue to more than two countries". "In fact we visualise a network with vertical and horizontal linkage to benefit as many OIC countries as possible."

The Minister said there was immediate need for institutions like design centres to provide necessary technological background support for formulation of plans for sophisticated and complex industrial ventures in the OIC member countries.

Mr Mahtab said that with the help of the proposed Task Force and assistance from the OIC Secretariat, there could be fruitful multilateral industrial ventures.

The Minister said the Bangladesh proposals were supported by a number of delegations at the meeting.

During his brief stay in Pakistan, the Finance Minister called on President Ziaul Huq and discussed matters relating to bilateral interest.

CONCERN EXPRESSED OVER IMF ATTITUDE TOWARD DACCA

Dacca THE NEW NATION in English 19 Feb 82 p 1

[Text] Financial Managers in the government are disappointed as the International Monetary Fund (IMF) is making unusual delay in sending another appraisal mission for giving final verdict about the resotration of the disbursement of 580 million SDRs under extended and supplementary financing facilities.

The Fund's mission in its last December visit hinted for another round of crucial meet in January but if has not as yet confirmed any date. President Abdus Sattar earlier announced that a Fund mission will arrive in Dacca in the first week of February. But according to official source there is no possibility of any IMF mission arriving even by the end of this month.

The acute foreign exchange crisis which virtually forced the government to make vigorus short term borrowings from foreign private financial institutions, along with the Compensatory Financing Facility extended by IMF and the lining of credit from various international organisations and the Sanli grant in and may only keep the economy alive upto May. And after that Bangladesh will be hardput to keep its economy going. Though the resource position marked a slight improvement compared with last month it is yet to be well enough even to bear the salaries of the officials of the Bangladesh missions abroad. From next month, Foreign Ministry has to pay about Tk 5 crores of foreign exchange equivalent every month.

Realising the gravity of the situation government sent another delegation last month to apprised the IMF of some fresh government measures satisfying the performance criteria.

During its last December visit IMF insisted on price adjustment of public utilities as well as of petroleum, oil and lubricants (POL), 10 per cent devaluation of the Taka drastic cut in government spendings and in the budget. To fulfill the demand of IMF it has recently decided to increase the POL prices by more than 30 per cent. The pricing committee of the government approved this price increase. Apart from this the annual Development Programme has been slashed down by about 300 crores to 2,700 crores. Government spendings have also been considerably reduced and the devaluation of Taka made in stages. But domestic credit of the economy has not yet registered improvement in line with IMF directives.

However, a high official while talking to the New Nation expressed concern over the IMF attitude by saying that government has already fulfilled most of the IMF criteria but it IMF is still showing reluctance about restoration of the disbursement of SDRs which was earlier suspended on June 4, 1981 by making only three instalments on the plea that Bangladesh had failed to fulfill the criteria.

EVENTS SURROUNDING FORMER MINISTER'S ARREST TOLD

Charges Reported

Dacca THE BANGLADESH TIMES in English 14 Feb 82 pp 1, 12

[Text] Mr Abul Kashem, a former Minister and President of Jatiyatabadi Jubo Dal, was arrested on Saturday noon on charges of harbouring an offender and of obstructing public servants from discharging their duty. He was released by the court on bail soon after.

Ramna Police made the arrest under Sections 213 and 353 BPC on the basis of a complaint lodged by Mr A. F. M. Mahmud Al Farid, Superintendent of Police, Dacca on Saturday. Soon after the arrest, Mr Kashem was produced before the court and was released on bail.

Mr Farid in his complaint stated that Imdadul Haque alias Imdu, son of late Ashraf Ali of Santanipara under Kaliganj Police Station in Dacca district was wanted in nine cases in Kaliganj, Rupganj, Tejgaon Police Stations and Bhairab GRPs and was absconding after commission of these crimes. He, along with his associates had been charge sheeted in some of these cases and warrent of arrest was issued and proclamation and attachment orders were served against him. But he could not be apprehended as he was evading police arrest. His daring criminal acts were published in well circulated daily newspapers and were subject to criticism in the Parliament.

The FIR stated that several attempts to trace out absconding accused Imdadul Haque alias Imdu went in vain. Subsequently on the morning of February 8, Mr Farid, the S.P., Dacca received a secret information that Imdu was residing with former Minister Mr Abul Kashem in his official residence. After verifying the information Mr Farid arranged cordoning of the residence of the Minister by plain-clothed policemen to keep vigilance and to apprehend the said Imadadul Haque.

The Superintendent of Police, Dacca, in the meantime, contacted Officer-in-Charge of Ramna Police (since the place falls under the jurisdiction of Metropolitan Police) seeking assistance in apprehending him. He also informed Deputy Commissioner, Dacca and other higher authorities. And accordingly he ordered his force to surround the official residence of the former Minister Mr Abul Kashem.

Imdadul Haque alias Imdu was found inside the residence of the former Minister. On seeing the approaching police force Imdu locked himself inside a room on the ground floor of the house.

Police ordered Imdu several time to surrender. But he threatened to kill anybody trying to enter the room forcibly and said that he would come out of the room only after the return of Mr Abul Kashem.

Meanwhile, the FIR stated, police force on duty managed to open a part of a window of the room in which Imdu was hiding and found that Imdu along with one of his associates Bellal, son of Moizuddin of Durbati under Kaliganj Police Station in Dacca district, armed with revolvers had taken position inside the room, aiming their weapons at its entrance.

In the meantime, Assistant Private Secretary of the former Minister arrived at the spot by the former Minister's car and informed, Mr Farid Deputy Commissioner, Dacca, Mr A. M. Mufazzal Karim, that the Minister was very much annoyed and had ordered them to withdraw the police force immediately.

Mr Farid stated in his complaint that he could not comply with the order and said he would not withdraw the force until notorious criminal like Imdadul Haque who was hiding inside the official residence of the Minister was arrested.

The S.P., Dacca, then informed the higher authority over phone from the nearby residence of Deputy Commissioner, Dacca about the attitude of the Minister conveyed through his APS.

At about 2 p.m. Mr Abul Kashem came and seeing the police force started shouting orders at the police to get out from in and around his residence.

Mr Farid told Mr Kashem the cases in which Imdu was wanted. Still, the former Minister threatened and intimidated him (the S.P.) to leave the place with the police force saying that he would allow anybody to apprehend Imdadul Haque from his residence. But Mr Farid insisted that Imdu should be handed over to the people otherwise police would apply force as per law to effect his arrest.

But former Minister Abul Kashem, the FIR stated, continued to threaten and created obstruction in effecting the arrest of Imdadul Haque alias Imdu. Despite his resistance, police arrested Imdadul Haque alias Imdu on the same day at 430 p.m. His associate Bellal managed to escape with the revolver in the melee.

The FIR mentioned that Deputy Commissioner, Dacca, Mr A. M. Mofazzal Karim, Deputy Police Commissioner (South) Mr Moazzem Hossain Khan, Kazi Bazlur Rahman, Assistant Commissioner, Ramna and Officer-in-Charge of Ramna Police Station assisted Mr Farid in the operation while many members of the public witnessed the occurrence.

Denial of Charges

Dacca THE NEW NATION in English 15 Feb 82 pp 1, 8

[Text] Former Youth Development Minister Abul Kashem, who is also an MP and President of the Jatiyatabadi Jubo Dal claimed yesterday that he did never provide shelter to Imdadul Huq Imdu at his residence.

Addressing a press conference at the central office of the youth front of the ruling Bangladesh Nationalist Party (BNP) he said he was a victim of a conspiracy hatched out to lower his prestige and blacked his image.

He came to the office straight from the meeting of the BNP Parliamentary Party where, he said, he sought justice from the party.

Wearing clean 'safari' suit the Jubo Dal President was apparently composed, but he was frequently thumping the table in excitement.

The Central Jubo Dal leaders and Redwan Ahmed an MP were also present at the press conference. While speaking to the press his lieutenants were often whispering into his ears.

He asserted that he was innocent and he had been implicated in it by an unidentified quarter.

Explaining to the press conference he said he wanted to reveal the facts in view of the newspaper reports centering him followed the arrest of Imdu from his official residence.

Mr Kashem said President Abdus Sattar when informed about it by him the following day expressed his ignorance and regret.

He said Imdu was expelled from the Jubo Dal in its meeting held on May 23 last year immediately after receipt of written complaint from one Abdul Awal Bhuiyan. Then, upon his recommendation the BNP Standing Committee approved it, he added.

At this stage Redwan Ahmed produced a copy of the application reportedly signed by Imdu and addressed to the BNP Chairman seeking restoration of his membership of the party. Mr. Redwan said Imdu sent it by post to Abul Kashem for his recommendation, but it was not given.

Narrating the incident of arresting Imdu the Jubo Dal President said Imdu was arrested from Minto Road not from his residence. He said while discharging his official duty at around 1-45 pm on January 8 his driver and security guard apprised him of the entry of a dacoit into his residence and it was cordoned by the police.

On enquiry he came to know that the Home Minister was not aware of it. But tem minutes later the Home Minister confirmed the incident, he said.

On reaching home he along with Jubo Dal Secretary Saifur Rahman and some other leaders of the organization got Imdu out of the premises of his residence forcibly and then he was arrested from the Minto Road by the Police.

He alleged that the policemen had threatend the inmates of his house where his wife and children were not present that day.

He said he was told that the Inspector General of Police wanted to talk to him before he was taken to Ramna police station from his residence. An Additional Police Superintendent informed him there that he was arrested under Sections 212 and 353.

Answering a question he said that he did not know who had hatched the conspiracy. He denied that any offstage quarter was behind it.

Asked as to whether Imdu was accompanied by another person he said that he had not seen, but he had heard about it.

He said Imdu was a worker of Ganabahini of JSD. He joined the BNP in 1980, he added.

FORMER MINISTERS REPORTED UNDER INVESTIGATION

Dacca THE BANGLADESH OBSERVER in English 17 Feb 82 p 1

[Text] Preliminary probe into alleged corruption of seven former Ministers including two Deputy Prime Ministers is in progress. Earlier, the Government has categorically said that corruption charges against some Ministers will be thoroughly investigated.

Except one who was dropped from the Cabinet of late President Ziaur Rahman all other Ministers against whom investigation now continues have lost their jobs following dissolution of the Cabinet a few days ago.

It may be mentioned here that the Government has impounded the passports of 16 former Cabinet members presumably to facilitate investigation against them. Former Minister Mr. Abul Kashem was arrested on Monday last on charge of harbouring an offender and obstructing public servants in discharging their duties. He was later enlarged on bail. Former State Minister Mr. Ruhul Amin Howlader, is being wanted on charge of possessing illegal arms.

CSO: 4220/7878

REPORT ON SALE TO ISRAEL STIRS OPPOSITION

Dacca HOLIDAY in English 14 Feb 82 p 5

[Text] The government of Bangladesh is understood to have been seized with the reported move by a foreign firm to supply 20,000 metric tons of TSP fertilizer of Israeli origin to Bangladesh through its local agent in Dacca. The matter has been taken up at the highest level here.

While an official announcement on January 31 termed the report of January 24 as "entirely baseless" probes are being made from different direction, to find out exactly what has happend. Steps are also being taken to ensure that no trade with Israel through any source in Bangladesh does ever occur.

Meanwhile, Arab missions in Dacca including the PLO and a visiting dignitary from the United Arab Emirate have strongly remonstrated against the projected import of Israeli fertilizers to Bangladesh with President Sattar and other government authorities immediately after the publication of the report in HOLIDAY of January 24. Some of them, including Saudi and UAE embassies, it is learnt, have written memoranda to the Ministry of foreign Affairs, Government of Bangladesh seeking to know the exact position about the reported move. Replies from the Foreign Office to these notes are still awaited.

Also, AL'WAHEEDA, a leading national daily of UAE, published from Aub Dhabi and having a wide circulation in Arab world and outside, reproduced the HOLIDAY despatch.

In the circumstances, informed circles say, the matter cannot be summarily dismissed as "entirely baseless", as has been sought to be done by some officials here. Moreover, their clarifications, published in the press, have raised further doubts. Some maintain that these have virtually confirmed the HOLIDAY report.

Their version of the story too admits that there had been the offer by a supplier for the import of Israeli fertilizers in 1981 also. The question is: why or how could there be any such offer, at all, whereas Bangladesh does not recognise Israel and does not have any trade link in any form with it? Or, have the local indentors of this American-Jewish supplier concern been taken to task for making or bringing this offer? Not yet.

True, this offer was rejected. But it was not rejected "outright", as has been claimed. Rather, following the opening on May 23, 1981, of the tender for the supply of 10,000 metric tons of TSP, negotiations between the suppliers with their headquarters in New York and the BADC for the reduction of price and the extension of the date of validity of the offer went on till about the middle of June. These are facts on records.

It must also be noted that the present deal in question for 20,000 metric ton TSP is also being handled by a New York company with the same origin as that of the firm who bid for the supply of 10,000 metric ton TSP of Israeli manufacture. The difference is that the quantity has been doubled this time with the use of the name of a third country (Turkey).

In our story of January 24, we mentioned that the supply is being shown to be of Istanbul manufacture. The name of the dummy manufacturer is the same as that with us.

Interestingly enough, some quarters in Dacca tried for a Turkish contradiction here of the HOLIDAY report, but in vain. The government too has not yet issued any press note on the subject.

SUPREME COURT QUASHES FORMER PRESIDENT'S CONVICTION

Dacca THE NEW NATION in English 18 Feb 82 pp 1, 8

[Text] The Supreme Court yesterday quashed special military court convictions of former President Khandakar Mushtaq Ahmed after he had served four years out of a five-year jail term.

The full bench of the Appeallate Division of the Supreme Court by an order allowed two appeals of Khandakar Mushtaq and quashed the convictions and sentence.

The bench comprised of the Chief Justice Kemaluddin Hossain, Mr. Justice Fazle Munim, Mr. Justice Ruhul Islam, Mr. Justice Badrul Haider Chowdhury and Mr. Justice Shabuddin Ahmed.

The Chief Justice pronounced the order at about 9-30 a.m. Reasoning for quashing the conviction and sentence will be known when the judgement will be given.

Khandakar Mushtaq was convicted on charges of corruption by a special military court set up by late President Ziaur Rahman months after he had floated Democratic League to contest General election scheduled to be held on 28 February, 1977.

In view of his convictions he was debarred from participating in the November 15 presidential election which President Justice Sattar won with a landslide of votes.

Khandakar Mushtaq who was sentenced in February, 1977 was released from jail in March, 1980.

Khandakar Mushtaw became President following the military coup of August, 1975 but was ousted from power on November 4 the same year.

It may be mentioned that the special Martial Law Court No. 8 in February, 1977 convicted and sentenced Khandakar Mushtaw Ahmed to suffer rigorous imprisonment for 5 years and a fine of Taka one lac in default to suffer rigorous imprisonment for another one year. The said court also convicted and sentenced him in another case to suffer rigorous imprisonment for three years

for alleged corruption and misuse of powers when he was holding the offices as Minister and President of Bangladesh. But the Martial Law Court directed the sentences imposed against him to run concurrently. The conviction and sentences was upheld by the government after reviewing the same.

Against the judgment and order of the Special Martial Law Court he thereafter filed two separate writ petitions in the High Court Division of the Supreme Court challenging the validity of the said judgment and order as well as the review by the government. The High Court Division of the Supreme Court comprising Mr. Justice Abdul Wadud Chowdhury and Mr. Justice Sultan Hosain Khan in their judgment dated July, 29, 1981 discharged the rules. But their Lordships gave certificate under Article 103 of the constitution for appeal before the Appellate Division of the Supreme Court considering the involvement of important constitutional question for interpretation in the cases. Accordingly Khanakar Mushtaq Ahmed filed two appeals before the Appellate Division of the Supreme Court.

It may be recalled that the government started two cases of Corruption against him under Martial Law Regulation No. 11 of Regulation No. 1 of 1975 when he was kept in jail under detention.

The allegation in one case against him was that during his tenure of office as President of Bangladesh in 1975 he incollusion with the then Secretary, Ministry of Public Works and Urban Development got various construction works done in his paternal home at Doshpara and private rest house at Sandalpur, Comilla at the expenses of the government through corrupt and illegal means and abusing his official position and thereby obtained pecuniary advantage to the tune of Taka 4,68,631 and further during his tenure of office as Minister for Commerce and Foreign Trade he ordered supply of furnitures to the tune of Taka 39,000 from the Trading Corporation of Bangladesh to the said private rest house thereby obtained pecuniary advantage for himself and the members of his family and caused prejudice to the economic and financial interest of the country. On the other hand the allegation in other case against him was that during his tenure of office as Minister for Commerce and Foreign Trade he abused his official position by ordering admission of some new comers as commercial import firms. But some of the owners of the import firms were his relatives and some were fictitious.

Besides this, he, violating the import policy in 1974-75 granted licence to some firms to import Diesel Engine and thereby obtained Pecuniary advantage for others and caused prejudice to the economic and financial interest, to the country. Thereafter police submitted charge sheet under Martial Law Regulation No 11 of Regulation No. 1 of 1975 in court against him. After hearing the parties the Special Martial Law Court No. 8 convicted him in both the cases and passed sentence as stated above. Thereafter the case record was sent to the Chief Martial Law Administrator for review according to the Martial Law Regulation. But the government after reviewing the same upheld the conviction and sentence passed by the Martial Law Court against him.

In both the cases Khandkar Mushtaw Ahmed contended that the allegations are malicious, false and fabricated. It was further contended that review of the Martial Law Court's judgment was done illegally and without lawful authority by the Ministry of Law and Parliamentary Affairs and not by the President who is the government under the Constitution and who did not delegate the power of review.

After long hearing at length the Supreme Court passed the order as stated above.

Messrs. M.H. Kandokar, Khandokar Mahbub Uddin Ahmed, Nizamuddin Haider, Golam Morshed and Shahabuddin Ahmed appeared for the appelant while Attorney General Mr. K.A. Bakr and Deputy Attorney General Mr. Abdul Wadud Bhuyan appeared for the Government.

Democratic League will hold special prayers and Milad Mahfils throughout the country of Feb. 26 in connection with quashing of charges against the former President Khondakar Mushtaw Ahmed by the Appellate Division of Supreme Court, according to a party press release.

HAZARDS OF INDIA'S WITHDRAWAL OF GANGES WATER TOLD

River Routes Periled

Dacca THE BANGLADESH OBSERVER in English 10 Feb 82 p 1

[Text] Navigation in 12 river routes of the south-western districts have become "hazardous" because of withdrawal of Ganges water, according to an official document, says ENA.

Formation of shoal and fall in water level in these routes also reduced navigation.

The document titled "Report on the Effects of Upstream Withdrawal of the Ganges in Bangladesh 1980-81" estimated that dredging of the routes will involve an expenditure of taka 70 crore.

The 12 river routes include Dacca--Khulna Rocket route, Madaripur Beel route, Madhumati river, Upper Kumar route, Arial Khan route, Dubladia route, Ganges Jazira shoal, Rupsha river (near Khulna city), Alaipur--Jatrapur route, Rupsa Kazirbacha route, Gabkhan--Hula route, Kirtonkhola river, canal mouth in front of Patuakhali on Barisal--Patuakhali route. Besides, the ferery route between Aricha--Goalanda was also jeopardised because of formation of a large shoal in front of the Goalando, the report said.

It mentioned that a very alarming fact was observed in the main trunk line between Dacca and Khulna which is designated as class one route. The water level fell down to seven feet draft at places during the lean-flow season resulting in the formation of large shoal measuring about seven lakh cubic yards.

The "Rocket steamers" with nine feet draft had to be diverted to Barisal via Gazipur which involves an additional cruising time of two to three hours for one way trip.

The report noted that "alarming effects" of the upstream withdrawal of the Ganges water is the gradually deteriorating condition of the channels which provide ferry links to the northern region of Bangladesh with the rest of the country. These ferry routes are the lifeline of economy as they serve as the feeding channel of foodgrains, fuel and other commodities.

A survey carried out by Bangladesh Inland Water Transport Authority (BIWTA) n 1975-76 and 1976-77 showed that inland waterway traffic in the south-west Bangladesh was reduced by 11 million ton miles due to adverse channel conditions. Although cargo traffic between the southern and other regions of the country increased after that period the river traffic of commodities did not rise because no step could be taken to improve the channel for lack of funds. The increased cargo, according to the report, is now being transitted through roads and railways which involves more expenditure.

The report stressed that the extent of channel deterioration and its consequent adverse effects on the inland navigation and economy as a whole should be evaluated and studied immediately. But it mentioned that surveys relating to hydrography, traffic etc. could not be taken so far for lack of finance. No measure to improve the channels and navigation could be taken unless such surveys are carried out to gauge the extent of deterioration, the report added.

Importance of Talks

Dacca THE BANGLADESH OBSERVER in English 10 Feb 82 p 5

[Editorial]

[Text] An official survey on the impact of large-scale withdrawal of water at Farakka on the navigability of rivers has given scientific confirmation to what was so long a commonly observed feature. The survey has highlighted the falling water level in the river systems and the consequent increase in shoaling which is making navigation dangerous in the dry season. Already major steamer services have to undertake long detours to avoid shoals and shallow waters and in the process are incurring extra fuel costs. The continuing impact of the withdrawal has brought in rapid reduction in total tonnage of cargo carried by the inland water systems. This means that transporters are now taking to the more costly modes such as roads and the railways.

Since Bangladesh is naturally endowed with a network of rivers and normally navigable canals, the most important transport system ought to have been the rivers. If water had not been artificially withdrawn in such volumes at Farakka by India, it would have been so and the network of roads and railways would have been alternative systems for speed and other reasons. But the natural order of things has been reversed and unless the withdrawal of water is limited, the problems of navigability will continue. It can be argued that with some dredging the situation could be improved, but if the water level is reduced continuously navigability would be irrevocably hampered.

At a recent seminar on forest resources, experts have underlined yet another economically disastrous result of the low level of water in the river systems in Bangladesh particularly in the estuaries in the South. The once luxuriant Sunderban forest is diminishing, they lamented, because more saline water was rushing in with the tides to fill in the vacuum of fresh water created by the withdrawal. For the economy it means millions of taka lost in forest resources.

The immediate economic reasons are enough ground for speeding up negotiations on the Ganges water sharing dispute. As a lower riparian country, Bangladesh loses everyday in real economic terms if the negotiations are stalled or delayed. Therefore, the scheduled forthcoming meeting of the Foreign Ministers of the two countries to reopen the dialogue on the Farakka issue ought to be accelerated. The latest official document on the aftermath of Farakka points out why this should be so.

NEW CREDITS MADE AVAILABLE TO BANGLADESH

Dacca THE BANGLADESH OBSERVER in English 11 Feb 82 p 1

[Text] The International Development Association (IDA), the World Bank affiliate for concessionary lending Tuesday approved two credits totalling 45 million dollars to Bangladesh for increasing fertilizer and textile production, reports Islamic News Agency.

The IDA is lending 12.8 million special drawing rights (SDR) (15 million dollars) to finance site preparation and provision of construction for equipment for a urea fertilizer plant in Chittagong district. The plant will require financing amounting to 470.6 million dollars.

The World Bank affiliate is one of seven co-financiers which will make available 293 million dollars in foreign exchange needed to build the plant. Others are: Asian Development Bank with 72 million dollars to be used for service fees, Abu Dhabi Fund for Arab Economic Development 25 million dollars for the water treatment plant, Canadian International Development Agency 20 million dollars for steam generation facilities, Islamic Development Bank 16 million dollars and Overseas Economic Cooperation Fund of Japan 60 million dollars for the urea unit and Saudi Fund for Development 85 million dollars for the ammonia plant.

The fertilizer plant will have an ammonia unit with a capacity of 1,000 metric tons a day and a urea unit with a capacity of 1,700 metric tons a day.

Another IDA credit of SDR 30 million dollars will be used to rehabilitate 15 textile units and instal quality control facilities.

IDA credits are denominated in SDRS which are valued on the basis of a "basket" of currencies. The United States dollar equivalent of the SDR amount of the IDA credit reflects the exchange rates existing at the time of negotiation of the credit.

REQUISITION OF 'BANGLADESH OBSERVER' HELD ILLEGAL

Dacca THE NEW NATION in English 18 Feb 82 p 1

[Text] The High Court Division of the Supreme Court yesterday held illegal the taking over of daily Bangladesh Observer by the Government.

The Division Bench comprising Mr. Justice Abdul Wadud Chowdhury and Mr. Justice Sultan Hossain Khan directed the government to return the newspaper to its owner Mr. Hamidul Haq Chowdhury within two months.

On prayer of the Government the court, however issued certificate to go in appeal in the Appellate Division of the Supreme Court against the judgement.

It may be recalled that Bangladesh Observer was taken over by the Government following Independence when its owner Mr. Hamidul Haq Chowdhury lost his citizenship being away in Pakistan. His citizenship was however restored later.

PRIME MINISTER: SATTAR NOT INFLUENCED BY MILITARY

Dacca THE NEW NATION in English 23 Feb 82 pp 1, 8

[Text] Prime Minister Shah Azizur Rahman yesterday asserted in Parliament that President Sattar was not influenced by anyone in dissolving the Council of Ministers and forming the new one recently.

Strongly refuting opposition charges that the President had to do that at the instance of a "supra-constitutional body" comprising defence Personnel, the Prime Minister said, "it is untrue and baseless. The President himself decided upon it and he is not under obligation to discuss it with anyone."

Earlier, Mr Rashed Khan Menon (Workers Party) renewing his point of order said, "Dissolution of the Cabinet and formation of the new one were not the decisions of the President. A mini-military coup occured that night. The Cabinet formed at the instance of a supra-constitutional body was not legal."

Defending his own position as Prime Minister and Leader of the House, Shah Aziz claimed a comfortable majority support of the MPs. "More than 200 BNP MPs in a written communication to the President have expressed their confidence in me. I also command support from a number of opposition MPs".

The President was wholly satisfied about the majority confidence and his satisfaction was final. It was the prerogative of the President which could not be challenged in the House, he added.

Quoting article 58 of the Constitution, the Prime Minister said the President shall appoint as Prime Minister a member of Parliament who "appears to him" competent and command confidence of the majority members.

He termed the points of order raised by the two Opposition group leaders as "frivolous and motivated" and held that those were untenable. Agreeing with him Speaker Mirza Golam Hafiz later ruled out the points of order.

Displaying his usual brand of biting sarcasm, Shah Aziz pitied Mr. Shahjahan Siraj and Mr. Rashed Khan Menon who had been insisting on their interpretations of the Constitution that his appointment as Leader of the House and Prime Minister was not legal. "I am disappointed to see their poor knowledge of law. I expected the young parliamentarians will groom themselves as future leaders.

Suggesting that they were prompted by the BNP dissident group which tried to challenge his leadership outside Parliament, the Prime Minister said "I understand you have obligation to some of your friends to discharge this duty. But there are mistakes in their briefing".

In an oblique reference to a BNP dissident leader, the Prime Minister told the two young Parliamentarians, "You should have taken brief from an experienced lawyer, not a lawyer in name only".

Replying to their charge that the Council of Ministers was not in accordance with the constitutional provision without a Deputy Prime Minister, Shah Aziz said there was no hard and fast rule that Deputy Prime Minister should be appointed then and there.

He informed the House that a Deputy Prime Minister would be appointed soon.

The Prime Minister further said under the present Presidential system council of ministers was responsible to the president and not to Parliament. It has, however, some accountability to Parliament by way of answering to questions, calling notice, adjournment motion, etc.

Later, the Emergency Requisition (Amendment) Bill was introduced in the House.

Piloting the bill the Prime Minister said it seeks to continue operation of the relevant act of 1948 until replacement by new legislation.

Opposing introduction of the bill Salahuddin Yusuf (AL-H) urged the Prime Minister to come up with the pending bill instead of continuing the old one which was vague and ambiguous.

The House was adjourned till 10 a.m. today.

PAPER REPORTS SATTAR'S VISIT TO BURMA

Departure from Dacca

Dacca THE BANGLADESH OBSERVER in English 24 Feb 82 pp 1, 8

[Text] President Abdus Sattar left for Rangoon on Tuesday on a three-day state visit to Burma. This is his second foreign trip after being elected in the November Presidential election.

Talking to newsmen at Zia International Airport prior to his departure President Abdus Sattar said that he was paying this "goodwill" visit to Rangoon at the invitation of U San Yu, Chairman of the Council of State and President of the Socialist Republic of the Union of Burma. He termed the existing relations with Burma as "cordial and brotherly".

The President said that he has no "fixed agenda" to discuss with his host. It is, however, expected that the two Presidents will discuss matters of bilateral relations and regional and international issues.

The President is accompanied by Foreign Minister Professor Shamsul Huq, Home Minister Professor Mr. M. A. Matin and Consultant to the President Mr. Daud Khan Mailish. The Chairman of TCB also accompanied the President to explore the possibility of buying rice from Burma.

President Abdus Sattar was seen off at the airport by Vice-President Dr. M. N. Huda and Prime Minister Shah Azizur Rahman. Members of the Cabinet, chiefs of the three services, members of diplomatic corps, leaders and high ranking civil and military officials were also present at the airport to see President off. He was given a guard of honour before he boarded the special aircraft of Bangladesh Biman.

The President is expected to return on Thursday.

Arrival in Rangoon, Talks

Dacca THE BANGLADESH OBSERVER in English 24 Feb 82 pp 1, 8

[Text] President Abdus Sattar and Burmese President San Yu today exchanged views on a wide range of bilateral, regional and international issues, cables BSS Special Correspondent Jehangir Hussain.

A Bangladesh delegation source later said, during the hour-long talks at the President's House this afternoon, the two leaders expressed complete identity of views on all matters. Both the Presidents stressed on the need for increasing cooperation between the two friendly and neighbouring countries and called for maintaining Indian Ocean as a zone of peace.

President Sattar arrived earlier this morning on a three-day state visit and his talks with President San Yu also covered the situation in Kampuchea, Afghanistan and the Middle East. There were complete identity of views on all the issues discussed, the source said adding the talks were held in an atmosphere of friendship and understanding.

The two Presidents who held the talks in an atmosphere of friendship and understanding expressed the determination that the existing cordial and friendly ties dating back to centuries would be further strengthened.

The two leaders maintained that the way Burma and Bangladesh had solved their refugee problem was an example for all neighbouring countries of the world on how to solve problems through understanding and in a spirit of friendship and amity.

Bangladesh foreign policy, President Sattar said, aimed at friendship with all countries of the world, particularly the neighbouring ones. He said, Bangladesh's ties with Burma was an example of good neighbourliness.

President Sattar hoped the foundation of strong and friendly relations laid by the late President Ziaur Rahman and the former Burmese President U Ne Win would be made stronger.

President Sattar also proposed among other things that telelinks between the two countries be improved and be made more effective. The two sides decided to hold a meeting at an appropriate level later for the purpose.

Welcoming President Sattar the Burmese President said the visit demonstrated "very very friendly" and "close neighbourly relationship between the two countries".

President San Yu said that like Bangladesh, Burma also wanted friendship of all countries particularly of the neighbouring ones and it had been trying to resolve all problems with them as it had done with Bangladesh.

He said Burma's foreign policy was guided by conciliation and friendship.

Foreign Minister Prof. M. Shamsul Huq, Home Minister Prof. M. A. Matin, Consultant Khan Majlis, Bangladesh Ambassador Mr. S. N. Hashim, Chairman of Trading Corporation of Bangladesh Qazi Azhar Ali and Mr A. K. M. Fazlur Rahman Director General Foreign Office, assisted the President at the talks.

President San Yu was aided at the talks by Aze Ko Secretary, Council of State Tin Oo, Member Council of State Maung Maung Kha, Prime Minister Chit Hlaing,

Foreign Minister Col Bo Ni Minister for Home and Religious Affairs and Thein Win Ambassador to Bangladesh.

President Sattar, earlier called on the Burmese President at the President's House.

President Sattar later laid wreaths at the Martyrs Mausoleum. The Burmese President is hosting a banquet tonight in honour of President Sattar.

Earlier President Abdus Sattar was given a tumultuous ovation on his arrival in Rangoon from Dacca this morning on a three-day state visit to Burma.

The newly elected Burmese President U San Yu warmly greeted President Sattar at the Mingaladon Airport as he alighted from his special aircraft.

President Sattar was given a 21 gun salute when the aircraft carrying the presidential entourage touched down at the airport.

Units drawn the Burmese Armed Forces presented him a guard of honour. President Sattar took the salute from a red and yellow dias erected especially for the occasion as President San Yu stood by him.

The dignitaries present at the airport including Burmese Prime Minister U Maung Maung Kha were then introduced to President Sattar the members of the council State of Burma members of the diplomatic corps and Bangladesh Ambassador to Burma Syed Nazimuddin Hushim were also present.

The Foreign Minister Professor Shamsul Huq, the Home Minister Professor M.A. Matin and the Consultant to the President Mr. Daud Khan Majlis are accompanying the President.

Thousands of flag waving school children attired in colourful dresses young Red Cross volunteers Lanzin youths (young cadres of Burma Socialist Programme Party) and factory workers sang welcome songs wishing long life to the visiting President and chanted "Long live Burma-Bangladesh friendship".

Airport ceremonies over President Abdus Sattar and President San Yu drove to the State Guest House in a flag bedecked ceremonial motorcade.

The entire seven mile route from the airport to the official State Guest House was decorated with welcome arches. Men and women young and old carrying miniature national flags of Burma and Bangladesh lined the route and chanted welcome songs as the motorcade passed through.

According to diplomatic sources here the unprecedented preparations indicate that the Burmese government attached great importance to the three day visit by President Sattar.

All the six national newspapers of Burma front paged a detailed biography of President Abdus Sattar highlighting his political career and his landslide victory in the last November Presidential election.

President Abdus Sattar was given a reception by Bangladesh community settled in Burma at the Bangladesh Embassy shortly after his arrival here today.

President Sattar rallying to an address of welcome said he was happy to meet them in fraternal Burma.

The President said that within 180 days of President Ziaur Rahman's assassination "we held the election" upholding the democratic process initiated by the late president.

He said his government was working hard to develop the economy of Bangladesh following the policies of late President Ziaur Rahman.

Then President Sattar thanked the President of Burma U San Yu for looking after the welfare of the Bangladesh community settled here.

President Sattar said "we want to develop the economy of Bangladesh with the hard work of nine crore people and following the policies of late President Zia".

Dr. Syed Anwar Azim President of the community read an address of welcome.

Banquet Speech

Dacca THE BANGLADESH OBSERVER in English 24 Feb 82 pp 1, 8

[Excerpt] President Abdus Sattar today expressed Bangladesh's desire to forge close and friendly relations with all countries of the world, particularly the neighbours and those of the South and South-East Asian region reports BSS.

Speaking at a banquet given in his honour by the Burmese President U San Yu at the President's House here, the President said that Bangladesh, like Burma, was dedicated to peace, stability and progress.

Text of Speech

The following is the text of the speech of President Mr. Justice Abdus Sattar at the banquet given in his honour by the Burmese President U San Yu at Rangoon on February 23:

Excellency and distinguished guests,

I am extremely happy to have the opportunity of paying my first state visit to our beautiful and friendly neighbour the Socialist Republic of the Union of Burma at the invitation of Your Excellency. I bring to your with me the warm greetings and sincere good wishes of the people of Bangladesh for you, Mr. President and through you to the friendly warm-hearted people of Burma. I am deeply touched by the brotherly welcome and gracious hospitality extended to me and the members of my entourage reflecting the goodwill and friendly sentiments that the people of Burma have traditionally harboured for the people of Bangladesh.

In keeping with our policy of forging close and friendly relations with all countries of the world, particularly our neighbours and those of the South and South East Asian region we attach the utmost importance to this visit on the firm belief that this will further promote and strengthen the friendly relations and cooperation already existing between our two countries.

Bangladesh and Burma are bound by historical and cultural bonds going back to centuries. The relations between our two countries have always been marked by extreme cordiality, mutual trust, understanding and cooperation. I recall gratefully the great contribution made by His Excellency U Ne Win and our late President Ziaur Rahman in bringing our two countries closer together. It would be my earnest endeavour and constant effort to further consolidate our relations in the days to come in the closest possible cooperation with Your Excellency. I am sure that relations between our two friendly and neighbouring countries will grow from strength to strength in the coming years for the mutual benefit of our peoples. I am convinced that exchange of such visits between us will help us to continue and further deepen our harmonious relations. We remember with great foundness the memorable visit of His Excellency U Ne Win to Bangladesh in May 1979 and that of our late President Ziaur Rahman to Burma in 1979 which have been of so much help in further strengthening relations between our two countries.

Bangladesh like Burma is dedicated to peace, stability and progress. As developing nations, our two countries have common experience, outlook and aspirations. We are convinced that only in an environment of peace can we enjoy the fruits of independence and concentrate our energies and resources for the economic and social development of our peoples. We firmly believe that peace and security can be best safeguarded through strict adherence to the principles of sovereign equality, respect for territorial integrity, non-interference in each others' internal affairs and peaceful settlement of all disputes.

Our two countries hold similar views on most of the important international issues and have strongly advocated the establishment of a New International Economic Order based on justice and equity.

Inspired by the ideals of our late President Ziaur Rahman, we, in Bangladesh have undertaken a massive task of national reconstruction and development with a view to attaining the goal of economic self-reliance and raising the quality and content of the life of our people. Our people are determined to march towards greater progress and prosperity. We are committed to a democratic system of government. My election to the office of the President by an overwhelming mandate from the people of Bangladesh and the convening of the session of the Parliament last week are concrete evidence of steps to demonstrate our keen desire and inflexible determination to maintain our cherished democratic traditions.

We have been watching with admiration the efforts made by your government for the all-round economic and social development of the people of Burma. I am sure under your wise leadership and able guidance the friendly people of

Burma will march forward in achieving their cherished goals. I wish you and the friendly people of Burma peace, happiness and all-round progress.

Excellencies and distinguished guests may I now request you to join me in a toast:

--to the health and happiness of His Excellency U San Yu and Madam San Yu;

--to the well-being of the distinguished guests present;

--to the continued peace and prosperity of the friendly people of the Socialist Republic of the Union of Burma; and

--to the everlasting friendship and cooperation between Bangladesh and Burma.

Foreign Ministers' Talks

Dacca THE BANGLADESH OBSERVER in English 25 Feb 82 p 1

[Text] The Foreign Ministers of Bangladesh and Burma at a meeting here today agreed to take all possible steps to increase bilateral cooperation in different fields including trade economy and culture reports BSS.

Foreign Minister Prof. M. Shamsul Huq and his Burmese counterpart U Chit Hlaing held the talks "in a very cordial and friendly" atmosphere following up yesterday's discussions between President Abdus Sattar and President San Yu.

The two Foreign Ministers expressed the hope that the maritime boundary between the two countries would be settled soon delineated in the same spirit in which they resolved problems in the past making examples for all neighbouring countries. They agreed to resume the maritime boundary delineation talks soon Prof. Huq said.

They reviewed a wide range of bilateral regional and international issues of mutual interest.

Emerging from the talks Prof. Huq said that a Burmese trade and economic delegation would soon visit Bangladesh to explore possibilities of increased cooperation between the two friendly countries.

Prof. Huq said that he and his Burmese counterpart agreed to hold consultations "whenever considered necessary" with the same objective of increasing bilateral cooperation.

While reviewing the international situation both the Foreign Ministers expressed "great concern" over the widening areas of tension and conflict in the world.

Noting the similarity in their views on different issues the two Foreign Ministers shared the view that the solution of the problems in Afghanistan

and Kampuchea be left to the peoples of the two countries.

They stressed that the peoples of Afghanistan and Kampuchea be left free to determine their own destiny without any external intervention be it military or otherwise.

They stressed that mutual respect for sovereign equality territorial integrity, non-interference in the internal affairs of other countries, renunciation of use of force and peaceful settlement of problems were imperative for global peace and security.

They maintained that the way Burma and Bangladesh had resolved their problems in the past were examples of how to resolve them between neighbouring countries.

The two Foreign Ministers considered that strict adherence to the rule of law and the United Nations Charter were of imperative need in the governance of international relations.

They noted with satisfaction the "excellent" bilateral relations between Burma and Bangladesh developed on the firm foundation laid by the late President Ziaur Rahman and the former Burmese President Ne Win.

They considered that the recently concluded agreement on the demarcation of land boundary between the two countries was a demonstration of continuing goodwill and good neighbourliness between the two countries.

Mr. Tin Ohn Deputy Foreign Minister, Ambassador to Bangladesh Thein Win and senior officials of the Burmese Ministry of Foreign affairs were also in the talks.

The Bangladesh Foreign Minister was assisted among others by Ambassador Mr Syed Najimuddin Hashim, Chairman of Trading Corporation of Bangladesh Qazi Azhar Ali and Mr A.K.M. Fazlur Rahman Director General Foreign Office.

The Burmese Foreign Minister U Chit Hlaing accepted the invitation of Prof. Huq to visit Bangladesh.

BANGLADESH, HUNGARY SIGN CULTURAL AGREEMENT

Dacca THE BANGLADESH OBSERVER in English 25 Feb 82 pp 1, 12

[Text] Bangladesh and Hungary on Wednesday signed a cultural agreement envisaging cooperation in Education science technology art sports and other related fields, reports BSS.

The agreement was signed by Mr Hedayat Ahmed Secretary Sports and Culture Division of the Ministry of Information Broadcasting Sports and Culture and Mr. Endre Galambos Hungarian Ambassador in Bangladesh on behalf of their respective governments.

Under the terms of agreement both the governments will exchange professors teachers specialists students researchers technologists and experts with a view to holding lectures and pursuing studies in institutes of higher education in each other's country.

Each government will also grant scholarships to the citizens of the other country for specialisation and exchange of experience in its educational scientific cultural and other institutions.

Both the parties will exchange visits of artists and artistic ensembles media officials journalists and cameramen and also promote cooperation between radio television information and Press institutions.

Speaking on the occasion Mr Endre Galambos said that the agreement would serve as a basis for the extension of cultural cooperation and bilateral relations.

He said that the agreement would give a new impetus as well as an institutional framework to the further development of Hungarian-Bangladeshi cultural relations.

Reciprocating Mr Hedavat Ahmed hoped that the agreement would further strengthen the existing bonds of friendship and brotherly relations between the governments and peoples of the two countries.

PRESS REPORTS ARRESTS OF MAJOR TERRORIST GROUP

Arrests on 18, 19 Feb

Dacca THE BANGLADESH TIMES in English 20 Feb 82 pp 1, 8

[Text] Lalbagh police in a 20-hour long raid on Thursday and Friday arrested 16 persons from different areas of the city. Some of the arrested persons were allegedly responsible for hurling bombs at the public meeting of Khondker Moshtaque Ahmed on May 23, 1980 and explosions in the Dacca University campus during DUCSU polls this year.

This was disclosed by Liaquat, one of the accused arrested on Friday, during his preliminary confession to police.

Police also recovered four unauthorised pistols, 25 rounds of ammunition, a private car and a motor cycle from the possession of some of the accused.

In crushing the well known terror group, police had to exchange fire with one of the accused. The accused, Hannan alias Moshfequr Rahman with two pistols in his hands opened five rounds of fire in an abortive bid to escape. He was caught wounded when a police bullet pierced his left thigh.

The arrested persons included four known leaders of pro-Hasina faction of Bangladesh Chhatra League (Jalal-Jahangir). They were: Hannan, Liaquat, Ekramuddaula and Montu alias Fazlur Rahman. All of them were wanted by police in a number of cases of murder, dacoity, possession of unauthorised fire arms and rioting.

One of the arrester BCI (Jalal-Jahangir) leader reportedly divulged startling information involving himself and his associates with some incidents of political violence in the city in the recent past.

The accused told the police that they were responsible for the explosion at the meeting of Khondker Moshtaque Ahmed on May 23, 1980, in which nine persons, including Mustafizur Rahman, a journalist, were killed and a number of people including journalists were injured.

He also told police that they were responsible for explosions at the Dacca University during DUCSU election this year. The same group is also connected

with recent bomb explosions in city including the hurling of grenade near the house of Mr Abdur Razzak, General Secretary of Awami League (Hasina).

Other arrested during the operation were: Jahangir Badshah alias Badshah, Abdullah Al Faruq, Abdul Aziz, Mono Ershadul Huq alis Bulbul, Jahangir Alam, Abdul Wahab, Dr Khandker Mohammad Iqbal, Md Mahtabuddin, Md Delwar Hossain, Md Shahidul Huq and Nurul Amin.

Police also seized one yellow coloured private car and a motor cycle used recently in a number of dacoities and robberies in the city.

The operation began at about 1-30 p.m. on Thursday with the arrest of Montu alias Fazlur Rahman in front of a hotel on Mirpur road, near Azimpur New Market, by Mr Akram Hossain Khan, Officer-in-Charge Lalbag Police Station and his men.

Police recovered from his possession a subcription collection book and a warning letter. While the subscription collection book indicated that Montu and his associates used to collect money from shop keepers in the name of "urs" the warning letter was addressed to the manager of a reputed sweetment shop "Maran Chand and Grandsons" asking the manager to meet accused Montu at a convenient time to settle some "important issues".

Montu told the police that originally he was a rickshaw driver but was "recruited" by Hannan, Liaquat and Shaha alias Shahabuddin. Shaha arrested earlier in a criminal case, is now under dentention.

Montu confessed that Shaha had given him a pistol but he had kept it with Ekramuddaula.

Ekramuddaula was arrested from the residence of his father-in-law in a dramatic was. Around 2 a.m. Friday when policemen entered the house of Matiur Rahman, Ekram's father-in-law a field officer of National Security Intelligence, they found all the inmates of the house awake.

In one corner of a room a girl was lying on a cot. The girl was asked to leave her bed. The policemen removed the mattress and found Ekramullah under that mattress. The girl was identified as the sister-in-law of Ekramullah.

Ekramullah told police that he had handed over Shaha's pistol to Hannan only on Wednesday.

Following the information obtained from Ekramuddaula police raided a house at New Eskaton road and arrested eight persons, including Liquat and Badshah, from there. Two pistols with 14 rounds of ammunition were recovered from their possession.

Police then raided the house of Hannan's sister at Mahakhali Chest Hospital doctors' staff quarters around 3-45 a.m. Sensing the arrival of the policemen Hannan came out of the house with two pistols in his hand. He fired five shots towards the policemen but none was hurt.

The OC, Lalbagh police then opened one round of fire from his revolver which hit the left thigh of Hannan. The constables also fired several rounds of shots on hearing the exchange of fire to scare Hannan. The bullets did not hit anyone. Injured Hannan was arrested along with his pistols and 11 rounds of ammunition.

The accused persons admitted that they had committed two robberies in Dhanmondi area on Thursday with the help of the car which the police had seized from the father-in-law of Ekramuddaula.

According to the preliminary confession of Liatquat, he and his associates belonged to pro-Hasina faction of the Awami League and its front organisation. He said that he wanted to leave for West Germany in 1981 but it was Sheikh Hasina Wazed who pursuaded him not to leave the country. "She assured me that she would hush up all cases against me," Liaquat told police.

Liaquat had reportedly told police that his associates were responsible for explosions in the Dacca University and recently in the house of Mr Abdur Razzak, General Secretary of the Awami League.

Liaquat had told police that it was Shaha and his men who hurled bombs in the meeting of Khondker Moshtaque Ahmed at Baitul Mukarram in 1980.

Giving the background of Shaha alias Shahabuddin, Liaquat informed the police that Shaha, a former bodyguard of Sheikh Fazlul Huq Moni left for India after the political change in 1975 but returned 1979.

While in India, Liaquat told police, Shaha was a member of Quader Siddiqui's "Bahini" and received commando training under RAW, Indian Secret Service, at Deradun. Captain Beg of Indian army conducted the training.

Liaquat had reportedly told the police that they had also close link with one section of Bangladesh Jatiyatabadi Jubo Dal. "We help each other in operations."

Apparently disgusted with the role of the party leaders, Liaquat at one stage urged the police officers to arrange his interview with Radio and Television so that he could tell the people about the way "our leaders are using us."

Full particulars of the arrested persons: 1. Fazlur Rahman alias Montu, son of late Ataul Huq, Shatvita, Dohar P.S., Dacca, at present 7, B.C. Roy Road, P.S. Kotwali, (2) Ekramuddaulah, son of Kutubuddaulah, Bahuli, P.S. Patiya, Chittagong, at present 42/P, Dacca University Staff Quarter, Azimpur, (3) Liaquat son of Mominuddin Ahmed, village South Kurkachar, P.S. Shibchar, Faridpur, at present 114, New Eskaton Garden, Ramna, Dacca, (4) Jahangir Badshah alias Badshah son of Abdul Aziz of Chashiri, P. S. Tongibari, Dacca, at present 1/A Eskaton Garden, Ramna, Dacca, (5) Abdullah Al Faruq son of Abdul Aziz, 1/A, Eskaton Garden, (6) Abdul Aziz son of Moulvi Moizuddin Bepary, 1/A, Eskaton Garden, (7) Mono son of Bazlur Rahman, Fatehabad, P.S. Debidwar, Comilla, at present 1/A Eskaton Garden, (8) Ershadul Huq alias Bulbul

son of Erfan Ali, Fulbari P.S. Bashail, Tangail at present 1/A, Eskaton Garden (9) Jahangir Alam son of Abdul Latif, Asadpur, P.S. Homna, Comilla at present 1/A, Eskaton Garden, (10) Abdul Wahab son of Mohammad Osman, Barunda, P.S. Tongibari, Dacca at present 1/A, Eskaton Garden, (11) Moshfiqur Rahman alias Hannan son of late Mokaddes Hossain Khan, Gonapara, P.S. Singair, Dacca at present 17 Free School Street, Dhanmondi, (12) Dr Khandker Mohammad Iqbal, son of Khandker Mohammad Sanwar Ali, Sabalia, Tangail, at present a physician of Mahakhali infectious disease hospital, (13) Md Mahtabuddin son of late Khadem Ali, Madanmohanpur, Nawabganj, Dacca at present Mahakhali Staff Quarters, (14) Md Delwar Hossain son of late Khadem Ali (15) Md Shahidul Huq son of late Khadem Ali, (16) Md Nurul Amin alias Ghyas son of Abu Mollah, Mahakhali.

More Arrests Reported

Dacca THE BANGLADESH TIMES in English 25 Feb 82 pp 1, 8

[Text] The Dacca Metropolitan Police, in separate raids in and around the city arrested alleged members of the "terror groups" during the last 48 hours.

The arrested persons are: Mujaheed Hasan, Kala Faruq Taju alias Tofazzal Hossain and Sana alias Sanaullah.

Taju and Sana were reportedly close associates of Montu Shaha an Indian national and a member of the terror group, arrested by police on February 18. Police recovered one pistol and ten bullets from Mujaheed.

Police had to exchange fire while arresting Mujaheed.

According information Inspector Aminul Huq, officer-in-charge, Ramna Police Station chased two motor cyclists near PG hospital crossing when their movements appeared suspicious.

The motor cyclists tried to escape towards New Market while the OC in his patrol jeep continued the chase. At Kataban point, the youngman sitting on the rear of the motor cycle opened two rounds of fire towards the police jeep. Inspector Aminul Huq returned fire but none was hurt in the exchange.

The cyclists parked their motor cycle near New Market Hawkers Market and tried to escape. Police chased them and managed to arrest Mujaheed while his companion escaped with a pistol. Mujaheed's pistol was found fully loaded with six rounds of ammunition. Besides, four live bullets were recovered from his pocket.

Police also seized the motor cycle, Dacca HA 6073. The police thought the motor cycle to be a stolen one.

Dhanmondi police on Tuesday arrested Kala Faruq, an associate of Hannan and Liaquat, from Elephant Road. Son of a senior bank officer, Kala Faruq was picked up from a restaurant.

Meanwhile, Lalbagh police arrested Taju alias Tofazzal Hossain and Sana alias Sanaullah, two close associates of Montu Shaha. Taju was arrested from Shakhipor in Kaliakoir police station and Sana was apprehended from Joydevpur in the early hours of Wednesday.

The Detective Branch of the Dacca Metropolitan Police arrested Syed Selim Ahmed on Tuesday night and recovered one G-3 automatic rifle with four rounds of ammunition.

On the basis of a secret information, Inspector M.G. Quddus, the captor of Chittagong mutiny leader Major General Manjoor, arrested Selim from near Jonaki Cinema. On the basis of his statement, the rifle was recovered from the kitchen of F.H. Hall of the Dacca University. Selim a non-student, was staying in that hall.

The students of the F.H. Hall welcomed police action and assured full cooperation to the police in recovering unauthorised fire arms, from the campus.

Selim, who belonged to another "terror group" used to collect subscriptions from travel agents under duress.

Sheikh Selim's Comment

Dacca THE BANGLADESH TIMES in English 24 Feb 82 p 1

[Text] Sheikh Selim, M P and Editor of Banglar Bani, in a statement on Tuesday condemned what he said "conspiratorial campaign in different newspapers--particularly Government newspapers--against the President of Awami League (Hasina) other leaders, Madhumati Mudranalaya and against him involving so-called confessions of some recently arrested persons".

He said that "the published news items were totally orchestrated false baseless, and motivated. The interested quarters were trying to tarnish the image of "Bangabandhu's daughter and myself" he said. It was also a deep conspiracy to close down the Madhumati Mudranalaya and Banglar Bani, he added.

It may be mentioned here that nothing has been reported by this newspaper involving Sheikh Selim.

INDIA DENIES CORRIDOR USE TO ENCLAVE INHABITANTS

Dacca THE NEW NATION in English 21 Feb 82 pp 1, 8

[Text] India has withdrawn the Tin Bigha corridor facility to the people of Bangladesh enclaves of Dahagram and Angarpota in violation of a gentleman's agreement reached in September last.

Heavy security force from the Indian state of Mizoram has been deployed at Tin Bigha last week. The security personnel were refusing the corridor facility saying their government has no permission for allowing the Bangladesh citizens to cross over Tin Bigha.

The enclave people said the new force posed brute and it is difficult to communicate with them.

It may be recalled that a gentleman's agreement providing for corridor facility was reached at a meeting between the Deputy Commissioner of Rangpur and the District Magistrate of Coochbehar in September last.

Since then the Enclave have been using Tin Bigha as corridor to visit the mainland.

But suddenly this facility was withdrawn by the Indian authorities without prior discussion or giving any reason whatsoever.

Meanwhile, the Tinbigha Protirodh Sangram Committee in Coochbehar district recently brought out a truck procession there protesting giving the corridor facility to Bangladesh. The processionists vowed to resist it even at the cost of blood.

Such procession immediately before withdrawal of the corridor facility after five months was viewed as organised by the Indian authorities to deliberately create problems for the enclave people.

Because of disruption in communication with the mainland supply of essentials in Dahagram and Angarpota were drying up. According to reports reaching from the enclaves, prices of foodgrains, medicine, kerosene and salt are soaring up everyday. People will face serious crisis of these essential items if supplies cannot be restored in next few days.

Meanwhile, Indian nationals forcibly took away at least 26 cattlehead from Dahagram during the last 20 days. Afsaruddin and Nesaruddin have each lost 6 cattlehead.

BUSINESSMAN REVIEWS BANGLADESH ECONOMIC SITUATION

Dacca THE BANGLADESH TIMES in English 26 Feb 82 pp 5, 6

[Text] Whither our national economy? This question is acutely agitating the minds of the people. While dealing with various facets of this question I will discuss in broad spectrum the economic realities with an open mind. These realities which may depict the frustrating experience of the business community should not however be treated as frustration. We will pinpoint the malaise of the economy with a view to finding our the lines of solution to the problems facing the country.

The national economy still remains highly unstable which has been bitterly proved by the current stagnation and inflation precisely called stagflation. All the economic buoyancy that a fine crop year (80-81) was supposed to have brought to the country has disappeared within six months of the very next year. Now we seem to be short both on cash and grains. Meanwhile, there has not been any substitute of the loss in agriculture sector. With rigorous credit squeeze for the private sector and driblets of foreign exchange funding for imports, activities in both industry and trade have slowed down. The high inflationary rate and the spurt in rice price threaten to wipe out savings and consequent internal resource mobilisation and even borrowings of the poor and middle class. The average inflationary rate in the country was around 20 per cent during the year ending December 31, 1981. The GDP (at 1972-73 factor cost) is intimated to have provisionally increased by 6.08 per cent during 1980-81.

It will not do to say that we have been unwitting victims of a global economic upheaval. We, I mean the authorities have committed far too many mistakes knowingly, or so one presumes. The terms of IMF were known to us when we signed the loan agreement with the Fund. Why did we then go on a kind of spending spree to which the IMF would object so sharply? We knew that even with the 1980-81 bumper harvest, we were having food deficit, and at the same time as the gobernment stock had been going healthy, we knew that the current crop was being destroyed by pests. Simple additions and subtractions would have shown where we were going. Given the cycle of floods and droughts we experience, it will also have been reasonable to assume production-loss on count of act of nature. Had we been preparing foreign supplies accordingly, we would have been saved, at least to some extent, of the panic boost to rice price. What had happened on the contrary was that until November, when the effects of the drought had already become pronounced people were told by the

authorities that we had so much food that we did not have room to stock it. Not only this, we experienced the ridiculous facade of 'export' of rice on the so-called plea of surplus. This had an adverse impact on the donor countries so far as their food aid is concerned. Even we exported fertilizer on the expectation that its production in the fertilizer factories would register remarkable increase. Regrettable though, production in the recently inaugurated Zia Fertilizer Factory could not commence as expected.

The financial performance of the public sector enterprises and public utilities remained far from being satisfactory. Many of the industrial enterprises instead of making any contribution to the Exchequer had to survive on direct and indirect subsidies. During 1972-73 to 1978-79, the jute industry alone incurred a total accounting loss of Tk. 352 crore while net pre-tax profit of some major Corporations, viz., BSEC, BSFIC, BCIC and BTMC stood at Tk. 168.30 crore which denotes a very poor return on investment. Profits of these Corporations will be much less or even be negative if accounts are taken of depreciation at replacement cost, debt service charges and subsidies received from other sector. These figures are of 1978-79. The present situation is worse than that.

The establishments' claim about successes on the industrial front are, therefore, deceptive and nothing but propaganda stunt. The continuing low operational efficiency of the public sector has been a chronic problem.

Now the time has come for serious rethinking of what nationalisation has brought to the economy of the country. Exponents of nationalisation might speak lot of things in their defence but this will not change facts. The nation today needs a clear-cut decision and direction in this regard.

The persisting slack in the industrial sector holds out unpromising prospects for the future as the potential investors continue to feel alarmingly discouraged by the extended network of bureaucratic and other forms of control at every tier from the beginning to the end for getting an industrial project off the ground. The investors are uncertain of so many things: uncertainty about release of funds both on local and foreign currency from the financing institutions, foreign exchange sanction, allotment of land, uninterrupted power supply, tariff protection, domestic marketing constraints and so on.

Against this backdrop, the target of the Lima Declaration of the United Nations Industrial Development Organisation (UNIDO) to raise the share of the manufacturing sector to the level of 25 per cent by 2000 AD in the least developed country like Bangladesh would almost certainly appear to be too illusory.

It is high time now that government concentrates more and more on productive expenditure. The expenditure of the Government on revenue however increased at an average annual rate of 25 per cent between 1972-73 and 1978-79; the increase took place mainly in public administration, defence, debt services and subsidies. More significant, however, is the fact that non-development expenditure increased at the rate of 21 per cent annually during 1975-76 to

1978-79. This sort of expenditure is unfortunately on the increase and worse than before.

According to the Annual Development plan implementation survey for 1980-81 an additional amount of Tk. 235 crore was spent without any allocation. The allocation was Tk. two thousand 369 crore. The number of projects was 321 whereas 160 projects were implemented.

On the other hand screw was tightened on private sector financing but the concerned authorities keep on busting the rules to keep afloat the credit guzzling losing public sector corporations. We order the jute mills to go for production but we do not consider cushioning of their loss even when they to sell their goods at a very low price or even when we see a competing country giving cash subsidy for export to its jute goods producers. We have arranged to refine crude oil at Singapore (on cash payment) involving thus heavy cash foreign exchange outlay but we have probably not yet sat down to calculate whether this process has given us a profitable return or not. On the subject of oil it may be worth mentioning that some of the western countries have begun to save up to 40 per cent on fuel consumption. What has been the impact of formation of high level committee on energy in our country? The country needs sound energy planning.

In spite of Government's oft repeated emphasis on export-orientation, growing dependence on imports has crippled the growth of domestic industries. The products of many of our industries have remained unsold. On the other hand, seven months have already passed but the planned allocation for the import policy 1981-82 could not be made available to the domestic industries to meet their requirements of raw materials and spares which have severely cramped their economic viability.

I mention all these not for being acrimonious nor for being polemical. My intention is to state that we have not even tried, not to speak of trying hard. My intention is to say that credibility of the government and its institutions which is vital for sustained efforts for economic and social progress is waning. My intention is to point out that we are already in the danger of exposing ourselves as inefficient to the international community. The very unwelcome efforts of these attributes snowball on the country and the people.

It is, however, heartening that of late this hard reality is being realised by the people at the top. We are now eagerly waiting to hear from them as to what pragmatic steps they are going to take to face this reality of stagflation.

At this point the question arises what is to be done.

There is a starting point which is as clear as it can be. The needs of the general mass have to be attended to put at the same time our wealth is limited, we being poor. This does not mean, however, that we have to share poverty. What we have to share is what we have. By this we might be sharing some hardship for some time. This is the starting point. There cannot be a free for all so that one can grab what one can.

This again means two things one, the government's policies relating to investment and spending must be firm and fair. There may be competition in the first case and competing claims about the second. Where there is competition it has to be ensured that there has been a fair decision and where there are competing claims, it has to be seen that the biggest chunk of government expenditure goes to productive purposes or economic-activity generating actions and not merely to money-circulating actions. Two, financial discipline must be rigorously imposed as opposed to the habit of reckless spending now and a squeeze then. I would mean steadily trimming the frills in government organisations and projects. A dangerous aspect of nonproductive expenditure, which we have to remember, apart from its immediate contribution to inflation, is that it begets further wasteful spending in the name of protecting employment and privileges.

In other words, government must drastically reduce unproductive expenditure and increase investment in necessary marketable production.

This again is not to say that building infrastructure or spending on social overheads should come to a halt. Only that care should be taken to avoid addition of white elephants, projects not useful in the foreseeable future, and expenditure that will become wastefully recurring.

These are not generalisations, as these seem to be. Experience, records and reports available with the government are plenty to show where the finger should be placed.

Last but not the least, inflation needs to be fought with determination. We have to remember that we cannot increase incomes corresponding to price-rise. In our kind of economy, which does not depend fully on sophisticated technology and where the domestic agriculture sector is the main supplier of necessities of the bulk of the population, it is perhaps possible to insulate and country to an extent from imported inflation. Keeping cost of production low in agriculture will have to be a major objective in this regard.

EFFORTS TO CURB DOMESTIC CREDIT EXPANSION FAIL

Dacca THE NEW NATION in English 17 Feb 82 pp 1, 8

[Text] Despite vigorous Government effort to contain widespread credit expansion, the overall domestic credit of the country registered a sharp increase over the last seven months since July, '81.

Upto January '82 the total domestic credit recorded an expansion by about Tk 531 crore to Tk 6020 crore as compared with that of Tk 5488.89 crore in the month of June'81 of which substantial portion is outstanding bank credit. As a result, liquidity position (cash money at the disposal of the nationalised banks) of the country has been worst affected during the period under review which has made a record in the recent past.

Following the visit of the International Monetary Fund (IMF) delegation in July last Government imposed drastic credit curb to satisfy the IMF prescription. It may be mentioned that in the last financial year the outstanding level of credit of the scheduled banks alone recorded an expansion by Tk 829,86 crore as compated with Tk 690.62 crore during the preceding year. Since then Government has been paying much attention towards containing demand by fixing quarterly target for monetary and credit expansion. But, however, a ministry official told The New Nation that the overall domestic credit did not cross the ceiling fixed by Bangladesh Bank.

The widespread expansion of the outstanding level of credit has posed serious threat to the liquidity position of the scheduled banks. The liquidity position of the scheduled banks experienced a record decline in the week ending on January 15 last. Bangladesh Bank's unusual advance to the nationalised banks, in fact, kept some banks in operation.

In January this year the liquidity position of the banking sector stood at Tk 1035 crore which is 27.30 per cent of the total deposits.

But in the week ending on January 15, bank liquidity recorded sharp decline to 852 crore which is only 22.89 per cent of the total deposit. The prescribed liquidity ratio of the scheduled banks is 25 per cent of their total demand and time liabilities out of which statutory cash reserve requirement is 5 per cent. To fulfill the prescribed requirement bank liquidity should be kept at Tk 931 crore.

The sudden deterioration of the liquidity position is being attributed to the low government spendings and the advances made in some specified priority sectors and poor recovery of the domestic credit. Statistics shows that two major nationalised banks are worst affected.

It is gathered that a leading nationalised bank had only 1.92 per cent statutory reserve in the week ending on January 15 last instead of 5 per cent cash reserve requirement. And other scheduled banks are just maintaining the reserve ratio nearly 5 per cent.

AUSTRALIA TO SUPPLY 70,000 TONS OF WHEAT

Dacca THE BANGLADESH OBSERVER in English 19 Feb 82 pp 1, 12

[Text] A memorandum of understanding between the government of Bangladesh and the government of Australia concerning Australian grant of 70,000 tonnes of wheat was signed in Dacca on Thursday, reports BSS.

Under this memorandum, the Australian government will supply 70,000 tonnes of wheat to Bangladesh as part of its food aid programme to Bangladesh for the year 1981-82.

Out of this 70,000 tonnes of wheat 30 per cent will be utilized for "Food for Works Programme and the rest will be available for the sale through the public distribution system.

The wheat is expected to be available for shipment in February, 1982 and the Ministry of Food will make necessary arrangement for shipment and distribution of wheat to be received under this grant.

Australia has been one of the major food donors to Bangladesh ever since ner independence, until June 1981. Bangladesh has received an amount of US dollar 96.5 million as food aid from the Australian government. This aid has come all in the form of grant. Besides food aid, Australia has also been providing project and commodity aid to Bangladesh.

The memorandum was signed by Mr. Mak Williams, High Commissioner of Australia in Bangladesh and Mr. Kazi Fazlur Rahman, Secretary, External Resources Division, Ministry of Finance, Government of Bangladesh on behalf of their respective governments.

BRIEFS

TIES WITH PRC--Mirza Golam Hafiz, Speaker of the Jatiya Sangsad called China as a tesed friend with which 'our friendship will be everlasing' reports BSS. The Jatiya Sangsad Speaker was speaking at a dinner on Tuesday night arranged in honour of Mr Zhao Peng Fei First Deputy Mayor of Peking and members of his entourage. The function was attended by the Mayor of Dacca Mr Abdul Hasnat, MP Mr Li Shu Quing Ambassador of China in Bangladesh, commissioners of Dacca Municipal Corporation. Mirza Golam Hafiz who is also the President of the Bangladesh-China Friendship Society recalled the role played by the late President Ziaur Rahman in cementing the bond of friendship between Bangladesh and China which was being further consolidated with the exchange of visits between the two countries. [Text] [Dacca THE BANGLADESH TIMES in English 24 Feb 82 p 1]

AMBASSADOR TO CUBA--The Government have concurrently accredited Major-General K M Safiullah, at present High Commissioner for Bangladesh in Ottawa, as Ambassador to Cuba, says a PID handout. [Text] [Dacca THE NEW NATION in English 24 Feb 82 p 3]

LIBYAN VISITORS--A 4-Member team of Libyan People's Bureau led by its Dacca Office Secretary Mr Md Al Ayeb called on the Minister for Information, Broadcasting Sports Culture and Education Mr T. H. Khan at his office in Dacca on Thursday morning, reports BSS. They discussed the existing areas of cooperation in various fields specially on Islamic, educational and cultural affairs. The question of exchange of delegations in educational, religious and cultural fields also came up for discussion in the meeting. The team chief said that any proposal from this country relating to the expansion of Islamic education and culture would get due consideration from the Bureau and hoped that the collaboration in these fields would increase further. [Text] [Dacca THE BANGLADESH OBSERVER in English 19 Feb 82 p 12]

JUTE EXPORT FIGURES--Bangladesh Jute Mills Corporation (BJMC) has exported jute goods worth Taka 290.20 crore during the first half of the current fiscal year, according to a Press release of the BJMC on Wednesday, reports BSS. During the corresponding period of the last year the export earning of jute goods was Tk 282.14 crore. The BJMC produced 2,98,457 tons of jute goods between July and December 1981, an increase of 6.64 per cent over the corresponding period of the last financial year. The BJMC, during the last fiscal year, produced a record quantity of about 581 lakh tons of jute goods. If this trend on production continues the corporation will be able to produce over 600 tons of jute goods during the current financial year, the Press release added. [Text] [Dacca THE BANGLADESH TIMES in English 18 Feb 82 p 1]

ASIAN PRODUCTIVITY ORGANIZATION--Bangladesh has become a Member of the Asian Productivity Organisation (APO) from January this year, says PID handout. APO is an inter-Governmental regional organisation which aims at productivity promotion for accelerating economic development in the Asian region by mutual cooperation through propagating productivity knowledge techniques and experience in agriculture, industry and service sectors, head office of the APO is based at Tokyo. In this multinational forum for productivity promotion, Bangladesh Industrial Technical Assistance Centre (BITAC) will represent Bangladesh and act as the National Productivity Organisation (NPO). Other member countries are Republic of China, India, Japan. [Text] [Dacca THE BANGLADESH OBSERVER in English 11 Feb 82 p 1]

AMBASSADOR TO PHILLIPINES--Major General Moinul Hussain Chowdhury the first Ambassador of Bangladesh to the Philippines presented his credentials to President Marcos in Manila on February 8, reports BSS. Presenting the credentials Ambassador Chowdhury said that the establishment of resident missions in each other's capital would provide strong impetur to the ever-growing cooperation between the two countries. He described the state visit to the Philippines by the late President Ziaur Rahman as a landmark in the history of bilateral relations and manifestations of deep bonds of friendship and understanding between the two countries. Welcoming the new Ambassador President Marcos said that the opening of Resident Missions by the Philippines and Bangladesh in each other's capitals was a step forward in the growing bilateral relations. He also stressed the need for cooperation among the Third World countries. [Text] [Dacca THE BANGLADESH OBSERVER in English 16 Feb 82 p 12]

FOREIGN EXCHANGE SHORTAGE--Due to acute want shortage of foreign exchange, the government could not issue import licence for required amount in the first half of the current fiscal year of 1981-82. And this situation has consequently caused the government incur a huge loss in revenue earning from this source. According to a reliable source, the government had allocated Tk 550 crore for issuance of import licence in the current financial year. But actually the government had so far issued import licences worth taka 200 crore only in the last six months from July to December period. It may be mentioned here that foreign exchange reserve in the country has dwindled this year compared to last several years. So the amount for which the government has so far issued import licence is insignificant as far as country's needs go. [Text] [Dacca HOLIDAY in English 14 Feb 82 p 3]

REPORTAGE ON FOREIGN MINISTER'S SOUTHEAST ASIA VISIT

DRV Talks, Press Conference

Calcutta THE SUNDAY STATESMAN in English 14 Feb 82 pp 1, 9

[Text] HANOI, Feb. 13.—India is to step up its assistance to Vietnam in economic and scientific and technical fields and sign a new trade protocol, report UNI and PTI.

The decisions emerged at a meeting the External Affairs Minister, Mr P. V. Narasimha Rao, had with the Vietnamese Prime Minister, Mr Pham Van Dong, on the second day of his visit here. Experts of the two countries would meet shortly to finalize arrangements for wider cooperation in the fields.

Mr Pham is said to have made a specific request for greater facilities for training Vietnamese in Indian educational and technical institutions.

India expressed its willingness to help resolve the issues that had generated tensions in South-East Asia but made it clear that it was not offering any specific effort or initiative.

Mr Pham emphasized that India had a very important role in solving problems in the region and ensuring peace.

Mr Rao concluded his talks with Vietnamese leaders this evening with a call on the Head of the State, Mr Truong Chinh. He held extensive discussions with his counterpart, Mr Nguyen Co Thach, spread over two rounds when they covered the situation in their respective regions and bilateral matters.

The Kampuchean question is believed to have come up prominently in the talks between the two Foreign Ministers, with Mr Nguyen explaining the reasons for the Vietnamese presence there. He is believed to have said that the stage of the withdrawal of troops from Kampuchea had not yet been reached.

He is also understood to have apprised Mr Rao of the Chinese "aggressive", postures against Vietnam. "Vietnam does not foresee any lessening of tensions with China in the immediate future", Mr Nguyen added.

At a joint Press conference with the Vietnamese Foreign Minister, Mr Rao said tonight that the results of his visit here had been gratifying and mutually useful.

Asked what India could do to help ensure lasting peace in South-East Asia, Mr Rao emphasized India's belief that outstanding problems could be resolved through dialogue and negotiations. Unfortunately interference by outside Powers and other factors led to escalation of tensions in various parts of the world.

Solution of problems, he said, lay in peaceful coexistence and settlement of disputes by negotiations. In this part of the world issues could be resolved only along these lines.

He had no doubt that if an occasion arose India would help, Mr Rao said, "to the extent possible", in resolving the issues. He was not offering any effort or initiative at the moment but India wished to be helpful in general.

Answering a question on Sino-Indian talks to resolve the border and other disputes, Mr Rao explained the background of the relations that have remained strained for two decades till Mrs Gandhi began the process of normalization in 1976 by appointing an Ambassador to Beijing.

The process had since then started slowly and last year the Chinese Foreign Minister, Mr Huang Hua, had visited India. During his discussions with the Indian leaders both countries had agreed that the border question was central to Sino-Indian relations.

The External Affairs Minister said that official level talks in Beijing recently had helped both the side state their positions. Further steps were being examined in pursuance of results of these talks and appropriate decisions will be taken shortly.

Mr Rao reiterated that India's relations with one country would never be at the expense of ties with another. India sought friendly relations with all countries on that basis.

On Indo-Pakistani talks for a non-aggression pact, Mr Rao told a questioner that recently he and his Pakistani counterpart, Mr Agha Shahi, had discussed the issue in a cordial atmosphere. The talks would soon be continued at the level of Foreign Secretaries.

While he could not say anything definite about the outcome of the Indo-Pakistani dialogue, Mr Rao said India was hopeful.

The External Affairs Minister said that during his talks here India and Vietnam had agreed on the need for peace and tranquility in their respective regions. They had re-affirmed their agreement with the declaration of the Foreign Ministers of non-aligned countries at New Delhi last year.

India and Vietnam would keep in touch and consult each other on matters of mutual interest from time to time, Mr Rao said. He invited Mr Ngyuen to visit India.

Mr Rao told a questioner that a conference on the Indian Ocean as a zone of peace would possibly be held next year.

He was confident that efforts by India and Vietnam as well as other countries in Asia would lead to lasting peace and tranquility in the region.

While Mr Rao termed his discussions here as "purposeful, meaningful and useful," Mr Nguyen said that these would make a contribution to peace in Asia in general and South-East Asia in particular.

Mr Rao leaves for Ho Chi Minh city tomorrow.

Meeting With Kampuchea

Calcutta THE STATESMAN in English 14 Feb 82 p 1

[Text]

HANOI, Feb. 14.—The Kampuchean Foreign Minister, Mr Hun Sen, today explained the situation in his country to the External Affairs Minister, Mr Narasimha Rao, during a meeting held here at his initiative, reports PTI.

Mr Hun Sen, who stopped over here on his way back from Paris and sought a meeting with Mr Rao, is understood to have mentioned to the Indian Minister the problems that are likely to come up at the non-aligned summit to be held at Baghdad in September. These could include the issue of Kampuchea's representation.

Mr Hun Sen told Mr Rao about the forthcoming meeting of the Foreign Ministers of Vietnam, Kampuchea and Laos to be held in Vientiane, where the complex situation in Indochina is to be discussed. Relations between the Indochinese States and ASEAN will be among the topics.

An Indian official spokesman said today that the two Foreign Ministers had discussed bilateral matters, especially economic cooperation. There were possibilities of cooperation on the basis of the report by an Indian team led by the former member of the Planning Commission, Mr G. V. K. Rao, which visited Kampuchea recently.

During the talks between Mr Rao and the Vietnamese Prime Minister and Foreign Minister yesterday both sides discussed measures to further the forthcoming non-aligned summit and the South-South summit in New Delhi. Vietnam has agreed to send one of its Vice-Ministers to the conference.

More on Hanoi Press Conference

New Delhi PATRIOT in English 15 Feb 82 pp 1, 7

[Text] Hanoi, Feb. 14 (UNI). External Affairs Minister, P. V. Narasimha Rao has assured Vietnam that India's efforts to normalise relations with China would not come in the way of Indo-Vietnamese friendship or affect its ties with any of its neighbours.

Addressing a joint press conference with Vietnamese Foreign Minister Nguyen Co Thach at the end of this two-day talks, Mr Rao told a questioner that India was trying to settle its border question with China. He said during Chinese Foreign Minister Huang Hua's visit to New Delhi last year India had broached the question of border which "is central to our relations."

He said in pursuance of this desire to resolve the border question India had sent an official level delegation to Beijing last October.

Mr Rao said during the wide ranging discussions with Mr Hua and the official level talks the two sides stated their respective positions. He said "appropriate decisions would be taken shortly."

Mr Rao said "we have made it clear that our relations with one country are not at the expense of our friendship with other countries. It is on this basis that we seek to maintain friendly relations with all our neighbours."

Answering another question on the recent ministerial level talks in New Delhi between India and Pakistan on the proposed non-aggression pact, Mr Rao said it was difficult to say what the outcome would be. However, he added that his talks with Pakistan Foreign Minister Agha Shahi were cordial and frank and "we are hopeful". He said the matter was being pursued further at official level in Islamabad early next month.

Asked how did he visualise the relations between the Indo-Chinese states and the ASEAN countries, Mr Rao said India always believed in a dialogue and a negotiated settlement of all outstanding problems. Unfortunately interferences from outside powers and certain other factors were escalating tensions in some regions, including this area.

Replying to a question on the latest situation in Southeast Asia Mr Rao said that India was not trying in any way to either mediate or take any initiative to resolve disputes. He said during his current visit to Hanoi and his forthcoming visit to Thailand he was not offering any mediation. India, however, would be always happy in helping to resolve issues, he added.

Mr Rao expressed the confidence that efforts being made by the countries of South Asia and Southeast Asia would lead to lasting peace and a tranquil environment which was badly needed at this time.

Earlier, Vietnamese Foreign Minister Nguyen Co Thach said India made a major contribution to peace and stability in Asia. He said the Government of Vietnam was very satisfied with the outcome of Mr Rao's visit which he said marked a turning point in the Indo-Vietnamese relations.

Mr Rao reciprocated the sentiments and recalled the foundations for the Indo-Vietnamese friendly relations were laid by Jawaharlal Nehru and Ho Chi Minh. He said a quick follow up action would be taken on all the decisions taken to expand and diversify Indo-Vietnamese bilateral economic and technical cooperation.

He said Mr G.V.K. Rao, a top economist who led a delegation to the Indo-Chinese states recently, would soon submit a detailed report on new patterns of economic cooperation between India and Vietnam, Laos and Kampuchea.

More Aid Pledged

India decided to step up its assistance to Vietnam in economic scientific and technical fields, and will sign a new trade Protocol.

The decisions emerged at a meeting the External Affairs Minister had with Vietnam Prime Minister Pham Van Dong.

Report on Joint Statement

New Delhi PATRIOT in English 16 Feb 82 pp 1, 7

[Article by Cecil Victor: "India, Vietnam Decry Foreign Interference"]

[Text] Ho Chi Minh City, Feb. 15. India and Vietnam have decided to work for the elimination of the threats of foreign intervention in Southeast Asia stressing dialogues as a means of ending existing problems.

The joint statement issued at the end of External Affairs Minister P.V. Narasimha Rao's four-day of talks with Vietnamese leaders underscores the

commonality of views between the two countries on matters affecting their two regions.

In the sphere of bilateral economic relations, the joint statement indicated that officials of the two countries would meet annually to dovetail Vietnamese requirements with Indian technical capabilities.

Throughout Mr Rao's visit Vietnamese leaders--Prime Minister Pham Van Dong, Foreign Miniser Nguyen Co Thach and Vice-Premier Vo Nguyen Giap--took pains to stress India's paramount position in South and Southeast Asia and Vietnam's eagerness to take advantage of the Indian experience in agriculture industry and science and technology.

They have said that the cooperation with India would be upgraded to a position second only to Comecon, which is a measure of the high esteem in which Vietnam holds India and a recognition of its ability to lead developing countries to a fruition of the non-aligned nations desire to increase mutual cooperation to mutual benefit.

Time and again the stress has been on the paramount position of India and the desire to learn from India's experiences. On regional issues the Vietnamese leaders feel that India can contribute tremendously towards resolution of tensions in South East Asia just as it is trying to do in South Asia.

Dialogues

Though Mr Rao made it clear at the joint press conference in Hanoi that India did not intend to take any initiative toward promoting dialogues between Vietnam and Thailand or other members of ASEAN, the Indian view that such dialogues are the only way of resolving disputes will nevertheless be conveyed to ASEAN in the quiet diplomacy that is continuing for the elimination of tensions in the region.

The feeling in Vietnam is that so long as there is a convergence of the ambitions of China and the US in the region tensions will remain. However, there are hopeful elements in the relations between the Indochina states of Vietnam, Laos, Kampuchea and Thailand on the one hand and these states and ASEAN on the other, that could eventually lead to a reduction of tensions. The Vietnamese leaders have told Mr Rao that they intend to do every thing they can to allay ASEAN and Thailand fears but they will always keep in mind the historical nature of developments in the region.

They believe that time is on the side of the Indochina states and they intend to spend the time beneficially to develop their industrial infrastructure with India's assistance by moving away from the ad hoc nature of past cooperation to long-term planned growth.

The 11-paragraph statement is based on extensive talks, Mr Rao had with Vietnamese counterpart, Nguyen Co Thach and other leaders on the situation in the region, including Kampuchean question. But it makes a one-para reference to south-East Asia without any direct reference to Kampuchea or to Chinese postures which Vietnamese leaders had dubbed hostile during the talks.

In an apparent reference to Indo-Pakistan dialogue, the statement spoke of satisfaction of both countries at "recent efforts to improve and strengthen relations among countries of South Asia."

India and Vietnam re-affirmed their adherence to non-alignment and to the principles of peaceful coexistence. They hoped meetings of non-aligned movement during the current year would make major peace and stability in the world.

Mr Rao's discussions were held in an atmosphere of friendship and mutual understanding covering a wide range of international, regional and bilateral matters, the statement said.

The two countries, it said, had decided to further expand and strengthen existing bilateral cooperation in various fields. It was decided that their officials should meet annually to exchange views on important international developments and to review progress in bilateral cooperation.

Mr Rao has invited his Vietnamese counterpart Nguyen Co Thach to visit India. The invitation has been accepted.

Rao in Bangkok

New Delhi PATRIOT in English 16 Feb 82 pp 1, 7

[Text] Bangkok, Feb 15 (PTD) Thailand and Vietnam, which have strong differences on the Kampuchean issue, have both told India of their desire for a regional solution to the impasse free from outside intervention.

The basic elements of such a solution are, however, not yet clear. While stress on a regional approach is seen by diplomatic observers as encouraging, parties concerned with Kampuchean issue will have to cover a lot of ground before a solution can emerge.

External Affairs Minister Narasimha Rao, who arrived here today, after a trip to Vietnam exchanged views in great detail with his Thai counterpart Air Chief Marshal Siddi Savetsila covering bilateral matters and situation in the region including Kampuchean problem.

Mr Rao told Thai Minister that India had noted that his country was seeking a regional solution to the problem. India welcomed this and other efforts in a similar direction.

Earlier in a joint statement issued at the end of Mr Rao's four-day visit, India and Vietnam called for a negotiated settlement of problems affecting peace and stability in Southeast Asia. Both countries deplored foreign intervention threats.

Four Principles

During his 75 minutes talks with Mr Rao here Air Chief Marshal Savetsila mentioned four principles on which Thailand wanted a solution to Kampuchean issue. The first of these is withdrawal of Vietnamese troops from Kampuchea.

On arrival here, Mr Rao made it clear to Thai press that India was not thinking of any specific role in resolving issues confronting the region. A solution had to come from within the region but friendly countries like India could help in a general way, he said.

The Thai Minister told Mr Rao that ASEAN posed no threat to Vietnam and it was prepared to join Vietnam in finding solution to protect region from outside threat in future.

Another point stressed by Thai Minister was that his country would like to work for a future government in Kampuchea that would pose no threat to any nation. Lastly any future government in Kampuchea had to be acceptable to all countries of the region.

Mr Rao described his talks with the Thai Minister as valuable and said these had given him a deeper understanding of Thai viewpoint and perceptions. The Thai Minister found the talks excellent and useful.

Air Chief Marshal Savetsila accepted Mr Rao's invitation to visit India to continue his discussions with the Indian side.

Later speaking at a dinner in his honour by the Thai Foreign Minister, Mr Rao stated that "India stands for any constructive action leading to a defusion of tensions and promotion of a viable solution."

He said unfortunately tensions had heightened "endangering regions of immediate concern to us both--India and Thailand." He said India believed that these tensions were polarising and "Asia needed to be relaxed."

At the talks the Thai side explained in great detail its position on the Kampuchean issue.

Mr Siddhi, summing up his government's stand, made four points.

He said first, Vietnamese troops should withdraw from Kampuchea. ASEAN countries posed no threat to Vietnam and was prepared to join Vietnam in finding a solution that would protect this region in future from any outside threat.

Thirdly, Mr Siddhi said it should be ensured that any future government in Kampuchea would pose no threat to any other country in the region and lastly, Thailand also wanted that any future government in Kampuchea has to be acceptable to all countries of this region.

However, when Siddhi pointed out that Thailand was seeking a regional solution to this problem, Mr Rao responded by saying that India would welcome this and any efforts in this direction.

After this Mr Rao apprised him of his talks with the Vietnamese and how they view the whole situation.

Mr Rao also briefly mentioned the gist of his talks with Kampuchean Foreign Minister Hun Sen in Hanoi two days ago.

Mr Rao explained to the Thai leader how India was trying to resolve the border question with China and improve its relations with Pakistan.

Significant

The Thai side attached considerable importance to the talks with Mr Rao since he was coming here from Hanoi, Mr Siddhi said he found the exchange of views with Mr Rao "excellent and very useful" and agreed to continue the discussions.

On the bilateral front the Thai side wanted the number of joint ventures with India to be increased from the present ten. Thailand has found these joint ventures very successful.

The Thai side also expressed a desire to promote trade with India and wanted the trade balance to be corrected in their favour. The two countries had a trade turnover of 100 million dollars during the first nine months of last year.

Mr Rao offered to correct the imbalance in trade in consultation with the Ministry of Commerce in New Delhi.

Thailand has also agreed in principle to consider an Indian proposal for an Indo-Thai agreement on science and technology.

Mr Rao will call on Thai Deputy Prime Minister Thanat Khoman tomorrow and continue his discussions. He would return to New Delhi tomorrow night.

Mr Rao was assisted in his talks by Mr Eric Gonsalves, Secretary (East), Ambassador Ashok B. Gokhale, Mr Kiran Doshi, joint secretary and Mr Mani Shankar Iyer, joint secretary, both in the External Affairs Ministry.

More on Bangkok Talks

New Delhi PATRIOT in English 17 Feb 82 p 1

[Article by Cecil Victor: "Thailand Not Averse to Neutral Kampuchea"]

[Text] Bangkok, Feb 16--Thailand sounded agreeable to a neutral status for Kampuchea as had existed after the 1954 Geneva Talks on Indo-China, on the eve of discussions between Vietnam, Laos and Kampuchea to begin in Vientiane shortly.

This could be amply gleaned from the Thai leaders talks with External Affairs Minister P.V. Narasimha Rao whose visit to Bangkok ended today.

Thailand Foreign Minister Siddhi Saratshila during his exhaustive review on Thailand's perception of the Kampuchean situation stressed what could be

termed a key element of his countrys' position on Kampuchea, such as withdrawal of Vietnamese troops from Kampuchea; no ASEAN threat to Vietnam; and Thailand's willingness to join Vietnam in finding a solution that would protect the region from any future threat from outside.

Further, Thailand would like to work towards a future Covernment in Kampuchea which would pose no threat to any other country in the region. Any future Government in Kampuchea has to be acceptable to all the other countries of the region.

During Mr Rao's talks with the Deputy Prime Minister Thanat Khoman the latter said his country was ready to have any fruitful dialogue. The Thai leader recalled India's role in bringing peace and stability to this part of the world when he specifically mentioned the 1954 Geneva Conference and India's role as chairman of the International Control and Supervision Commission on Indo-China.

Before his departure for Delhi Mr Narasimha Rao, addressing a news conference, said he was encouraged to note that the leaders of the two countries favoured a regional approach to the Kampuchean issue and desired peace and stability in the region, adds UNI.

Mr Rao said there were hopeful signs of a "positive situation" emerging in which a solution to the liking of all could be found.

He described as "a thing of the past" Indo-Thai difference over certain issues affecting the Southeast Asian region, Mr Rao declared that India would be glad to make any contribution to help evolve a political solution to the Kampuchean problem but made it clear that we are not arrogating to ourself any specific role.

There had been an unmistakable impression during his discussions in Hanoi and Bangkok that "on both sides there is a desire for peace" and to settle the Kampuchea problem in the regional context, he added.

ANALYST DEPLORES EFFECTS OF POWER POLITICS

Madras THE HINDU in English 14 Feb 82 p 2

[From "The Nation" column by G. K. Reddy: "Super Executive and Supine C.Ms."]

[Text] IT is often said that, in the final analysis, only three persons count in India—the Prime Minister, the Chief Minister of a State and the Collector of a district. The primacy of the Prime Minister has remained unaffected all these years except during the Janata interregnum, but the prestige of the Chief Ministers has suffered considerably in the last decade. The Collectors, who fly the flag and represent the Government in their respective districts, have by and large been compelled to function as pro-consuls of the ruling party and rendered ineffective in many States.

The concept of power, whether it is for positive or punitive purposes, varies from country to country and from society to society, depending on the stage of its political maturity, economic development and social evolution. There are no uniform norms or established traditions that are equally applicable to all countries and all systems. The result is that even in elective democracies, not to speak of dictatorships, those in power tend to resort to double standards for rewarding sycophancy, stamping out dissent or disapproving criticism.

Vagaries of patronage

This is not something peculiar to developing countries that are subjected to pressures of rising expectations. Even affluent societies like the United States are no less susceptible to the vagaries of political patronage and personal predilections. The world's two largest democracies share many common weaknesses in their uses and misuses of power with all the built-in checks and balances of their systems. The excessive concentration of power in the hands of single super executives had tended to impair rather than improve the functioning of government.

It has tended to inhibit initiative at various levels, exposing both politicians and civil servants to the hazards of individual likes and dislikes, and highly personalised styles of dispensation of patronage and enforcement of discipline. The damage is often done before an President or Prime Minister realises the limitations of political power even in the best of circumstances.

It is not always possible to inspire one's followers and infuse a sense of mission into them, if the accent is on isolating one's opponents and punishing those that dare to question the wisdom of one's decisions or validity of one's actions. A head of a government has to learn the hard way to tolerate dissent and respect criticism by rendering oneself more accountable for the overall performance of the administration.

Overriding authority

The Prime Minister of India is no less powerful than the President of the U.S. in terms of executive authority for laying down policies and implementing them according to one's own lights. Apart from cracking the whip of party discipline, the Damocles sword of President's rule can be used to topple an arrogant or incompetent Chief Minister and install a more competent or pliable person in his place.

The U.S. President has no such over-riding authority to get rid of elected Governors of States even when they engage in running controversies with the Federal Government. An Indian Prime Minister has the additional advantage of controlling Parliament with the majority of the ruling party, without having to cajole Congress all the time as in the U.S. to get through essential legislation.

But unfortunately the Indian dispensation has been running into rough weather, largely because of the incapacity of those in authority to rise above the rut of party politics and use political power for more creative purposes than justifying their continuance in office. The doctrine of power for power's sake has led to a rapid decline, and in some cases even to a near collapse, in the quality of government leading to a near breakdown of authority in several States, especially in the northern region.

Dacoits hold darbars

The recent policy of halting the politicisation of senior postings and promotions has helped to restore some degree of administrative efficiency at the Centre, but the Chief Ministers continue to play havoc with the services. The District Collectors in many States have been reduced to the level of either passive dispensers of patronage at the behest of their political masters or pitiable symbols of a badly run-down administrative system that has lost all its relevance.

The near breakdown is more painfully evident in Uttar Pradesh, the largest State with a population of over 90 million , where crores and crores of rupees are being spent on anti-dacoit operations. Yet the top dacoits with their political connections feel safe enough to hold durbars openly in the villages to demonstrate their utter contempt for the authority of government.

The notorious gang leaders responsible for hundreds of murders, robberies and loot have been accusing the State Government of bad faith, in press interviews and at rural durbars, in not accepting their pleas for ceasefire honourable surrender with amnesty and establishment of zones of peace to avoid further encounters with the police.

A supine State Government has not been able to do much to call this no-war bluff and bring these dacoits to heel and make them face the consequences of their murderous rampages. There have been serious allegations that a good many of those caught up in the police cross-fire and killed in the anti-dacoity operations are innocent persons. The hard-pressed Chief Minister has not been able to offer satisfactory data to rebut these charges.

The present chaotic conditions in some of the northern States, where people feel insecure to travel by bus or train, are only a culmination of the steady deterioration in the quality of local administration. After the first Congress split, the Prime Minister systematically downgraded the Chief Ministers to prevent them from functioning as independent power centres again.

This policy logically led to the progressive elimination of the party stalwarts and their replacement by political light-weights who were totally dependent on continued patronage from Delhi. The deadening impact of the rapid run-down of the administration was felt much more at the district level than in the Secretariats of the State Governments.

The parody in Kerala, where the Congress (I)-led coalition has managed to survive the very first test of its strength in the Assembly with the help of the Speaker's casting vote, is a shocking example of how the ruling party with a strength of only 17 seats of its own in a House of 140 has been allowed by the Governor to form a government under instructions from Delhi.

The Central leadership has not crowned itself with glory by dragging its feet for months over the Antulay affair, until the Bombay High Court judgment clinched the issue. The indiscriminate fund collections at all levels has not only brought the country's political system into utter disrepute, but made the task of restoration of the missing moral values almost impossible in the prevailing permissive atmosphere.

It is not a cry of despair, or a sign of defeatism, if well-meaning critics ask where does the country go from here. The sad part of it all is that the process of change in the States has not been leading to a progressive improvement in the calibre of leadership or quality of administration, however slow and slovenly the pace of it. On the contrary, the remedy in many cases has proved to be more damaging than the malaise with less and less competent men being catapulted into positions of power on purely subjective considerations with utter disregard for public opinion.

Anjiah episode

The Anjiah episode in Andhra Pradesh has to be viewed against this dismal background to realise that the inadequacies of his leadership are not a startling discovery by those who had installed him in power in the first place. But the shabby manner in which he has been singled out for harsh treatment, when there are several other Chief Ministers who deserve to be replaced befor him, has earned him a lot of sympathy in Delhi.

And if an early poll in Andhra Pradesh is an easy way out of this tangled situation, it would be more logical for the Central leadership to opt for a mid-term poll in all the Congress (I)-run States to clear up all the accumulated cobwebs of dishonesty and incompetence in one grand sweep to make way for a better breed of men to rule them.

REPORT ON GANDHI 16 FEB SPEECH IN CALCUTTA

New Delhi PATRIOT in English 17 Feb 82 pp 1, 7

[Text] Calcutta, Feb 16. Assuring that West Bengal will have elections and dismissing any idea of imposing president's rule, Prime Minister Indira Gandhi said today the Left Front government will run its full term.

"We certainly do not want to postpone the election," she said during the 45-minute question-answer session with newsmen at Raj Bhavan.

It was for the Election Commission to decide on the date of election and the Congress-I was ready to face the CPI-M led Front, she said.

Addressing a mammoth public meeting at the Brigade Parade Ground, the last engagement in her seven-hour visit to the city, Mrs Gandhi said she had come not to criticise scrutinise or topple, the Government.

Mrs Gandhi returned to the Capital later in the night.

Observing that the question of election and fears about President's Rule seemed to haunt many--it was in the air the moment she arrived here--Mrs Gandhi wondered at the press conference why everyone seemed to be obsessed with such thoughts expressed often, by the Left Front Ministry, the press and the ruling party.

"Is it done because of guilty feelings?" she asked.

The political situation and industrial climate in the State, law and order 'no-war' pact with Pakistan, China's alleged interference in the Northeast, the IMF loan and the revitalised 20 point economic programme figured in the press conference.

At the public meeting organised by the State unit of the Congress-I, Mrs Gandhi warned of the twin threat to the country's defence arms mobilisation by a neighbouring country and big-power rivalry in the area.

"We are not much worried" about the arms build-up, she said though not mentioning Pakistan by name. But the rivalry of super powers--the greatest danger came from a war climate generated--might affect national security. There was a threat of war but it could not be said where it would tak· place.

In a sharp reaction to the Marxist rule in the State, Mrs Gandhi said while the Marxists accused her of being authoritarian, they were doing certain things which were nothing short of authoritarianism. They always tried to "pick up quarrels" with the Centre. Industrialists, who had met her had spoken of shifting their units, obviously since they found "things difficult here."

At the press conference, Mrs Gandhi said India always wanted to establish peaceful friendly relations with Pakistan without neglecting for a moment the need to remain ready for any eventuality.

The Prime Minister reacted sharply to the CP-M charge that she was compromising with imperialism. If she had compromised with imperialists they would not have attacked her, she said.

She said they were not attacking the CP-M. "In fact, they are supporting the CP-M." She also said the CP-M on its part was trying to ally itself with the BJP, which, according to its own characterisation, represented right-wing and pro-imperialism.

She said, there were some forces which would try to increase tension between India and Pakistan. She did not identify the forces.

She said, according to reports available with her, the law and order situation in West Bengal was worse than any other State in the country. She admitted the Bihar situation was also bad, but not worse than West Bengal's.

"It is unfortunate that the Left Front Government in West Bengal does not cooperate with the Centre in the constitutional functioning of the Indian polity." But she was not thinking in terms of any action against the Front Government, which should fulfill its terms, she said.

Regarding the charge that the Congress-I was trying to foil the election in the State, Mrs Gandhi said, "her party does want the election to be held in the state, but on the basis of a correct voters' list." She wanted the voters' list to be correct, but added, "this is a matter to be looked into by the Election Commission."

The Prime Minister expressed her concern over the reported influx of Bangladesh nationals into India. She said that the Central Government was maintaining contact with the West Bengal Government on the issue.

Replying to a question, Mrs Gandhi said, her party had been trying to restrain partymen, particularly in Kerala and West Bengal, from doing what they wanted to do in meeting the challenge of the CP-M's interference with democratic political life.

She had heard many complaints about the CP-M interference in educational affairs, in the matter of health services and other such issues, she added.

Leadership

At the meeting, she called upon the people to stand united in the face of the challenges the country is facing in its attempt to move towards a society based on socialism.

Calling for a national consensus on the vital national issues, Mrs Gandhi said, she has been trying to get the cooperation of all political parties for reaching such a consensus, but she is not getting it.

Mrs Gandhi asserted that India does not care for what the IMF conditions might be. The country is firm on the policy of attaining self-reliance, the policy which has been approved by the Parliament.

Mrs Gandhi denied she is a dictator and said the CPI-M which shouts so much about her dictatorship is actually pursuing dictatorial policies in West Bengal. They behave as if other political parties do not have the right to exist, she charged.

Mrs Gandhi paid glowing tributes to Bengal and its tradition of culture, its contributions to literature, music, poetry, art and to India's struggle for freedom.

She said, the people of West Bengal are good, but they have to suffer because of the lack of leadership. She said, it is unheard that a government itself calls for strikes and bandhs. This happens in West Bengal.

She said she heard from some industrialists that the industry here is in a bad shape. It is for the people of the State to set things right, she suggested.

Earlier the Prime Minister met a number of educationists who, under the leadership of Dr Satyendra Nath Sen, former Vice-Chancellor of the Calcutta University, submitted a memorandum to her. The memorandum demanded transfer of university education to the Concurrent List and said otherwise educational institutions would suffer due to political interferences.

Mrs Gandhi also met a deputation from the Indian Medical Association and received a memorandum which said the State Government is trying to bring post graduate medical education under the government department, instead of the university.

GANDHI INTERVIEWED BY SWEDISH TV CORRESPONDENT

New Delhi PATRIOT in English 15 Feb 82 p 7

[Text] Prime Minister Indira Gandhi has accused the press in India of functioning as the Opposition, reports PTI.

"It is not functioning as a free press," the Prime Minister said in an interview to Mr Herman Lindqvist, Asia correspondent of the Swedish Television.

Reacting sharply to negative reporting, Mrs Gandhi said "the press is the Opposition in India ...what is called the national press. They lead the Opposition. It is not just reporting...their reporting is absolutely baseless," she said.

Stating that the press was biased, Mrs Gandhi said the press was also against her father, Pandit Jawaharlal Nehru.

"For a country which is trying to pick itself up from such a tremendous trauma of having undergone the colonial rule, cynicism and pessimism is very close to crime," she said.

The Prime Minister said she wanted the press to project the correct picture. "We don't want to hide our faults or what is wrong. But they (press) don't admit that anything good has happened," she said. The press, she noted, always picked out something bad and quoted somebody, who had said that such thing had happened.

That is why the people are not bothered," Mrs Gandhi stated and asked whether a free press should not reflect the feeling of the people.

"But what the press says has no connections with what public feels. They are still supporting other parties (Opposition), but people are not supporting those parties," the Prime Minister said.

Mrs Gandhi said the Swedish press was also very much against her. "It had written some ghastly things against me. People wrote to me to say sorry and that the press is like that," she said.

Partnership

Asked whether it was possible to rule with the current Westminsters type of democracy in the country and whether the presidential type of system was being considered, the Prime Minister said "whether you have a president or a prime minister, India can only function as a democracy."

She said she did not think of ruling India. "I think of partnership. We try to involve the people in what we are trying to do and we can only succeed in it if the people are with us in doing that," she said.

"You can't force an Indian to do anything," she said. Asked whether government was enacting measures to restrict trade union movements, the Prime Minister said "we are not restricting anything. We only restrict particular type of strikes in certain essential services."

She said strikes in those services were called not because of workers' demands but because of demands of politicians, who happened to be presidents or secretaries of certain unions. "They are not concerned with the workers welfare," she stated.

Denying that government had imposed any curbs on genuine trade union movements, Mrs Gandhi said "the curbs are imposed where the freedom is converted into a licence." Wherever there were genuine grievances, she said, there were "bodies" to sort them out.

"None of the workers have expressed any apprehensions about the legislation enacted by the government. It is only the political leaders, she said.

Problems

Asked how the government proposed to tackle various problems facing the nation, Mrs Gandhi said "we find people who have less population and less problems seemed to be much more worried about their problems." More than the size of the population and the size of the country. "It is very much one's attitude of the mind" she said.

"Today also our problems are gigantic. We are solving them. Many problems have been solved. The country has achieved self-sufficiency in food. At the same time we don't want our population to keep growing" she said.

REPORT ON SWEDISH INTERVIEW WITH INDIRA GANDHI

'TIMES OF INDIA' Report

Bombay THE TIMES OF INDIA in English 13 Feb 82 pp 1, 9

[Text] NEW DELHI, February 12 (UNI).

THE Prime Minister, Mrs. Indira Gandhi, has said that it is for Pakistan to accept India's offer of a friendship treaty.

In an interview with Swedish journalists here, Mrs. Gandhi said that only on the basis of friendship, understanding and co-operation could problems be resolved between the two countries.

In this context, she welcomed the recent ministerial-level talks with Pakistan on non-aggression pact and other issues.

Recalling that India was the first to make a no-war pact offer to Pakistan, Mrs. Gandhi said that her government had similarly taken an initiative for the normalisation of relations with China too. That led to the exchange of ambassadors between India and China.

On the acquisition of sophisticated weaponry by Pakistan from the United tSates and other sources, Mrs. Gandhi said India had apprehensions that the arms would be used against this country.

"It is clear that Pakistan is not going to use these against anybody else," Mrs. Gandhi said.

Mrs. Gandhi said Pakistan had made it celar to the Soviet Union that it was not all that foolish to take on the Soviets.

Considering all these factors, Mrs. Gandhi asked, "whom is Pakistan going to fight?"

Mrs. Gandhi said India recognised the fact that Pakistan was a small country. "We are not afraid of them."

Expressing herself strongly against any war, Mrs. Gandhi said "war means people dying even if it is a localised affair."

She expressed India's firm resolve in creating an atmosphere of cordiality and mutual trust for resolving problems between the two countries.

Mrs. Gandhi said India always wanted its neighbours to be strong because one could not foresee what a weak neighbour would do.

The Prime Minister was asked which of the two super-powers — the United States or the Soviet Union — posed a greaetr threat to world peace.

Mrs. Gandhi replied that the threat to world peace was not from any one power or another but from "this atmosphere of confrontation and the arms race which has gathered momentum." She warned that in this atmosphere, an explosion was bound to take place.

The second danger to global peace arose from economic disparities between countries.

"I mean, if you have very poor countries and very rich countries, it is going to lead to trouble", Mrs. Gandhi asserted.

To a pointed question about the U.S., Mrs. Gandhi said their ideas differed from that of India's.

She regretetd that India did not form part of the global strategy of the U.S. "The United States think they do not need to consider India."

Mrs. Gandhi was categorical that India could not be ignored when one thought of peace in this region which "is relevant to global peace."

On assistance from the U.S., Mrs. Gandhi said India first approached the U.S. and some other Western countries for help in building the country's infrastructure. They refused. The U.S. said it would help the private sector but not the state sector.

It was then that India approached the Soviet Union which "helped us at a time when nobody had done so."

Asked for her reaction to a Soviet submarine being grounded in Sweden's territorial waters, Mrs. Gandhi said "nobody has any business in another's territorial waters."

However, she added, that according to the Soviets, the submarine had strayed into Swedish waters by mistake.

Mrs. Gandhi said Sweden's aid policy was far more enlightened than that of other European countries.

Remarks on Tarapur Agreement

Madras THE HINDU in English 13 Feb 82 p 6

[Text]

NEW DELHI, February 12.

A PRODUCTION target of 6.47 million tonnes of saleable steel has been fixed for SAIL plants for 1982-83 against the anticipated production of 5.7 million tonnes during the current year.

In terms of utilisation of rated capacity, it would mean an improvement from 78 per cent this year to 90 per cent in 1982-83. TISCO has promised to produce 1.55 million tonnes of saleable steel during 1982-83.

Disclosing this here today at a meeting of the consultative committee attached to his ministry, the Union minister for industry, steel and mines, Mr. N. D. Tiwari, said that realisation of these targets would depend upon adequate infrastructural support in terms of raw material, power and rail movement.

Reporting the continuing upward trend in steel production, Mr. Tiwari said during April 1981—January 1982, integrated steel plants produced 7.08 million tonnes of ingot steel and 5.9 million tonnes of saleable steel compared to production of 5.91 million tonnes of ingot steel and 4.97 million tonnes of saleable steel in the corresponding period of the preceding year. This represents an increase of about 20 per cent for ingot steel and 19 per cent for saleable steel.

The performance of public sector steel plants has been quite encouraging. During the period under review, SAIL plants produced 5.46 million tonnes of ingot steel and 4.59 million tonnes of saleable steel compared to the production of 4.37 million tonnes of ingot steel and 3.7 million tonnes of saleable during the corresponding period of the previous year. This represents a growth rate of 25 per cent for ingot steel and 24 per cent for saleable steel.

It is estimated that SAIL plants would produce 5.7 million tonnes of saleable steel during this financial year.

The production performance in the current year is expected to be better than the best of the performances of 5.43 million tonnes of saleable steel in 1976-77. The minister reported improvement in pig iron production also in the last four months. Public sector plants produced 0.43 million tonnes of pig iron during October 1981—January 1982 as compared to the production of 0.41 million tonnes in the preceding year.

Regarding distribution policy of steel, Mr. Tiwari said that existing guidelines had been relaxed. The joint plant committee distribution procedure continues to apply in respect of plates, structurals and pig iron only. For distribution of items other than these items, a new system for registration of demand with and supply from main producers and their stockyards for different groups of customers had been introduced. Special provisions had been made for compact groups of industries like re-rollers, forging units, wire-drawing units, bright bar manufacturers and other industries.

The members were told that construction work on the Visakhapatnam steel project was started on January 23. Mr. Tiwari announced the government approval to set up two slag cement plants — one of 0.935 million tonne a year in Chhitari-Bhilai area and the other of 0.735 million tonne a year at Rourkela with Central clinkerisation unit at Chhitari. These two units will be of great help in improving utilisation of slag of steel plants and also increase cement availability for the country.

INDIAN RADIO REPORTS HIGHLIGHTS OF 1982-83 BUDGET

Overseas Service Report

BK271400 Delhi General Overseas Service in English 1330 GMT 27 Feb 82

[Text] The budget for 1982-83 presented to Parliament today shows total receipts estimated at 271.34 billion rupees and an expenditure of 292.19 billion rupees. It carries an overall budgetary deficit of 20.85 billion rupees. The deficit is proposed to be brought down to 13.65 billion through an additional revenue of 4.7 billion from taxes and other sources.

The first budget presented by the youngest finance minister, Pranab Mukherjee, gives the highest priority to increase in the Plan outlay, mobilizing larger savings while containing the inflationary rate further. It also carried further encouragement to the people of Indian origin abroad to contribute more toward the progress of the country.

The finance minister said that he has tried to contain non-Plan expenditure to the extent possible. But, he added, certain increases have been unavoidable. He invited the attention of the members to the evolving geopolitical situation in the region under difficult environment in which India had to function. Mukherjee said India has tried to resolve the situation in a spirit of good will but at the same time all necessary steps have been taken to safeguard the security of the nation. He announced the defense expenditure of 51 billion rupees as against 46 billion in the revised estimate for the current year.

Referring to the balance of payment situation, the finance minister said there has been a substantial deterioration in this since 1979-80, primarily because of sharp increases in import prices, particularly of oil and oil products. To avoid the destruction in the economy and regain time for the adjustment, the government negotiated a credit of 5 billion SDR's from the IMF. He said this will help the country in implementing the policies which have been sanctioned and approved by the people and Parliament.

In recent years, remittances by nonresidents of Indian origin have shown a healthy growth. The finance minister said this has been a stabilizing factor in the balance of payment position. Announcing further incentives to nonresidents, he said the test of residence in India will be deleted. The test

covering an individual who is regarded as a resident for the year if he stays in India in that year for 30 days only and also maintains a dwelling house in the country for 182 days or more is being deleted, since this causes hardship to persons who come home even on relatively short visit. Under the new liberalized scheme, an Indian citizen who leaves the country in any year for employment abroad shall not be treated as resident unless he has been in India for 182 days or more in that year. To increase foreign exchange earnings the budget also provides tax relief to exporters.

The budget gives the highest priorities for increase in the Plan outlay. The Plan outlay of the Center and the states represents an increase of 21 percent over that of 1981-82. In line with the strategy for the Sixth 5-Year Plan, substantial increases have been proposed in the crucial sectors of the economy. It will receive 20.45 billion rupees, representing a 90 percent increase over the current year. The outlay for coal will be 8.7 billion rupees, an increase of 52 percent.

The power sector will get 9.29 billion rupees, an increase of nearly 34 percent. Taken together, the energy sector constitutes 34 percent of the central Plan outlay.

Pranab Mukherjee said India attaches special importance to renewable energy sources. Referring to the recent successful expedition to Antarctica and the collection of polymetallic nodules from the ocean bed for the first time by an Indian ship, he said that India proposes to undertake a detailed survey of the Indian Ocean. He announced an allocation of 170 million rupees for the Department of Ocean Development. Including this, a total of 1.84 billion rupees have been provided for the science and technology sector.

Announcing stepped up outlay for the sectors emphasized in the new 20-point economic program announced by Prime Minister Mrs Indira Gandhi, the finance minister said agriculture will account for 12.02 billion rupees against the existing [words indistinct] supply program at a cost of 1.271 billion rupees will cover an estimated 45,000 problem villages in the country. In an effort to promote the small fmaily norm, the outlay in this vital sector is being stepped up to 2.45 billion rupees against the existing level of 1.55 billion rupees.

A scheme of excise duty concessions was also announced by the minister for increased production of goods during the 12-month period from 1 March this year up to 28 February next year. He expressed the hope that industry will rise to the occasion and achieve new peaks of production in the productivity year 1982. The finance minister referred to the bouyancy in revenue and the fall in the inflationary trend coupled with strong agricultural and industrial growth in 1981-82 and said these have helped him in keeping the budgetary deficit as low as feasible.

Domestic Radio Details

BK271700 Delhi Domestic Service in English 1530 GMT 27 Feb 82

[Excerpts] New incentives for more production and savings, a big increase in outlay for development and wide-ranging concessions in excise duty on articles of common consumption are the highlights of the central budget for the coming year presented at Parliament today by Finance Minister Pranab Mukherjee. Some relief to the salaried taxpayers, a 5 percent increase in auxiliary customs duty on all imports, with some exceptions, and a dual pricing policy for cement are the other features of the budget.

Two new attractive savings schemes have been proposed for the coming year. Underlining the need for mobilization of resources in a noninflationary way, the government has decided to issue two new savings instruments. The first is a social security certificate which has been specially designed for the small savers. Under the scheme, an individual between the ages of 18 and 45 can invest up to 5,000 rupees which will triple in 10 years. The certificate will also provide social security to his family. The second instrument is a capital investment bond which is designed to attract a larger flow of private savings for public sector investments. These bonds will have a maturity of 10 years and carry an interest rate of 7 percent, free of income tax and wealth tax. They will also be exempt up to 1 million rupees, in case of their first holder, from gift tax.

The budgetary deficit at the existing rate of taxation will be 20.85 billion rupees. The tax measures proposed are now estimated to yield an additional revenue of 4.7 billion rupees to the Center in 1982-83. The finance minister expects to raise 2.5 billion rupees from capital investment bonds. It would still leave an uncovered deficit of 13.64 billion rupees during the coming year. The finance minister said that he has set forth a framework of policies with a view to encouraging higher savings, investment and production in the economy.

The Plan outlay of 110 billion rupees in the central sector for the coming year will be an alltime record. It represents an increase of 27.6 percent over the outlay in the previous year. Higher outlays have been provided for several areas emphasized in the revised 20-point program, which is vital for the development of the economy and for the welfare of the people, especially the weaker section. Under this, [more than?] 21 billion rupees have been provided for irrigation and command area development; 12.02 billion for rupees, oilseeds and dry land farming; 1.9 billion rupees for integrated rural development program and a similar amount for national rural employment program. The outlay for family planning is being increased to 2.45 billion rupees. Central assistance for the special component plan for scheduled castes has been raised to 1.2 billion rupees. The other provisions included 1.27 billion rupees for rural water supply program, 750 million rupees for house sites for the rural landless, 3.54 billion rupees for rural electrification, 160 million rupees for program for welfare of women and 3.4 billion rupees for the development of village and small industries. There will also be a larger investment in crucial sectors of the economy: 20.45 billion rupees for petroleum; 9.29

billion for the power sector; 17.57 billion rupees for the transport sector; 8.6 billion rupees for steel; 5.07 rupees for chemicals and fertilisers and 1.84 billion rupees for science and technology. Defense has been allocated 51 billion rupees. A lump sum provision of 3.5 billion rupees has been earmarked for payment of additional installments of dearness allowance and pension relief to central government employees.

The finance minister said that despite these commitments the budgetary deficit has been contained within reasonable limits and he has tried to avoid placing burdens on the low and middle income groups. He pointed out that the past 2 years have been years of crisis management and recovery. With the prospect of industrial growth of 8 percent a new peak in foodgrains production and firm control over inflationary trend, the economy is now back on the rails. The objective in the coming year will be to maintain the momentum of growth and to make an all-out effort to achieve the social and economic objectives of the Sixth Plan.

OPPOSITION CLAIMS ARAB FUNDS BEHIND COMMUNAL RIOTS

Bombay THE TIMES OF INDIA in English 24 Feb 82 p 1

[Text]

THE opposition members in the Rajya Sabha today asserted that large scale inflow of money from West Asia through "clandestine" means was responsible for communal disturbances in India.

These members, who were participating in the debate on a calling attention notice by Mr. Harkishan Singh Surjeet (CPM) and 17 others regarding communal violence in Maharashtra, revealed the details of some of these "surreptitious" transactions.

Mr. J. P. Mathur (BJP), who was visibly exercised over the flow of funds, told the house that generally the money from Gulf areas was transferred throuh banking channels to United States and from there it was funneled to India throuh Nepal. Mr. Mathur said that he had no objection to such money coming into the country but it must not enter through surreptitious means.

Mr. A. G. Kulkarni (Cong-S) giving details of disturbances in Pune and Solapur, said money from the Gulf countries was the cause of conflict and advised the government to stay away from Gulf money. Stating that mistakes were being committed by both the communities in the occurance of communal roits, he said "the Gulf money was providing the fodder."

Reacting sharply to the observations made by Mr. Kulkarni, the Union minister of state for home affairs, Mr. P. Venktasubbiah, said the bogey of Gulf money was being raised for sinister purposes.

This provoked Mr. Kulkarni who retorted "don't play politics." He then repeated his objections to the Gulf money coming amidst protest from the (Cong-I) benches.

Mr. Venkatasubbiah assured the house that the government was keeping a close watch on the communal organisations as well as the flow of foreign money into the country.

The minister sought co-operation from secular forces in the country to tide over the situation created by communal forces to destabilise the social fabric. He said the situation in the riot-affected areas of Maharashtra was reported to be under control, though some tension still persisted. The state government was taking all precautionary measures and was keeping a close watch on the situation, he added.

The minister, however, maintained that if the minority community wanted to build more mosques, it could not be objected to in a secular country like India.

He also saw no harm in Haji Mastan giving money for installing "loudspeakers" in mosques.

Earlier, Mr. Kulkarni had said that in a certain village he had been told by the residents that money for a "loudspeaker" in a mosque had been given by the "Haji Mastan trust."

Mr. Syed Shahabuddin (Janata) alleged that a nationwide propaganda was launched against Muslims after the conversion of some Harijans in Meenakshipuram. Denying that foreign money played any role in the conversions, he alleged that it was some Hindu organisations, including the Vishwa Hindu Parishad and the RSS, which were receiving foreign money.

Mr. B. D. Khobragade (RPI) said the government should follow a uniform policy in regard to the activities of people belonging to all religions.

He pointed out that in Maharashtra, Ganesh idols were installed in government offices and the festival was celebrated in government premises.

PAPER REPORTS 1981-82 ECONOMIC SURVEY

Summary of Survey

New Delhi PATRIOT in English 25 Feb 82 pp 1, 7

[Text] The 1981-82 Economic Survey presented to Parliament on Wednesday has highlighted distinct growth in savings, investment, exports, revenue collections and gross national product, but has warned that balance of payments, and therefore the foreign exchange reserves, will continue to be under pressure.

In sharp contrast to the bright picture of the domestic economy presented in the survey stands the position of balance of payments which is likely to show a trade deficit of over Rs 5,000 crores at the end of the current financial year. Foreign exchange reserves had already declined by Rs 1292 crores by the end of January this year even after taking credit for the Rs 637 crores received as part of the IMF loan.

Even while noting 14 per cent increase in exports, the survey expresses concern over the slow increase in exports in value terms and the stagnation in engineering exports.

The survey points out that substantial borrowings in recent past had to be secured on harder terms and notes that prospects for increased concessional inflows were not favourable. While recourse to a certain volume of commercial loans may be unavoidable, it cannot be relied upon as a fajor source of financing current account deficits.

This implies that adjustments in balance of payments will have to come from trade and invisibles, of which the latter declined in 1981-82.

Expressing satisfaction over the results which the economic policies pursued during 1980-81 and 1981-82 have yielded, the survey indicates continuance of the policy of keeping the budgetary deficits low, money market tight, savings on the upswing and all round encouragement to investments and exports.

The survey also indicates that the policy aimed at containing inflationary pressures by not only applying appropriate restraints on credit extensions but also be curtailing non-development expenditures. The spirit of the survey appears to be all round emphasis on productivity as was earlier indicated by Prime Minister Indira Gandhi by designating 1981-82 as the Productivity Year.

INFRASTRUCTURE

The survey shows that the economic situation has shown a distinct improvement during the year. The performance of infrastructure has improved substantially and industrial production is likely to increase by about 8 per cent. In agriculture, a growth rate of 3 per cent is expected. Foodgrains output of 134 million tonnes will exceed the earlier record level of 1978-79. The Gross National Product (GNP) is likely to increase by about 4.5 per cent on top of 7.5 per cent growth during 1980-81.

According to the survey, the annual rate of inflation as measured by the wholesale price index came down to 5.4 per cent as on 16 January, 1982, as against 16.2 per cent on 17 January, 1981. This deceleration is gradually getting reflected in the consumer price index also.

The survey points out that exports are likely to grow by 12-13 per cent in terms of value during 1981-82. The growth in imports will be much lower. Thus, says the survey, the trade deficit during the year is likely to be somewhat lower than that of 1980-81. Net receipts from invisibles are likely to be lower this year. But aid utilisation has shown improvement.

The survey draws attention to the uncertainties of the international price situation and the possibility of a spurt in prices of oil and other commodities. Volatile exchange rate changes and movement of large liquid resources of surplus countries are other uncertain factors pointed out by the survey.

The survey highlights the delicate demand and supply balance in the economy and stresses the need for continued vigilance on the price front.

The survey emphasises the importance of mobilising resources in a non-inflationary manner to increase incentives for savings and investment and restraining the growth of non-development outlays.

The survey draws attention to the continued need for growth in agricultural production, efficient procurement and distribution of foodgrains through the public distribution system and improved working of the public enterprises. The survey recognizes that higher productivity is the key to the rapid improvement of the economy and in this context it has referred to the revised 20-point programme which focusses attention on the priority areas, with emphasis on improving the condition of the weaker sections of the society, for concerted action at all levels.

Payments Position

Highlighting the serious balance of payments problem, the survey points out that these are of a structural nature which can only be resolved over a medium term horizon but they call for solution without delay and action on many fronts such as further step up in investment, better productivity of investment and, most important, import substitution in crucial sectors. The prospects for an increase in inflows of bilateral and other sources of external development finance on concessional terms are not favourable and recourse to a certain amount of commercial loans may be unavoidable. The survey adds that adjustment in the balance of payments will have to come from trade and invisibles.

Reiterating the importance of rapid export growth, the survey points out that the success of India's export efforts will depend crucially on the quality and prices of our industrial products. It adds that the maintenance of price stability, continued improvement in infrastructure, and the satisfactory supply situation in respect of inputs should provide the right environment for expansion of exports in coming year.

Savings and Investment

According to the survey, with a growth of 7.5 per cent in 1980-81 and an expected increase of 4.5 per cent in 1981-82, the growth in the real GNP in the first two years of the sixth Five-Year Plan period, will significantly exceed the target growth rate of 5.2 per cent per annum during the Plan period.

In 1981-82, projected public investment outlays are likely to be met, and the outlook for private investment is good. Therefore, the rate of capital formation, which was 24.2 per cent in 1980-81 says the survey, should remain high in 1981-82 also.

The domestic savings rate during the year is also expected to remain high. (It was 22.2 per cent in 1980-81).

According to the survey, agricultural production during 1981-82 is expected to increase by over 3 per cent on top of the 15.4 per cent increase in 1980-81 and against a decline of 15.5 per cent in 1979-80. Much of this recovery is because of improvement in yield per hectare, reflecting the efficacy of the agricultural strategy of extending irrigation facilities and assured supplies of improved seeds, fertilizers, credit and other inputs. In the

current year, foodgrains production is expected to reach a record level of 134 million tonnes. Sugarcane production is also expected to register an all time high. The prospects of groundnut crop are equally bright and those of cotton, jute and mesta are quite encouraging.

The performance of the infrastructure sectors during 1981-82 was highly satisfactory, according to the survey. The coal production target of 121 million tonnes is expected to be exceeded. The supply of coal to power plants and other key industries has improved substantially.

Power generation during 1981-82 is expected to increase by about 10 per cent on top of 5.7 per cent increase in 1980-81 mainly because of notable growth in thermal generation, says the survey.

The railways are likely to exceed the target of 215 million tonnes of revenue earning traffic during 1981-82.

The cargo handled by major ports also increased compared with 1980-81.

Industrial Production

According to the survey, industrial production is expected to increase by about 8 per cent during 1981-82 as against 4 per cent in 1980-81 and a decline of 1.4 per cent in 1979-80. The improvement has been widespread; key industries such as steel, crude oil and petroleum products, cement, aluminium, nitrogenous fertilizer, newsprint, diesel engines, transport equipment, sugar, vanaspati, etc. are expected to touch new peak levels of production, the survey adds.

Public sector undertakings, specially industrial groups covering steel, minerals and metals coal, petroleum, chemicals and pharmaceuticals, heavy engineering, medium and ligh engineering transport equipment and consumer goods have all recorded a rise in production during 1981-82.

The steady progress of small scale and cottage industries witnessed during the year, says the survey, reflects both improved environment and a positive response to sepcific measures to promote production in the decentralised sector.

There was an improvement in industrial relations, notes the survey. During the first half of the financial year 1981-82, the number of man-days lost was 8.01 million compared with 11.79 million in the corresponding period of 1980-81.

The survey notes that the available indicators of private investment, such as grant of licences, capital issues, sanctions and disbursements of loans by term lending institutions show that the pick up in investment continued during 1981-82.

New measures to boost industrial production were initiated during the year as a follow up of the July, 1980 Industrial Policy statement. Automatic

increases in production, special incentives for promo' ' g export-oriented industries and some relaxation in location policy were allowed. The new textile policy emphasised expanded production in the decentralised sector and modernisation of the capacity in the mill sector.

The survey draws attention to the need for achieving an average rate of growth of about 7-8 per cent per annum in industrial production on a sustained basis. This would require continued improvement of and investment in infrastructure, a determined effort to utilise existing capacities fully, and speedy implementation of new industrial projects. The prospects for Indian industry in the eighties would depend largely on the success achieved in increasing productivity and reducing costs of manufacture, the survey adds.

Price Trends

Control of inflation, says the survey, continued to be an important element of economic policy and a number of measures were taken during the year to moderate the rate of inflation. Supply management effort was directed towards increased production supplemented by imports of edible oils, wheat and sugar in significant quantities. These were intended to improve the resilience and viability of the public distribution system. A number of steps were also taken to effectively contain the expansion of money supply and bank credit.

The survey draws attention to the persistent problem of inflation and says that it is a matter of satisfaction that commendable success has been achieved in the task of reducing inflation. This is a major achievement which has eluded many developed countries. It emphasises that a major task in the years ahead is to sustain a non-inflationary environment for faster growth and development and, therefore, measures for restraining aggregate demand and increasing supplies of essential commodities have to be continued.

Realizing the importance of fiscal policy in containing the growth of aggregate demand and thereby ensuring price stability, the survey points out that the Budget in the last two years have tried to achieve a balance between investment requirements and consumption needs of a developing economy. Efforts have been made in these two years to mobilise additional resources in a non-inflationary manner, to increase incentives for savings and investment, and to restrain the growth of non-development outlays.

The task of fiscal policy in the coming years, according to the survey, must be to encourage further savings and to channel these to productive investment for increasing employment and growth in the economy. The survey further points out that the financial position of the States which had improved considerably as a result of the recommendations of the Seventh Finance Commission has been showing signs of mounting strain in recent years. The financial performance of individual States has been uneven during 1980-81 and 1981-82. While some States have made a commendable effort to mobilise additional resources, the performance of some others has not been satisfactory, resulting in an increase in overdrafts from the Reserve Bank of India. States

facing gaps in resources have been advised to adopt concrete measures to restrain public expenditures and mobilise additional resources.

Wholesale, Consumer Prices

New Delhi PATRIOT in English 25 Feb 82 p 1

[Text]

THE Government admits that the fall in wholesale prices has not been reflected in retail prices during 1981-82, and has advanced a number of reasons for it.

The pre-budget Economic Survey notes that the rate of inflation, though not necessarily inflation as such, declined during the year. The consumer prices, has actually recorded a rise, even if marginal.

The Wholesale Price Index (WPI) increased by only seven per cent in 1981 calendar year compared to 13.5 per cent in 1980 and 22 per cent in 1979. However, the Consumer Price Index (CPI) did not fall in its wake. Instead, it rose by 9.5 per cent as compared to an increase of 9.4 per cent in 1980 and 12.6 per cent in 1979.

While Mr R Venkataraman used to say during his days in the Finance Ministry that the divergence between the WPI and the CPI was due to time-lag in percolation from the first to the second present Finance Minister Pranab Mukherjee on Wednesday listed a number of factors for this.

The survey noted that though in the long run, a change in the WPI should come to be reflected in CPI, this could not be possible immediately and in every case because of "subtle statistical differences" between the two indices.

For instance, WPI and CPI coverage in terms of price quotations and locations for the two indices are very different—the weighting diagram of the CPI is based on the family budget survey during 1958-59, while the weights of the WPI in the base year of 1970-71 is based on levels of transactions during 1969-70.

Consequently, the weights of even common items in the indices are quite different, the survey says.

It points out how prices of cereals, edible oils, fruits and vegetables, milk and milk products, eggs, fish and meat have continued to increase during the year, almost twice as much weight in the CPI than in the WPI.

Another reason is that prices of items distributed through the Public Distribution System have not been relatively stable during the last two years. These items have a higher weight in the CPI than in the WPI.

The survey for 1981-82 expects the current year to record a 10 per cent rise in the level of prices.

It also draws attention to the uncertainties of the international price situation, and the possibility of spurt in prices of oil and other commodities.

The survey noted that monetary expansion in 1981-82 was kept within reasonable limits—11.3 per cent till 8 January 1982, compared with 13.4 per cent in the same period last year.

Profile of economy

The Economic Survey presents the following profile of the economy in 1981-82:

Gross national product: (plus) 4.5 per cent,

Agricultural production: (plus) 3 per cent.

Industrial production: (plus) 8 per cent.

Foodgrain production: 134 million tonnes.

Wholesale prices (increase): around 10 per cent.

Monetary expansion: (plus) about 17 per cent.

Exports: (plus) 12-13 per cent.

Imports: (plus) 4 to 5 per cent.

Trade gap: Rs 5,500-5,600 crores.

Foreign exchange reserves: (decline) Rs 1,400 crores.

Net inflow of external assistance: Rs 1,089 crores.

RAO INTERVIEWED BY KUWAITI NEWSPAPER

New Delhi PATRIOT in English 16 Feb 82 p 7

[Interview with P. V. Narasimha Rao, external affairs minister, by the editor of ARAB TIMES; date and place not specified]

[Text] External Affairs Minister P.V. Narasimha Rao has said that India is "not in any way in competition with Pakistan in its relations with the Arab world," reports UNI.

India's ties with the Arab countries subsist on their own merits and "I think the Arab countries appreciate India's role in the world affairs, irrespective of our being a secular state."

Giving his views in an interview with the editor of ARAB TIMES, a Kuwait-based English daily, Mr Narasimha Rao said: "I might tell you that there are more Muslims in India than in Pakistan, but I don't think this factor should make any material difference in relations between mature and sovereign nations."

Asked if any consideration was being given to the various requests made by Indian expatriates in the Gulf for facilities in their country, he said. "We have only recently liberalised our Customs regulations, and I understand that incoming passengers, especially from the Gulf region, have found this liberalisation to be helpful."

Asked about India's trade with Gulf countries, Mr Narasimha Rao said the time had come for India to be more active in industrial ventures in the Gulf, possibly in collaboration with other countries. "We are also concentrating on product improvement in India which would enable us to capture a larger share of the market for manufactures which undoubtedly exists in the Gulf region."

He added: "I regard economic and commercial cooperation between India and the Gulf countries in an important input in our emphasis on collective self-reliance among developing countries."

Mr Rao said several proposals were under consideration by his government on Arab investment in India. "We have already cleared investment proposals in respect of meat processing and export as well as for cement."

Asked if Arab countries had done better than the industrialised ones in assisting third world nations, he said: "There is no doubt that the record of the oil-exporting developing countries in respect of augmenting the flow of development finance to other developing countries has been better than the performance of the industrialised countries."

However, while the oil-exporting countries have worked out some useful bilateral and regional arrangements, these still need to be extended to the inter-regional and multilateral spheres.

REPORT ON CONCLUSION OF SOUTH-SOUTH MEETING

New Delhi PATRIOT in English 25 Feb 82 pp 1, 7

[Text]

THE three-day 44-nation New Delhi Consultations concluded on Thursday on a note of consensus on approaching the issue of North-South global negotiations with "firmness and flexibility" so as to prevent compromise on matters of principle and substance even while not being rigid in approach and strategy.

On South-South cooperation, a number of concrete decisions were taken to further the Caracas Programme of Action. One of them related to the Indian suggestion for setting up a multilateral financing authority, on the basis of voluntary contributions by interested developing countries, to promote Third World cooperation in several areas.

The suggestion was endorsed, and it was decided to prepare a detailed scheme. India was asked to convene a meeting of experts from interested developing countries so that the detailed scheme could be prepared for presentation to the "Group of 77".

It was also decided that 10 technical meetings be convened in the coming months in the fields of "finance, science and technology, food and agriculture, new and renewable sources of energy, and trade and technical cooperation.

Yet another decision was to shortly set up in India a non-aligned centre for science and technology that would go a long way in realising the institutional framework for the Caracas Programme.

The section on global negotiations in the meeting's final document (that will be officially released on Thursday morning) reads: "The adoption of a short enabling resolution was considered the optimal way of launching these negotiations. It was emphasised that the Group of 77 should remain firm and flexible—firm in its commitments to the basic objective of global negotiations as contained in Resolution 34/138 and flexible in its approach and strategy.

"They were agreed that efforts should be made concurrently to achieve progress in areas of critical importance to developing countries —such as food, energy, financial flows and trade in the forthcoming conferences and meetings of specialised agencies.

"The need for synchronising the positions of the Group of 77 on issues dealt with in the context of the global negotiations and in specialised bodies, particularly those of a technical nature such as the GATT, IMF and World Bank, was stressed"

Briefing newsmen, Secretary (East) in the External Affairs Ministry Romesh Bhandari said the exchange of views here would now enable the G-77 to discuss and negotiate more effectively with the industrialised countries at global negotiations.

Asked if there were differences within the G-77 on the issue, he said it was a question of how to evolve a common approach to the US assertion that global negotiations should not question the competence of the role and functions of existing specialised international institutions like the World Bank and the IMF. It was obvious that in case these institutions could not be reviewed at the negotiating table, then the negotiations do not become global, he added. But the question was how to respond to the US attitude.

That was where the concept of flexibility in approach coupled with firmness in protecting principles came up.

Pak Plea Rejected

It is learnt that there was general opposition at the meeting to the US proposal for a conference preparatory to the global negotiations. At the same time, a proposal advanced by Pakistani delegate Niaz Naik to strike a compromise by agreeing to an 'organisational conference' as part of the global negotiations was rejected outright. The proposal, according to Mr Naik, had been forwarded by him in his capacity of Deputy Chairman of the UN General Assembly on behalf of the Chairman of the General Assembly.

Mr Bhandari, however, pointed out that if a common solution to the question of reviewing the activities of IMF and World Bank was found, the subject of preparatory conference would be sorted out.

"The stage will now move from New Delhi to New York" for consideration by the 'Group of 77', he added. The consultations (in New Delhi) were not meant to come to a decision, which had been left to the Group of 77, he added.

South-South

As for South-South cooperation, most of the participants called for expeditious implementations of the numerous ideas mooted and decisions taken at various conferences.

These ideas were outlined in a document by Mr G Parthasarathy, chairman of the meeting, summarising the report of the deliberations of the committee on South-South cooperation (which was finalised on Tuesday evening itself).

According to this document, the meeting urged for "greater commitment" at political level for promotion of economic cooperation among developing States and recommended the setting up of a 'high-level' national authority in each country for the purpose.

It underlined the strategic value of such cooperation in strengthening the negotiating power of developing countries against the affluent nations.

Summing up the deliberations, Mr Parthasarathy said in the document that the participants were guided in their deliberations by the principles, goals and objectives of developing countries in their quest for the establishment of the new international economic order.

No Substitute

The meeting was of the view that while South-South cooperation was important, it could not be a substitute for North-South economic cooperation nor "relieve the industrialised countries from their responsibilities and commitments towards the developing nations".

One proposal called for establishing a South-South financing institution, organised on business lies and involving decision making structure, which

would both give recognition to the concerns of contributing countries and provide a better balance of power between donors and recipients than is the case with the Bretton Woods institutions (the World Bank and the IMF).

The primary business of the institution would be to develop commercially viable projects in developing countries.

A new institutional framework for investment, based on joint ventures in developing countries was also suggested.

The participants expressed the hope that these proposals would be elaborated and presented to the forthcoming meeting of the group of experts of developing countries in Jamaica.

The meeting stressed that the global system of trade preferences (GSTP) was one of the key elements in the efforts of the developing countries in promoting collective self-reliance.

Food Question

On food, a suggestion was made to set up a small agricultural coordinating group with experts from various regions to work out a scheme for promoting joint ventures and collaborative projects utilising surplus capital and technical know-how in developing countries.

It was stressed that countries could organise themselves in vital area of food by developing a matrix for agricultural self-reliance and food-self-sufficiency based on the four major parameters of need, potential technology and capital.

The meeting also recalled that the Vienna Programme of action had laid the foundation of extensive cooperation among developing countries in science and technology. The caracas meeting had built on this foundation and formulated comprehensive recommendations for forging cooperation in this field. Lack of institutional mechanism was an obstacle to its speedy implementation.

Facilities available in many advanced scientific and technological institutions in several developing countries could promote not only cooperation in technological innovation and research, but also improve the position of developing nations in regard to technology transfers, it was noted.

Delegates also recognised that cooperation in the field of energy was an important component of collective self-reliance among developing countries.

The idea of an 'energy affiliate' of the World Bank was also mooted to mobilise additional financial resources.

The conference laid stress on giving special consideration to the problems of least-developed among developing countries to enable them to participate more effectively and benefit from activities for promoting economic cooperation among developing countries.

INDIA SEEKING CLOSER RELATIONS WITH S. KOREA

Madras THE HINDU in English 12 Feb 82 p 7

[Article by G. K. Reddy: "Bid for Closer Ties With S. Korea"]

[Text] New Delhi, Feb 11.--As part of its policy of both widening and deepening its contacts with the third world nations, India is now making a concerted effort to develop closer bilateral relations with countries like South Korea which are in a position to engage in mutually beneficial cooperation in the economic sphere.

The South Korean Foreign Minister, Mr Shinyong Lho, is arriving in Delhi on February 18 on a three-day visit for a wide-ranging exchange of views on current developments as a prelude to the visit of the External Affairs Minister, Mr P. V. Narasimha Rao, in April or May to carry forward this dialogue.

No Stranger

Mr Lho is no stranger to India, since he served with distinction as Consul-General in Delhi in the early '70s before the two countries established Ambassador-level relations. As one who has closely followed India's policies in the past, he would be able to explain to the Prime Minister, Mrs Indira Gandhi, and Mr Narasimha Rao, the latest proposals of the South Korean President, Gen. Chun Doo Hwan, for Korean reunification.

It is not without significance that, in extending invitations to ten more developing countries to take part in the South-South talks in Delhi later this month, India has added to the list countries as diverse as South Korea and Rumania, Nepal and Iran, Morocco and Nicaragua, along with Burundi, Trinidad and Tobago, Gabon and Colombia to ensure balanced representation.

The 43 countries that will be participating in the South-South conference include 15 from Asia including China, 14 from Africa, 12 from Latin America and the Caribbean and two from Europe. Though it is not a member of the Group of 77 from which the original list has been drawn up, South Korea has been chosen along with China and Rumania for special invitation because of its intrinsic importance as one of the dynamic societies of the third world which would be able to play an important role in promoting the idea of South-South cooperation.

At the political level, too, India continues to take a lively interest in any move for Korean reunification, or for at least establishing a working relationship between the two divided Korean States, because of its past role as Chairman first of the U.N. Commission on Korea and later of the Neutral Nations Repatriation Commission that supervised the return of prisoners as part of the armistice agreement.

It is equally significant that India has now quietly abandoned the past practice of trying to equate and balance its relationship with the two Korean States. The current accent is on developing mutually beneficial relations with both Koreas without prejudice to a closer relationship with either of them.

It is against this general background that the South Korean Foreign Minister's visit to Delhi next week, and the projected return visit by the External Affairs Minister to Seoul, have been receiving considerable attention among foreign diplomats who have been following India's efforts for widening its bilateral relations with third world nations. It has been duly noted that India and South Korea are aspiring to emerge not as competitors but as collaborators sharing the fruits of development of Asian sub-regions.

VICE PRESIDENT CALLS FOR BALANCED DEVELOPMENT

Madras THE HINDU in English 12 Feb 82 p 6

[Text]

AHMEDABAD, Feb. 11.

The Vice-President, Mr. M. Hidayatullah, today called for a national endeavour to attain full installed capacity in the public and private sectors, especially in the fields of power, steel and cement.

Addressing a State-level businessmen's conference here, Mr. Hidayatullah asked traders to explore methods for better management of the economy and strive for greater cooperation with the developing countries for sustained expansion of international trade and increased domestic growth.

"The Indian economy is now entering a promising phase of consolidation and growth in this year of productivity", he said.

Mr. Hidayatullah told over 1,000 delegates, gathered for dwelling on "Towards accelerated economic growth", that all programmes envisaged by the Government to strengthen the nation and take it further on the path of self-reliance, deserved their fullest cooperation.

The Vice-President said that whatever the shape and growth of the economy, the proper tackling of the unemployment problem must have priority. He asked businessmen to evolve effective schemes for this.

A great deal of collective effort was needed on the part of every one. The entire responsibility could not be put on the civil servants and managers of public enterprises. Leaders of political parties, who had got the people's mandate should bear an equal share of responsibility, if not more.

The Vice-President stressed that the planning machinery should promote balanced regional development by curbing concentration of investment in some pockets.

How far the poor had access to the benefits, which the growth in economy had made available to others, would be the yardstick for the real assessment of the economic growth, he said. — PTI.

CORRESPONDENTS REPORT JAGJIT SINGH CHAUHAN IN U.S.

U.S. Reversal

Madras THE HINDU in English 12 Feb 82 p 1

[Article by N. Ram: "Jagjit Singh Case: State Dept. Overruled"]

[Text] WASHINGTON, Feb. 11.

The case might seem an individual one, but the details now available on the U.S. decision to grant the self-styled leader of the "Khalistan" movement entry into the U.S. show that a quick, conscious and high-level decision was made in the last week of January to reverse the one made within the State Department to deny him entry.

The reversal seems to have occurred within two or three days from the time it was communicated (towards the end of January) that the State Department's position remained the refusal of entry. The original decision favourable to the Government of India followed a mild protest against Mr. Jagjit Singh Chauhan's admission into the U.S., also without a passport, in December.

Both the U.S. Embassy in New Delhi and the India desk in the State Department in Washington appear to have been overruled.

Chauhan's claim: Mr. Chauhan himself has claimed that he has used the "influence" he and the "Khalistan" forces have built up in high places in this country to counter the Government of India's intensive efforts to have his entry blocked. While there is probably self-serving exaggeration in this claim, to an extent it is substantiated by whatever is known about the forces that have been at work in his favour.

While Mr. Chauhan has been advertising his rightist credentials in general and also emphasising his hawkish anti-Soviet stance in relation to Afghanistan as well as India, Mr. Jesse Helms, an ultra-hawkish, far-right Senator, is reported to have exerted himself to make Mr. Chauhan's entry and status within the U.S. something more than a "humanitarian" act connected with medical reasons and a "routine administrative procedure".

Not taken seriously: The suspicion is that, in a sense, Mr. Helms has been made a front man for those forces within the U.S. Government which cannot make their hostile stance towards India or their reasons known publicly.

The claim of "humanitarian considerations" and "routine administrative procedure" made by the State Department has not been taken seriously in New Delhi. No attempt seems to have been made by Washington to show that the man's medical history figured seriously in its reversal of a specialist State Department decision.

Claims of "humanitarian considerations" aside, the U.S. Government has simply maintained in effect that in its judgment, since no evidence has been produced to connect Mr. Chauhan with any "terroristic" or "criminal" activity in India, there is no reason it knows to deny him entry.

The Foreign Minister has angrily rejected this contention and drawn the attention of the U.S. Ambassador to India to "a new irritant in the already strained relations between the two Governments."

There is some suspicion aired here that New Delhi is trying to establish a precedent in this case with respect to the freedom of travel of passport-deprived Indian nationals who oppose it. The point is being made to counter this impression that Mr. Chauhan's background and known activity, his (politically) conscious admission into the U.S. overriding protests and reversing an earlier decision by the State Department, and the failure to impose any political restrictions on him (in contrast to the attitude of the Canadian Government), make this case qualitatively different from the position of other political opponents of the Government of India.

A contrast: By way of contrast, visa difficulties have been reported for at least one activist of the secessionist "Eelam" movement (of Sri Lanka) based abroad, seeking to visit this country from his base in the United Kingdom.

Although it would be ridiculously flattering to Mr. Chauhan to make any comparison of his political weight with that of the fanatical right-wing protestant leader of Ulster, it might be noted for the record that the Reagan Administration was obliged recently to refuse a visa to Rev. Ian Paisley to enter this country — on the ground that political passions might get dangerously inflamed. It also refused visas to a pro-IRA member of the British Parliament and another activist, who were arrested along the Canadian border while they tried to enter the U.S. without the necessary documents and later deported

Chauhan in Washington

Bombay THE TIMES OF INDIA in English 15 Feb 82 p 1

[Article by J.N. Parimoo: "Sikh Rebel at Capital Hill"]

[Text] WASHINGTON, February 14.

THE SIKH secessionist politician, Dr. Jagjit Singh Chauhan, is in Washington and not in Houston where he was supposed to go "for follow-up medical care," the reason for which he was allowed by the state department to enter the United States without a passport.

For most of the three days that he has been here, Dr. Chauhan has been lobbying at the Capitol Hill, meeting a few Senators and Congressmen.

Attempts made to contact Dr. Chauhan failed because, according to his friends, he has been advised by his American sympathisers to avoid meeting the press.

His American sympathisers, it is explained, are some pro-Pakistan politicians and officials, who are traditionally hostile to India not only because of their pro-Pakistan sympathies but also because of their perceptions of India's pro-Soviet tilt.

These politicians had helped Dr. Chauhan in getting admission to the U.S. through an extraordinary waiver process.

Sen. Jesse Helmes, who has shown keen and consistent interest in Dr. Chauhan's activities, had put pressure on Mr. James Buckley, under-secretary of state, to secure for the Sikh politician a waiver so that he may enter the U.S. without a passport.

State department sources say they have found that Sen. Jesse Helmes did not know that Dr. Chauhan was advocating a Sikh separatist cause called "Khalistan." They say the senator has known Dr. Chauhan as an "anti-Soviet activist" during the days of the Afghanistan crisis.

Dr. Chauhan has been keeping himself busy with a number of causes. He was active in a pro-Pakistan and anti-Soviet movement during the initial phase of the Afghanistan crisis. He was also active during the days of Indian emergency in a movement called "India for democracy," which was directed against Mrs. Indira Gandhi. Now Dr. Chauhan has espoused the cause of "Khalistan."

An important staff member of a senator thinks that Dr. Chauhan has been very useful to him as he was "the best informed man of India." It is not, however, clear what information Dr. Chauhan has been making available to the senator or his staff.

Indian political observers here believe that it will be rather naive to accept the argument that the few senators that may be helping Dr. Chauhan are doing so because of his association with the anti-Soviet movement for Afghanistan.

Any such misconception as the senators might have had, presumably at the initial stages when Dr. Chauhan was making desperate attempts from Vancouver to enter the U.S. without a passport, should have been dispelled by now, they argue. Why is Sen. Helmes helping him now?

Indian observers here believe that some American official or semi-official agencies and organisations have by tradition shown a willingness to help disruptionist or separatist movements in India perhaps because they would like to embarrass, if not weaken, the government of Mrs. Indira Gandhi.

These observers believe that the U.S. state department's plea that any support to a secessionist movement in India will militate against the U.S. policy objective of unity and stability in India is a simplistic attempt to explain away an extraordinary decision to admit to the U.S. a leader of a separatist movement against the wishes of the government of India.

Moreover, even if it is to be assumed that the state department is privately pursuing the policy objectives that it is professing publicly, it is not unusual for the U.S. administration to have different departments pursuing different policy goals at the same time.

These observers point to the CIA documents seized in Iran to explain how different departments of the U.S. administration or even different sections of the CIA itself could be pursuing different goals at the same time.

Meanwhile, some Sikh leaders associated with gurdwaras here are unhappy over the publicity that Dr. Chauhan has been receiving. They believe that this is out of all proportion to his status in the Sikh leadership.

They say if he is fighting for a cause why is he not going to Punjab and doing what leaders like Master Tara Singh and Sant Fateh Singh did in the past.

"Will U.S. senators give Khalistan to him? He dare not address a meeting on Khalistan in a gurdwara here. Let him try. It is you newsmen who give him the publicity he wants," they say.

Mr. Ganga Singh Dhillon, a Washington-based Sikh politician who advocates a separate Sikh nationhood (as opposed to a separate statehood for Sikhs advocated by Dr. Jagjit Singh Chauhan), expressed the view (on telephone) that the government of India was interfering with the internal affairs of the U.S. government by challenging the U.S. decision to admit Dr. Jagjit Singh Chauhan.

He said the Indian government should "mind its own business" and try to revise its policies towards the Sikhs instead of trying "to spot CIA and American influences working behind Jagjit Singh or Ganga Singh."

"Today every Sikh in this country has become suspect. If he wants to go home, his case is referred to Delhi. I wanted to participate in the akhand path of my son but I was not given a visa. Similarly, Dr. Harbhajan Singh and Sardar Tejpal Singh, two Sikh leaders, were not given visas.

"Instead of telling the U.S. who it should allow to enter this country, the government of India should set its own house in order and stop the discriminatory attitude towards Sikhs who are kept waiting for visas for months — they are guilty," Mr. Dhillon

FRENCH BANKERS OFFER PURCHASE CREDIT TO INDIA

Bombay THE TIMES OF INDIA in English 24 Feb 82 p 4

[Text]

BOMBAY, February 23: A consortium of French bankers has offered a line of buyers' credit to India for francs 800 million (Rs. 130 crores). This is to be utilised for the purchase of plant and equipment besides maintenance of French-assisted industrial projects in India.

The line of credit will be split into two parts — purchase of French equipment worth 600 million francs sortium of French bankers has od-foreign currencies, for purchases elsewhere.

Mr. Harish Mahindra, president of the Indo-French Chamber of Commerce and Industry, who led a delegation of Indian industrialists to France, told newsmen here today that this agreement, subject to the government approval, followed after intensive discussions with French bankers.

"This is a significant achievement which indicates not only the high credit rating of India in Western financial markets but also continued French earnestness to assist India in its industrial development," he added. He expected further possibilities of Indo-French economic co-operation in various fields.

Mr. Mahindra was hopeful that this line of credit would be accepted by the goevrnment as a supplement to the French protocol.

He pointed out that this was not the end of the proposal and if this line of credit was successfully and rapidly utilised, a further approach would be made to French bankers to supplement it.

During their visit to France, the members of the delegation had in-depth discussions for establishing projetes in India in several sectors with French participation.

DEFENSE MINISTER NOTES BUILDUP ON PAKISTAN BORDER

Bombay THE TIMES OF INDIA in English 24 Feb 82 p 9

[Text]

THERE are indications that Pakistan is strengthening its armed forces and the bulk of the Pakistani army is stationed in the vicinity of the Indo-Pakistan border, the defence minister, Mr. R. Venkataraman, said today in the Rajya Sabha in a written reply to question from Mr. N. N. Pandey.

He also said that there was no confirmed information to suggest that Pakistan had given a military base to the U.S. Pakistan was known to have obtained military equipment from a number of countries, including the U.S., U.K., France, West Germany and China. Some East Asian nations were also reported to be providing financial assistance to Pakistan for its arms acquisition, he added.

Replying to Mr. G. C. Bhattacharya as to what steps the government proposed to take for defending the country against an attack by Pakistan's F-16 planes, Mr. Venkataraman said the government had taken appropriate measures to maintain full defence preparedness. It was not in the interest of national security to disclose the details.

In reply to another question of Mr. P. L. Khandelwal, he said that there had been no case of infiltration by Pakistani or Bangladeshi troops into Indian territory during the past two months. However, there had been a few incidents of air violations by Pakistan and one by Bangladesh during this period, the government had taken up the issue relating to these violations with the concerned governments.

INDUSTRY MINISTER TELLS STEEL OUTPUT TARGET

Bombay THE TIMES OF INDIA in English 13 Feb 82 p 14

[Text]

NEW DELHI, Feb. 12.

India has received offers of nuclear fuel from certain countries for the Tarapur atomic power plant which is at present dependent on supplies from the U.S.

The future of the agreement under which India has been receiving fuel from the U.S. is still uncertain and until a final decision is taken "we cannot give a clear answer to anybody else," the Prime Minister, Mrs. Indira Gandhi, said in an interview to Swedish journalists yesterday.

Mrs. Gandhi said there was no discussion with the Swedish Prime Minister, Mr. Thorbjorn Fälldin, on cooperation in the field of nuclear power during the recent talks.

Asked whether India would manufacture its own nuclear fuel in the future, Mrs. Gandhi said, "This is a question that is still hanging fire because of our discussions with the U.S. We do not know what will come out.

No discussion on arms: In reply to a question, Mrs. Gandhi said she did not discuss the question of buying weapons from Sweden during her talks with Mr. Fälldin.

No overwhelming aid

While India required more aid from outside in certain specific areas, Mrs. Gandhi said, "we do not want to be overwhelmed by aid. I mean we do not want to have more than we can manage effectively." What India received from outside had to be balanced with local resources.

Asked about the obstructive attitude of the Indian bureaucracy inherited from the British days, she said earlier decision-making used to take place at many levels. Her Government had tried to lessen those levels and there were fewer points where obstructions could occur now, she added.

When her party returned to power, she found a lot of demoralisation in the services and it took her Government a long time to set things right. When her party was out of power, "they had certain different types of philosophies....For instance they were against exports", she said.

Treaty with Pakistan: She said she had offered a "friendship treaty" to Pakistan to create an atmosphere of "understanding and cooperation" between the two countries.

India had welcomed the recent talks with the Pakistani Foreign Minister, Mr. Agha Shahi, here and "we can only hope for the best."

Replying to a question on acquisition of sophisticated arms by Pakistan, Mrs. Gandhi said it had created some fear among the country and the people. "It is clear that they are not going to use them against anybody else," she said, and added that Pakistan had already made it clear to the Soviet Union that it was not foolish enough to attack it (the Soviet Union).

Feeling for peace

Mrs. Gandhi replied in the negative when asked whether India was afraid of Pakistan, a small country. A war meant people dying, whether it was a big war or small. "We don't like that", she said.

She noted that there was a strong feeling for peace among the people in the country, though there was no movement as such. There was a Peace Council, which was dominated by communists. "There is a strong feeling for peace, first, because we have been attacked and secondly we feel that others carry out their rivalries on our continent and not in their countries," she said.

Problems galore: She pointed out that the country had a long way to go in solving its problems and eradicate poverty. "Any war or modernisation of the defence forces meant diversion of funds meant for development".

Threat to world peace

Asked which of the great powers — the Soviet Union or the U.S. — she saw as a great threat to world peace, she said the threat was not from one power or another but from the atmosphere of confrontation and the momentum which the arms race had gathered.

The other danger to peace was from the disparity between countries. "If you have very poor countries and very rich countries, I am sure it is going to lead to trouble", she said.

Russia's help

Asked what she saw as the main gain from collaboration with the Soviet Union, Mrs. Gandhi said, "They have helped us in many

things. "Soon after freedom", we wanted to build our infrastructure, that is, we wanted to produce our own steel, for instance.

"India first went to the U.S. but got a negative reply. They said they would help the private sector but not the State sector and we were anxious that these things should be in the State. We had private steel plants and we were not taking them over but we thought any new unit should be under the Government", she said.

On Poland, Mrs. Gandhi said India was against any outside interference from anywhere. "Sometimes it takes place in the form of actual presence of troops and sometimes of aggression. Both are equally bad", she said.

Irresponsible Opposition

Answering a question, she said the Opposition in India was not serious and adopted an irresponsible approach. She, however, hoped they would look at things with a deeper sense of responsibility.

She said the marxist Government in Bengal had itself given a call for a strike affecting production. This was bad not only for the State but the entire country. "There is nothing we can do about it. We have to take it in our stride". — PTI & UNI.

REPORT ON OIL MINISTER'S 12 FEBRUARY PRESS CONFERENCE

Madras THE HINDU in English 13 Feb 82 p 9

MADRAS, Feb. 12.

[Text] The Government of India has made it clear to foreign collaborators in oil exploration that it would not share the product where the potential was substantial, Mr. Shiv Shankar, Union Minister of Petroleum and Chemicals, said here today.

"But there may be some areas where the oil potential is not up to expectations and the Government may consider under the given circumstances sharing the product. This is only at the will and discretion of the Government of India", he said.

The Minister told a press conference that drilling for oil was going on at a fast rate in different parts of the country. Preliminary investigations had also begun at Jwalamukhi and Jaisalmer in Rajasthan. In all, at the end of 1983, there would be 16 rigs in operation in the country, and four more would be taken on lease. The Indian drilling rigs in Bombay High were doing extremely good work.

Answering questions, the Minister said the Union Government had not overrated the oil potential and had fixed realistic targets for the Sixth Plan.

Work in Palk Straits

About the production of oil in Palk Straits, he said the second well there was spudded in November last year by the Gettysburg to a depth of 3455 metres. It was producing 1,500 barrels daily and was now under production testing. Two more wells had to be dug before commercial processing of oil could start. "We are keeping our fingers crossed", the Minister said.

He said if certain types of crude were not fit for refining within the country, there was nothing wrong in swapping them with other countries. The Madras Refineries designed to refine light Darius crude from Iran was now in a position to use Bombay High crude.

Replying to a question on the shutting out of 'multinationals, the Minister said the Government could not totally shut out foreigners. There might be need for such assistance at some intermediate range where technology was not available in the country.

About delaying expansion of the Madras Fertilizers, the Minister said NIOC of Iran and AMOCO of U.S. were holding 49 per cent of equity. They were neither willing to add to the equity not permitting expansion. The Union Government had started negotiations for purchase of their shares. If no agreement was reached, the Union Government might start another fertilizer factory. This was only hypothetical now.

As for the Nagarjuna Fertilizer project, Mr. Shiv Shankar said the Birlas had originally contemplated a turnkey project in association with a Japanese firm. Since another fertilizer project was proposed, the Birlas might have withdrawn from the scene. The Godavari project proposed to utilise gas from the Godavari Basin. This project would be built in collaboration with IFFCO.

About the Tamil Nadu Government's request for reducing price of fertilizers, Mr. Shiv Shankar said because of the subsidy involved there was little chance of this.

The Minister, who visited the Surgical Instruments Factory at Nandambakkam yesterday, said SIF had turned the corner. Mr. Varadarajan, Chairman, IDPL, who was present, said the administrative blocks of SIF had been converted into a formulation block at an investment of Rs 1 crore. The basic drug production was now being done in Hyderabad and Rishikesh, he said.

Mr. Shiv Shankar also visited Madras Fertilizers and Madras Refineries. He left for Delhi in the evening

FINAL VERSION OF CPI-M RESOLUTION REPORTED

New Delhi PATRIOT in English 13 Feb 82 pp 1, 7

[Text] The political resolution of the CPI-M's 11th Congress at Vijayawada has attacked Euro-Communism as an expression of 'revisionist deviation' flowing from the Soviet Communist Party's 20th Congress.

The final document was made available on Friday.

In a new section entitled 'Party and the International Communist Movement' paragraphs have been added in the light of amendments moved at the Congress last month. The amendments were not pressed after the party leadership assured that some changes would be made in the document before it came out in its final form on the lines of the amendments suggested.

The new paragraphs note the 'severe trials and tests on ideological and policy questions faced by the party of late as in the past and highlight the two deviations--'revisionist and dogmatic'--which 'sharpened ideological controversies and undermined proletarian unity.'

The two paragraphs on the two deviations placed in their order of priority read: 'The revisionist deviation originating from certain formulations of the 20th Congress of the CPSU, continues to do immense harm to the world movement today. It expresses itself in Euro-Communism and other manifestations: rejection of the concept of the dictatorship of the proletariat, of proletarian internationalism and partisanship for the Socialist camp, of the leading role of the party, faith in parliamentary path and overt and covert rejection of Marxism-Leninism form the content of present day revisionism.

"Dogmatism and sectarianism in the international movement once again rejects partisanship for the Socialist camp and while claiming adherence to the dictatorship of the proletariat, equates the Soviet Union with the U.S. The harm it has done to the progress and economy of the originating country is now acknowledged."

The document repeats in this section what has been mentioned earlier, it holds that ruling Communist Parties of Socialist countries 'subordinate class struggles' in non-socialist countries 'to the narrow immediate needs of the foreign policy of the Socialist Governments.'

In this section the document also brings out the CPI-M's adherence to 'dictatorship of the proletariat,' 'proletarian internationalism' and unity of the socialist camp. It further highlights the party's approach to the idea of peaceful transformation to socialism, stating that how such a transformation can be brought about 'mainly depends on the behaviour of the ruling classes who, historical experience teaches us, do not respect the will of the people and suppress it by use of terror and bastial violence."

In preceding paragraphs, however, the general support to the Soviet Communist Party's foreign policy course and sharp criticism of the Chinese Communist Party on the ame foreign policy are identical as in the draft document of the resolution. There are only two additions: (a) while speaking of China, it says criticism should be done with the expectation that China would eventually take its legitimate place in the fight against imperialism 'and strengthen the unity of the Socialist Forces'; (b) under another sub-heading on attitude towards China in the South Asian context, it is mentioned: "It is encouraging that efforts are being made both from India and China to normalise the relations between the two countries.'

The words 'carrying out the imperialist line' are removed from a paragraph dealing with Naxalites' concentration of fire against the CPI-M.

In the fag end of the document some words related to China's support to rearming of Pakistan are deleted in the final document. This probably is a repetition, since it is mentioned in another section earlier.

Four paragraphs have been added on the party's ideas on 'culture.'

There are some new paragraphs castigating the Congress-I for having supported the chauvinists in Assam in the past. Other alteration are mostly in the nature of updating the document, like mention of the 19 January all-India industrial general strike and its substantial success.

CONGRESS-I YOUNG FARMERS ORGANIZATION ESTABLISHED

Bombay THE TIMES OF INDIA in English 14 Feb 82 p 7

[Text]

NEW DELHI, February 13.

THE Congress (I) has floated a new organisation of young farmers primarily with the objective of preventing them from drifting towards opposition parties or groups.

Mr. Rajiv Gandhi, MP, who was the chief guest at the inaugural function held in Guntur in Andhra Pradesh on February 3, has expressed the hope that no income-tax would be levied on agricultural income in the future also.

Dr. B. Subba Rao, president of the newly-formed Indian Young Kisan Mazdoor Congress, told newsmen here today that the organisation would be complementary to the Indian Youth Congress (I) and not competitive to it.

Replying to a question on the need to mobilise young farmers, Dr. Subba Rao said that in states like Maharashtra, Tamil Nadu and Andhra Pradesh they were feeling attracted towards leaders like Mr. Sharad Joshi, Mr. Narayanaswami Naidu and Dr. J. Venjata Rayudu, respectively." We want the young farmers to come into the Congress (I) fold," Dr. Subba Rao said.

COTTON SLUMPS

The new organisation proposes to take up issues which are agitating the farmers with the state governments concerned for redressal. For instance, Dr. Subba Rao said, there had been a substantial slump this year in the prices of cotton and tobacco in Andhra Pradesh.

The Cotton Corporation of India (CCI), he said, had purchased cotton at about Rs. 100 to Rs. 125 less per quintal than last year when the prices were around Rs. 600. He proposed to take up this issue with Mr. Shivraj Patil, minister of state for commerce, shortly.

Dr. Subba Rao stated that an organisation of the kind formed was needed as social relations in rural India were undergoing a radical transformation with farmers agitating for higher prices and concessions and agricultural labourers agitating for higher wages.

STATE PANELS

He said that Mr. N. G. Ranga, MP and deputy leader of the Congress (I) parliamentary party, who has been championing the cause of farmers since the early '20s, has blessed the organisation.

The national executive of the IYKMIC has representatives from various states and more members will be co-opted soon. The state committees will be set up in March and the national convention will be held in April.

It is proposed to institute an annual "Prof. N. G. Ranga award" to be given to an outstanding young farmer, who had undertaken novel schemes to diversify agricultural production.

IRANIAN SPECIAL ENVOY TALKS TO NEWSMEN

New Delhi PATRIOT in English 17 Feb 82 p 8

[Text]

BANGALORE, Feb 16 (UNI)

IRAN will buy Iron Ore from Kudremukh Ayatollah Mahdavi Kani, former Iranian Prime Minister, said here today.

The Ayatollah, who is currently touring India as special envoy of the Iranian revolutionary leader Ayatollah Khomeini, told newsmen that he had talks to this effect with Prime Minister Indira Gandhi and other officials during his stay at Delhi.

Ayatollah Kani said an Indian delegation would visit Iran next month to hold talks in this regard.

He said Iran wanted to maintain good relations with India.

He said during his talks with Mrs Gandhi, he had expressed Iran's concern at the Afghanistan issue. Besides, he had asked India to change the venue of the next non-aligned summit meeting scheduled to be held in Baghdad. The very principle of summit was based on peace and Iraq which was engaged in war with Iran was not the right venue.

Avatollah Kani, who is the chief of the revolutionary clergies in Iran, said there was complete freedom of religion in his country. Some of the Bahais were executed not because they belonged to a different sect, but for their involvement in espionage activities. The British were responsible for the setting up of the Bahai organisation which had links with the Zionists and the imperialist powers, he alleged.

BACKGROUND ON ANDHRA CHIEF MINISTER APPOINTMENT

Madras THE HINDU in English 24 Feb 82 p 1

[Text] The new Chief Minister of Andhra Pradesh, Mr. Bhavanam Venkatarama Reddi, will assume office tomorrow, when he will be sworn in along with the Deputy Chief Minister, Mr. C. Jagannatha Rao, but he will take a few more days to complete the formation of his Cabinet in consultation with central leaders in Delhi.

According to Congress (I) sources here, he intends to have a compact two-tier Ministry on the basis of the broad guidelines already given to him. As he himself put it, the choice will be based on a three-fold criteria of loyalty to the party, commitment to its ideology and personal integrity, to be able to inspire greater confidence.

The new Chief Minister left for Hyderabad this evening after seeking the blessings of Mrs. Gandhi and other Congress (I) leaders, including Mr. P. V. Narasimha Rao, Mr. P. Shiv Shankar, Mr. Pranab Mukherjee, Mr. N. D. Tiwari, Mr. K. Brahmananda Reddi, Prof. N. G. Ranga and Mr. G. K. Moopanar, besides meeting a large number of Andhra MPs and out-going members of the Anjiah Cabinet. He will be back in Delhi on Thursday with a tentative list and finalise the names in consultation with the party president and others looking after Andhra affairs here.

After an agonising suspense until the last moment, the mantle finally fell on Mr. Venkatarama Reddi's shoulders for a variety of reasons. As a starting point for this exercise, the Prime Minister decided that the new Chief Minister should be from the Andhra region and he should be chosen from the legislature party as far as possible. This directive effectively ruled out the possibility of anybody being deputed from the Centre, since she wanted to avoid a parliamentary by-election.

Sharp division: The division in the legislature party between the supporters of Mr. Kona Prabhakara Rao and Mr. N. Janardhan Reddi became so sharp that the Congress (I) high command felt that no matter which of the two was chosen there would be no guarantee that the two groups would cooperate fully in fighting the next elections. The clumsy manner in which the central emissaries went about handling the whole issue, by attempting to stage-manage a snap vote in favour of one of them at the party meeting in Hyderabad last Saturday, made Mrs. Gandhi realise that any further move to impose either of them on the party would be counter-productive.

It was generally recognised in high Congress (I) circles here that one of the two claimants, Mr. Janardhan Reddi was undoubtedly a man of proven administrative ability and dynamism. But he lost the race in the process of his being equated with Mr. Prabhakara Rao for the purpose of eliminating both principal contenders and making way for a third person.

Non-controversial person: At this point she decided that a non-controversial person who was not actively identified with either group should be considered in the larger interests of party unity and discipline. This in turn led to a reopening of the whole process of selection, after the choice had narrowed down to Mr. Prabhakara Rao and Mr. Janardhan Reddi, with no third person left actively in the race. It was at this late stage that Mr. Venkatarama Reddi emerged as a dark horse on the scene, taking almost everybody in the Andhra camp by surprise except the few senior leaders who were actively engaged in this exercise.

In choosing a non-controversial person with a relatively low profile, the Prime Minister was also keen on dispelling the widely prevalent impression that she was against the dominant communities like the Reddis in the State. She wanted to avoid the feeling that no matter who was finally selected, she did not deny any community, including the Reddis, its rightful opportunity to provide the next Chief Minister for this composite State.

These two factors gave Mr. Venkatarama Reddi an edge over the other aspirants, while focussing attention on his positive qualities as a man of both ability and integrity, a good speaker in Telugu and as one who had shown his administrative capability as one of the abler Ministers in the Channa Reddi and Anjiah Cabinets. An additional plus point in his case was that, as one who has married a Khamma lady quite prominent in State politics, he could act as a bridge between the two dominant communities by projecting himself as an illustrious example of national integration.

Test for leadership: But whatever his special qualifications both as an individual and as active politician, the new Chief Minister will have to prove his mettle by providing the necessary qualities of leadership at a time when the State is heading for elections. He has to face the legislature and present the budget, prepare the party for the impending Rajya Sabha and Legislative Council elections and keep this Congress (I) vote bank in tact for the Presidential elections.

He will have to satisfy Mrs. Gandhi in the next few weeks that he has the capacity to carry the party successfully during the next elections. In attempting to impress the public that he is not a political light-weight, he has to resist the temptation of over-reaching himself under the influence of power or pressure of events.

The Prime Minister will be watching his performance quite critically in the next month or two to see whether he will be able to provide effective leadership in governing this complex State, and avoiding the pitfalls of factional politics, while inspiring the administrative machinery to put up a better performance.

The Deputy Chief Minister chosen from the Telengana region is also known to be an able man who as a member of the backward community can give a balancing touch to the new power equations. The two together can form a strong team if they are left untrammelled by the failures of this experiment in the past.

The fact that he was not the first choice but only a second alternative will certainly give a handle to his critics to decry Mr. Venkatarama Reddi as a candidate of convenience. But it need not cramp his style if he does not allow his mentors in Delhi to look upon him as their proxy in the State. One of the very first things he has to sort out with the central leadership is the PCC (I) chief Mr. Prabhakara Rao's future role, since both of them hail from Guntur district.

And if the decision is to have a new PCC (I) chief from some other district, he will have to be suitably accommodated along with Mr. N. Janardhan Reddi to give the new Cabinet greater weight and better balance. This is one of the factors that is now engaging the attention of the central leaders in Delhi.

WASHINGTON CORRESPONDENT PREDICTS U.S. AID CUT

Madras THE HINDU in English 15 Feb 82 p 9

[Article by N. Ram: "Cut in U.S. Economic Aid Likely"]

[Text] Washington Feb. 14--The U.S. economic assistance proposed for India over fiscal 1983 will be around $198 millions (Rs 178.2 crores) as matters stand, Reagan administration officials told THE HINDU. The development assistance component of this is around $87 millions, with the balance represented by title two of PL-480.

The figures are expected to be sent to the U.S. Congress soon, as part of the budget details. The sources make it clear these are "planning figures" and might undergo changes (as the fiscal 1982 figures did to a significant extent). In the hardened economic and political environment that prevails and is developing in the U.S., the changes can be expected to be only downward.

Even without taking inflation into account, bilateral aid levels have been slipping with each fiscal year in which the Reagan Administration has been involved to date. This means the level planned for fiscal 1983 will be over $16 millions less (in nominal terms) than the fiscal 1982 level, which itself represents a substantial reduction from both the figure initially planned for that year and the previous year's level.

IDA Commitment: More significant than direct bilateral aid perhaps is the impact of the U.S. leverage over the resources available to the International Development Association (IDA) for commitment, as well as India's share of the cake. The Board of Executive Directors might have taken the wishful or pious position that the events for fiscal 1982 must not be regarded as "precedents," but there is every indication from the U.S. administration, and within Mr. Clausen's World Bank, that the sharp erosion in IDA resources committed to India in fiscal 1982 will be repeated in 1983.

The Reagan fiscal 1983 budget mentions a figure of $945 millions as the proposed appropriation for the third year of IDA-6, but administration sources advise this correspondent not to take this literally. In "realistic" terms, if there is going to be foreign aid legislation, the level of IDA appropriations that will be aimed at (for fiscal 1983) will be in the $700 to $750 millions range. If, as might well be the case, there is no specific legislation

and recourse is taken to a "continuing resolution." The U.S. contribution to IDA's commitment authority in the third year of the programme will be simply $700 millions.

The Government of India, it seems, cannot realistically aim for more than $850 millions in IDA resources committed--more or less the estimate for 1982--in fiscal 1983. (By the same token, too much expectation need not be brought into the forthcoming Aid India Consortium meeting, that is coordinated and chaired by the World Bank).

According to the same sources, the U.S. position is that any talk of levels for IDA-7 is premature, given the current realities. The Reagan administration has signalled those concerned that it is approaching the April meeting of IDA deputies in Paris as a deliberation over the affairs of IDA-6, and will resist attempts to go into the level and details of a future programme.

"IDA Holiday": Faced with this situation, Mr Clausen's World Bank management is dragging its feet in relation to the commitment to start negotiations for IDA-7 in time, and recipient Governments are bracing themselves for the prospect of an uncomfortable interregnum or "IDA holiday." (It is already guaranteed, of course, that the three-year IDA-6 will go into fiscal 1984 and, quite conceivably, into 1985.)

The U.S. position is that the next IDA programme cannot be expected to rely on donations from country Government and that (in the words of the Deputy Secretary of the Treasury) the "key issues" that must be addressed in designing and negotiating IDA-7 (if there is to be such an animal) are "length of maturities, including possible acceleration of repayment schedules...fees and rates charged...conditionality...and relationship to blend lending."

The World Bank President, who has been talking for several months of a "new product design" for the soft-loan window, has just announced a decision to undertake "a retrospective study of IDA"--which is supposed to "contribute significantly to discussions on its future structure and funding."

To some of those relying on concessionary aid, it might be beginning to sound like a requiem.

JHA MAKES CASE FOR SOUTH ASIAN ECONOMIC COOPERATION

Calcutta THE STATESMAN in English 15 Feb 82 p 9

[Text]

NEW DELHI, Feb. 14.—Mr L. K. Jha has called for a bold initiative for economic cooperation among countries of the Indian sub-continent which, he said, could lead to "a fade-out" of political differences, reports PTI.

Mr Jha a veteran in economic administration and member of the North-South (Brandt) Commission, suggested that India, Pakistan, Bangladesh, Nepal, and other neighbouring countries embark on a framework of economic cooperation through trade liberalization with preferential tariff treatment on a reciprocal basis and clearing arrangements to get over the hurdle of hard currencies.

Delivering the first Fakhruddin Ali Ahmed memorial lecture—held in memory of the former President whose death anniversary was observed on Wednesday—Mr Jha also emphasized the importance of the South-South conference to be held in New Delhi later this month on the initiative of Mrs Gandhi.

Efforts on the global level should not detract attention from the possibilities of mutually beneficial efforts on a regional scale, Mr Jha said. He referred to groupings in the Caribbean and in Latin America and to ASEAN, which had become an area of dynamic growth and development and asked, "should we then not think of a similar initiative in the Indian subcontinent?"

Historical factors and other compulsions and possibilities favoured such a course. These possibilities should be identified and teams of knowledgeable people, who could put forth constructive ideas, should work on them, Mr Jha said.

Mr Jha did not think that it was feasible at this stage to have a common market in the Indian subcontinent on the model of the EEC but said other alternatives were available. Each country could give preferential treatment including duty free entry to products from other countries in the sub-continent if it was not itself producing them.

This programme should be on a reciprocal basis and could benefit all and hurt none. Also, it should be possible to liberalize restrictions on imports and exports within the region.

Mr Jha who is also chairman of the Economic Administration Reforms Commission said the countries in the subcontinent should have an understanding so that in the matter of jute or tea or carpets or garments they were able to increase exports to other countries without undercutting prices. There could also be a common code in regard to treatment of foreign investors.

Mr Jha proposed as the Brandt Commission did, that Nepal, Bhutan, Bangladesh and India get together to make full use of the great Himalayan rivers, not only to meet irrigation needs but also generate power on a scale which could transform the economy of the entire subcontinent.

He was quite convinced that if such an effort was launched, external finance would be forthcoming for its execution.

Mr Jha felt that hurdles to cooperation were not so much political as a result of "short-sightedness". The trend of mounting expenditure on defence because of threats to peace and security had to be halted and reversed. "To plead for peace, to talk of a no-war pact and to continue to prepare for war carries no conviction".

BHEL SUCCESS IN OVERSEAS CONTRACTS REPORTED

Bombay THE TIMES OF INDIA in English 15 Feb 82 p 15

[Text]

NEW DELHI, February 14: The state-owned Bharat Heavy Electricals Limited has been awarded for the second time a consultancy contract by Turkey.

The $100,000 contract, provides for technical evaluation of the feasibility report for setting up manufacturing plant for turbines, generators and motors at Diyabakir. The earlier contract was for consultancy work for establishing a plant for the manufacture of transformer and switchgear at Elazig.

The acceptance of software from India by developing countries is indicative of the confidence being reposed in the Indian engineering and technical expertise in the field of sophisticated power equipment. Offering of consultancy, in addition to products and services, is yet another step taken by BHEL towards enlarging the range of its export activities.

BHEL have so far bagged orders totalling over Rs. 580 crores, covering nearly 40 countries, including developing nations in Asia, Africa and Middle East, and developed countries like USA, Australia and New Zealand.

Some 80 per cent of Malaysia's thermal power project consisting of two units of 120 Mw each set up on a turnkey basis by BHEL, is currently in operation. In Saudi Arabia, a Rs 72-crore project for electrification of Gizan region has been completed by BHEL.

Another order worth Rs. 14 crores has been bagged from Saudi Arabia. For the Pattani multi-purpose project in Thailand, BHEL have supplied three hydro turbines of 28.8 Mw. BHEL is also meeting the requirements of hydro generators for the Bhumibol project in Thailand.

Two successive orders are being executed for hydro generators from New Zealand, aggregating to a total generating capacity of 544 Mw in Tanzania, the first phase of submarine cable inter connection project has been completed.

In recognition of the continued efforts being made by BHEL in the export field, top exporters shield has been awarded to BHEL for the second time. The shield will be presented to Mr. K. L. Puri, chairman and managing director, BHEL, at a special function organised by Engineering Export Promotion Council, in New Delhi on February 17

G. K. REDDY ON INDIAN POLICY TOWARD KOREA

Madras THE HINDU in English 19 Feb 82 p 9

[Text]

As a sort of curtain-raiser to the South-South dialogue opening in Delhi on Monday, the Foreign Ministers of India and South Korea today called for increased cooperation among developing countries to secure better standards of life for their peoples.

The South Korean Foreign Minister, Mr. Shinyong Lho, who arrived last night on a three-day official visit, expressed deep appreciation of India's "just and principled" stand on the Korean question at the United Nations and at non-aligned and other international forums.

He also spoke eloquently about the part India had played, first as chairman of the Korean Commission in supervising the first general election in his country, and later in rendering humanitarian assistance during the Korean war by sending a field ambulance unit, before assisting in the repatriation of prisoners of war after the armistice.

Reunification: At the dinner given by him in Mr. Lho's honour tonight, the External Affairs Minister, Mr. P. V. Narasimha Rao, expressed the hope that the reunification of the Korean peninsula would take place peacefully "without outside intervention".

He also recalled with pride the ancient links between india and Korea, with Buddhism serving as a bridge between the two cultures. In more recent times the two countries have established mutually beneficial trade links to tap the vast potential for increased cooperation.

After their first round of talks this afternoon, the two Foreign Ministers voiced satisfaction over their efforts to strive for peace and stability in their respective regions. They noted that two-day trade between the two countries, which was only symbolic not long ago, had

increased more than 20 times in recent years reaching $310 millions (Rs. 279 crores). The two countries were now making an ambitious effort to step this up to $1,000 millions in the next five years.

The two countries are also interested in setting up joint ventures, especially in the multi-billion dollar construction business in West Asia and Africa by pooling their skills and resources. At the Indo-Korean joint business council meeting in Seoul an year ago, the two countries had agreed to make a concerted effort to cooperate in manufacturing industries as well.

Inhibitions go: The talks today were held against this background with India shedding its earlier inhibitions in establishing closer links with South Korea and, in return, South Korea displaying an equal, and perhaps greater, interest in seeking better understanding with India. The Indian side was satisfied that South Korea was making an earnest attempt to reduce its reliance on military alliances and seek a peaceful solution to the Korean problem. The South Korean Foreign Minister was no less gratified by India's sympathetic attitude towards Seoul's aspirations.

It was in this spirit that Mr. Narasimha Rao heard intently Mr. Lho's exposition of his country's latest formula for Korean reunification. Though it was not for India to comment at this stage on the merits of these proposals, Mr. Rao saw no harm in welcoming the effort in principle.

The Indian attitude at these talks clearly implied it was no longer the policy of this country to attempt to keep up a delicate balance in its over-all relationship with the two Korean States. The approach now is to keep exploring the possibilities of better relations with both Koreas, responding to every opportunity on merit without undue reservations.

The South Korean side, too, was equally candid in voicing its desire for closer relations with India, as part of a conscious policy of cutting across the earlier constraints. The new South Korean Government headed by President Chun Doo Hwan has been making an ambitious bid to have a good working relationship with all the three Asian giants — China, India and Japan — to the extent possible in the present circumstances.

The visiting South Korean Minister will be calling on the President, the Vice-President, the Prime Minister and the Minister of Finance tomorrow to carry forward these discussions. The official engagements that have been laid on for him clearly indicate that the Government of India also is keen on strengthening Indo-Korean economic cooperation with a measure of political understanding over the basic aspirations of the two peoples.

DETAILS OF PLANNED MIRAGE PURCHASE TOLD

Calcutta THE SUNDAY STATESMAN in English 14 Feb 82 p 1

[Text] NEW DELHI, Feb. 13.—India and France have signed a memorandum of understanding for wide-ranging collaboration in the field of defence equipment and its manufacture in this country, reports UNI. The pact also covers the proposed sale of Mirage 2000 aircraft for the Indian Air Force.

However, a comprehensive document called the "intention to proceed" is now being finalized by the defence experts of the two countries for the initial purchase of 40 Mirage aircraft in a fly away condition.

According to present indications, the first Mirage 2000 will be delivered to India late in 1984, almost about the same time it will be inducted into the French Air Force.

Technical details about the weapons kit of the Mirage 2000 and its exact delivery schedules are being worked out by a French team of experts in New Delhi.

The first few Mirage 2000 to be delivered to India will be fitted with the original M-53-5 engine, but the subsequent aircraft will have the uprated M-53P2 engine, which will have 7% to 15% more thrust.

In the "intention to proceed" which will cover the entire Mirage 2000 programme, India will have an option to approach France for licence production of about 100 Mirage 2000 at Hindustan Aeronautics.

Sources said that France had also cleared the advanced Matra Super 530-D missile and laser-guided weapons.

Defence experts said this would be the first time that India would go in for an advanced aircraft which was yet to enter service. In the past, India had been negotiating for weapons which had already been manufactured and had been in use for some years. This deal with France would give India the advantage of flying an absolute new and futuristic aircraft.

An added advantage would be that India could suggest to the manufacturers, Marcel Dassault, any modifications to suit their requirements of its Air Force and these would be carried out.

The experts said that there were possibilities of further development of the Mirage 2000 aircraft and that while signing the deal with France, India would keep in mind the experience of the Jaguar deal with the British. The Indian side would ensure that all stepped up technology was made available to it in future.

The Indian Mirage 2000 would be fitted with the RDM multi-mode radar, which had now been cleared for all existing weapons that the aircraft could carry in the future.

The RDM radar, it was understood, had the look-down capability to track low-flying aircraft and could be integrated with the Matra Super 530-D missile. The improved RDI radar which was optimized for air defence roles with larger ranges has presently under development and would be available to the Indian Air Force when ready.

The sources pointed out that the Mirage 2000 deal was not a reaction to the Pakistani acquisition of the American F-16 Falcon Jet fighter aircraft. They said a decision to go in for an aircraft of the type of Mirage 2000 and roles which it would perform had been taken as early as 1973-74.

There would not be any further addition to the number of combat fighter aircraft in the inventory of the IAF, but this was only a process of modernization while replacing the outdated aircraft.

The defence experts said the air defence aircraft of the Soviet origin with the IAF were "adequate to meet the existing threat but would be outmatched by the F-16S and the uprated Mirage 111S and Mirage VS that Pakistan Air Force had in very large numbers".

Pakistan had a substantial long range strike force of the Mirages today, which would now be augmented by the addition of F-16S next year. As against this, the Indian Air Force had only one or two squadrons of Jaguar aircraft.

DRV POSITION ON RELATIONS WITH INDIA TOLD

New Delhi PATRIOT in English 17 Feb 82 p 7

[Article by Cecil Victor: "Vietnam Keen To Upgrade Cooperation With India"]

[Text] Ho Chi Minh City, Feb 16--Throughout the four-day visit by External Affairs Minister Narasimha Rao, Vietnamese leaders--Prime Minister Pham Van Dong, Foreign Minister Nguyen Co Thach and Vice-Premier Co Thach and Vice-Premier Vo Nguyen Giap--took pains to stress India's paramount position in South and South-east Asia and Vietnam's eagerness to take advantage of the Indian experience in agriculture, industry, science and technology.

They have said that the cooperation with India would be upgraded to a position second only to Comecon, which is a measure of the high esteem in which Vietnam holds India and a recognition of its ability to lead developing countries to a fruition of the non-aligned nation's desire to increase mutual cooperation to mutual benefit.

Time and again the stress was on the "paramount position" of India and the desire to learn from India's experiences. On regional issues the Vietnamese leaders feel that India can contribute tremendously towards resolution of tensions in Southeast Asia just as it is trying to do in South Asia.

Though Mr Rao made it clear at the joint press conference in Hanoi that India did not intend to take any initiative toward promoting dialogues between Vietnam and Thailand or other members of ASEAN, the Indian view that such dialogues are the only way of resolving disputes will nevertheless be conveyed to ASEAN in the quiet diplomacy that is continuing for the elimination of tensions in the region.

US, China, Ambition

The feeling in Vietnam is that so long as there is a convergence of the ambitions of China and the US in the region tensions will remain.

However, there are hopeful elements in the relations between the Indochina states of Vietnam, Laos, Kampuchea and Thailand on the one hand and these states and ASEAN on the other, that could eventually lead to a reduction of tensions. The Vietnamese leaders have told Mr Rao that they intend to do

everything they can to allay ASEAN and Thailand fears but they will always keep in mind the historical nature of developments in the region.

They believe that time is on the side of the Indochina states and they intend to spend the time beneficially to develop their industrial infrastructure with India's assistance by moving away from the ad hoc nature of past cooperation to long-term planned growth.

MORE REPORTAGE ON SOVIET VISA DENIAL TO DANGE

New Delhi Embassy Denial

New Delhi PATRIOT in English 16 Feb 82 p 7

[Text] The USSR Embassy in New Delhi has denied refusal of Soviet visa to Mr S.A. Dange.

In a statement, the embassy said: "In connection with reports which have appeared in a section of the press about the alleged denial of Soviet visa to Mr S.A. Dange, the USSR Embassy in India considers it necessary to clarify that Mr Dange and a person who was to accompany him to Havana via the USSR were never refused Soviet visas.

"Moreover, in connection with the allegations which have appeared in the press, the Consul-General of the USSR in Bombay personally called on Mr Dange to reiterate the availability of the visas."

'TIMES OF INDIA' Editorial

Bombay THE TIMES OF INDIA in English 15 Feb 82 p 8

[Editorial: "The Dange Episode"]

[Text] By refusing a visa to Mr S.A. Dange, the Soviet Union has finally denied its attitude towards the breakaway All-India Communist Party. It has left no room for doubt that Moscow is opposed to the party. Two aspects of the entire episode are especially noteworthy. The first is the apparent suddenness with which the Soviet Union decided to make public its disapproval of India's best-known communist leader. This suddenness is more apparent than real. For, divergence between the CPSU leadership and Mr Dange on the question of endorsement of the CPI's stand on Mrs Gandhi is not new. Well over six months ago, Mr Dange was said to have been told by some CPSU leaders that they did not and would not support his openly pro-Mrs Gandhi and anti-CPM orientation--the central point of his dispute with the leadership of the CPI ever since the latter made a formal break with the Congress(I) at Bhatinda in 1978. It also cannot be an accident that the Soviet move has followed the CPM party congress which witnessed the triumph of the pro-Soviet line and preceded the forthcoming CPI party congress next month. Clearly Moscow has felt that the

time had come for it to administer a public snub to Mr Dange. It is tempting to rush to the conclusion that in the process the Kremlin has also expressed its displeasure with Mrs Gandhi over her policies. But this temptation should be resisted for the time being. Indo-Soviet relations at the state-to-state level are at once much too intricate and complex to be discussed in terms of such episodes.

The second feature of the Dange affair is the manner in which the Soviet leadership has decided to reprimand the recipient of the Order of Lenin, effectively preventing him from attending the session of the World Federation of Trade Unions, of which he has been a vice-president for over two decades. In denying him the visa, the Soviet leadership has treated Mr Dange not as a fellow-communist with whom it differs, but as an ordinary Indian citizen who is not entitled to special consideration. In other words, he has been put outside the pale. This sort of manoeuvre is, of course, nothing new for the CPSU: it goes back to the Stalinist thirties. Thus the Soviets have made it clear that they no longer consider it useful to engage in a debate with Mr Dange. As a result, the position of the Rajeshwar Rao group, which is hostile to Mr Dange, has been considerably strengthened and the opposition to the policy of going along with the CPM greatly weakened. And if the pro-Dange elements in the CPI, represented by several individuals in the national council are likely now to face a rout, the AICP, already confined to a few pockets, is sure to shrink further.

ITALIAN GROUP TO AID IN OIL EXPLORATION

New Delhi PATRIOT in English 15 Feb 82 p 7

[Text] The ENI group of companies, a Government holding company of Italy, has agreed to cooperate with the Oil and Natural Gas Commission (ONGC) for early production system in Palk Strait and 57 fields where oil has been recently discovered by ONGC, reports UNI.

According to an official release the decision was taken after a three-day meeting of the officials of the Petroleum, Chemicals and Energy Ministry, the representatives of the ONGC, Indian Oil Company IPCL, EIL and OCC in Delhi.

The ENI has also offered to train Indian engineers in oil drilling technology and other spheres of production including refining.

A team from ONGC would shortly visit Italy to study the facilities available and draw up a suitable programme for training, the release added.

Snamprogetti and Saipem of ENI group, besides showing interest in oil and gas pipelines both onshore and offshore and platforms, agreed to cooperate in the development of indigenous facilities in this regard.

Agip SPA, exploration and production company of ENI group, which is presently operating in 23 countries has also offered ONGC cooperation in joint ventures abroad.

In the field of refining ENI agreed to assist Indian Oil Corporation and Engineers India Limited in the preparation of precise cost estimate for hydrocrackers being planned in the new refineries and energy optimisation in the existing refinery. It would also help ONGC improve the quality of lubricating oils so as to reduce their consumption in India where it is comparatively high. It will result in substantial savings, the release added.

The visit of the ENI delegation was a follow-up to the talks held in Rome for further collaboration in oil sector during Prime Minister Indira Gandhi's visit there in December last. The discussions have proved very fruitful, the release said. The ENI also agreed to join hands with the Engineers India Limited in setting up ventures in third countries in case to case basis and also to utilise their inspection service.

BRIEFS

INDIA-INDONESIA ACCORD--New Delhi, Feb. 11--India and Indonesia signed an agreement yesterday, according to an official release, reports UNI. The agreement, which is a major step in increasing cooperation between the two countries covers exchange of information on technical, scientific, organizational and management matters. Besides, information on existing training facilities in technical, industrial and educational institutions and exchange of scientists, advisers, experts, technicians, scholars and research fellows are included. The Indonesian Foreign Minister, Mr Kusumaatmadju, said that the agreement laid the foundation of cooperation between the two countries in their effort to improve skills, technology and science. It symbolized cooperation among developing countries, in order to accelerate the realization of the new international economic order. [Text] [Calcutta THE STATESMAN in English 12 Feb 82 p 1]

PACT WITH ALGERIA--Algiers, Feb 13 (INA-Pool)--Algeria and India have signed a joint agreement for technical and economic cooperation at the conclusion of meetings of the joint Algerian-Indian committee. The minutes called for the development of technical and economic cooperation, expanding trade exchange and the exchange of expertise and technical data between the two countries. The joint agreement was signed by Planning Minister S. B. Chavan and Algerian Minister of Planning and Regional Development Abdelhamid Brahimi. [Text] [New Delhi PATRIOT in English 14 Feb 82 p 3]

NORWEGIAN AMBASSADOR--Norwegian Ambassador T. Ibsen presented his credentials to President Sanjiva Reddy at Rashtrapati Bhavan on 11 March. [Text] [BK120659 Delhi ISI Diplomatic Information Service in English 1434 GMT 11 Mar 82]

CULTURAL PROGRAM WITH GDR--On 11 March, India and the GDR signed a cultural program for a period of 3 years. The program, signed in New Delhi, envisages strengthening of mutual relations and promotion of cooperation in the fields of higher education and science, health, arts and sports. The program was signed by the minister of state for education and the GDR minister of culture. [BK120569 Delhi Domestic Service in English 1530 GMT 11 Mar 82]

COMMUNISTS TO PRC--New Delhi, 7 Mar (AFP)--The Communist Party of India-Marxist (CPI-M) has accepted an invitation from the Chinese Communist Party to visit China, it was reported here today. The daily INDIAN EXPRESS, quoting party sources, said a two-member official delegation, comprising secretaries M. Basavapunniah and Samar Mukherjee, would go to Beijing. The exact date for the visit was yet to be fixed. Mr Mukherjee is also leader of the CPI-M group in the Lower House of Parliament. Although unofficial CPI-M delegations had visited China during the last 2 years, this was the first time the Marxists had agreed to send an official delegation, the paper noted. The Chinese invitation was considered significant in view of the pronounced tilt towards the Soviet Union the CPI-M had shown at the Party's annual congress recently. [Text] [BK071107 Hong Kong AFP in English 0618 GMT 7 Mar 82]

INDO-BULGARIAN COOPERATION--India and Bulgaria will organise a working meeting in the Capital between engineering, other organisations and companies of the two countries for identifying concrete areas of cooperation on a country by country and project by project basis. An agreement to this effect was signed at the end of Bulgarian Deputy Prime Minister Andrei Lukanov's visit to India. During discussion with Commerce Minister Shivraj Patil, both sides felt that earnest efforts should continue for setting up of joint ventures in both the countries with a view to increase mutual trade. It was felt that the examination of the four joint ventures on fashion gloves, shoe uppers, leather shoes and lamb-fur leather should be expedited. The Bulgarian side indicated their interest in setting up of joint ventures for the production of dyes and intermediates in Bulgaria. [Text] [New Delhi PATRIOT in English 20 Feb 82 p 7]

RAO ON 'MERCENARIES'--External Affairs Minister P V Narasimha Rao on Friday described as 'incorrect' reports in some newspapers that a batch of 31 Indians was working as 'mercenaries' in Beirut, reports PTI. Mr Rao told Mr Dhuleshwar Meena in a written reply that the batch was recruited by some unscrupulous agents and promised jobs in a factory in Beirut on payment of amounts of about Rs 14,000 to the agents in December last year. The batch was then flown to Bangladesh on tourist visas from where they were taken to Damascus via Moscow Sofia and Istanbul. From Damascus they were sent on their own to Beirut by bus without possessing visas for Lebanon with the assurance that they would be met by the agents in Beirut. On arrival in Beirut they found themselves stranded without jobs. They were however, repatriated to India by the Indian embassy in Beirut on 31 January last he added. [Text] [New Delhi PATRIOT in English 20 Feb 82 p 8]

DANGE VISA DELAY--The veteran communist leader, Mr. S. A. Dange said here today the "inexplicable" delay on the part of the Soviet Consulate in granting a visa forced him to cancel his trip to Cuba to attend the congress of the World Federation of Trade Unions which was held from February 10 to 15. He said WFTU had sent him two air tickets, one for himself and one for his daughter. As the Soviet Consulate in Bombay did not grant a visa until February 2, they could not leave that day, he said. However, on February 5, Mr. Dange said, the Soviet Consulate told him it could not grant visas without tickets. Air-India stated its inability to issue tickets without the visas. BIOGRAPHIC INFORMATION ON INDONESIAN PERSONALITIES

[Unless otherwise noted, the following information on Indonesian personalities has been extracted from Indonesian language sources published in Jakarta.]

NEW AMBASSADORS--President Soeharto on Saturday [30 January] at State Palace installed in office six new Indonesian ambassadors: Vice Admiral Edie Suprapto, Maj Gen R S Sasraprawira, R Supangat, Mohamed Isnaeini, Vice Admiral Dr Raden Mas Subroto Yudono, and Lt Gen Ahmad Tirtosudiro. Vice Admiral Edie Suprapto has been appointed Indonesian ambassador to the Republic of Korea (South Korea), replacing Maj Gen Kaharuddin Nasution. Maj Gen R S Sasraprawira has been appointed Indonesian ambassador to the Republic of Kenya, replacing Mohammad Sabir. Mohamed Isnaeini has been appointed Indonesian ambassador to Rumania, replacing Brig Gen Susidarto. Vice Admiral Dr Subroto Yudono has been appointed Indonesian ambassador to Nigeria and to Liberia, replacing Maj Gen Dr Iwan Stambul. Lt Gen Ahmad Tirtosudiro has been appointed Indonesian ambassador to the Kingdom of Saudi Arabia, replacing T M Hadi Thayeb. [Excerpt] [Jakarta PELITA in Indonesian 1 Feb 82 p 1] 5170

AMBASSADOR MOHAMED ISNAEINI--"The chief of state has appointed me ambassador to Rumania, and as an Indonesian citizen I accept the task cheerfully, and I will carry out the diplomatic line of President Suharto [he used the nickname of "Pak Harto"--Father Harto] in that task." This was stated by Mohamed Isnaeni ["Isnaeni" as spelled in this article; in the previous article it was spelled "Isnaeini"] on Thursday [28 January] at an informal meeting with journalists assigned to Parliament and to the People's Consultative Assembly [MPR]. For 16 years Mohamed Isnaeni has been deputy chairman of Parliament and of the MPR. He said that his task as a diplomat was something new for him. For that reason when President Suharto asked him to serve as an ambassador, he frankly said that he did not have any experience in the diplomatic field. However, President Suharto said that since he has had 16 years of experience as deputy chairman of Parliament and of the MPR, he can certainly function as a diplomat. Ambassador Isnaeni said that, "When I went to say goodbye to President Soeharto when I was leading the Indonesian Parliamentary Delegation to Africa in November, 1981, the president asked me about my decision not to remain in Parliament any longer. Apparently, the president had plans for me, because on 2 January 1982 he directly asked me to accept appointment as ambassador to Rumania. As I am a citizen, I of course will

carry out any task assigned to me by the chief of state." Isnaeni, who is also a leader in the Executive Council of the Indonesian Democrat Party [PDI], stated that he had sent a letter of resignation to the leadership of Parliament and of the MPR. Meanwhile, the Executive Council of the PDI has sent a letter to President Shuarto asking him to replace Isnaeni as deputy chairman of Parliament and of the MPR. "At the end of February there will be a conference of Indonesian ambassadors in Europe. I will use that meeting specifically to obtain the details I need to have for my job as ambassador to Rumania," he said. [Excerpts] [Jakarta HARIAN UMUM AB in Indonesian 29 Jan 82 pp 1, 8] 5170

AMBASSADOR R SUPANGAT--The government of the Republic of Kenya has agreed to the appointment of R Supangat as Indonesian ambassador to Kenya. This was stated by the Ministry of Foreign Affairs on Thursday [28 January].
R Supangat was born on 7 January 1925 in Yogyakarta. He attended the HBS [Dutch grammar school in the colonial period], the SMA [Indonesian senior high school], the Political Science Academy, the Diplomatic and Consular Course at the Ministry of Foreign Affairs, and the Senior Course at the Ministry of Foreign Affairs. In 1947 he was assigned to Yogyakarta in the secretariat of the Indonesian Delegation in the discussions with the Dutch side on the USS RENVILLE and later in Kaliurang, Jakarta, and the Hague under the UN Commission on Indonesia. After the Round Table Conference Agreement was reached in 1949, R Supangat began his career in the Ministry of Foreign Affairs. He has served in Indonesian embassies in Brussels, Jiddah, Moscow, Paris, and most recently as deputy chief of mission in the Indonesian Embassy in Wellington. Since 1977 he has been chief of the Bureau of Social and Cultural Affairs in the Indonesian National Secretariat of ASEAN. He is married and has four children. [Text] [Jakarta KOMPAS in Indonesian 29 Jan 82 p 12] 5170

COL (ARTILLERY) IDA BAGUS MADE SOEDJANA--Col (Art) Ida Bagus Made Soedjana on Saturday [20 January] was installed in his post as the new chief of staff of KOSTRAD [Army Strategic Reserve Command]. He is of the younger military generation, having graduated from the National Military Academy (now the Army section of AKABRI [Indonesian Armed Forces Academy]) in 1960. This is the first time that a younger generation officer has held one of the senior posts in the headquarters of KOSTRAD. Prior to this assignment Colonel Soedjana was chief of staff of Military Region XII/Tanjungpura in West Kalimantan. The position of chief of staff at KOSTRAD have been vacant since Brig Gen Djoni Abdulrachman was appointed commander of Military Region I/Iskandar Muda in Aceh recently. Since that time the post of chief of staff of KOSTRAD has been temporarily filled by the commander of COSTRAD, Maj Gen Rudini. Colonel Soedjana, who graduated from the National Military Academy with Brig Gen Edy Sudradjat, now commander of Military Region II/Bukit Barisan in Medan, is no stranger to KOSTRAD. He has spent a large part of his service since he became a second lieutenant in KOSTRAD, beginning as an officer of Section II in Arillery Battalion Med 13/105, and continuing as commander of Artillery Battalion Med 14 and commander of Artillery Regiment Med 2 in KOSTRAD. He was assigned for a time to Army Headquarters and was commander of Military Sub-District 121 in Sintang, West Kalimantan. There Soedjana also served as commander of Operation Perbatasan [Boundary], a joint effort by the Indonesian and Malaysian Armies. From Sintang he was promoted and became chief of staff

of Military Region XII, where the commander was Brig Gen Untung Sridadi, a former chief of staff of KOSTRAD. According to the chief of the Information Office in KOSTRAD, Lt Col (Communications Corps) Dr Winoto, Colonel Soedjana, who is now 46 years old, has served in KOSTRAD between the time its commander was Maj Gen Soeharto (now President Soeharto) and the current, 11th commander of KOSTRAD, Maj Gen Rudini, with the exception of the period when Gen Himawan Soetanto was commander of KOSTRAD. Colonel Soedjana graduated from the Army Staff and Command School in 1973 and from the Joint Staff and Command School in 1978. He graduated from the National Defense Institute in 1980. At the Institute he was awarded the "Seroja Wibawa Nugraha" prize for the best written study when he was a student there. [Excerpt] [Jakarta HARIAN UMUM AB in Indonesian 1 Feb 82 p 8] 5170

COLONEL (INFANTRY) SOETEDJO--Colonel (Inf) Soetedjo reported to the commander of KOSTRAD [Army Strategic Reserve Command], Maj Gen Rudini, on 30 January as the new chief of staff of Combat Team II. He replaces Col (Inf) Agus Suprata, who has retired. Previously Col Soetedjo was assistant for operations and commander for education and training in Military Region VI/Siliwangi. Col Soetedjo graduated from the National Military Academy in 1961 and has spent much of his service in the commandos, from the time he was a second lieutenant until he became commander of Group IV/Parachute Commandos, whose headquarters are in Cijantung. After serving in Military Region VI/Siliwangi Colonel Soetedjo again returned to Cijantung, to the headquarters of Combat Team II of KOSTRAD. CHAMRIL DJAFRI DJAVID--The Indonesian government has appointed Chamril Djafri Djavid as consul and chief of the Indonesian Mission in the Indonesian Consulate in Bombay. He was installed in this office today [3 February] at the Ministry of Foreign Affairs on Jalan Pejambon. Born in Medan on 20 June 1928, Djafri Djavid graduated from SMA [senior high school] in 1952, from the Foreign Service Academy in 1956, and from the second class of the Foreign Service Officers School in 1974. In 1956 he worked in the Americas Directorate of the Ministry of Foreign Affairs, and 4 years later he was assigned to the Indonesian Embassy in Ankara. Later he had numerous foreign assignments. In 1979 he was appointed chief of the Administrative Section of the International Agreements Directorate in the Ministry of Foreign Affairs. Among the international conferences which he attended were the 1969 Quaker Conference in Rastenfeld, Austria; the WIPO Conference [sic; not otherwise identified] at Geneva, where he was a member of the Indonesian Delegation, in 1979; and as a member of the Indonesian Delegation at the Ad Hoc Committee meeting on the ASEAN-EEC Cooperation Agreement in Jakarta in 1979. NAVY COMMODORE ABDU RACHMAN--Minister of Agriculture Prof Soedarsono Hadisapoetro on Tuesday [2 February] administered the oath of office and installed Navy Commodore Abdu Rachman as director general of Fisheries Affairs in the Ministry of Agriculture, replacing the previous incumbent, Navy Commodore Imam Sardjono. The ceremony was held at the Ministry of Agriculture in Jakarta. The appointment of Commodore Abdu Rachman as director general of fisheries was based on President Decision Letter No 9/M of 1982, dated 20 Jan 1982. Before his appointment as director general of fisheries Commodore Abdu

Rachman was commander of Navy Region IX in Ambon, Navy Region IVV in Ujungpandang, and most recently as commander of Operation Halilintar [sic; not otherwise identified]. [Excerpts] [Jakarta HARIAN UMUM AB 3 Feb 82 p 8] 5170

DR HARDJANTO SOEMODISASTRO--Dr Hardjanto Soemodisastro on Thursday [4 February] was installed in office as deputy chairman of Parliament and deputy chairman of the MPR [People's Consultative Assemby] by the chairman of the Supreme Court, Dr Mudjono, at a plenary session of Parliament in Jakarta, presided over by Parliamentary Chairman Daryatmo. The oath-taking ceremony took place after the session of Parliament, attended by 232 members, unanimously approved the candidacy of Dr Hardjanto to the post of deputy chairman of Parliament. Dr Hardjanto was nominated to the post by the fraction of the Indonesian Democrat Party [PDI] as a replacement for M H Isnaeni, who was also from the PDI fraction. Dr Hardjanto was born in Surakarta in 1927. He was second chairman in headquarters of the Indonesian Verterans Legion from 1959 to 1968, a member of the MPRS [Temporary People's Consultative Assembly] from 1959 to 1968, and a member of the MPRS Working Body from 1960 to 1967. Based on the results of the general election of 1971 he became a mamber of Parliament, representing elements of the former Indonesian National Party [PNI]. Following the general election of 1977 he because a member of Parliament representing the PDI fraction, and most recently he has been chairman of the PDI fraction in Parliament. In the party organization he has been first chairman of the Executive Council of the PDI. He holds seven guerrilla decorations and six army campaign medals. [Excerpts] [Jakarta HARIAN UMUM AB in Indonesian 5 Feb 82] 5170

YOOP AVE--Minister of Communications Roesmin Nurjadin on Thursday [4 February] installed Yoop Ave in office as director general of tourism, replacing Achmad Tirtosudiro, who has been appointed Indonesian ambassador to Saudi Arabia. The installation ceremony was held at the Minister of Communications, attended by all directors general and other high officials in that ministry. The replacement of the director general of tourism was based on Presidential Decision Letter No 11/M of 1982, transfering Achmad Tirtosudiro from his post as director general of tourism and appointing Yoop Ave as his replacement. The post of director general of tourism had been held by Achmad Tirtosudiro since 1977. Yoop Ave had previously been director general of protocol and consular affairs in the Ministry of Foreign Affairs. He had held that position since July, 1978. Presidential Decision Letter No 11 also appointed R Achmad Djumiril (currently Indonesian ambassador to Sweden) as director general of protocol and consular affairs in the Ministry of Foreign Affairs, replacing Yoop Ave. Yoop Ave was born in Yogyakarta on 5 December 1934. He graduated from the Foreign Service Academy in 1957 and from 1957 to 1958 continued his education at the University of the Philippines in Manila. Beginning at the age of 18 [1952] he was an announcer on Radio Indonesia for 6 years, working in the French and English service. In 1957 he was assigned to the Americas Directorate in the Ministry of Foreign Affairs. From 1 January 1965 to 1967 he was deputy chief of the Directorate of Protocol, and from 5 January 1967 to June, 1972, he was assigned to the Indonesian Consulate General in New York as a consul. In 1972 he was assigned to the State Secretariat as chief of administrative affairs at the Palace, serving in that capacity until 1978. [Text] [Jakarta HARIAN UMUM AB in Indonesian 5 Feb 82 p 3] 5170

MAJ GAN R A SALEH--Maj Gen R A Saleh on Tuesday]9 February] was installed in office as chief of the National Reserve Center [PUSCADNAS], replacing Lt Gen J Henuhili. The transfer of office, in the presence of the deputy commander of the Indonesian Armed Forces, Admiral Sudomo, took place at the offices of the National Reserve Center in Jakarta. The post of chief of PUSCADNAS for a long time was held by Lt Gen Henuhili after his appointment as commanding general of the Indonesian Armed Forces Academy, replacing Lt Gen Susilo Sudarman, who is now commander of Defense Area I. Previously, Maj Gen R A Saleh was commander of Military Region I/Iskandar Muda in Banda Aceh. [Text] [Jakarta HARIAN UMUM AB in Indonesian 10 Feb 82 p 1] 5170

MAJ GEN (RETIRED) H V WORANG--The former governor of North Sulawesi, Maj Gen (Ret) H V Worang, died suddenly on Wednesday, 3 February, at his home at Simprug Kav A 177, Jakarta. He was found unconscious in the bathroom at 1615 on that day. Mrs Worang immediately took him to the Pertamina Hospital, but the doctor who examined him on arrival there determined that H V Worang had died. Among those who came to pay their respects Wednesday evening were President and Mrs Soeharto, members of the cabinet, high-ranking officials, and close acquaintances. It is planned that his remains will be buried on 5 February in the burial place of his family in Desa Tontalete, Airmadidi, Minahasa, North Sulawesi, near where he was born almost 63 years ago. The deceased was born on 12 March 1919. He had previously served as commander of the Worang Battalion in Brigade XVI in South Dawi, Blitar, and Malang; as commander of the Worang Battalion in North Sulawesi; as commander of Regiment 24 in North Sulawesi; as commander of Regiment 6 in Tanjungkarang; as commander of the Defense and Security Corps in the Ministry of Security; and as governor of North Sulawesi for two terms. His final post, at the time he died, was that of member of the MPR [People's Consultative Council] and inspector general of development. The deceased leaves a wife and five sons and daughters. [Excerpts] [Jakarta KOMPAS in Indonesian 4 Feb 82 pp 1, 12] 5170

AWAD BAHASOAN--Awad Bahasoan was born in Ambon on 21 June 1947. He is the director of the Community Instruction Institute (LPM) [an Islamic doctrinal body] in Jakarta. He attended courses in Arabic at the Teachers Training Institute [Institut Keguruan Ilmu Pendidikan] in Jakarta. Later, he continued his studies at the Faculty of Social Sciences of the University of Indonesia, majoring in sociology, where he completed fifth year. He became general chairman of the Student Council of the Teachers Training Institute in Jakarta (1970-1971) and chairman of the Cooperative Council of the Student Senate of the All-Indonesian Teachers Training Institute (1970-1976). He has been an assistant instructor for the sociology of religion at the Faculty of Social Sciences at the University of Indonesia. ARMY GENERAL POLITICAL DEPARTMENT HEAD DISCUSSES MILITARY OBLIGATIONS

Vi .iane SIANG PASASON in Lao 18 Dec 81 p 2

[Interview with Lt Col Souphan Leuangsisiengmai, chief of Army General Political Department; date and place not given]

[Text] Today the military and people everywhere are studying and carrying out the Eighth Plenum of the Party Central Committee and the plenum of the party central military committee. In these resolutions, the issue of "carrying out military obligations" receives special attention. This issue has never before occurred in the history of our nation. To clear up this issue, our reporter went to interview Lt Col Souphan Leuangsisiengmai, chief of the Office of Propaganda and Training of the Army General Political Department.

[Question] Today the problem of carrying out military obligations is of interest to cadres, combatants, and our people, especially among the youth. Please explain what the aim of our party and government is concerning this problem.

[Answer] We all know that the strategic duty for the whole party, the military, and all the people is to defend and build up a socialist nation. As for defense, it is most necessary to strengthen the Lao People's Liberation Army, the source of the revolutionary forces, and an effective instrument for the party in carrying out the dictatorship of the proletariat in order to make it strong, disciplined, and modern step by step. The carrying out of military obligations is one of many problems in building up our military in the First Five-Year Plan. This is made clear by the Eighth Plenum of the Party Central Committee and the plenum of the party central military committee.

[Question] Can you tell us specifically how that will be implemented in line with the detailed plans?

[Answer] This year, 1981, the party and government have only prepared the prerequisites for promulgating a military obligation law, and has experimented on improving it. After it passes government approval, the people will be educated and trained. It will take effect in 1982 as part of political life nationwide in order to organize and mobilize troops in a planned manner.

[Question] Can you possibly tell us more about what the conditions are for those who are under these military obligations?

[Answer] In the latest draft legislation concerning the rights and basic obligations of civilians in serving the people for state workers which the Council of Ministers issued on 12 December 1980, it was indicated in article No 6 that each citizen has an obligation as a soldier to take part in defending the country.

[Question] In order for this military obligation to be carried out effectively, what do you think we should do?

[Answer] I fully agree with the resolution of the party military committee that what is needed is mobilization to build a strong foundation, do a good job of changing the policies in army rear service matters, and raise high the honor of the revolutionary army. All branches in all levels of the army must work together seriously as a team to recruiting new soldiers, insure control of equipment, take care of them, and train them in order to raise the morale of those who have just joined the army.

ANTI-REGIME INFILTRATION, AGITATION IN LUANG PRABANG

Vientiane SIANG PASASON in Lao 25 Jan 82 pp 2,3

[Article by Khaikeo Khammani: Role of Youth in Luang Prabang Province]

[Text] Our motto is that all people should defend peace and the nation, and never to let enemies come in to disturb the people's tranquility.

At this time all of our armies and people have to be more aware than ever before of our enemies' tricks. In the past six years when we have been on the path to building our country, the American imperialists, Beijing reactionaries, and other reactionaries have never ceased their attempts to threaten, pressure, and provoke. They cut our country off politically, economically, and militarily. Generally speaking, Luang Prabang Province is specifically responsible for defending the northern provinces that border on China and Thailand.

Luang Prabang Province is faced with psychological warfare, agitation movements, and bribery by reactionary China. For example, they use minorities and the people they are acquainted with as tools to propagandize and slander our government. They bribed a number of people on the northern border to carry out their dirty tricks by sneaking in and agitating suspicion of the people toward the policies of the party and the government, or else by killing and robbing, thus creating a bad situation among the people.

In confronting this situation in order to protect our land and the peace of the people in the local areas, the provincial administrative authority of Luang Prabang Province in studying the situation has set up national defense forces, peace-keeping forces, guerilla militia, and also an effective local security movement over a wide area.

In exposing the clever tricks of our enemies and also for protecting and building our fatherland to become stronger, which is the fruit of the people of the whole nation bought with tears and sweat and blood, in 1981 over 100 young men from many different towns with Luang Prabang Province, such as Luang Prabang District, Nan District, Pak-ou District, Pakseng District, and

other districts volunteered to serve the country as combatants in the Lao People's Liberation Army in order to maintain national and domestic security, and to set up conditions that could improve the people's living and steadily enrich and strengthen the nation.

Each town held a ceremony honoring those young men who were about to leave. Prior to their leaving, each young man had sworn to learn to train themselves to be enthusiastic combatants knowledgeable and capable in tactics for fighting and self-defense in order to score achievements in the national defense and security duties given by the nation, and to make the socialist nation a victorious reality in order to bring riches and health to all the people.

ROUTE 9 CONSTRUCTION UNITS FUNCTIONS DESCRIBED

Vientiane HENG NGAN in Lao 1-15 Jan 82 pp 6, 18

[Article by Theutthoun Thavisai: "Route 9 Construction Division No 623]

[Text] According to the schedule for construction division No 923 committee, we were going to observe the animal husbandry project in Phin District, but there were some obstacles in travelling there. So I visited Mr Thongleuan Phomlouangvisa instead. Therefore, my article has had to change according to the situation. However, I will try my best to tell you about all areas of steadily increasing progress for construction division No 923.

Mr Thongleuan Phomlouangvisa, the commander of the construction division No 923, is a brave officer who fought fiercefully in uncounted battles. He used to command an army unit attacking enemies, and defeated them numerous times. Right now he has been "commanding an army" to build up the nation on the "economic battlefield" to guarantee both the construction work and improvement in the standard of living. What are his plans to carry out that responsibility? I asked Mr Thongleuan this question when I visited him at the command headquarters. Mr Thongleuan quickly answered without looking at any prepared statements.

After the nation had been established as the Lao People's Democratic Republic, the party, government, and the supreme command headquarters assigned me to be responsible for over 4,000 cadres, combatants, and their families, who are from different units, in order to carry out new work in peacetime by using the Se Thamouak area in Phin District, Savannakhet Province, as a military base that contains many natural resources, but which had been neglected for a long time.

The priority job at that time was to repair places to stay, improve the standard of living, and increase production in order to become self-sufficient. Comrade, if you could just imagine it, at that time we had only our two hands and land that was not cleared. At the same time, orders came from above for us to repair route 9 that had fallen into disrepair and was full of mines

that the enemy had buried and left since the war. We had to work to the middle from the north and the south. I sent one group of men to work on building houses, and another group to repair the broken down roads and bridges. As for the women who were the daughters and wives of those cadres and combatants, they increased productivity to become partly self-sufficient. This was something that gave those women a chance to contribute to the job. An urgent problem was to have a school and a nursery. I decided to have a general education school built for instruction from the elementary level to the secondary level, and I am now requesting permission from above to build a higher education school. Meanwhile, we built a kindergarten and a nursery school. A number of people, almost half of the people in construction division No 923, contributed their energy to increase the productivity. At the present time those people are the owners of hundreds of hectares, and have brought a large amount of income to our construction division No 923.

Meanwhile, we have trained unit cadres and combatants in both theory and technology that is able to respond in part to the demands of jobs. Comrade, you have probably seen them with your own eyes.

We started from zero. Within only five years we have managed to develop an almost complete set of materials and techniques. We are now able to respond to the jobs assigned from above. We started off as a construction division which depended primarily on its own strength. At the present time we have become a construction division that is completely equipped with materials and techniques. The party and government trust us and have invested a large amount of money in us. Since the end of the year 1980 we have been able to form the structure of the complete unit, including skilled technicians and modern equipment.

That was one aspect of the collective duty. Now I am carrying out a construction plan to turn Se Thamouak into a town that will contain schools, hospitals, a drama theater, public parks, a hydroelectric dam, hotels, restaurants, etc. I expect that whenever we succeed in the construction plan for route 9, this little town will have become developed at the same time.

Mr Thongleuan Phomlouangvisa added his views concerning the future of the construction job for route 9. He said that right now we are learning the technology from Soviet experts for construction and for taking care of the equipment. If we try hard, we can learn a lot quickly from the Soviet experts, and we will be able to set up many corporations in the near future, such as bridge construction, housing, machinery, sawmill, food production, and stone and brick corporations. By that time the capacity to do these jobs will not only be high and bring a steady increase in income to the government, but personal income will also be increased. This is a way to improve the standard of living for cadres and government employees.

After we talked for some time, Mr Thongleuan took us to see the construction of the water reservoir which is northeast of Se Thamouak. When it is finished, we will be able to have water for thousands of hectares of rice fields, and electricity to serve all areas of Se Thamouak, including new factories that will be built later.

MEDICAL WORK, FOREIGN ASSISTANCE NOTED

Vientiane SIANG PASASON in Lao 15 Dec 81 p 2

[Article: "Public Health Progress in 1981"]

[Excerpts] The preparation and improving of three levels of medical doctors has been rapidly expanding.

In 1981, in particular, the number of high level medical doctors increased by 41 (more than expected according to the plan).

There has been an increase of over 150 doctors in the middle level (more than expected).

The total number of different kinds of primary level doctors has increased by as much as 8,540 doctors. There was also an increase in the number of students admitted to mid- and basic-level schools, and university.

In addition, the Ministry of Public Health has succeeded in upgrading the middle level medical school to a high level pharmacy school.

The party and government have appropriate methods for limiting and reforming private pharmacy operations.

The pharmacy work of the government has improved, for example, in the treatment, production, distribution, and preparation for turning it into an enterprise.

Basic construction has expanded very rapidly. For example, a 150-bed hospital has been constructed with the assistance of the Soviet Union.

A hospital was constructed in Attoupeu Province with aid from the Socialist Republic of Vietnam.

A hospital in Xieng Khouang Province was constructed with assistance from Mongolia.

Paklai Hospital was constructed with the assistance of the High Commissioner of the United Nations and others.

GYPSUM RESERVES, MINING EXPORTS NOTED

Vientiane SIANG PASASON in Lao 15 Dec 81 pp 2, 3

[Article by V.T. Phonchanheuang: "Gypsum Mining: Our Hope for the Future"]

[Text] Gypsum mining and its production have been steadily increasing. This mine is close to Dong Hen District, Savannakhet Province. In the beginning of December our reporter had an opportunity to visit and observe the actual situation for excavation in this mine.

Now it is the dry season. It is a convenient season for all kinds of work in our mines. We went to visit them and watched while the workers were involved with many different jobs in producing diligently. Some jobs required the use of hands and feet, and some required rather big machinery such as bulldozers, graders, augers for drilling dynamite holes in stone, cranes, steam shovels, electric service units, transportation, and others that are related to each other like a chain. We saw how each worker took responsibility for his own job and had a diligence appropriate to his youth with high determination as socialist workers for the new regime.

This gypsum mine has long been known since the French colonialist occupation. They took advantage of digging up this valuable natural resource. Later, it fell under the neocolonial American imperialists. Their henchmen, the capitalists had carried out a project to build a base for preparing to excavate the resources to enrich other nations and themselves. However, this project did not succeed, as it was the time when our country was liberated, and the Lao People's Democratic Republic was established. This is the time when the Lao working class became the owners of all the land and resources of Laos. Thus, the party and government has set up a plan to excavate this natural resource to serve in enriching our people. Louang Thaimala, the director of the gypsum mine, told our reporter of the production results: Our production projects began in late 1979. It was not until 1980 that actual production started. However, it is still faced with many problems. For example, there are not many skilled workers and cadres for specialized tasks, and there is insufficient transportation. Therefore, in 1980 they could produce only 20,000 tons of gypsum. In 1981, some of the problems have gradually been solved. Strengths have been developed and are aimed at continually increasing the production capability.

Thus, they are now able to produce as much as the plan level, i.e., 40,000 tons of gypsum. Over 20,000 tons has been exported to other countries in exchange for some indispensable goods from our friendly allies, such as cement from the Socialist Republic of Vietnam.

The board of directors for the mine stated that the production plan for the coming year 1982 might not increase very much because much emphasis still needs to be put on improving certain difficulties. For example, this includes training cadres in technology and workers in repairing the sites and vehicles used for transportation. The most important thing is to repair the route from the gypsum mine to route No 9 which is 9 km long, in order to guarantee good transportation.

Gypsum is a shiny white, soft stone. It is primarily used for mixing in cement. Moreover, it is used to make chalk, casts for broken bones, forms, chemical fertilizer, etc. One technology expert said that the gypsum mine is approximately 20 km long and 6 km wide, with a great deal of gypsum. If we dig 100,000 tons a year, it will take hundreds of years to mine all the gypsum there. This is considered a very valuable natural resource and the biggest one in our country. This is our wealth and our hope far into the future.

SAVANNAKHET ELECTRIFICATION WORK DESCRIBED

Vientiane SIANG PASASON in Lao 19 Dec 81 p 2

[Article: "Savannakhet State Electrification Enterprise Makes Progress"]

[Text] The Savannakhet State Electrification Enterprise has played an important role in the province, especially in the first year of the First Five-Year Plan of the government. One main problem is the expansion of electrification to the production bases, for example, the project to build power lines to Outhoumpon District, the survey and installation of electrification in Atsaphangthong District, and a survey to plan the installation of electrification in all other districts.

With this determination throughout the past year, the comrades, technicians, and workers of Savannakhet State Electrification Enterprise put all their strength and ability into carrying out those tasks, and they have made steady progress. For example, they wired 1,200 meters of low voltage power lines to Na Seng Village, installed poles, repaired large poles, and tightened loose power lines for 532 poles, installed 1 transformer, brought electricity into 1 factory, replaced broken poles, repaired power lines in 25 places, and did electrical repairs for offices and individuals in 2,675 places. They added 2 more high voltage transformers, set up electrification for administrative purposes 38 times, installed electricity in houses and made repairs in 182 places, and planned and built 280 [as published]. Besides these, the Savannakhet State Electrification Enterprise has made some progress in other work related to the long-term plan, and in daily work for normal operation, for example, the survey to collect data concerning electricity for five towns in the province, auto repairs, providing mobile electrification service locally, and repairing the material and technical base for the State Enterprise, for example, garages, changing electrical poles to standard sizes, and modifying a number of tools used in technical work. Since each link of the chain of the State Enterprise has guaranteed its own work, if we count the 11 months from the beginning of the year, the Savannakhet State Electrification Enterprise has contributed almost 6 million kWh of electricity for industrial work and the province as a whole. This means that 90 percent of the plan has been accomplished.

Today the Savannakhet State Electrification Enterprise consists of over 100 people, and is divided up into 7 specialized tasks, as follows: the administration, finance and accounting, billing, collection section, technical section

planning, installation, lines and transformers, and machinery and production. Most cadres are trained on site in both theory and practice. In the past year, they were able to train one cadre from the middle to the high level, and five people from the primary level or small group chief level to the middle level. Meanwhile, they trained dozens of cadres for primary or higher level jobs. In terms of money, in the first 9 months alone they collected a total of 86 percent of the yearly plan. Moreover, the Savannakhet State Electrification Enterprise joined with foreign experts in a 2-month effort in putting materials and money into the rural bases to gather data in order to build hydroelectric dams and [gather] other economic data, and were 70 percent effective.

Following this progress, in this year 1982 the Savannakhet State Electrification Enterprise plans to produce and distribute as much as 6.6 million kWh of electricity, most of which will be provided to rural areas and many important production bases within the province.

SEMINAR INMATES REPAIR ROADS, VEHICLES

Vientiane SIANG PASASON in Lao 17 Dec 81 p 2

[Article by Theutthour Thavisai: "The One Hundred Million-Kip Men"]

[Text] Who are the one hundred million-kip men? They are not a robber gang who stole one hundred million kip, but people who helped the government save as much as one hundred million kip.

Bounkong, political chief in the technical office of bridge construction company No 923 in the Se Thamouak area escorted reporters of HENG NGAN to visit the machinery section which repairs all construction equipment for company No 923.

We had an informal conversation with Nga Chanthasombat and those who are responsible for the machinery section. In this friendly discussion, we learned about the one hundred million-kip men. This group includes Nga Chantasombat.

The story begins like this.

After the liberation, the party and government brought former officers and enlisted men of the Vientiane side for a training seminar in Se Thamouak, Phin District of Savannakhet Province. Besides political training, the committee responsible for the seminar camp provided time for them to perform physical labor. For example, some were organized to plant and raise animals, and others were organized to repair roads and build places to stay.

The road repair group in particular is facing many difficulties because of the lack of vehicles.

In confronting this situation, Comrades Kong Souriyamat and Nga Chanthasombat along with 18 other men discussed the idea of using the old broken down bulldozers that the American imperialists and Saigon puppet soldiers had left on the Lamson 719 battlefield. Their plan was given approval from above, after which they started to carry it out.

The route along which they searched for the broken down bulldozers from Dong Village to Phou Bi and Phou Pom was over 10 km long. Also, this was the area that contained mine fields of the American imperialists and Saigon puppet

soldiers that were emplaced in Operation Lamsson 719 during the war. Thus, these men had to climb along a narrow path, and carefully and slowly took two model DKD bulldozers and one model D7 bulldozer apart in Phou Bi and Phou Pom. They then had to carry the dismantled pieces with difficulty. It took them a very long time to carry the metal pieces for the three bulldozers, and they had to surmount uncounted difficulties. When the disabled vehicles arrived at the office, they hurried to clean and polish the parts, and joined the different parts together. There were many spare parts that could not be fit together, but they used their inventiveness to alter the parts to fit the different bulldozer models.

After 3 months of urgent work, those 18 cadres whom I called the "one hundred million-kip"-men succeeded in putting the parts togetner to make 3 bulldozers. Based on an appraisal from above, the three bulldozers are worth approximately one hundred million kip (in liberation kip at the time). This is the story of the one hundred million-kip men.

BRIEFS

OUDOMSAI DISTRICT POPULATION--La District is in Oudomsai Province. Its rice harvests and salt production have been increasing steadily each year. It is self-sufficient. La District is located on the La River. It has a total population of 13,374 people. Most of them are of the Lao Theung race. The district is divided into seven cantons and 96 villages. The production base for this district is rice and salt. In addition, there is agriculture and animal raising. [Excerpts] [Vientiane SIANG PASASON in Lao 25 Jan 82 p 2] 9884

CHAMPASSAK DISTRICT POPULATION--Phonthong is a district in Champassak Province. The population density is very high, and there are over 40,000 people. There are 2,217 tribesmen, 107 villages, and 10 cantons. The majority of these people are farmers primarily involved in agriculture and animal husbandry. [Excerpt] [Vientiane SIANG PASASON in Lao 11 Jan 82 p 2] 9884

LOUANG NAMTHA POPULATION--Louang Namtha is a province located in the northern region of our country. It is a fertile land filled with natural resources. Its border adjoins three countries: China, Burma, and Thailand. It has a total population of 131,021 people, and is divided into 8 districts, 56 cantons, and 29 ethnic groups speaking different languages. [Excerpt] [Vientiane SIANG PASASON in Lao 11 Jan 82 p 2] 9884

SAVANNAKHET DISTRICT POPULATION--Khanthabouri is a district that has special characteristics which make it different from other districts in Savannakhet Province. It consists of 13 cantons, and has a total population of 77,992 people who have two new occupations: rice farming and trading. As many as 22,900 people are involved with trading in the town. BRIEFS

PUNJAB LOCAL BODIES POLLS--Lahore, March 5--The Punjab Governor Lt-Gen. Ghulam Jilani Khan, has ordered preparations for the 1983 Local Bodies elections, reports a Lahore daily. The Local Bodies Department has been instructed that on the basis of population, election procedure be finalised. The Department has asked the Provincial Elections Authority to take necessary action so that the elections could be held under the local Government Ordinance, 1979. PPI [Text] [Karachi DAWN in English 6 Mar 82 p 4]

GEN SAWAR FOR SAUDI ARABIA--The Vice-Chief of Army Staff, General Sawar Khan, left Karachi yesterday on a 10-day official visit to Saudi Arabia. He was seen off at the airport by the Corps Commander Lt Gen Ahmad Jamal Khan and other senior military officials.--APP [Text] [Karachi DAWN in English 6 Mar 82 p 10]

QASIM ON PARTIES' ALLIANCE--Sahiwal, March 6--Malik Mohammad Qasim, General Secretary of the defunct Muslim League (Khwaja Khairuddin Group), has hoped that a broad-based alliance of political parties would come into being within the next few days. Talking to PPI here on Thursday, he said that almost all the political parties were unanimous on restoration of the 1973 Constitution and holding of general elections under it. He said restoration of democracy in the country was the need of the hour, and added that only an elected government could solve problems in a better way. He claimed that restoration of democracy was the only objective of the MRD and it did not believe in agitation and subversive activities.--PPI [Text] [Karachi DAWN in English 7 Mar 82 p 3]

SATTAR NIAZI'S PLEA--Lahore, March 6--Maulana Sattar Khan Niazi, Secretary-General, defunct JUP, on Thursday demanded restoration of fundamental rights, political activities, all powers to the judiciary and lifting of curbs on Press. He was speaking at a meeting held in connection with the Hameed Nizami Day at the Jinnah Hall here. Maulana Niazi, confined to his native district by the Punjab Government but freed by the Lahore High Court only recently, said that President Zia had never said he would stay in power for good nor had he declared that there would be no elections or restoration of fundamental rights, yet an indefinite delay in all these matters was not desirable. The Maulana said if the Government restored fundamental rights to the people there would be no need for alliances of political parties. He stressed that the hurdles in the way of restoration of these rights should be made known to the nation. He criticised the formation of Federal Council and urged Khwaja Safdar to resign as its chairman.--PPI [Text] [Karachi DAWN in English 7 Mar 82 p 3]

ARRESTS IN BANNU--Bannu, March 6--About 117 persons were arrested from various places and Arms, including sten guns, handgrenades, rifles and cartridges, were recovered from them by the Bannu police during a sweep against anti-social and subversive elements here today. According to police officials, seven persons were apprehended by the Cantonment police, and 14 sten guns, three rifles each of 12 bore and three hand-grenades were recovered from their possession. The police also arrested 20 proclaimed offenders. The Mandan police recovered eight rifles each of 7 mm and four pistols each of 32 bore from 10 persons, in addition to the arrest of nine absconders. Some 20 double-barrel rifles each of 12 bore and 6,000 cartridges were recovered from the possession of 15 persons, and about 40 outlaws were booked by the Miriyan police. Twelve persons were arrested by the city police on the charge of giving shelter to absconders and forcing women to prostitution. Some 20 kilograms of charas was recovered from four persons who were arrested by the city police.--PPI [Text] [Karachi DAWN in English 7 Mar 82 p 1]

MAULANA ABBASI CRITICIZES MRD--Larkana, March 6--MRD does not enjoy any political status in the country and it is simply a group of people with peculiar mentality, who do not endear the country or the nation said Maulana Jan Mohammad Abbasi, Amir of defunct Jamaat-i-Islami, Sind. While talking to newsmen here on Saturday he said Khaksar Tehrik, JUL and Qayyum League have already left MRD and the remaining components are engaged in confrontation with each other. Moreover, majority of their members have joined the Federal Council and assured the government of their support. Commenting on MRD's charge that Jamaat-i-Islami and Muslim League are with the government the Maulana said that those who level this charge are themselves in league with the government. He said that some of the leaders of MRD have threatened to quit in case Jamaat is included in MRD, but Jamaat had never requested for its inclusion in MRD. Mutual discussion amongst the leaders does not mean that Jamaat is desirous of joining the MRD as the Jamaat does not believe in the drawing room alliance, he added. PPI [Text] [Karachi DAWN in English 7 Mar 82 p 12]

87 MORE ARRESTS--Eighty-seven more persons were arrested during last night as a result of joint Army and Police operation launched in the province against criminals and anti-social elements said an official handout. During the operation the authorities hauled up nine proclaimed offenders, one dacoits, 73 anti-social elements and four military deserters. The authorities also recovered five daggers, knives four pistols, four cartridges of all kinds. Further the campaign resulted in the recovery of stolen ornaments worth Rs 50,000 and seizure 650 of kilograms of charas. [Text] [Karachi MORNING NEWS in English 8 Mar 82 p 1]

QUARTZITE MINE IN LASBELA--Quetta, March 7--The Baluchistan Development Authority has developed quartzite mine in the Lasbella district to produce 25,000 tons of quartzite annually for Pakistan Steel Mill. According to official sources, the concerned authorities "were planning to use quartzite potential for the manufacture of ferro silicon presently imported by Pakistan for the manufacture of high silicon steel." Besides meeting the domestic demand it will have a sizeable foreign exchange for the country. Quartzite is used for the production of all kinds of steel manufacture of alloys and sanitary wares. [Text] [Karachi DAWN in English 8 Mar 82 p 4]

AUSTRALIAN AID FOR REFUGEES--The Government of Australia has announced a food aid of 10,000 tons of grains for the Afghan refugees in Pakistan. Tbe worth of this food aid was stated to be around two million US dollars. A spokesman of the Australian Ministry of External Affairs said that the food aid to refugees indicates the Australian concern over the Afghan situation. Earlier on Wednesday, the United Nations Food Programme has announced a food aid worth about 11 million dollars for the Afghan refugees in Pakistan--VOA [Text] [Karachi DAWN in English 8 Mar 82 p 6]

WHEAT FOR REFUGEES--Islamabad, March 14--The Government of the United Kingdom will provide 14,650 tons of wheat valued at about 37.72 million rupees for Afghan refugees. Letters to this effect were exchanged between the Governments of Pakistan and the United Kingdom here on Sunday. This brings the total aid given by the UK, both bilaterally and through EEC for Afghan refugees to 8.63 million pounds sterling (about 171.24 million rupees at current exchange rate) since 1980.--PPI [Text] [Karachi DAWN in English 15 Mar 82 p 12]

BEGUM BHUTTO IN COURT--Begum Nasrat Bhutto appeared before the court of Mr Justice Salim Akhtar of Sind High Court in Karachi on Sunday in connection with the two suits filed for the attachment of property of the legal heirs of the late Mr Z.A. Bhutto. The case was adjourned for want of time. One suit relates to the claim in respect of secret funds allegedly used by Mr Nasrullah Khan Khattak and Mr Khurshid Hasan Mir under the said authority of the late Mr Bhutto. The amount involved is over Rs 8 lakh. The other suit pertains to the claim of the Government in respect of additions, alterations and installation of air-conditioners at 70-Clifton and Al-Murtaza, Larkana. The amount involved is Rs 46 lakh. [Text] [Karachi DAWN in English 15 Mar 82 p 1]

FINANCE ADVISORY BOARD RECONSTITUTED--Islamabad, March 14--The Government has reconstituted the Advisory Council of the Finance Division for the 1982-84 term, according to an official handout issued here today. The council is to serve as a forum for discussing the monetary, fiscal, balance of payments and investment policies of the Government. It will assist the Government in formulating both short and long-term economic policies. It will also bring out and discuss grievances of taxpayers with a view to recommending measures to improve the taxation system. In its advisory capacity, the council will render general advice on all matters with which the Finance Division is concerned.--APP [Text] [Karachi DAWN in English 15 Mar 82 p 1]

68 HELD IN SIND--Sixty-eight more criminals and anti-social elements were arrested on March 14 throughout the province. Those hauled up included 8 proclaimed offenders and 60 anti-social elements. Six pistols/revolvers, 2 shotguns, 8 cartridges of all kinds, one dagger, 343 kgs of charas, 15 tablets of mandrix, 66 gallon of local liquor and 4 kgs of heroin were seized. Stolen property including Rs. 52820 cash and car parts worth Rs 3000 were also recovered. [Text] [Karachi DAWN in English 15 Mar 82 p 1]

BEGUM LIAQUAT DENIES REPORT--Begum Ra'ana Liaquat Ali Khan has refuted in a section of the Press (not "Dawn") that she had been offered presidentship of the defunct QML and that she had asked for time to consider the offer. In a Press statement, she said she was neither offered nor had she met or knew any person giving such irresponsible statements. Stating that she never took part in the country's politics, she said she had always been a social worker and liked to be associated with it. [Text] [Karachi DAWN in English 15 Mar 82 p 1]

MAZARI CALLS FOR TROOP WITHDRAWAL--Multan, March 14--The leader of the defunct NDP, Sardar Sherbaz Khan Mazari, has said that those who demand restoration of democracy in the country should also call for withdrawal of foreign forces from Afghanistan. Talking to newsmen in his party's office in Dera Ghazi Khan the other day, he said: "When we demand basic rights and general elections in Pakistan, the people of Afghanistan should also be given the right to establish a government of their own choice." He demanded immediate release of political detenus. He also demanded priority for all development schemes for Dera Ghazi Khan. Replying to a question, he said that all component parties of MRD had sunk their differences and "now we all are united on one platform." [Text] [Karachi DAWN in English 15 Mar 82 p 3]

SCIENCES ACADEMY FUND CAMPAIGN--The Pakistan Academy of Sciences has launched a countrywide campaign to acquaint the general public with its activities and gather support and to get donations for its ongoing and future programmes. According to a Press release of the Islamabad based Academy, previous and present office-bearers of the academy have already been meeting prominent industrialists, businessmen and others in this connection. Inaugurating the Academy in 1953 the then Prime Minister Khawaja Nazimuddin had said that the Academy would act as "the supreme organization of scientific research" and decided to promote the pursuit of knowledge unfettered by an extraneous factor. It has a restricted selective fellowship representing the most distinguished scientists with outstanding contributions of an original nature eligible for election as its members. Activities include promoting research in pure and applied sciences, publishing research journals and monographs, organizing symposia, supporting scientific societies, awarding fellowships and prizes, advising the Government on policies and procedures concerning education, research and development etc.--APP [Text] [Karachi DAWN in English 15 Mar 82 p 5]

STUDENT KILLED IN CLASH--Islamabad, March 13--A student was killed and another sustained injuries in a clash between two groups of students which took place in the Government College for Technology here today. The following Press note has been released by the District Magistrate Islamabad. "Today the 13th March, 1982 at about 11.45 a.m. an altercation took place between two students of Government College for Technology over use of unfair means in the examination being conducted by the Punjab Board of Technical Education. On the intervention of college authorities, the students dispersed. However, later these students, along with some supporters, assembled in the college compound and exchanged hot words which led to firing of pistol shots injuring two students, one of whom succumbed to his injuries

in the hospital. The condition of the other injured students is reported to be out of danger. A case has been registered and police have made some arrests. Further investigation is in progress. The college authorities have closed the college till further order. The situation is under control." PPI/APP [Text] [Karachi MORNING NEWS in English 12 Mar 82 p 1]

NWPF PRESS NOTE--Peshawar, March 13--The Government of the N.W.P.F. has issued the following Press note here tonight: "It has come to notice of the Government that a defunct political party intends to hold a public meeting at Peshawar tomorrow (March 14) for political purposes. "The public is reminded that holding of public meetings and taking out processions is banned under the existing laws and contravention of law is liable to action as prescribed."--APP [Text] [Karachi MORNING NEWS in English 14 Mar 82 p 8]

TERRORIST HELD IN RAWALPINDI--Rawalpindi, March 13--The New Town police arrested a terrorist and recovered different types of firearms from him today. According to details, the New Town police had been tipped that Sarfaraz Hussain was alleged to be involved in terrorist activities. Following this information a team of police officials, under the supervision of DSP Sardar Nasim of the New Town Circle was formed. The team in a raid here last night arrested the accused and recovered various types of firearms from his possession.--PPI [Text] [Karachi MORNING NEWS in English 14 Mar 82 p 1]

WORKERS' MEETING VOICES DEMANDS--Lahore, March 14--The 16th biennial delegates' conference of the All-Pakistan Federation of Trade Unions on Sunday pledged its full support to the Government in its efforts to build an Islamic society free from exploitation and class differences. Hundreds of delegates attending the workers' moot also resolved to struggle for the economic development and social uplift of the country and the integrity and strength of the motherland. The conference, chaired by Mr Bashir Ahmed Bakhtiar, adopted a number of resolutions demanding revision of workers' wages in proportion to the price-hike, grant of the right of pension to the workers and security of service and protection of healthy trade union activities. The conference called for comprehensive planning to solve the problem of unemployment and for this purpose it said facilities for technical training should be increased. The conference believed that an atmosphere of mutual understanding and goodwill between workers and the employers was the foremost requirement for maintaining industrial peace which would guarantee increased production. The conference called upon the Government to prepare plans for absorbing the Pakistanis working overseas on their return home. It further called for running all the industrial units to their capacity to absorb the unemployed labour. The conference urged the Government to strictly enforce the laws prohibiting display of wealth at the time of marriage and other social functions so as to discourage lust for money.--APP [Text] [Karachi DAWN in English 15 Mar 82 p 5]

70 HELD IN SIND--Seventy more criminals and anti-social elements were arrested on March 7 as a result of cleanup operation, launched jointly by Martial Law and police authorities, throughout the province, says an official handout. Those hauled up include 19 proclaimed offenders, 50 antisocial elements and one military deserter. Recoveries/seizures include 8 pistols/revolvers, one 303 rifle, 32 cartridges, 113 kgs of charas, 6 kgs of opium, 31 kgs hemp, one Datsun pickup, stolen property which includes one bus, jewelry worth Rs 30,000, besides other property worth Rs 1,200. [Text] [Karachi DAWN in English 9 Mar 82 p 1]

BORLAUG CALLS ON MINISTER--Peshawar, March 8--Dr Norman E. Borlaug, Nobel Laureate in agriculture science, who gave world renowned Maxi-Pak variety of wheat seed to Pakistan, accompanied by four other agriculture scientists, called on the NWFP Minister for Food, Agriculture and Cooperative, Mr Shujaat Ali Khan, in his office, on Saturday. FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

PRESS REPORTS, COMMENTS ON REDDY 18 FEB SPEECH

Text of Speech

Madra THE HINDU in English 19 Feb 82 p 6

[From "Yesterday in Parliament" column: "Political Differences Not at Cost of Harmony: President"]

[Text] New Delhi, Feb 18--The following is the text of the President, Mr N. Sanjiva Reddi's address to a joint sitting of the two Houses of Parliament today.

It gives me pleasure to welcome you to this first session of Parliament in the year 1982. I extend my best wishes to you for the successful completion of the budgetary and the legislative business ahead.

Inflation curtailed: The year 1981-82 was a year of further consolidation. The rate of inflation was substantially curtailed in spite of the unfavourable international economic environment. The improvement in the performance of the infrastructure in the current year and the formulation of the revised 20-point programme provide the basis for further growth along with stability and greater social justice.

During April 1981 January 1982, power generation increased by 11.3 percent, coal production by 11.2 percent and railway goods traffic by 144 percent compared to the corresponding period of the previous year.

In fact, the Railways will be achieving this year an all-time high loading of over 220 million tonnes, bettering the previous best figure by over eight million tonnes. All important industries have recorded significant increases during April 1981-January 1982 the notable examples are saleable steel (18.7 percent), cement (15 percent), nitrogenous fertilizers (51.9 percent), crude petroleum (61.2 percent) and petroleum products (18.4 percent).

There are firm indications that there will be even more impressive production in these and other industries. In fertilizers, with the expected commissioning of three new plants and expansion in existing ones, production capacity will increase from 45.75 lakh tonnes to 53 lakh tonnes of nitrogen and 12.82 lakh tonnes to 14.90 lakh tonnes of phosphate. In petroleum, the year 1981-82 may close with a total production of over 16 million tonnes of crude oil compared to 10.5 million tonnes during 1980-81.

Oil output: The discovery of oil in structures east of Bombay High, in the Palk Strait, in Sisodra in Gujarat, Napamua in Assam and of gas in Baramura in Tripura and in Kudara in Gujarat is an assurance that the tempo of production will be further accelerated.

Our refinery capacity increased from 31.8 million tonnes in 1980-81 to 37.8 million tonnes in 1981-82. Production of LPG, which went up by 15 percent in the current year, is estimated to increase further by about 40 percent in the year ahead and will show a marked change in the demand-supply position.

Production in the six integrated steel plants is expected to touch the highest ever level of 7.2 million tonnes of saleable steel, exceeding last year's production by more than a million tonnes and marking a capacity utilisation of nearly 84 per cent.

In September, 1981, the Government approved the proposal for the establishment of an integrated steel plant at Pradeep. This, coupled with the earlier decision to set up an integrated steel plant at Visakhapatnam, indicates the Government's determination to augment existing capacities to achieve a state of self-reliance in this core sector.

Productivity year: To maintain the tempo already generated in industrial production and to accelerate economic growth, the year 1982 is being observed as productivity year and we shall have an intensive drive to maximise utilisation of capacities available in all sectors of the economy.

The outlook for agricultural production in 1981-82 is encouraging.

A preliminary assessment indicates that the kharif foodgrains production might reach an all-time level of 79.9 million tonnes.

For the year as a whole, foodgrains production is expected to exceed the previous record level of 132 million tonnes. This compares favourably with the production of 129.9 million tonnes achieved in 1980-81, which itself was 18.4 percent higher than in 1979-80.

The production of sugarcane, which had slumped to 129 million tonnes in 1979-80 had reached 150.5 million tonnes in 1980-81 and is expected to be between 170 and 180 million tonnes this year. The forecast for pulses this year is 12 to 13 million tonnes compared to 8.6 million tonnes in 1979-80 and 11.2 million tonnes in 1980-81.

While the Government has made arrangements to ensure availability of agricultural inputs in sufficient quantity and in time, the major credit for our improved agricultural performance must go to the enterprise, dedication and hard work of our farmers.

During 1980-81 an additional irrigation potential of 2.4 million hectares was created. Another 2.6 million hectares is expected to be covered during 1981-82 giving an additional coverage of five million hectares during these two years.

Our objective is to add three million hectares a year during the remaining three years of the Sixth Plan. This will be the biggest effort by any country in bringing additional land under irrigation in one year.

Use of river waters: The Government has also prepared a national perspective plan for water resources development. A national water development agency will be established to carry out investigations and formulate, in consultation with the State Governments, a plan for the optimum development and use of available waters, initially of the peninsular rivers.

Two important developments during the year were the understanding on the utilisation of the Narmada waters and the agreement on sharing of the surplus flows of the Ravi and the Beas. I congratulate the States concerned.

A Central land resources conservation and development commission is being constituted to provide expert guidance in formulating national policies relating to management of land resources and also coordinate activities of the State land use boards.

New Forest Act: With the enforcement of the Forest (conservation) Act, 1980, diversion of forest land which was of the order of nearly 1.5 lakh hectares per annum in earlier years, has been controlled. As the Indian Forest Act, 1927 is not applicable uniformly in all the States, it is proposed to bring forward comprehensive legislation to replace the existing law.

As part of the social forestry programme, a total of 135 crores seedlings are expected to have been planted in 1981-82. The enactment of legislation to establish a national bank to improve the quantity and quality of credit flows to rural areas is a significant step.

Inflation: The energies of the Government continued to be focussed on controlling inflation. The components of the anti-inflationary strategy were higher production, better capacity utilisation, strengthening the public distribution system, imports of essential commodities wherever necessary, fiscal and monetary discipline, and curbing the activities of anti-social elements.

The annual rate of inflation as measured from point-to-point movement in the wholesale price index has come down from 22.2 percent as in the week ended January 12, 1980 to 14.8 percent as in the week ended January 10, 1981 and further to 6.9 percent for the week ended January 9, 1982.

During the current financial year i.e. March 28, 1981 and January 23, 1982, the index has gone up by only 2.8 percent which is significantly lower than the rise of 14.1 percent in the same period last year. The number of fair price shops stood at 2.98 lakhs in November 1981 compared to 2.73 lakhs in March 1981. There will be no slackening of vigilance in the fight against inflation.

Fight against inflation: While the present approach promises further results in the fight against inflation, far greater efforts are required to deal with the deterioration in the balance of payments situation. Owing to the sharp

increase in the import prices of oil and oil products in 1980-81, the trade deficit increased to about Rs 5,500 crores in that year compared to Rs 2,450 crores in 1979-80.

To meet the situation and ensure continued development the Government has entered into an extended agreement with the International Monetary Fund. Th s agreement will enable the drawing of SDR 5 billions over the next three years.

A series of measures have been taken to promote exports, as a result of which exports are estimated to have shown an increase of 15.4 percent during April-November, 1981.

Import Bill: Further, as a result of the steps taken to increase the productive capacity of the economy, the rise in the import Bill during this period has decelerated to 11.4 per cent. There is reason to believe that the tendency in the last few years for the trade gap to widen will be arrested in 1981-82.

Parliament also knows that an export-import bank has been established to help credit availabilities for exports. High priority will continue to be given to export promotion during the coming years.

The overall rate of growth in the output of the public sector industries under the Central Government is estimated at 20 percent in April-September 1981 over the corresponding period last year. There is scope and need for much better performance.

Steps are being taken to streamline and improve the working of these enterprises through better delegation of powers, simplification of procedures and stricter enforcement of accountability.

The Government is vitally concerned with the welfare of workers, who contribute in no small measure to national production and productivity. Legislation is proposed to be introduced in the present session to amend labour laws relating to industrial disputes, trade unions and standing orders to remove procedural delays and secure speedy justice to workers. The industrial relations machinery is being strengthened and streamlined to anticipate labour problems and to take prompt ameliorative action.

20-point plan: The 20-point programme has been revised to impart greater dynamism to some key social and economic programmes included in the Sixth Plan. In broad terms, it concretises what the Sixth Plan means for all of us, particularly for the weaker sections.

Special emphasis is being given to programmes to assist specific target groups through the integrated rural development programme, the scheduled castes component plan and hill and tribal sub-plans, the slum improvement programme and allotment of house sites to rural families.

While the thrust of the revised 20-point programme continues to be on providing better living conditions for the less privileged sections of the population the programme as a whole aims at all-round improvement in productivity.

Population control: The census of 1981 underlined anew the importance of population control. The Government gives high priority to voluntary family planning as an essential ingredient of people's well-being and national progress and has included it as part of the revised 20-point programme. It is our objective to bring down the birth rate to 21 and the death rate to 9 per thousand by the end of the century.

I should also like to draw attention to the fact that national programmes for the control of leprosy and blindness have been intensified in furtherance of the objective of health for all by A.D. 2000. These two programmes are now being treated as 100 percent Centrally sponsored. The provision of elementary education for all children, and the covering of the illiterate adult population with appropriate educational programmes is being accelerated. The Government has also launched a substantial programme of non-formal education. It is proposed to revise the content of vocational education. In higher education, especially higher technological education, the emphasis will be on quality.

Space technology: Considerable headway was made in space technology and communications during the year. Three Indian-made satellites were launched-Rohini, with the help of our own satellite launching vehicle, the experimental communications satellite APPLE and the earth-observation satellite Bhaskara-II.

India became one of the few countries to have a domestic satellite communications network when in November 1981 with the help of Intelsat-IV, satellite communication links were extended to remote areas in Leh in Jammu and Kashmir, Aizawl in Mizoram, Port Blair and Car Nicobar in the Andaman and Nicobar islands, and Kavaratti in Lakshadweep. A troposcatter communication-link was established with the Soviet Union, an under-sea link with Sri Lanka and a microwave link with Bangladesh.

The next major event will be the launching of the multipurpose Indian national Satellite (INSAT) in April 1982 and its utilisation for meteorological capability, communications and radio and television coverage.

TV link: The micro-wave link, with TV capability between major cities of India like Madras, Bangalore, Bombay, Delhi has already been established. The link between Delhi and Calcutta and Delhi-Srinagar will be completed by June 1982 and a large number of urban and rural areas will be covered through the satellite and the microwave system.

During the year a science advisory committee to the Cabinet (SACC) was constituted. In order to lessen unemployment among science and technology personnel, the Government is establishing a science and technology entrepreneurship development board.

Other major steps are the establishment of a commission of additional sources of energy which has already initiated wide-ranging programmes of research and development and demonstration all over the country on a large scale, the decision to form a national biotechnology board to ensure coordinated work in biotechnology, which has implications for agriculture, medicine and industry, and the setting up of a national institute of immunology in Delhi and a plasma physics programme in Ahmedabad.

The Department of Environment has taken up programmes to prevent eco-destruction. It has also set up a national eco-development board.

The Department has introduced procedures to ensure environmental impact assessment of large projects and monitoring the implementation of environmental safeguards in such projects.

The Department of Ocean Development, which was established in July 1981 is preparing a perspective plan of ocean development. It organised a scientific expedition to Antarctica. The leader is back and the others will soon be returning after a successful voyage of over two months. The expedition covers a wide range of scientific investigation in fields like meteorology, glaciology, and oceanography.

Law & order: I now turn to some problems concerning law and order. There cannot be forward movement without the assurance that national energies are not frittered away on agitations engineered by sectional interests.

The Government is distressed at the outrages perpetrated against members of scheduled caste communities at some places and is determined to ensure that all sections of the population live in safety and honour. The guilty will be firmly dealt with.

Evils of communalism: The problems confronting these classes are part of the larger socio-economic problems of the country. The fullest cooperation of the public is necessary to fight the forces of communalism and casteism, which are often in league with anti-social elements.

Programmes for the integrated socio-economic development of scheduled castes and scheduled tribes and weaker sections have been intensified and much larger outlays than ever before have been provided. Their implementation will be closely monitored.

Assam issue: As part of its earnest efforts to find a fair and satisfactory solution to the problems of foreigners in Assam, the Government held several rounds of talks with the representatives of the agitating organisation and leaders of political parties. These efforts are continuing.

The international situation has deteriorated. Military presences around us have increased. This danger should make all of us determined to safeguard national security and interests through non-alignment and the peaceful resolution of difference.

We earnestly hope that the major military powers will realise the futility of confrontation and arrest the diversion of resources from development and welfare to armaments. It is regrettable that the strategic considerations of other countries should cast extra burdens on us. We cannot afford to be complacent. The nation will be called upon to make heavy sacrifices to maintain preparedness at all times to meet external challenges.

With our immediate neighbours we have continued to seek relationships of greater mutual trust and closer friendship. I have just paid a useful visit

to Sri Lanka, as I did earlier to Nepal and Indonesia. The King of Bhutan will soon be in our country. Our foreign minister visited Burma, Vietnam and Thailand. With Bangladesh we have had a series of useful exchanges of views.

Further steps have been taken to improve relations with China. Following the visit of the Chinese Foreign Minister during this year, an official delegation went to Beijing to discuss international and bilateral issues including the question of boundary and territory.

Relations with Pakistan: As regards Pakistan, Parliament is only too well aware of the nationwide concern after that country decided to acquire sophisticated arms and the persistent international reports about its nuclear programme.

While announcing its move to go in for advanced aircraft, Pakistan also informed us of its desire to have a no-war pact, a suggestion we had put to them several times and in different forms over the years. In December 1981 we gave Pakistan an outline of the principles which might govern our discussions towards that end.

This dialogue was carried forward during the recent visit of the Pakistan Foreign Minister. We reiterated our desire for peace and friendship and our stand that issues should be bilaterally resolved. We are glad that Pakistan has accepted our proposal for a joint commission to examine, renew and promote the entire range of relations between the two countries.

Indian Ocean: Elsewhere on our continent, tensions persist. The problem of Afghanistan and the Iran-Iraq conflict remain unresolved. The Palestinian people's rights continue to be obstructed. The Indian Ocean is far from becoming a zone of peace.

There are a few hopeful signs also, such as the renewed plan of the non-aligned movement following the conference of foreign ministers of non-aligned countries in New Delhi last year, the initiatives of the Commonwealth countries to promote greater international cooperation, and the beginning, however tenuous, of efforts for a dialogue between developed and developing countries.

The Prime Minister participated in the Commonwealth Heads of Government meeting in Melbourne and in the international conference of cooperation for development of Cancun, Mexico. Her visits during the year to Australia, Bulgaria, Fiji, France, Italy, Kuwait, Kenya, Indonesia, the Philippines, Rumania, Seychelles, Switzerland, Tonga and the United Arab Emirates led to further strengthening of friendship with those countries.

Foreign visitors: Since I last addressed you, we have had visits from the heads of States of Governments of Kenya, the Federal Republic of Germany, Guinea, Tanzania, Britain, Bahrain, Yemen, Zimbabwe, Nauru, Australia, Madagascar, Botswana, Ghana, Venezuela, Uganda, Spain and Sweden all of which were useful.

We look forward to the visit next week of President Nyere and to conferences of some developing countries. Greater cooperation among developing countries is mutually beneficial and strengthens them collectively in their dealings with the advanced countries.

In the present session besides dealing with pending business a large number of fresh legislative measures will come up for your consideration. Among these are:

The Land Acquisition (amendment) Bill, 1982, and the National Waterway Bill, 1982 to declare the Ganga between Allahabad and Haldia as a national waterway.

Difficult times: Hon. Members, the world is passing through difficult times. Our own problems are not inconsiderable. Fortunately we are a nation imbued with a sense of purpose. Our people have also shown commendable capacity to rally together in moments of challenge.

Political differences are bound to exist in a democracy which guarantees freedom of opinion and organisation. But differences should not degenerate into discord. The good of the nation is an objective for which we must learn to cooperate, transcending disputes.

We have the strength and the resources to move forward speedily. The first two years of the Sixth Plan were years of consolidation. Let us now use this strength to make the next three years of the plan, years of a march forward.--UNI.

'TIMES OF INDIA' Editorial

Bombay THE TIMES OF INDIA in English 19 Feb 82 p 8

[Editorial: "A Candid Appraisal"]

[Text] In his address to the two houses of parliament, the President has spoken about the external threats confronting the country at much greater length than he did last year or the year before. This is entirely understandable given the deterioration in the international situation, especially in India's immediate environment. Mr Sanjiva Reddy has underscored this by referring to the increase in the "military presence around us" and to the fact that the Indian Ocean is "far from being a zone of peace." He is entirely right also in regretting that other people's strategic calculations should cast "extra burdens" on this country. His warning against complacency and about the heavy sacrifices that the nation might have to make to safeguard its sovereignty is not a rhetorical flourish but a candid appraisal of harsh realities. In reporting to parliament the progress made in the India-Pakistan dialogue, he has made no attempt to play down this country's concern over the acquisition by Pakistan of sophisticated arms from the United States and persistent international reports about its nuclear programme.

President Sanjiva Reddy has been no less candid in taking stock of some of the internal problems which he has described as "not inconsiderable." As in this Republic Day broadcast three weeks ago, so in his address to parliament he has expressed his and his government's distress over the outrages perpetrated on the Harijans and other weaker sections of society. It is for the government to make good his promise to put an end to these atrocities, punish the guilty and ensure that all sections of people live in safety and honour. But the complexity of this task is underlined by his admission that communal and

casteist forces are often in league with anti-social forces. The prolonged stalemate in the talks between the Union government and the leaders of the anti-foreigners' agitation in Assam is an obvious source of concern but it is reassuring that New Delhi intends to persevere in its attempt to break the deadlock.

On the economic front the President has painted a rosy picture. The government's critics might even call it too rosy. But there is little doubt that almost all his claims are supported by facts, the most important of which are the anticipated record food production, an impressive improvement in the performance of the core sector consisting of power, coal, transport, steel, fertilisers and oil industries and the reduction in the rate of inflation from 14 per cent last year to nearly two and a half per cent now.

Editorial Notes Dangers

Madras THE HINDU in English 19 Feb 82 p 8

[Editorial: "The Comfortable Sights of 1982-83"]

[Text] The two main points made by the President in his address to Parliament are that 1980-82 should be viewed as years of consolidation and that the base thus created should be prudently utilised to improve the results in the rest of the Plan period 1982-85. The stress of Government policy as highlighted in the address relates to the curtailment of the inflation rate, improvements of the infrastructure programme and reorientaion of the schemes for ensuring greater economic justice to the weaker sections. The optimism which characterises the speech is obviously provoked by the encouraging results in the agricultural and the industrial sectors and the slowing down of the inflation rate to 6.9 percent this January from 22.2 percent in January 1980. The recovery in agricultural production in recent years supported by the increases in industrial output has been the biggest check on the inflationary trends unleashed by the disastrous farm and factory results in 1979-80. The President has specifically stated that foodgrains production in 1981-82 was "expected to exceed the previous record level of 132 million tonnes, compared to 129.9 million tonnes achieved in 1980-81." This is a welcome confirmation of some encouraging news. It has nevertheless to be tempered by the knowledge that the buffer stocks which stood at 21 million tonnes in July 1977 came down to a low 11 million tonnes by April 1981. If a record output materialises in 1981-82 as expected, it should be possible to increase the buffer stocks to 20 million tonnes. This will of course involve procurement of over 9 million tonnes of wheat even after taking into account the imports of 2.25 million tonnes. Which means that the Government has to take appropriate pre-emptive action to prevent a repetition of the situation in 1980-81. In that year the desired quantities could not be procured because growers were holding back stocks and traders were cornering supplies in anticipation of a rise in prices in the lean months. Talking about prices, the fact needs to be emphasised that, despite a slowdown in the rate of inflation, the cost of living index went up because of the hardening of food prices. All the more reason why the Governments at all levels have to keep their public distribution system in the fettle if their concern for the weaker sections is to be meaningful.

Much has been said in the President's address about the overall improvements in industrial production and in the steel, coal, electricity and transport infrastructure. Considerable success has no doubt been achieved here and in respect of crude oil, the output is rising at a rate that can take the total indigenous supply to 30-32 million tonnes in 1984-85, making a doubling of the figure for 1981-82. It should be remembered that the Sixth Plan outlay which is twice that of the Fifth reflects increases more in the financial than the physical targets because of inflation. Also against the backdrop of an endemic inflation, the travails of 1979-81 were due to the quirks in movement of freighted traffic chiefly of coal and the consequent headaches to the thermal power and cement plants. The sickness of the State Electricity Boards and their failure to perform had such a dampening effect on industrial planning and output as to provoke the thought that the country had better concentrate on less and less of power intensive projects and schemes if it wished to keep to its production targets. The President's address says that the Railways have transported a larger tonnage of goods in 1981-82 than in any previous year. The Railways owe it to the industries to ensure that there is no slide down in achievements. On present sights the year ahead 1982-83 is taking off from a reasonably comfortable industrial, agricultural and infrastructural base. The opportunities flowing from such a position of strength require to be utilised to the fullest extent. One way of doing this will be to take a close look at the monetary policy in order to assess the validity of the criticism that the banks have been forced to be tight fisted when they ought to be liberal in the matter of advances to industry. The President has of course spoken of the pressures building around the country. That no doubt warrants larger spending on defence. But at this point of time when there is a revival of activity, a buoyancy in revenues and an attempt by industry to pick up the thread from where it had been dropped in the difficult 1979-81 period, the economy can afford--or if necessary has to find the resources for affording--concomitant increases in outlays on both defence and development. No country can be helped to stand up to an external threat, potential or immediate, by hamstringing economic activity at home. There is a real danger of the comfortable sights of 1982-83 vanishing into thin air.

Communist Paper Comments

New Delhi PATRIOT in English 20 Feb 82 p 2

[Editorial: "Optimistic View"]

[Text] The President in his traditional address to the joint session of Houses of Parliament presented on the whole a rosy picture of the domestic scene. His assessment that the current financial year had been a year of "further consolidation" was borne out by the figures of growth in the various sectors of economy, specially in the field of agricultural production. The figures show an impressive growth in some of the core sectors like power, coal, steel and petroleum, while agricultural production promises to beat all earlier records. The only troublesome area appears to be the balance of payments where the gap between import and export has compelled the Government to ask for the International Monetary Fund loan, which might turn out to be a costly bargain. What has not been noted in the address with due emphasis is

that neither growth in production nor the big fall in the rate of inflation in wholesale prices is adequately reflected in the life of the working people and the unemployed. There is a sorry gap between economic advance and people's well-being (covered up by statistics) which generates many of the problems that the President has mentioned in his address where he deals with the law and order situation. However, crime and violence are given a fillip also by lack of efficiency in administration, particularly the police force, and a weakening of social norms of life. The President has denounced outrages against the Harijans and the other weak sections and reiterated his Government's determination to fight the forces of casteism and communalism. But success in this endeavor requires, apart from public cooperation, a much more vigilant and efficient administration, to build which the requisite sense of urgency is lacking.

Referring to deterioration in the international situation, the President naturally underlined the danger to our national security and the increasing burden of defence expenditure. Against the background of regional tensions and Pakistan's effort to acquire sophisticated arms and manufacture nuclear weapons, the President's warning against any complacency is in accordance with the gravity of the situation. The address makes no reference, for diplomatic reasons, to the specific US policy in this connection, but the fact remains that the US strategic policies are causing anxiety in this country. The nation may be called upon, in the words of the President, "to make heavy sacrifices to maintain preparedness at all times to meet external challenges." This certainly does not imply that life will become any easier in the near future.

The President gave full credit to the Government for achievements in the economic field and its consistent effort to establish good relations with all countries in pursuit of the policy of nonalignment and peace. But the social problems and conflicts call for much greater efforts in different directions. He had apparently this aspect of the domestic situation in mind when he appealed to members of Parliament to rise above disputes and prevent political differences from turning into discord. Democratic struggles for changes in policies and Governments are an essential feature of our system, yet there are many issues on which the contending sides can and should cooperate. It is good to draw attention to such an area when the spirit of confrontation is in the air.

SUHARTO'S DIVIDED OPPOSITION

London 8 DAYS in English 27 Feb 82 pp 20, 21

[Article by Richard Cowper]

[Text] THE INDONESIAN government of President Suharto sees orthodox Islam as its only serious political opposition, a point illustrated by the fanfare surrounding the trial, in Jakarta, of Imron bin Mohammed Zein, who is charged with attempting to overthrow the government at the head of a revolution along Iranian lines.

Imron clearly never posed any serious military threat, but the case has roused extreme fear among Indonesia's security-minded and secularist army leadership. Charged with setting up a self-styled Islamic revolutionary council, Imron is accused of masterminding last year's hijack of an Indonesian airliner, and of plotting to kidnap the Iranian oil minister as part of a plan to overthrow the government and set up a hardline Islamic state.

When Khomeini toppled the Shah and proclaimed an Islamic state in a country that had been held up by the West as a shining example of stability and economic development, it was a chilling reminder to Suharto's government of the potential political power of fundamentalist Islam in Indonesia.

Though Imron is far from being another Khomeini, there are a number of similarities between pre-revolutionary Iran and present-day Indonesia. Indonesia is by far the world's largest Islamic country, with 135m Muslims. And, as with Iran under the Shah, it is a major producer and exporter of petroleum and is strategically important to the world's non-communist industrialised nations.

A broad Islamic political alliance forms the only real opposition to Suharto, and a number of its leading figures regard the forward-looking government as authoritarian and corrupt. Some of them have privately denounced high-cost, low-employment projects like the $2.5bn Krakatau steelworks and the $2bn Asahan aluminium complex. These, they say, are grandiose schemes, unsuited to a nation which has to feed 3m extra mouths and provide 2m new jobs a year.

Many areas in Indonesia are undergoing a process of social change, which is putting noticeable strains on traditional values and ways of life. A rapidly-growing urban population — Jakarta now has almost 7m inhabitants — has witnessed a worrying increase in urban crime, and sociologists are concerned over the wave of pitched battles between secondary school pupils in the capital over the past 18 months.

There is a powerful tradition of revolutionary Islam in some areas of Indonesia. The Achinese, in the northernmost province of Sumatra, waged a 100-year war against the Dutch East Indies government. After independence, they fought a number of campaigns, inspired by their desire for an Islamic state, against the Jakarta authorities.

There, however, the similarities with Iran end. Indonesia has no Khomeini waiting his chance to take over: nor does it seem likely that the country's masses will rise up to depose Suharto in a 'holy war' against modernisation. Moreover, Indonesia may have the world's largest Muslim population, but about 80 per cent are Muslims in name only. These people hold a wide variety of beliefs, ranging from animism to Hinduism and modern secularism, making Indonesia one of the world's most tolerant and least orthodox Islamic nations.

For the vast majority of Indonesians, the idea of a truly Islamic state would be anathema: despite the history of Islamic

revolt in Aceh, South Sulawesi (Celebes) and West Java, these movements have never attracted national support. And, as the break-up of Imron's small band of about 150 followers shows, the security forces have generally been successful in infiltrating and reducing the effectiveness of those small groups of Muslim extremists which do exist.

Orthodox Islam is a minority religion in Indonesia, accounting for perhaps 20 per cent of the country's population. But even these adherents remain fragmented and divided, not only on doctrinal grounds, but also ethnically and geographically. Unlike Iran, Indonesia's Muslims are Sunni rather than Shia and the Indonesian variant does not have the ayatollah system, which proved such a powerful means of building up leading opposition figures in Iran. There is no outstanding leader or institution that can claim the loyalty of Indonesia's orthodox Muslim community and speak authoritatively on its behalf.

Parliament is powerless and democracy little more than a useful charade, but nevertheless Suharto's government, unlike that of the former Shah, does respond to criticism and seems aware of the social, political and economic forces in the country. The president has worked hard to give an impression of consulting the country's religious dignitaries, and has been careful to back down on the rare occasions when an issue threatened to unite the Islamic community against him.

Aware of the charges that the country's modernisation plans have often benefited only a small elite, the government has recently made great play, in the country's third five-year economic plan, of a new emphasis on distributing the fruits of development more equitably. At the same time, the new order has done its best to ensure that Muslim politicians are given little chance of uniting the country's 30m orthodox Muslims against the government.

There was a brief alliance between the army and Islam after the abortive coup of 1965, when the two groups combined to massacre as many as 550,000 Indonesians suspected of belonging to, or supporting, the Communist Party. Since then, the government has worked hard to keep orthodox Islam weak and divided. It does not allow political parties to organise or engage in political activities at village level, except during an election.

The Imron trial may conjure up some of the regime's deepest fears, but it is also designed to illustrate to potential Muslim dissidents the folly of opposing the government in a campaign of armed violence. With less than four months to go until the countrywide general election for parliament, some government leaders may also hope that it will prove a useful vote-winner.

FRENCH PARLIAMENTARY DELEGATION ON INDONESIA'S POSITION

Jakarta KOMPAS in Indonesian 8 Feb 82 p 12

[Excerpts] "France considers Indonesia the cornerstone country in Southeast Asia, and the government of President Mitterrand will always consult with countries holding key positions in each region before making a move. If Indonesia is the key holder in ASEAN, it is Mexico in Latin America and Algeria in North Africa," Claude Estier, 57, chairman of a French Parliamentary Mission, told this paper at the Halim Perdanakusuma airport before leaving Indonesia yesterday.

Claude Estier is vice chairman of Foreign Affairs Commission of the French Parliament and also director of the weekly newspaper "l'UNITE," official organ of the ruling Socialist Party. This parliamentary mission is composed of Ir Hubert Dubedout (Socialist), presently Mayor of Grenoble (near the Swiss border), Xavier Deniau (de Gaullist), 59, and Theo Vial-Massat, 63 of the French Communist Party.

During its 6-day stay in Indonesia from 2 February, the delegation was received by President Soeharto, Vice President Adam Malik, Foreign Minister Mochtar Kusumaatmadja, Education and Culture Minister Daud Jusuf, Prof Dr Eng B. J. Habibie, minister of research and technology, and Daryatmo, Speaker of the House of Representatives.

This was the first visit to Indonesia of the French Parliamentary Mission since the election victory of the Socialist Party in May 1981. In its talks with high-ranking officials of the Indonesian government, the main topics of discussion involved the creation of a new atmosphere for a bilateral relationship in the fields of economy, social and cultural affairs.

Claude Estier said that the new French government will strive to improve collaboration in a positive manner, including the teaching of French technical education to the Indonesians, granting of more French scholarships and invitation of more Indonesian exchange students to France.

Claude Estier divulged that in the course of his conversation with Foreign Minister Mochtar, he found out that France and Indonesia hold similar views on a number of international issues.

With regard to Southeast Asia, both parties agreed that Vietnam should leave Kampuchea forthwith and that the Kampuchean people themselves should decide on their own government. Estier hoped that ASEAN exert more influence on Vietnam in its effort to resolve the Kampuchean problem.

Jean-Pierre Chevenement, French minister of research and technology, and Regis Debray, personal representative of President Francois Mitterrand, are scheduled to visit Indonesia in March this year.

Regis Debray is well known as a revolutionary leftist intellectual and was once a guerrilla fighter in Latin America. He will arrive in Jakarta on 14 February and then proceed to Vietnam to study the problem of resettlement of Vietnam refugees and displaced persons in foreign countries.

REVIEW CRITICAL OF AUTHOR NAIPAUL

Jakarta TEMPO in Indonesian 6 Feb 82 p 56

[Article by Abdurrahman Wahid]

[Text] The visit of the author, V S Naipaul, to the "Muslim nations" of Asia in 1979 turned out to lead to a conclusion which he sought from the beginning: an Islam that is angry.

What he sought in fact was an Islam that is not considered as a whole but rather an Islam that rejects what Naipaul believes in himself; secular, modern humanism and the technology which is developed by this humanism. The results of his visit are contained in his newest book, "Among the Believers."

As one of the greatest novelists of our time Naipaul automatically serves up sharply focused observations and deep reflections on what he saw. It is very interesting to see how he tries to find "the fine threat" linking the statements, attitude, and thought of the people whom he meets. This becomes an interesting kind of narration which is delightful to read.

Unfortunately, all of that does not cover up the fundamental weakness of his most recent work. As his conclusion he is only able to speak of an Islam which is angry with the modern world--whereas in fact this conclusion itself is not really true. I think that there are more examples of "an Islam that is not angry," which is completely distinct from Naipaul's experience.

Naipaul encountered the anger of Islam in Indonesia in various forms. Within himself Adi Sasono, who feels he has been pushed into a corner by intelligence officers, only because he is a devout Muslim, is a santri [a person consciously and exclusively Muslim in thought]. Within himself Imaduddin, from the Bandung Institute of Technology, uses modern psychological technique to develop an awareness of the superiority of the teachings of Islam, through the religion courses which he gives. Within himself is a Muslim businessman who thinks there is a physical conflict between "the university people" and "the people who have gone to the pesantren" [Muslim religion school]. It is not enough that a million people died as a result of the G-30-S/PKI [abortive Communist coup attempt of 1965], this man says. There are still millions more who will be victims of the conflict which he foresees.

Seen in this way, it is indeed appropriate for Naipaul to be afraid. An exclusive community leadership, which seeks truth only in its own interests, an intellectual outlook which does not try to look farther than merely reconstructing the formal teachings of religion, and individual morality which considers it sufficient merely to imitate on the surface the practices of the Prophet Muhammed--that is what Naipaul saw as a manifestation of the level of awareness of the Muslim community which he encountered.

He then becomes skeptical about the development of an increasingly angry Islam and sees nothing good coming from this.

It is unfortunate that the visit of Naipaul to the world of the Muslim religious schools did not lead him to reflect more carefully on the situation. Had he done so, it is there that he would have perceived a growing force, which seeks to present an Islam which is not angry.

Ironically, the visit which he made was specifically to the Tebuireng pesantren in Jombang [East Java] and the Pabelan pesantren in Muntilan, places where the outlook of an Islam that is not angry began to be seen.

What he saw turns out not to have gone very deeply into Islam and was not basic in character. At the Pabelan pesantren he did not see the creativity emerging in the form of the teaching provided, which emphasizes the integration between the people of the village and those attending the pesantren. He says that at that pesantren they have only established "a commune in which people reject technology and make everything with their own hands."

At the Tebuireng pesantren he only saw the school as a continuation of the priestly institution from the pre-Islamic period. As a result, Naipaul's view of the pesantren can be reduced to the following: they make village people remain village people. Elsewhere he says that the pesantren keeps village people ignorant.

The essence of what concerns Naipaul is the failure of Muslims to provide a modern answer to the challenges of present-day life. For him modernity is to be found in the form which is developing in the industrially-advanced countries, in an increasingly calculating attitude toward life, in the capacity to control and exploit nature. It is not surprising that he then says: Islam will not progress if it continues to pray and to fast--which he considers "unnecessary things."

Here is to be found Naipaul's basic error: he measures modernity in terms of the rejection of what is traditional; he measures progress in terms of the destruction of one's original beliefs.

Is it true that the struggle taking place is as sharp as that? Isn't it possible that an awareness is emerging of the total change in the standards of community living, particularly in terms of respect for teachings which are of a ritualistic character? Isn't it very possible that a creative and dynamic ideology is being constructed from digging back into fundamental teachings themselves?

If Naipaul regards the pesantren--which defend the external forms of the past and the rites which are handed down from generation to generation--as a continuation of the pre-Islamic "religious function" in our village society, that is his right. However, he will be seriously mistaken if he regards their supervisory function as the only developing reality in Indonesia at present.

He quotes the question which was once asked by a Christian (Catholic) magazine in the Philippines, when it interviewed a kiai [Muslim teacher]: how can a kiai be the pioneer of basic change in a community? How can he make the landlords and rich people give up their wealth which, according to Islam, is exclusively the property of Allah and give it to those who work the land? How can the kiai make the farmers aware of the importance of their presence in this world, in order to make it possible to establish social justice?

The fact that such a question was asked by a non-Muslim to a kiai in a pesantren shows how great a change has occurred. Naipaul needs to use the above quotation to dig deeper into the life of the pesantren, which is beginning the great process of changing the structure of basic community life, without using force and without stimulating any protests. And without anger.

I don't think that Naipaul has the right to belittle this and to regard the weaknesses of the pesantren only as frozen remnants of the past and to consider their dependence on ritualistic life as just a continuation of the pre-Islamic "religious function."

NORTH KOREA REPORTED INTERESTED IN IMPORTING INDONESIAN OIL, GAS

Jakarta KOMPAS in Indonesian 5 Feb 82 pp 1, 12

[Excerpts] The problem of how to improve economic cooperation, both in trade and technical field, between Indonesia and Democratic People's Republic of Korea (North Korea) was discussed between President Soeharto and Premier Li Jong Ok at Merdeka Palace yesterday. "A follow-up to the result of this discussion is still called for," said Minister State Secretary Sudharmono at the conclusion of the discussion which lasted 90 minutes.

Radius Prawiro, minister of trade and cooperatives, added that he discussed with his North Korean counterpart the problem of how to intensify the trade relationship between the two countries, including an exploration concerning the importation of several Indonesian goods by North Korea which needs rubber, nickel concentrates, iron ore, pepper and timber.

North Korea will send a trade delegation to Indonesia before summer begins to finalize the plan for closer trade cooperation.

Trading between the two countries is still small in volume. Several years ago Indonesia imported rice from North Korea, but this was discontinued after Indonesia's domestic rice production was sufficient to fulfill her consumption requirements. Consequently, Indonesia's imports from North Korea dwindled to only about $21 million, comprising glass raw materials and some chemical matter. On the other hand, North Korea's imports from Indonesia amounted to about $1.4 million, according to Radius Prawiro.

Earlier Sudharmono said that North Korea is also interested in importing Indonesian oil and gas, but details concerning this matter need to be studied by a forthcoming dispatch of a North Korean technical team to Indonesia.

The talk between President Soeharto and Premier Li Jong Ok was held separately, quite apart from the other discussion groups on political and economic matters. Among those present in the high-level discussion groups were Minister State Secretary Sudharmono, Cabinet Secretary Murdiono, Agriculture Minister Sudarsono Hadisaputro, Minister of Trade and Cooperatives Radius Prawiro, Munawir Sadzali, political director general of the Department of Foreign Affairs; M. Satari, director of Asia-Pacific desk of the Department of Foreign Affairs; and Djundjunan Kusumahardja, Indonesian ambassador to

Pyongyang. North Korea was represented by Foreign Trade Minister Choi Jang Gun, Deputy Foreign Minister Jo Gyu Il, Foreign Economic Relations Minister Jong Song Nam, Pak Min Sop, North Korea's ambassador to Jakarta, and Kim Mun Hyop, secretary to the prime minister.

Suharmono added that in their closet meeting President Soeharto and Premier Li Jong Ok deliberated on how to improve the nonaligned movement, of which both parties are members. Both Indonesia and North Korea earnestly wish that the nonaligned movement remains nonaligned, and not drawn into the interests of a certain force or bloc.

Sudharmono said that President Kim Il Sung addressed a letter to President Soeharto, which was hand delivered by Premier Li Jong Ok, but he declined to explain the contents of the letter.

INDONESIA STILL IMPORTS OIL FROM ABROAD

Jakarta KOMPAS in Indonesian 10 Feb 82 p 2

[Text] Although Indonesia at the present time represents an oil producing and exporting country, it still imports oil from abroad to support domestic oil fuel needs. The imports are in the forms of crude oil and ready-to-use fuel materials.

Minister of Mines and Energy Subroto made these remarks before a House Budget Commission session Monday.

Out of the total planned Indonesian oil production of 1,641 million barrels in 1982-83, Indonesia's quota is about 923,000 barrels per day. The remainder are for work contractors or production sharing. More than half of Indonesia's share of petroleum, about 588,400 barrels per day, are used to fulfill the domestic oil fuel needs, while the rest, 335,200 barrels/day, are for export.

The growth of domestic oil fuel materials averages 12 percent per year, the minister said. For the current period of 1982-83, we need oil fuel materials for domestic consumption totalling about 28,168 million kiloliters (kl). To fulfill this requirement, Indonesia imports ready-to-use oil fuel materials totalling 62,196,000 barrels (in 1981-2 the figure was 42,784,000 barrels) and crude oil totalling 39,055,000 barrels.

Indonesian oil which was refined either within the country or abroad through a "processing deal" in 1982-83 totalled 143,600 barrels (in 1981-2 the figure was 159,700 barrels). These amounts do not include crude oil imported from Saudi Arabia (ALC) utilized for the manufacture of lubrication oil at the Cilacap refinery.

According to the minister, there has been a rising tendency to import oil fuel materials and crude oil, while the refining of Indonesian crude oil has suffered a downward trend.

The costs for supplying oil fuel materials average 132.69 rupiahs per liter, of which 103.83 rupiahs is for the purchase of domestic crude oil, imported crude oil and imported oil fuel materials per liter, and the remaining 28.86 rupiahs for processing, distribution, sea transport and loading per liter. These costs and charges do not include land transportation, profits for service stations and donations to provincial authorities.

In connection with the budget for 1982-98, the minister said that the revenues total about 9,100,000,000,000 rupiahs, part of which is accrued from the export of Indonesia's quota, while a subsidy of 924,000,000,000 rupiahs is given out for petroleum consumed within the country.

Regarding the plan to sell Indonesian LNG to the U.S., Minister Subroto said that the contract is shelved for the time being, but not yet cancelled. Sale of the liquid natural gas to the U.S. has been negotiated for eight years and will end in the current year of 1982. However, the existence of obstacles within the American community has resulted in the non-realization of the sale.

We do not want to be placed at a disadvantage, the minister said. As an alternative, the American quota has been marketed to Japan and South Korea. Although the U.S. failed to obtain the gas from Arun, it has requested Indonesia not to neglect its interests when processing other liquid natural gas.

For this purpose Natuna has been reserved. This region has started producing oil and gas in its offshore section, including the one being handled by CONOCO at Udang field with a production of 30,000 barrels of oil per day and accompanying oil 29 billion standard cubic feet (MMSCF) per day. It is estimated that the offshore region has a huge natural gas potential. Pertamina is making a thorough study for its development.

INDONESIA MAY START IMPORTING COAL IN 1985

Jakarta KOMPAS in Indonesian 10 Feb 82 p 2

[Excerpts] There is great possibility that beginning the year of 1985 Indonesia will import coal to fulfill its domestic requirements, which will be about 3,656,000 tons. In that year domestic coal production is projected to reach about 1,965,000 tons. This means we will need 1,691,000 tons more.

Minister Subroto gave this explanation in a work conference with House Budget Commission on Monday, during which he elaborated on the necessity to import coal to cover the deficit at home. On the other hand, coal consumption to generate electric power and cement plants cannot be reduced, while on the other hand increase in coal production cannot be accelerated correspondingly. Apart from the time we need to develop coal mines in the country, we also need to train more technical skills and experts to manage the mines. Two countries, Canada and West Germany, have expressed their readiness to train Indonesian technical personnel. At the same time, we are cooperating with institutions of higher learning in our country in the development of coal.

According to Minister Subroto, coal import will be handled by the state enterprise PN Batubara. Two coal storages are being planned, one located in Pulau Batam [Batam Island], the other at Tarahan in South Sumatra. The coal will be imported from the east coast of Australia and India, among other countries.

Domestic coal requirements will reach 1,054,000 tons up till 1984, which can be covered by the domestic production of 1,175,000 tons. Beginning 1985, however, there will be a big jump in coal demand. By the year 1990, domestic coal demand will not be able to be covered by domestic supply. In that year, the production will be about 15,490,000 tons, while the demand will reach about 16,646,000 tons.

The biggest domestic consumers of steam coal are cement plants, steam power electric generators, State Railway Company, PT Tambang Timah (Bangka), aluminum factories and other industries. The cement plants are located at Baturaja, Gombong, Indarung, Madura and North Sulawesi, while steam power electric generators are located at Surabaya, Paiton-Tuban, Tanjung Enim, Salak, Bali, Loa Kulu and others. By the year 1985, increase in coal requirements will still not be considerable, but beginning 1986, the demand for

energy sources will jump upward continuously. This is due to the fact that several new cement plants will begin operations, while the existing ones will increase their production and simultaneously there will be a shift to coal in the utilization of energy.

The mine development project at Bukit Asam will not start producing coal until around 1985-86. The coal to be produced there will be allocated to Steam Power Electricity Center (PLTU) Suralaya I and II and PLTU Tanjung Enim, amounting to 2.45 million tons/ year and 400,000 tons/year, respectively. The cement factory at Baturaja will be alloted 80,000 tons per year, PT Tambang Timah (Bangka) 40,000 tons per year, State Railway Company and others 60,000 tons per year.

The development of coal in Ombilin is being planned in stages. The first stage will cover a production increase from the present level to about 750,000 tons in 1985-86. Then, with the opening of a new mine in the Waringin region around 1989, the production will be increased to 1,350,000 tons per year. A portion of this production will be utilized for the cement factories in Indarung and Aceh.

The development of coal in East Kalimantan and South Kalimantan which have huge reserves will not play a role until 1988-89. According to plan, this coal will be used as an energy source in several cement factories and electric power generators in Java.

Minister Subroto pointed out that the government has conducted an inventory of coal deposits located outside of South Sumatra/West Sumatra, South Kalimantan/East Kalimantan and Irian Jaya. Some regions are thought to contain sufficiently large coal reserves potential to be earmarked for development by the government.

UNITED STATES VIEWS ON AFGHANISTAN CRITICIZED

Karachi DAWN in English 15 Mar 82 p 9

[Text]

It appears from the attitude adopted by the western countries in respect of the Afghan crisis that they are interested in it only to use the matter in their policy of confrontation with the Soviet Union.

Continued presence of the Soviet Union in Afghanistan is for them a source of satisfaction as far as Europe is concerned. They often refer to sacrifices being rendered by the Afghan freedom fighters, saying that this was making Afghanistan a Vietnam for the Soviets. The West has the military and economic potential to serve an ultimatum on the Soviet Union to pull back from Afghanistan. The western countries being major powers, the Soviet Union does not have the capability of ignoring their pressure. It is, therefore, not inappropriate to suggest that the proposed holding of Afghanistan Day without first exerting any kind of pressure on Moscow is merely a lip service to the Afghan cause. This belief is supported by the official statement of a US government spokesman in which it was said that the US considered the Afghan problem basically related to the Muslim world. The US, the spokesman added, morally supported the freedom struggle of the Afghan people but their request for arms would be turned down. This statement tantamounts to giving the Soviet Union a free hand in Afghanistan.

MAZARI SAYS SITUATION FAVORABLE FOR POLLS

Karachi DAWN in English 13 Mar 82 p 1

[Text]

MULTAN, March 12: The leader of defunct NDP, Sardar Sherbaz Khan Mazari, has demanded restoration of the 1973 Constitution and holding of elections in the country according to the will of the people.

Talking to newsmen at the residence of a member of the executive body of defunct NDP, Mr Aslam Khan Marwat, at Taunsa, Dera Ghazi Khan district, he said the atmosphere in the country was quite favourable for holding of elections.

He said that dearness and corruption had broken the backbone of the people.

Mr Mazari said that it was now better to end Martial Law, and added that the Army should go back to barracks to perform its real task. He said that no one except a representative Assembly had the right to amend the 1973 Constitution.

He said: "We are not the followers of poltics of terrorism and will never ask or compel the people to agitate. We had political differences with the former Prime Minister and we had launched a movement against his government, but we are not against his widow and daughter".

Replying to a question regarding Mr Ghaus Bux Bizenjo's demand for provincial autonomy, Mr Mazari said that "we talk of rights for all the four provinces". He said that except Foreign Affairs, Finance, Defence and Communications, all other departments should independently remain with the provinces. He said the income of all the four provinces should be utilised in their respective areas according to the will of people.

Mr Mazari said all political parties in Pakistan were agreed on restoration of the 1973 Constitution and desired that elections should be held in the country.

He said the people would not support the pacts made by the present Government with other countries.

MAHMUD ALI ISSUES DENIAL ON PROPOSAL

Karachi DAWN in English 13 Mar 82 p 1

[Text]

ISLAMABAD, March 12: Mr Mahmud Ali, Minister of State and Chairman, National Council of Social Welfare, today desribed as "unwarranted" the reports appearing in a section of the Press that he had placed before Nawabzada Nasrullah and other political leaders proposals for a provisional government, which they had rejected.

Commenting on the report, Mr Mahmud Ali said: "I did not carry any proposals, nor was I deputed by the Government to make such proposals. Therefore, the question of the rejection of these imaginary proposals does not arise."

He said that during the course of his normal tour he had visited Karachi, Multan and Muzaffargarh. He did meet old friends, including Pir Sahib Pagara and Nawabzada Nasrullah Khan whom he had known for a long time, but he did not less any "proposals" before him.

Mr Mahmud Ali said he did not fly by helicopter to Dera Ghazi Khan at all, as suggested in the report.

"Of course if I happen to visit Dera Ghazi Khan, I would certainly like to meet Mr. Balakh Sher Mazari or Sher Baz Khan Mazari, who are my old friends."

SAFDAR'S CALL FOR POSITIVE RESPONSE

Karachi DAWN in English 13 Mar 82 p 4

[Text] LAHORE, March 12: Khwaja Mohammad Safdar, Chairman, Federal Council, today appealed to the political leaders to give positive response to the initiative taken by President Zia-ul-Haq for effecting an understanding with them.

Speaking at a reception here today, he said the President had detailed Mr Mahmud Ali, Federal Minister of State and a great patriot, for consultations with the politicians. He expressed the hope that they would welcome the President's gesture in a true national spirit as it had been made quite sincerely.

Khwaja Safdar said the country could ill-afford the state of confrontation and needed an atmosphere of understanding to cope with the internal and external situation facing it. He said that instead of resorting to agitational politics, the nation should make collective efforts to bring about Islamic order in the country.

He said it was unfortunate that while the Government was making sincere efforts to enforce Nizam-i-Islam, certain religious leaders in the political arena were finding faults with the steps taken in this direction instead of extending their cooperation in this task.

He said at the very first session of the Majlis-i-Shoora, which was under constant criticism in the political circles for being a nominated body, a concrete step was taken towards the Islamic order with the setting up of a committee to find out the hindrances in the way of Islamic system. This committee had already met for four times and its report was being compiled.

Strongly criticising the political parties forming the so-called MRD, Khwaja Safdar said it was astonishing that the formula announced by the present MRD chief yesterday made no mention of Islam which was the very basis of this country. The people of this country had struggled for this separate Muslim homeland only in the name of Islam and they had reaffirmed their faith during the Nizam-i-Mustafa Movement launched only four years ago.

FORFMOST NEED

Khwaja Safdar maintained that the foremost requirement of the country was the enforcement of Islamic order which could be followed by the restoration of democracy suited to Islam. He said he firmly believed in democracy but he could not endorse the concept of democracy preached and practised by the defunct PPP. Elaborating, he said the six-year rule of the People's Party was a period of lawlessness, during which political opponents were humiliated, tortured and some of them even assassinated. The state of emergency was not lifted for even a single day during the PPP rule, he added.

He said that today the defunct PPP was condemning the Martial Law but he could recall the time when 104 MNAs, of the PPP had supported the continuation of Martial Law while the Constitution of 1973 was being finalised.

About the recent campaign against anti-social elements all over the country, Khwaja Safdar said the arrests followed a hot discussion in the first session of the Federal Council about the law and order situation in country. He did not agree with the claims that the arrests were made on political grounds or they were thousands in number.

All the persons arrested were thieves, smugglers, narcotic dealers, scoundrels or indulged in other anti-social activities, he maintained adding that any innocent person taken into custody would be set free.

Commenting on the eight-point formula presented by Mr. Fatehyab Ali Khan, current MRD convener, Khwaja Safdar said he felt as if it was prepared for some country other than Pakistan.

He asked the political leaders to correct the order of priorities in their formulas, give precedence to the introduction of Islamic system and then talk of democracy. If they set right their priorities according to his suggestion he would cooperate with them, Khwaja Safdar assured.

TRANSFER OF POWER FORMULA SOON--NOORANI

Karachi DAWN in English 15 Mar 82 p 14

[Text]

LAHORE, March 14: Maulana Shah Ahmad Noorani, President of the defunct JUP, disclosed here today that a joint formula by all the political parties for a peaceful transfer of power would soon be presented to the Government. The formula, he said, would be forwarded after it was approved by all the parties in the country. In this connection, contacts had already been made with a number of parties, he added.

Talking to newsmen at the end of the first-day proceedings of a two-day general council meeting of the party, Maulana Noorani said that, in fact, all the political parties in the country had a formula, but they were unanimous that elections should be held this year and power be transferred to people's representatives.

Maulana Noorani said the call made by the defunct Tehrik-i-Istiqlal to observe April 24 as a protest day had not been conveyed to his party, but added that if the same was formally conveyed, his party would definitely like to discuss it with Tehrik leaders.

Regarding his meeting with the Minister of State, Mr Mahmud Ali, Maulana Noorani said he had met him at Karachi about four days back and discussed with him the current situation in the country. Mr Mahmud Ali, he said, did not indicate that he had been sent by some one neither did he talk about any formula.

RESOLUTIONS

PPI adds: The Central Shoora and the Central Executive Committee of the defunct JUP, through a resolution, has called for restoration of the 1973 Constitution and transfer of power to elected representatives of the people. The resoluiton was approved by both superior bodies of the JUP in the meeting held here today under the chairmanship of Maulana Shah Ahmed Noorani.

The resolution said that Martial Law should not be made a permanent law, political parties be given a chance to function again, ban on freedom of expression be lifted and politicians be taken into confidence to solve the political problems faced by the country.

Through another resolution adopted in the joint meeting, the members of the defunct JUP, who have joined the Federal Council and the Cabinet, were asked to review their decision within a month otherwise it would be considered that they have left the party.

The joint session also expressed profound concern over the murders of Chaudhry Zahur Elahi and Ar ab Sikandar Khan Khalil and demanded that Government should eliminate violence, subversion and crimes without further delay.

COLUMN DISCUSSES POLITICAL FUTURE, OTHER ISSUES

Karachi DAWN in English 15 Mar 82 p 9

[Islamabad Diary column by M. A. Mansuri: "Pining for a Flicker at the End of the Tunnel"]

[Text] THROUGHOUT last week, we were groping in the dark, trying to construct a picture of our future destiny on the basis of current conjectures. The exercise itself is a sad commentary on the state of the nation, marked as it has been for a long time by uncertainty and drift.

From the cool atmosphere of Islamabad, the strenuous exercise undertaken by the leaders of various defunct political parties to form some kind of an alliance for restoration of democracy looked like a pantomime. Similar was the feeling about the extensive tours of various cities by Majlis-e-Shoora Chairman Khawaja Safdar and some of the Federal Ministers, pleading for national unity and inviting cooperation for promotion of Islamisation. The 21-member delegation of the Majlis visiting the United States to explain the official version of the situation in Pakistan was also viewed with indifference.

When the sad news of Arbab Sikandar Khan Khalil's murder reached Islamabad, we were engaged in absorbing discussions on the extent and the impact of the latest country-wide drive by the police and other agencies against subversive and anti-social elements. The interest in reports about the widespread resentment against the use of the Holy Quran as a booby-trap, said to have been planned for some high-ups in the country, was overtaken by a sort of tension caused by the police drive which itself was claimed to have been necessitated by the discovery of this nefarious attempt.

NOORANI'S SPEECH

In this context, attention was also attracted by Maulana Shah Ahmad Noorani's hard-hitting speech, in a hotel here the previous week, in which he had claimed that over ten thousand persons had been detained during the police drive and that torture cells, worst than the Lahore Fort and the infamous Dalai Camp, were also working in the country – to extract confessions from the detained persons. Most of the detainees are reported to have been interned for 90 days each. Reported extensively in a section of the local Press, his speech gave rise to an apprehension that the Maulana would be arrested before he left for Karachi, or would, at least, be expelled from the Punjab, as he was when he came here the last time. This fear did not come true, however. But his allegations about the number of arrests and the existence of torture cells were denied by the official sources – although precise information about the over-all situation was still not provided.

Anyway, reports continued to pour in from various parts of the country about more arrests of subversives and seizure of more arms dumps. According to reports published in a section of the local Press, the Government has unearthed a big plan of the subversives which aimed at killing some important personalities with the help of rocket launchers, two of which had been supplied to

contacts in Lahore and Multan, and one in Peshawar. In Rawalpindi also some more sten-guns, detonators and hand grenades were seized. A daring dacoity in Namak Mandi, one of Rawalpindi's busiest markets, in which two persons received serious bullet wounds, was committed while the police were busy in their vigorous anti-subversion drive.

AFGHAN GROUPS

A new factor seems to have been added to the situation – we had not seen it before from this angle. It is the alleged indulgence of some Afghan refugee groups in the local affairs of the NWFP and Baluchistan. No substantial proof of this has been provided by any quarter. But the insinuations implied in the statements of Khan Abdul Wali Khan and the defunct NDP Executive's resolution on Arbab Sikandar Khalil's death, last week, alleging that it was a political murder, have involved even some of our own religious interests, though they have not been named. Khan Wali Khan has, in fact, been voicing resentment for more than a year against the opening of the Durand Line for Afghan refugees, alleging that this would revive Afghanistan's old bogey of 'Pakhtoonistan'.

But this latest insinuation has given rise to a feeling that groups of Afghan refugees could be engaged by local interests to promote their own purposes. This has prompted new thinking on the need for pursuing more vigorously Pakistan's official policy of seeking an early political solution of the Afghanistan crisis. Food for this thinking has also been provided by latest reports from London, published in a national Urdu daily, last week, that attempts may be made in the coming summer to create trouble in Baluchistan where over six thousand followers of Ataullah Mengal and Khair Bakhsh Marri – both living abroad for the past several years – are reported to have been organised and armed with modern weapons for the purpose. At the back of this thinking may also be the economic issues facing the people of certain areas in the two provinces where the refugees have out-numbered the locals.

CONJECTURES

However, we noted with interest unauthorised reports in a section of our Press, last week, which revived vague hopes that something was being done either to hold snap pools some time within this year or to evolve some kind of a national arrangement by agreement with leaders of various defunct political parties. These wishful conjectures were partly supported by enthusiastic reporting of the meetings of the Election Commission and the Islamic Ideology Council last week. They were also nourished by the report of the calls made last week by the Minister of State, Mr. Mahmud Ali, on Nawabzada Nasrulla Khan who is interned in his Khangadh House turned into a sub-jail, Sahibzada Farooq Ali in Multan and several other politicians in Karachi.

The report that Mr. Mahmud Ali was conveying a message of President Zia-ul-Haq to these politicians for formation of an interim government was denied by Mr. Mahmud Ali himself. The Minister for Manpower and Labour, Mr. Ghulam Dastgir Khan, also stated the same day that there was no plan to form any interim government. The Majlis-i-Shoora delegation at present visiting the United States has said in America that elections will be held in about two years' time if the conditions permitted. In fact, it seems, that none of these stalwarts knows anything about the plan.

So far as the meetings of the Election Commission and the Islamic Ideology Council are concerned, none of the hopes held out by some of our newsmen while reporting these events was well-founded. Who instigated them, if they were, in fact, instigated, is difficult to say.

The Chief Election Commissioner himself refuted the report when several weeks before the recent meeting it was said that the Election Commission had been asked to keep ready for snap polls. The latest meeting of the commission did not have on its agenda any item which could even remotely suggest that elections of any kind were on the cards.

Similarly, the Islamic Ideology Council made it clear early this month that its recommendations on the future political structure of the country would take another two to three months to complete. What it was working on was an "Islamic political structure in relation to General Election" only. Apparently, the intention is to evolve an Islamic system of election so as to ensure that they would yield "positive results". It is a tremendously difficult task and the Ideology Council may not be able at all to formulate a fool-proof system. What, then, will be the alternative?

One alternative is to carry on with the present system which has already worked for over four and a half years. But when this system made its start, it did not have those factors to face which are now at work in our national life. Have they not already established that they are more relevant to the present situation than most of our politicians are?

COMMENTARY ON SOLVING POLITICAL PROBLEMS

Karachi DAWN in English 15 Mar 82 p 9

[Text]

IT is time the government disclosed its political thinking and identified the lines by working on which it intends to solve the political problems of the country.

If it is correct that a Federal minister has met some political leaders as a representative of the government, we would describe it it as a healthy political trend. If a decision is required in respect of the collective internal and external situation, the wise step will be to have immediate and serious exchange of views with politicians. Initially this can be done on an individual level. Later on the arrangement could be expanded to the collective level.

The success of such exchanges lies basically with the government. It will have to take the initiative. It should decide that the time has come for the establishment of a political government and the people, too, should be given the right to elect their representatives. Once this is done, it would not be difficult to enter into a compromise with the political quarters over the procedure.

Presently there are two opinions in this respect. A political group supports the holding of elections within 90 days and under the umbrella of martial law. The other group believes in first establishing a political government for a fixed period and holding elections under its auspices. In such a situation, the preparation of a working formula for the interim period should not be difficult.

INDIA ASKED TO SEND OFFICIALS FOR TALKS

Karachi DAWN in English 15 Mar 82 p 1

[Text]

MADRAS, March 14: Pakistan has asked India to send its Foreign Secretary R D Sathe soon to Islamabad to resume the dialogue on the no-war pact which was postponed following an incident at the Human Rights Commission in Geneva last month.

Speaking at a social gathering in Banglore in south India, Pakistan Ambassador Abdul Sattar said the larger objective of India-Pakistan peace would not be allowed to be vitiated by an academic debate or difference over the interpretation of an agreement.

Mr. Sattar said it was entirely up to India to decide when to resume negotiations. Pakistan's invitation to Indian Foreign Secretary R. D. Sathe was "still outstanding", he added.

Describing as exaggerated Indian fears of Pakistan's arms purchases, Mr. Sattar said his country with fractional resources did not and could not desire any arms race. He said Pakistan was keen to discuss both reduction and limitation of arms with India and, in fact, "we have even put forward the idea of an agreement on military ratios".

In this context, he said the recent purchases of 40 F-16 aircraft by Pakistan over a four-year period could not be characterised by an impartial observer as "massive".

Referring to Indian purchase of military hardware, he said Pakistan had not raised any clamour about the deep-penetration strike aircraft Jaguar, the latest MIGs and futuristic Mirage-2000 being inducted by India in addition to other lethal equipment, both by import and indigenous manufacture.

DEVELOPMENT WORK IN KOHISTAN REPORTED GOING WELL

Karachi DAWN in English 13 Mar 82 p 4

[Text] RAWALPINDI, March 12: The Chairman of the Kohistan Development Board, Brig. Jan Nadir Khan, said here on Tuesday that the development activities in the region had brought about complete transformation there.

Addressing the delegates attending the international seminar on "disaster preparedness and relief" at a dinner hosted by the Board, he said that after the area had been hit by the earthquake in 1974 a four-year development programme was launched for rehabilitation and welfare of the people. This programme was later extended to eight-year period and would be completed by June 1983.

The programme was progressing according to schedule with 83 per cent work having been completed he said and added that the development plan envisaged 1000 kilometres of new roads in the area and out of this 700 kilometres had already been laid.

Before the beginning of the development activities only 2.1 per cent of the population had easy access to drinking water and with the completion of the programme 42.3 per cent would be able to get basic amenity, he said. Similarly the education would increase from 7.2 per cent to 24.6 per cent, he added.

He said the people were responding marvellously to the programme and fully participating in the development.

EDUCATION

The Chairman said that 365 new schools had been set up in the area. He said for some reasons the people previously were not interested in the education of girls but due to incentive provided by the Board now 750 girls had enrolled themselves for studies. He said free milk was provided to boys while the girl students were given free food package.

Brig. Jan Nadir Khan said that about 1000 persons had been trained under the adult education scheme and eventually 3,000 persons would benefit from it. He said 100 health guards had been trained to administer basic medical treatment and the Board planned to provide the training to 500 guards. Similarly 500 persons would get veterinary training.

The Integrated Rural Development Programme was making a great headway and the people were extending full cooperation in this regard. The programme was being implemented with the assistance of friendly countries and international agencies.

The plan would be completed with an expenditure of over Rs 400 million.

OVER 2,000 PUNJAB TEACHERS PROTEST IN RAWALPINDI

Karachi DAWN in English 15 Mar 82 p 1

[Text]

ISLAMABAD, March 14: Over 2,000 school-teachers from all over the Punjab today held a demonstration in the premises of a school in Rawalpindi to press their demands. They also tried to march towards the President House, hardly a mile from the school, but were stopped by a heavy police force.

Leaders of the teachers' federation, in their speeches, urged the Government to accept the demands of teachers all over the country. They demanded abolition of disparity between the teachers of rural and urban areas, equal promotion to all categories of teachers and better pay scales.

At 12.30 p.m. the striking teachers dispersed peacefully.

Meanwhile, all the colleges in Rawalpindi remained closed today in protest against the yesterday's clash in which one student, Sohail Malik of Government College of Technology, was killed; while Qayyum, another student, received injuries.

Sohail was buried today in his home town, Rawat, some 20 miles from here.

Meetings were held in several colleges to offer Fateha for the deceased. A procession of students later drove to Rawat to attend the funeral of Sohail.

The Director of School and College Education, Rawalpindi region, when contacted, said all the colleges in Rawalpindi were closed for a day at the request of students.

The students of the colleges, he said, wanted to attend the funeral of their colleague in Rawat.

The Director said the students had been asked to avoid any provocative step as the death of Sohail was the result of rivalry between the groups of students.

Classes in the girls' colleges functioned as usual, the Director said.

TEACHERS' FRONT HOLDS TALKS WITH HOTI

Karachi DAWN in English 15 Mar 82 p 1

[Text]

ISLAMABAD, March 14: The representatives of the All-Pakistan Teachers' United Front and the Federal Education Minister, Mr Mohammad Ali Khan of Hoti failed to reach a compromise at a meeting held here today.

A 10-member delegation of the Front, led by its President, Maulana Abdul Ghafoor Ghaffari, had called on the Minister to [words illegible] teachers' demands.

The Minister assured the delegation that the Government would give due consideration to genuine demands of the teachers, but asked them to call off their strike in the national interest as such an extreme measure did not fit in the dignified nature of their profession.

The meeting ended without an agreement.

An official handout later said: "A 10-member delegation of teachers from NWFP, led by the President, Pakistan Teachers' United Front, Maulana Abdul Ghafoor Ghaffari, called on the Federal Education Minister, Mr Mohammad Ali Khan, and apprised him of striking teachers' demands.

"The Minister exhorted the delegation to give up illiterate labourers-like tactics and call off their strike in the national interest as teaching is a highly dignified profession and such an extreme measure does not fit in their status.

"He said that teachers' decision to go on strike at this stage will not serve any useful purpose rather, in fact, it goes against the children who are centre of our all hopes.

"He assured the delegation that the Government will give due consideration to their genuine demands but they should also realise that the nation does not expect from them such undignified behaviour. The teachers should adopt the way of mutual understanding in the greater interest of society.

"The teachers' delegation assured the Federal Education Minister that they will confer with their colleagues in the light of his advice and let him know about their re-considered plan of action."

THIRTY KARACHI UNIVERSITY STUDENTS FREED

Karachi DAWN in English 15 Mar 82 p 1

[Text]

Thirty University Students who were rounded up by the police for obstructing the normal functioning of the University administration were released on sureties furnished by the Vice-Chancellor.

A former student of the University, who was also apprehended for allegedly keeping obscene literature during the 'sit-in', was not released.

All the 30 students, including the President of the Karachi University Students Union, were received by a group of students at the Campus on Sunday morning.

The Vice-Chancellor furnished sureties in the sum of Rs. 5,000 each for the released students with an undertaking that they would not indulge in such activities in future.

Meanwhile, the same group gave 48 hours to the authorities for acceptance of their demands, including the withdrawal of the rustication orders of some students from the University.

The United Students Movement (USM) leaders called on the Vice-Chancellor and demanded withdrawal of rustication orders of all the students.

They also demanded that the next semester should begin immediately and the University should function without the scheduled vacations.

PPI adds: Police sources said the situation at the University was calm.

The terminal examinations at the Campus were held peacefully on Sunday.

The boycott of examinations was put off for 48 hours on the assurance of teachers that they would extend their full cooperation to the students for solving their problems.

PROJECT FOR TEACHING OF ARABIC IN SCHOOLS UNDER STUDY

Karachi MORNING NEWS in English 14 Mar 82 p 8

[Text] Islamabad March 13--President General Mohammad Zia-ul-Haq wishes that every Pakistani child should gain mastery over the Arabic language in order to remove the language barrier existing at present between Pakistan and other brotherly Muslim countries.

This was observed by Federal Education Minister Mohammad Ali Khan Hoti during his meeting with the visiting two-member educational delegation led by the Adviser to the President of Maldives Mr Ibrahim Saihab here this morning.

The Minister told the delegation that Government is actively working on a project aimed at teaching Arabic in all the schools of the country. About 10000 teachers wil lbe required to implement this project while there are only 3000 teachers in Pakistan at present he added.

The Minister maintained that the Government is also seriously considering a proposal to make compulsory the study of Quran Majjeed in primary and middle schools so that students should get it completed positively when they clear their middle standard examination.

The Minister highlighted the Government's present efforts to establish Islamic order in the country particularly the promulgation of Hadood Ordinance Zakat and Ushr the introduction of profit and loss sharing banks account system and the programme of establishing Qazi courts in Pakistan in the near future.

The Minister briefed the Maldivian delegation about the prevailing two different streams of education in the country and apprised it about the Government's efforts to bridge the present gap between the two. He paid glowing tributes to he Ulema who waged war against the British imperialism during subcontinent's war of independence in 1957 and continued to serve Islam and Muslim brethren through 'Deeni madaris' and mosques despite all sorts of hurdles and difficulties.

BODY TO IMPROVE POLICE EFFICIENCY

Karachi DAWN in English 15 Mar 82 p 1

[Excerpt]

RAWALPINDI, March 14: A Federal Cabinet meeting held here today under the chairmanship of President Gen Mohammad Zia-ul-Haq. decided to set up a committee, comprising senior police officials and headed by Sahibzada Rauf Ali, to implement the Mitha Commission Report, 1969-70, the recommendations of which somehow were not implemented because of various reasons, including financial and administrative.

Briefing newsmen, the Federal Information Secretary, Maj-Gen. Mujibur Rahman said the Cabinet also considered ways of making police better organised and more effective. The Cabinet also discussed the defects in the police force owing to lack of resources, development, and training of personnel. He said the Mitha Commission Report had made recommendations for immediate and long-term restructuring of policies and resources.

He said President Zia-ul-Haq had been issuing various directives from time to time aimed at improving working of the police and this committee now had been set up to implement those directives.

He said the committee would also have the guidance of various ministries like Interior, Finance and Establishment to sort out as to which recommendations of the Report could be implemented and how. The committee would take into consideration the problems of the provinces in the implementation of the Report and how to expedite [illegible]

AIMS OF ECONOMIC PROGRESS DISCUSSED

Karachi DAWN in English 15 Mar 82 p 9

[Text]

In a semi-tribal and semi-fuedal state like ours, industries could not be developed as much as they should have during the past 35 years. That is why our economy is still in its initial stages of development.

Pakistan's biggest problems is speeding its economic progress. The country has chosen for itself a mixed economy. The Vice-Chairman of the Planning Commission has also emphasised the same point and has described as futile the tussle between the private and public sectors. What is relevant is progress; whether we achieve it through one sector or another is irrelevant.

Those interested in the history of economic development of this country watched in surprise the bad way in which planning was done in this country. Sometimes there was an emphasis on the industrial sector, sometimes on the agricultural sector. On still other occasions the emphasis was on both sectors.

Our motto should be to have progress which could make the country self-sufficient in basic necessities.

We have seen indiscriminate nationalisation and heard about sick units. The experts who sent the majority of our manpower to work abroad and exported food items, have got us in a mess. The oil crisis, the annual payment of billions of rupees on external debts are draining our economy. No concrete base for progress can be found without first scrapping the economic base we inherited from a colonial past.

BRITISH TRADERS' APATHY TO PAKISTAN MARKET NOTED

Karachi DAWN in English 13 Mar 82 p 10

[Article by Yehia Syed]

[Text] London, March 12--The Pakistan economy is in a fairly healthy shape," reported the "Daily Telegraph" staff correspondent from Islamabad on Thursday in despatch headlined: 'British Bussinessmen Failing to Enter Pakistan's 'Goodwill market.'

"Four good harvests in a row achieved self-sufficiency in food grain last year," he wrote "unemployment is low and a large trade gap--some 1,250 million pounds last year--is financed by foreign aid and remittences from the many Pakistanis working abroad, particularly in the Gulf states."

The report quotes Mr William Fullerton, Commercial and Economic Counsellor at the British Embassy Islamabad as saying: "I'm often asked why the British don't come here as much as they used to. Businessmen here say that one within of business and there's 20 Japanese on the doorstep. They want to know why we're not capitalising on the tremendous amount of goodwill towards Britain."

Trade prospects in the Pakistan market, according to the report, "are considered good.' British exports for the last two years have been 139 million pounds and 140 million pounds respectively, capturing around six per cent of the market. Britain comes fifth in the world trade table--behind America, Japan, Saudi Arabia and West Germany.

"Industrial sector growth was eight per cent in 1979-80." the report said, "and total gross fixed investment increased by more than 20 per cent in the same year. At present the goodwill to Britain is such that Pakistani entrepreneurs will take British goods even if they are a little more expensive."

"The most fertile field for British expansion," the report said, is one common to the whoe area--joint ventures involving technical know-how from the foreign partner combined with domestic cheap labour and market contacts."

Particular emphasis is now being placed on developing joint ventures in engineering industry which is welcomed by the Pakistan Government to increase Pakistan's exports which were worth only 15 million pounds last year, the report said.

NEW STRATEGY FOR ENERGY CONSERVATION STRESSED

Karachi DAWN in English 13 Mar 82 p 4

[Text]

ISLAMABAD, March 12: The Finance Minister, Mr Ghulam Ishaq Khan, has urged the energy consumers to make use of un-utilised indigenous resources like coal and to optimise use of available surplus fuel to contain impact of current energy crisis on the planned growth of the national economy

The Minister, who was presiding over fourth meeting of the National Energy Policy Committee here on Thursday, emphasised the development of coal in Baluchistan on priority basis. He said that in addition to the development of bio-gas and solar energy, a comprehensive strategy should be evolved to develop investment in fuel wood cultivation and marketing on commercial lines.

The Minister also stressed the need for achieving maximum efficiency in the energy utilisation and its management. He said utmost attention should be focussed on conserving energy requirements which was vital in the overall national economic interest.

The National Energy Policy Committee discussed at length concrete steps for achieving energy conservation in the country. It decided that lead time should be established for inter-fuel substitution in all the consumption sectors of the economy and specific exercises concerning different economic activities would be undertaken to realise this objective.

The NEPC decided that the concerned Ministries should examine the proposed energy management ordinance which was designed to help the industries in abating waste and maximise use of available energy. It decided that appropriate recommendations should be formulated to provide incentives to the industries in this connection.

In view of the fact that the country does not have national oil specifications, the Committee considered promulgation of national specifications of petroleum products and decided that the matter should be finalised on priority basis, at all appropriate levels.

The NEPC expressed the view that since the process of hydrocracking the furnace oil to produce HSD and HOBC was profitable, this project should preferably be left to the private sector. This would conform to the Government policy to encourage involvement of the private sector in the field of energy also.

The Committee appreciated pace of work on long term energy planning and considered it a priority to further expand it to 25-year plan split into ten years investment programme in the country. The services of the foreign consultants would be required for this purpose.

It was reported at the meeting that the indigenous production of crude oil had improved to 11,320 barrels per day in February from about 10,000 barrels per day in the preceding month. It was further reported that Khashkheli would add another 4,000 barrels per day by June this year to push up the indigenous production of crude oil at about 16,000 barrels per day thereby meeting about 13.5 per cent of the total quantity consumed in the country.

The meeting, lasting four hours, was attended by the Minister for Petroleum and Natural Resources, Maj-Gen. (retd) Rao Farman Ali Khan, Deputy Chairman, Planning Commission, Dr Mahbubul Haq, Federal Secretaries for Finance, Planning and Economic Affairs and Food and Agriculture and senior officials of the Ministries of Industries, Production, Water and Power and Petroleum and Natural Resources.

BRIEFS

MORE REFUGEES FOR UNITED STATES--More refugees from Afghanistan will be able to migrate to the United States as a result of the US decision to raise the quota of immigrants from that country. A US mission source said in Karachi the quota has been raised to 1,600 Afghan refugees from Pakistan, for the year ending September next. Last year, it was fixed at 1,200. Meanwhile, there has been a steady flow in the migration of Afghan refugees from Pakistan to the US. From March last, when the airlift of the refugees began, till September 1981, a total of 1,134 refugees had left in search of new homes in the US. Since September last 394 more Afghan refugees have left Pakistan for the State. The source however, thought that the quota of 1,600 refugees for the current fiscal year may not be completely utilised. He listed cumbursome administrative procedure and difficulty in finding probable sponsors in the US as two major factors which may result in under-utilisation of the quota. [Karachi DAWN in English 13 Mar 82 p 8]

SCIENCE POLICY DEMANDED--The Pakistan Association of Scientists and Scentific Professions (PASSP) has called for announcement of national science policy as early as possible. The general body meeting of the association held on Thursday under the chairmanship of Dr A. H. Chotani, said in a resolution that delay in the formulation of the science policy was causing concern among scientists in the country. The PASSP called upon the government to consider various proposals submitted by it to the Federal Science Ministry in the form of a crash programme. It decided to set up a science centre in Karachi for which a 2,000 yeards plot has been acquired in Gulshan-i-Iqbal. A fund raising campaign for its construction will be launched soon. The meeting further decided to create a fund initially with Rs 30,000 for giving scholarships to deserving talented science students. Earlier, Dr. G.M. Khattak, Vice Chancellor, Agriculture University, Peshawar, was elected President. [Karachi DAWN in English 13 Mar 82 p 9]

EXAM BOYCOTT THREAT CRITICIZED--A meeting of the Central Working Committee of the United Students' Movement (USM) held here on Thursday criticised the "threat" by a section of the students to boycott the examination, says a Press release. The meeting presided over by Mr. Hasil Baloch also expressed surprise over the decision of the authorities to close the University from March 18. The meeting condemned what it described as police intervention" in the campus and demanded immediate release of all arrested students. [Karachi DAWN in English 13 Mar 82 p 10]

INDEFINITE TENURE FOR VIRATA DECLARED

Manila PHILIPPINES DAILY EXPRESS in English 17 Mar 82 pp 1, 10

[Article by Willie Ng]

[Text] President Marcos declared yesterday Prime Minister Cesar Virata would remain in office indefinitely.

This would do away with the earlier proposal to rotate the position of prime minister.

"There will be no rotation for the post of prime minister because of the economic crisis," the President told newsmen. "The present crisis does not allow the changing of horses in midstream."

He added that Virata "is at his best grappling with an economic situation."

Previous announcements of the President justified rotation of the prime minister's post as a way of giving opportunity to deserving officials to take a crack at the No. 2 government post.

The executive committee headed by Virata which handles day-to-day government operations is known as the training ground for future leaders.

The President said that anyone could have a chance at the post if he thought he could do better.

"And you are well aware that the prime minister is willing that we train as many as possible to handle the position," he said. "All of us are in agreement that one cannot be selfish in this thing, because nobody knows what will happen to the prime minister."

In a talk the day before with the foreign press, the First Lady, Minister of Human Settlements Imelda R. Marcos cited Virata for showing that "he is not only a technocrat, but one who is making an effort to understand the people and how the various programs would relate to the needs of the people in the rural areas."

Meanwhile, the Cabinet presided by Virata ordered yesterday the redrafting of the barangay elections bills in order to incorporate sentiments voiced in nationwide public hearings.

It was also announced by Deputy Prime Minister Jose A. Roño that a caucus of the ruling party, the Kilusang Bagong Lipunan (KBL), will be held tomorrow at the Batasang Pambansa before the question hour to consider the trend of public opinion on the barangay elections.

The KBL in a caucus held Jan. 14 had opted to implement the results of the referendum to hold barangay elections through the consensus method.

Because of the multiplicity of proposals the committee on revision of laws, codes, and constitutional amendments and the committee on local government of the Batasan decided to hold public hearings in the country's various regions to get a cross section of citizen views on the proposals.

The public hearings were conducted in the cities of Baguio, Legazpi, Iloilo, Cebu, Davao, Cagayan de Oro, and Zamboanga. A hearing en banc was held in Metro Manila at the Batasan building.

Perez reported to the cabinet the following findings of the teams:

1. Non partisan barangay elections.

2. Election through secret ballot, without being preceded by consensus. It is claimed that preliminary consensus impairs the credibility of the barangay elections as a whole, considering that the lupong tagapayapa which is to act as the arbiter is composed of persons appointed by the barangay captain.

3. Government employes and members of the Armed Forces should not be allowed to run for barangay office without forfeiting their positions.

4. Candidates should specify the position—whether barangay captain or councilman—he is running for and votes should be counted separately for each position.

5. Qualifications for barangay official shall be: 21 years of age on the day of election, Filipino citizen, able to read and write, actual resident of barangay for at least six months, and a registered voter of the barangay.

6 Location of voting centers shall be adjusted under the supervision of the Comelec to facilitate voter access.

7. Voters registered as of the June 16, 1981, presidential election and those who may have registered thereafter shall be entitled to participate in the barangay elections.

8 Term of office—four to six years depending on how barangay elections can be synchronized with other elections.

9. Campaign period—to be fixed by the Comelec but not less than 10 days nor more than 15 days. Date of election recommended: May 17, 1982.

10. Election protests to be under the jurisdiction of the city or municipal trial courts which shall decide case within 15 days from filing and the decision shall be immediately final and executory.

11. The Comelec shall supervise the elections.

12. The 1978 Election Code shall be applicable in suppletory character.

FIRST LADY INTERVIEWED BY FOREIGN PRESS

Manila PHILIPPINES DAILY EXPRESS in English 16 Mar 82 pp 1, 6

[Text]

THE FIRST LADY, Imelda R. Marcos, stressed yesterday that she would leave the government service as soon as President Marcos steps down.

She told foreign correspondents in a three-hour interview at the Manila Hotel that her stay in the government is "coterminus" with that of the President.

"When he steps down, I too, will step down," she said.

* * *

DURING the interview, Mrs. Marcos also said that:

- President Marcos is not meeting with opposition leader former Sen. Benigno Aquino Jr. or Nur Misuari, Moro National Liberation Front leader, during his visit to Saudi Arabia
- She will continue to oppose the legalization of divorce in the country as she did five years ago, saying she still believes strong family ties are the foundation of a strong society.
- She was satisfied with the performance of Prime Minister Cesar E. A. Virata whom she described as a technocrat who understands the people and relates government programs to their needs.

* * *

ON REPORTS that the President may meet with Aquino in Saudi Arabia, the First Lady said "the President doesn't have to meet him. He doesn't have to go all the way to Saudi Arabia to meet Aquino. He has no time for that."

She also dismissed reports that the President is ailing. Except for occasional bouts with allergies, she said, the President is in fine physical shape.

"The President, in fact, is more fit than I am," she said, noting his personal discipline in diet and sleeping habits.

Asked about the cost of projects which she has initiated, the First Lady said she had never been "extravagant" on the projects.

She said "extravagance arises from the input of beauty" as she strives not only for a project to be "good and true" but also to be beautiful.

BRAIN DRAIN PROBLEMS DISCUSSED

Manila PHILIPPINES DAILY EXPRESS in English 16 Mar 82 p 24

[Article by Tenny F. Soriano]

[Text] THE REVERSE transfer of technology, or more popularly known as "brain drain," is taking a heavy toll on the already stunted growth of science and technology in most countries of Asia including the Philippines.

Here, the phenomenon of highly scientific manpower moving out of the country to more lucrative labor markets like the Middle East, the United States and Canada has prompted the government to initiate two moves to win back its scientists.

One was Presidential Decree No. 1502 providing for a system of incentives and administrative reforms to promote efficiency and productivity of scientific and technological research. The other is PD 819, otherwise known as "Balik-Scientist" program, which seeks to lure overseas Filipino scientists to return home and apply their knowledge to the development programs of the nation.

Of the 217 scientists who heeded the call and received their awards in 1975, 89 came back for the second time to serve for a period of two weeks while another 119 came home to fulfill their contract to work with the government and the private sector.

* * *

THE BRAIN drain is but one of the major stumbling blocks that defer scientific and technological advancement in this part of the world, National Science Development Board officials say. It is for this reason that the nation's five-year plan for science and technology seeks to do away with the main obstacles and in the process proceed to achieve its two-pronged objectives of increasing national productivity and world competitiveness.

The reverse transfer of technology will be a principal agenda to be discussed in a science meeting to be hosted by the Philippines on March 22 this year.

This will be the "Second Conference of Ministers Responsible for the Application of Science and Technology to Development and Those Responsible for Economic Planning in Asia and Oceana," or CASTASIA II for short.

* * *

THE FIRST CASTASIA meeting was held 13 years ago in New Delhi and since then, concerned officials of the region have concluded that after this span of time, science and technology need to be assessed as it is currently "not moving in the right direction." They blame several factors, which are prevalent worldwide, like the high cost of oil imports, the apparent lack of resources in many developing countries and, of course, the mass exodus of Asian scientists.

The last problem, they say, indicates a situation in the region where there is a surplus of science graduates and a prevalent pattern of external brain drain. This is usually accompanied by internal brain drain, a situation where graduates cannot practice their profession or cannot be employed.

* * *

IN THE Philippines, the number of scientists engaged in research and development in agriculture and natural science has apparently increased. Some of them are being absorbed by the government.

There is likewise a glut in the number of engineers. But only agricultural engineers seem to have a better chance of being taken in, and only a mere one percent of other engineers can be employed by the government in its various research and development programs.

* * *

IN ITS position paper for the forthcoming CASTASIA conference, the Philippine panel has predicted that the number of medical science graduates will remain constant. However, government demand for research and development projects will increase steadily, which means less and less scientific manpower will be left available to the private sector.

As it is, the country's medical scientists, are shrinking in number. Natural scientists, on the other hand, may be a bit luckier because the government's manpower requirements up to 1984 will accommodate at least 47 percent of them.

The Philippine report said modest gains have been made in science and technology in the country despite all the problems. It said progress was made as a result of extensive research and development programs in the fields of energy, agriculture, natural resources and social sciences.

In the field of energy alone, the country has successfully discovered alternative, new and renewable, energy sources like hydro and geothermal power.

At present, the country has five 55-megawatt plants and two 3-megawatt plants in Leyte and Negros Oriental.

Moreover, the country has 25 potential areas for geothermal development. In addition there is another 7,000 megawatt capacity from large hydroelectric sources based in Luzon and Mindanao. (NMPC-OMA)

PHILIPPINE SAUDI TRADE INCREASE

Manila PHILIPPINES DAILY EXPRESS in English 17 Mar 82 p 7

[Text]

IN 1974, the Philippines and Saudi Arabia agreed to act on all issues of importance to both of them in all international conferences.

A joint statement embodying this agreement was signed by Deputy Foreign Minister Manuel Collantes and Deputy Foreign Minister Sheikh Al-Sultan of Saudi Arabia when the latter made a three-day goodwill visit to the Philippines in February 1974.

The Philippines also reassured Saudi Arabia of its support on the Palestinian question within the framework of the relevant resolutions of the United Nations.

SAUDI ARABIA is given primary importance in the Philippines' diplomatic campaign to promote closer relations with the Arab world because of its pivotal role in international affairs and because of its close historical ties with Muslim Filipinos.

To insure a continuous supply of oil from Saudi Arabia to the Philippines, President Marcos wrote King Faisal a letter, which was personally delivered by Foreign Minister Carlos P. Romulo in Riyadh in November 1973.

The government made other moves which eventually resulted in the Philippines being classified among the nations friendly to the Arab world, entitled to a regular supply of oil, in the meeting of the Organization of Petroleum Exporting Countries in Kuwait on Dec. 23, 1973. It is generally believed that much of the credit for this favorable decision should be given to Saudi Arabia.

***

IN APRIL 1975, the First Lady, Imelda R. Marcos, visited Riyadh as the President's personal representative. She was assured by Saudi officials that they would support the Philippine government's policy of exploring possible means of a peaceful settlement of the Mindanao problem.

In February 1977, Saudi Arabia and the Philippine signed an agreement establishing air traffic between the two countries The agreement is very significant to Muslim Filipinos because it opened to them a new means of access to Mecca the Holy City of Islam.

In May 1977 a special mission headed by Foreign Minister Carlos P. Romulo met with Foreign Minister Prince Saud to discuss bilateral issues. The members of the mission were Defense Minister Juan Ponce Enrile and Solicitor General Estelito Mendoza. They were accompanied by Ambassadors Lininding Pangandaman and Pacifico A. Castro.

***

SINCE the opening of diplomatic relations in 1973, exchanges between Saudi Arabia and the Philippines have been increasing in commerce, culture, education and other fields. Saudi Arabia has also given aid to Filipino Muslims through government or private institutions.

Among the concrete symbols of the strong ties between the two countries are the King Faisal Center for Islamic and Asian Studies at the Mindanao State University in Marawi City, the Golden Mosque in downtown Manila, and Saudi assistance to mosques and madrasah (Islamic schools) in various parts of the Philippines.

In 1981, Ambassador Pangandaman was recalled to Manila after serving as envoy to Saudi Arabia for more than eight years. The new envoy, Ambassador Benjamin Romualdez, presented his credentials to King Khaled on May 24, 1981.

IN THE NINE months that Ambassador Romualdez has been envoy to Saudi Arabia he has taken steps to improve the Philippines' relations not only with Saudi Arabia but also with other Islamic countries.

Under his direction, the Philippine embassy in Jeddah organized an

information mission to key member-countries of the Islamic Conference Organization and to the 1981 Islamic Conference in Baghdad.

The special mission gave the Philippine government headway in its campaign to give the Islamic countries the true picture of the situation in Southern Philippines.

THE PHILIPPINE embassy in Jeddah also began an intensive information campaign to counter the propaganda of the Moro National Liberation Front on the Mindanao problem.

The embassy started negotiations on an economic and technical cooperation agreement with Saudi Arabia. The agreement is expected to correct the trade imbalance which at present is in favor of Saudi Arabia.

The embassy organized a week-long Philippine food and cultural festival as part of the Independence Day activities last June and set up the Philippine trade and industrial exhibit last December in cooperation with the Ministry of Trade and Industry.

THE EMBASSY helped repartriate 26 stranded Filipino pilgrims and 300 stranded Filipino contract workers, besides interceding in the settlement of about 200 labor disputes involving about 5,000 Filipino laborers. These acts helped remove irritants in Saudi-Philippine relations.

Last year, the Philippines announced its support for Prince Fahd's eight-point peace plan for the Middle East. President Marcos reiterated the Philippines' endorsement of nations during an interview with six visiting journalists from Saudi Arabia last October.

CHINA COCONUT OIL PURCHASE

Manila PHILIPPINES DAILY EXPRESS in English 13 Mar 82 p 11

[Text] THE Philippines and China have concluded a commodity trade protocol for 1982 under which China will buy 25,000 to 50,000 tons of Philippine coconut oil in exchange for 650,000 to 900,000 tons of crude oil.

The protocol, signed here, was the sixth since the Philippines and China set up a joint trade committee which meets annually to draw up lists of commodities to be traded between them.

This year, China will import from the Philippines as much as 50,000 tons of coconut oil, 40,000 to 80,000 tons of copper concentrates, 40,000 to 100,000 cubic meters of lumber, 30,000 to 50,000 tons of chrome ores, and 400 to 1,200 tons of tobacco leaves.

The Philippines will buy a minimum of 650,000 tons of Chinese crude oil, 2,000 tons of kenaf and 400 to 500 tons of white mineral oil.

* * *

CHINA also agreed to import substantial quantities of raw sugar, plywood, cashew nuts, television picture tubes, synthetic fibers, refined glycerine and other commodities.

The Philippines will buy from China glacial acetic acid, coal, textile, steel billets, sulphonamide paracetamol, machinery and equipment, minerals and mineral products, as well as industrial, agricultural and pharmaceutical chemicals.

A significant trade imbalance against the Philippines was noted by both parties when a review of trade transactions was made during the negotiations.

This prompted China to reaffirm its desire to import new products from the Philippines to correct the trade imbalance.

Twenty-three non-traditional products were offered by the Philippines for export to PROC as an initial step to correct the trade imbalance. These are: dessicated coconut, fatty alcohols, gum copal, raw and processed coffee, garments, toys, fruit juices, fruit puree, coffee, creamer, sugar confectioneries, polyamides, yarns, fiberglass insulation, bonded fiber fabric, soap and detergents, ferro silicon, calcium carbide, tires and tubes, flat glass (clear and figured), bottles for softdrinks (flint and green), woven polypropylene bags with inner polyethylene liner, door jambs, stops and casings, utility vehicles and nickel.

PRESS REPORTS DEBATE ON SATTAR'S PARLIAMENT SPEECH

Muslim League, Awami League, Others

Dacca THE BANGLADESH OBSERVER in English 26 Feb 82 pp 1, 12

[Excerpts] The general discussion on President's speech continued for the fifth day on Thursday in the Jatiya Sangsad. The Treasury Bench members termed the President's speech as pragmatic while the Opposition members termed it as a speech without any sense of direction.

Kazi Kader

Kazi Kader of Muslim League (Sabur) alleged that the President had failed to fulfil the promises he made during the election. He said that change of Ministry was not the solution to the problems. He said that the Ministers were in an uncertain position. Today they are ministers and tomorrow they are ousted he noted. He said that the liquidity position in Bangladesh Bank had come down to 13 per cent from the required 25 per cent.

Abdul Latif

Participating on the President's speech at the Parliament Mr Abdul Latif Khan (AL-H) said that the President's speech did not reflect the real problems of the country. He said it was expected that the President in his speech would announce abolition of Gram Sarkar and the Jubo Complex, which he felt was responsible for corruption oppression and many other misdeeds in the country. He alleged that Gram Sarkar members in the last presidential election were used as 'lathial' of the present regime.

He criticised the Government for importing luxury goods in the import policy. Bribery and illegal gratification were rampant everywhere including court and government offices. He alleged that murderers were moving at large. He cited that a particular murderer of Khulna who deserved capital punishment had been at large.

And the cases against him had been withdrawn from the Home Ministry. Mr A. Latif Khan suggested three measures. The measures are separation of the police from the investigating authority, the magistrate who would deal judiciary whould not be given other functions and allow the judiciary to function independently and appoint required number of judges.

A. S. M. Solaiman

Mr A. S. M. Solaiman of Gono Front advocated free economy for the country. He said that required political cadres for establishing socialism was absent in the country.

He criticised tnat the President's speech did not refer anything to the 11000 bank employees who lost job. He said that uncertainty loomed over the politics of the country. He felt that it was not wise to bring the armed forces in politics. He urged the members of the armed forces not to involve themselves in the politics. He hoped that the members of the army would not commit such a mistake.

Abdur Rahim

Maulana Abdur Rahim, chief of the Islamic Democratic League alleged that President Sattar had hit hard the democracy with axe by ignoring the Parliament for more than seven months bypassing the parliament. The Maulana further alleged that the President symbolised him as a dictator and established one man's rule in the country. President Sattar did not fulfil the commitment of President Ziaur Rahman that the Parliament would sit for six months a year.

Maulana Abdur Rahim who was a presidential candidate in the last presidential election alleged that the election was not fair and free.

Anowarullah

Participating in the general discussion on President's speech Col. (Rtd.) Anowarullah (Al-Hasina) made a strong plea in the Jatiya Sangsad on Thursday that the role of our Armed Forces in nation building activities should be discussed and considered. He told the House that when all the political institutions in the country are either divided or engaged in internecine quarrel, corruption was rampant, law and order situation deteriorated and the country was facing crisis in all fronts, it was not unjustified on the part of the Armed Forces which is a strong and united institution to give their reactions on these issues.

Col. (Rtd) Anowarullah said that our Army was formed as a non-political professional force 200 years ago. But our Armed Forces participated in the Liberation War in 1971 inspired by the spirit of nationalism. Those who could not participate directly had their mental participation, he added. He further said that it was therefore natural that this Army would be sensitive on national issues and they cannot be silent spectators to the happenings around them. He said that the Army chief had echoed this sentiment through his statement and it was not unjust and wrong. When the Government servants speak on certain national issues through their associations, the political parties do not say anything but when Army speaks they find it wrong. He regretted this attitude.

The Awami League leader said that "we shall make a mistake if we think that Army cannot be sensitive about the country and the nation and would

not say anything. He stated that Bangobandhu realising this reality ensured the participation of Army in the nation building activities.

Rashed Khan Menon

Mr Rashed Khan Menon (Workers' Party) said that the role of the Armed Forces in nation building activities should be discussed. He regretted that he wanted to discuss the issue in the House but was not allowed.

More Opposition Speeches

Dacca THE BANGLADESH TIMES in English 28 Feb 82 pp 1, 12

[Excerpts] The President's policy statement came under fire from the Opposition bench in the Jatiya Sangsad who said that it failed to offer any guideline for the nation for squarely facing the country's problems.

Sirajul Islam

Advocate Sirajul Islam (AL-H) criticised the President for failing to provide any accounts of Bangladesh's share of assets from Pakistan.

Shafiquallah

Al-Haj Shafiqullah (IDL) said that Government's failure to discharge its duties had increased the possibilities of a takeover by armed forces. He urged the Government to take effective steps to discharge its functions.

The IDL member called for taking effective measures to curb corruption. He also demanded proper action against violators of law and order and demanded exemplary punishment for the persons responsible for hurling bombs at a campaign procession during Dacca University student's union elections last month.

Mr Golam Mostafa (JSD) claimed that the entire country had been plunged into an anarchic situation in the absence of proper planning.

M O Ghani

Dr M O Ghani (Ind) said that the nation's future was bleak. He called for taking the political and economic crisis seriously and tackling them constitutionally. Dr Ghani also regretted the delay in convening the Jatiya Sangsad session.

Demanding resignation of the President, Mr Lutfar Rahman (AL-H) observed that he who tolerated corruption was also equally guilty. He demanded return of power to the elected representatives of the people. He also called for an account of the expenditure on the canal digging programme.

Razia Faiz

Begum Razia Faiz (BML) termed the President's speech as a charter of national failures. She said that it could not provide any sense of direction to the nation. It totally ignored the food crisis.

Begum Faiz also criticised the Government for failing to take steps to tackle the problems of corruption. She demanded that the Vice-President should be elected, Parliament committees should be strengthened and Satkhira sub-division in Khulna should be declared a famine affected area.

Four Opposition bench Members took place in the discussions during the evening sitting of the House, namely, Mr Mohammad Toaha of Samyabadi Dal (Marxist-Leninist), Mr Mosharraf Hossain, Mr Siddiqur Rahman and Mr Mohammad Mohsin; all of Bangladesh Awami League (Hasina).

Toaha

In his address Mr Mohammad Toaha pointed out that President Sattar in his address to the parliament had referred to land reforms. The President had not, however, mentioned anything about achieving it.

Mr Toaha pointed out that problems of national life could not be solved without 'fundamental land reforms.'

The chief of Samyabadi Dal criticised the Government for its 'wrong industrial policy'. He said that President Sattar in his address said that the Government had approved 6,000 industrial projects. 'We wish to know how many of these have actually beenimplemented' Mr Toaha told the House. He called for 'adequate protection' to the local manufacturing industries.

Mr Toaha hailed Army Chief General Ershad for his statement regarding the role of the Armed Forces in the politico-economic life of the nation. Mr Toaha termed the statement of General Ershad as 'very crorect'.

Siddiq

Mr Siddiqur Rahman of (Al-H) said that from the President's address to Sangsad it appeared that nobody in Bangladesh was in want and that everybody could afford two square meals a day. Nothing, he said, could have been further from reality.

The Opposition Members who particpated in the Friday's discussions on President's speech were Mr Ataur Rahman Khan (BJL), Mr Lutfur Rahman (Al-H), Mr Satish Chandra Roy (Al-H), Dr M O Ghani (Ind), Mr Nazrul Islam (Al-H), Mr Golam Mostafa (JSD), Begum Razia Faiz (BML), Advocate Sirajul Islam (Al-H), Mr Abdul Matin Mia (JSD), Alhaj Shafiqullah (IDL) and Principal Nazrul Islam (Al-H), Mr Mosharaff Hossain (Al-H), Mr Siddiqur Rahman (Al-H), Md Mohsin (Al-H), Md Toaha (BSD), Mr Rezaul Alam Khandaker (IDL), Mr Hasnat Md Abdul Hye (Ind) and Mr Abdus Sattar Khan Choudhury (BML).

DEMOCRATIC LEAGUE DEMANDS NEW ELECTIONS

Dacca THE NEW NATION in English 2 Mar 82 pp 1, 8

[Excerpt] Democratic League demanded immediate election to the Parliament in the interest of national stability and for materializing people's aspiration.

In a press release issued yesterday Democratic League held the view that the nation was facing a critical moment with alarming food situation, destroyed economy, downward trend in production in mills and factories, unprecedented inflation, exhausted foreign exchange reserve and being a market of foreign goods.

The press release said along with the staggering economic condition political situation had also become alarming. The government had led the nation to a state of calamity by compromising with its foreign master on the question of state independence and soveriegnty belying the policy of establishment of a government of people's representatives based on parliamentary democracy.

The press release maintained late president Ziaur Rahman had crippled the parliament. The incumbent President has failed to preserve the sanctity of the Constitution and recent affairs made to believe that the President had become dependent on others.

CSO: 4220/7943

DEMOCRATIC LEACUE GENERAL SECRETARY SUSPENDED

Dacca THE NEW NATION in English 2 Mar 82 p 1

[Text] General Secretary of Democratic League Shah Moazzem Hossain has been suspended for alleged involvement in activities detrimental to the party interest.

A decision to this effect was taken at an emergency meeting of the party central committee in Dacca on Sunday with Khandaker Mushtaque Ahmed in the chair.

In a resolution, the meeting alleged that Shah Moazzam Hossain had also failed to discharge his responsibility and had tarnished the image of the organisation.

The meeting also decided to serve a notice on Shah Moazzem asking him to show cause within 15 days as to why he would not be expelled from the party. If he fails to do it within the stipulated time, he would be treated automatically expelled, it said.

The meeting also decided to suspend the agriculture secretary Miah Musa Hossain on similar charges. The charges brought against both of them were also proved at the meeting.

Meanwhile, member of the party central committee Miah Abdur Rashid has been given responsibility of acting general secretary of the party till the election.

EXCERPTS FROM FOREIGN SECRETARY'S DELHI SPEECH

Dacca THE BANGLADESH TIMES in English 27 Feb 82 pp 5, 6

[Excerpts from the speech of Foreign Secretary Humayun Rashid Chowdhury at the New Delhi Consultation of Developing Countries on Food and Agriculture]

[Text] For the 125 million children who will be born in 1982 the facts of life are than 12 million will be dead before their first birthday and another five million before their fifth. Some time ago, FAO estimated that the number of severely undernourished people in the developing market economy countries rose from some 360 million in 1969-71 to about 420 million in 1974-76. The vast majority of the undernourished live in Asia, with heaviest concentration in South Asian region. One in every three children in sub-Saharan Africa at present is undernourished and roughly 4 per cent of them are on the verge of starvation. Worst of all, the number of population living below the poverty line or a level of income necessary to ensure a minimum diet have been increasing over time. Their absolute number is currently estimated by the World Bank at some 800 million, most of them confined in rural areas.

But, can these data, stunning as they are, ever reveal the distress and sufferings, the miseries and frustration that lie behind them?

For vast numbers of the developing countries agriculture is the mainstay of the economy. And clearly, a break through in this sector, in conjunction with a planned growth in population, holds out the best chances for economic emancipation of many of us. The findings of a survey of 16 developing countries by the World Bank affirms this in these words:

"The crucial obstacles to eliminating absolute poverty are the failure to create enough non-agricultural jobs, fast population growth, and the inequitable development of agriculture."

Agricultural success together with proper income distribution generates domestic demand for industrial products, supplies food at reasonable prices and raw materials for agro-processing, earns foreign exchange to finance imports of capital and intermediate goods for industry and creates the climate for labour intensive industries in small towns and villages. Experience has also shown how difficult it is to achieve balance of payments adjustments in countries that have lagged behind in agricultural production. Yet, inspite

of its overwhelming importance, developing countries with more than two-thirds of the global population and 91 per cent o agricultural employment are responsible for only 44 per cent of the world food production.

Globally, food production has grown marginally faster than population, and in the developing countries it rose by over two and a half per cent annually between 1950 and 1975. But demand for food has grown by well over three per cent a year with a rise in population, as well as income-level in some of these countries. As a result, the developing countries have rapidly increased their imports of cereals, from relatively low levels in the 1950s to 20 million tons in 1960-61 to over 97 million tons in 1980-81. On the basis of current trends, the Third World countries could be importing 145 million tons of food by 1990, 80 million of which would be needed by developing countries, in Asia and Africa. Given the prevailing economic condition, it is unlikely that these countries' export earnings or even additional aid can finance the massive imports. Even if the quantity needed is available, the huge task of storage, transportation and distribution will pose virtually insurmountable difficulties.

We have to keep a number of other important considerations in view. For instance, the developing countries suffer from a serious deficiency in purchasing power. Imports wring from them 20 billion dollars--at a time when their energy bills quadrupled within 24 months.

More alarming is the long-term worsening of the terms of trade of some major exports of these countries. The capacity of many of these countries to shop abroad for food or energy or other essentials partly depends on the ability to sell their export products, such as jute, rubber, palm oil, tea, tropical hardwood--the prices of which have slumped. Ten years ago, the export proceeds of one ton of tea could finance only 8 tons of fertilizer and tea prices continue its downwards slide in real terms. Likewise, one ton of banana exports covered the cost of one ton of imported steel ten years ago. By 1979, to buy the ton of steel, over two tons of banana had to be sold.

Significantly, food imports are also becoming more expensive. According to FAO while the volume of cereals imported by most seriously affected developing nations and lesser developed nations increased by 14 per cent between 1967-79 and 1976-78, the prices they paid almost doubled and the freight bills quadrupled. [as published]

Also, can we even ignore the dangers to world food security from possible climatic, logistical and political factors arising out of high and growing concentration of international grain supplies in one geographical region. These are good enough reasons for the development of alternative sources of supply, particularly in developing countries.

But, what do we find in reality? Generally, production increases were the smallest where they were most needed--in the poorest countries. The annual report of the World Bank in 1981 stated that 26 countries with a population exceeding 250 million were reporting food shortages. The average increase in agricultural output of the least developed countries is about 1.6 per

cent a year, while their population is growing at 2.6 per cent. During the past decade, production growth has kept pace with population growth in only five of them. Annual fluctuations are very great and this adds further to food insecurity. Population in more than a third of these countries are malnourished, and their dietary energy supplies cover only 86 per cent of their needs. In more than 45 developing countries, production failed to keep pace with population growth, let alone the increased demand for food resulting from people earning higher incomes usually in towns.

The picture is grim enough already. And it will get worse if we, the community of nations, do not take immediate, vigorous and comprehensive action to tackle the situation. We must act promptly and prudently. And we must act now. In introducing FAO's publication "Agriculture: Towards 2000", its Director General Mr. Sauoma observed:

"By the end of the century world population will surpass 6 billion, against less than 3 billion twenty years ago and 4.3 billion today, the labour force will increase to over 2.5 billion or 40 per cent more than today. The agricultural sector must be able to produce the food needed for the expanding population, 90 per cent of which is in developing countries. Almost 50 per cent more food would have to be grown in the year 2000, if only to meet present inadequate intake levels, yet additional food supplies will be needed by the end of the century, to conquer famine and malnutrition and to accommodate the requirements for improved nutritions as well as the demands arising from higher incomes".

As for abolition of hunger, the international community has already ignored in practice the target of mid-1985 set by the World Food Conference. We must not allow the same fate to meet the International Development Strategy in which we all agreed only as recently as December 1980 that "Hunger and malnutrition must be eliminated as soon as possible and certainly by the end of this century." The North-South Summit of 22 nations in Cancun last October also asserted the same objective.

How do we achieve this? The IDS for the Third Development Decade agreed that long-term measures were needed to step up food production in developing countries "which is the only lasting way to obtain food security". For this the target rate of growth of 4 per cent must be achieved. At the same time, the purchasing power of the poorest section of the population must be raised so that their requirement for food intake is backed by adequate effective demand. Achievement of sustained higher growth at this rate calls for modernization of production processes in developing countries. Purchased inputs need to be increased and resources used more intensively in conjunction with an expansion of the land base. The funds and the physical quantities of inputs needed are huge. FAO estimates the value of inputs for 90 developing countries to double from 1980 to 1990, and then almost to double again by the end of the century. Obviously, a large part of these requirements will have to come from the developing countries themselves. However, a part of the requirements must come in the form of external assistance, as compared with the actual 1977 commitments of 4.3 billion dollar, will rise to 12.7 billion dollar in 1990 and 16.8 billion dollar in 2000. Yet, this sum

of money when compared with the global military expenditure, which has been estimated by the Brandt Commission Report at 450 billion dollar annually, appears miniscule. Can we not forego production of a few weapons of self-destruction to rid humanity from the scourge of hunger and malnutrition?

Do the developing countries have the potentiality to optimally utilize these investments? The answer is an unhesitating yes. For instance, differences in average productivity between developed and developing countries remain enormous with crop yields twice as high on average in developed countries and labour productivity 8-9 times. Developing countries still have substantial under or unutilized land resources and estimates show that 205 million hectares of this land could be brought under cultivation by 2000.

The world has the potentiality as well as the technological, scientific and financial capability to win the war against hunger and malnutrition. Yet the prevailing mood has enough cause for concern. The largest single source of capital assistance for food and agriculture and for rural development is the World Bank. Its affiliate, the International Development Association, which is a major source of low-cost loans for agricultural projects in the poorest countries, now faces serious resource constraints, because of reduced contribution by its major donor to the Sixth Replenishment. It is also unfortunate that this has prompted some other donors to reduce their respective contributions. As a result, IDA is reportedly planning to reduce its assistance programme for the current year from projected 4.1 billion dollar to 2.6 billion dollar. Such drastic cut will severely hit the development programmes of the poorest developing countries, more so, because they are already facing the crunch in the flow of external resources from other sources. Agreement regarding another key source of funding for agricultural development, IFAD, has just been reached for replenishing its capital to the extent of 1.1 billion dollar. We welcome it. But replenishment of 1.5 billion dollar was necessary.

A four per cent target for yearly average increases in developing countries has been called for often: in 1970 in the Second IDS, in 1974 by the world Food Conference and in 1980 in the Third IDS. But, this time it is a race against time and we must win.

Meanwhile, availability of food aid remains a matter of grave concern for food deficit developing countries. Although food aid does not address the longer term problem of hunger and malnutrition, its improtance as an essential, interim measure has been accepted. The World Food Conference in 1974 set minimum target of 10 million tons of cereals a year which was about 0.6 per cent of annual world production. This modest target has not been met. The 1980 Food Aid Convention agreed to provide 7.6 million tons of food aid. This is hardly half the quantity that FAO estimated the recipients to be needing in the 1980s. The Third IDS estimated that between 17 to 18.5 million tons of cereals would be needed as food aid by 1985. A matter of additional concern is the fact that the companion International Wheat Agreement is yet to be agreed upon. Food aid in dairy products also remain low. There is an estimated requirement of 300,000 tons of dairy products and 350,000 tons of vegetable oil by 1985. Also, resources of the World Food

Programme, which provides assistance under Food for Work Programme, needs to be augmented to the level of $1.2 billion. This was called for by the 36th UNGA last December on the basis of voluntary contributions.

The 7th Special Session of UNGA and the Third IDS sets a target of 500,000 tons of cereals for an International Emergency Food Reserve (IFFR). But so far no reliable mechanism has been in place for maintaining reserves by annual replenishment and contributions have been erratic. Food reserves can provide cushion against devastating sudden shortages due to widespread crop failures, natural disasters or excessive price inflation. Therefore, IFFR should be incorporated in a legally binding convention.

Six years have elapsed since the FAO council adopted the International Undertaking on World Food Security, which called for the establishment of an internationally coordinated system of national reserve stocks. A large number of countries have subscribed to it so far. But it is still voluntary in nature making its application as uncertain as ever. This uncertainty must be overcome and the Undertaking should be turned into a legally binding instrument in a new International Wheat Agreement.

The low-income food deficit countries need balance of payments support for meeting their food import bills. This was also recommended by the IDS. We are happy to note that last year IMF agreed to establish a food financing facility to assist these countries facing abruptly increased food import bills. But we hope that the facility will have wider scope, flexible conditionality and soft repayment terms. At the same time, we also welcome the World Bank's decision to help fund food storage and reserve programmes and we hope that this programme will be raised to a sufficient level to meet the growing requirements.

Protein deficiency in the developing countries, particularly the least developed among them, is yet another area of concern. Proper management harnessing and exploitation of fisheries resources, both marine and in-land, will go a long way to meet their growing protein needs. Over 90 per cent of the world commercial fish catch comes from the exclusive economic zone of 200 miles. As soon as a new Law of the Sea Convention is adopted, these countries will need financial and technical assistance to develop capability and know-how to gainfully utilize these resources. Similarly in-land fishing holds great promise for all of us, including the land-locked countries. We hope, FAO and other multilateral and bilateral sources will be forthcoming in these respects.

The 7th Special Session of UNGA recognized the great importance of trade policy measures to augment agricultural production. The willingness of the developed countries to absorb a greater quantity of exportable surplus of food, agricultural, fishery, forestry and tropical products of the developing countries will generate the much-needed incentive. Their increased earnings will, in turn, create demand for exports of developed countries. But, international trade in agriculture has suffered all along under rigorous restrictive measures and the developing countries continue to face serious obstacles. The Tokyo Round of Multilateral Trade Negotiations was also a disappointment in this respect. This situation must be redressed.

We believe that there is imperative and urgent need for international efforts for establishing food security on a reliable basis which will, (a) ensure that the food importing developing countries, particularly the least developed among them, have access to resources to import the minimum quantum of food to protect their population from hunger and malnutrition, either as grant or on easy credit terms, (b) create a dependable system of food reserves to guard against fluctuations in production and prices, (c) a substantial increase in investments and flow of external resources to accelerate food production in developing countries to achieve the 4 per cent target and (d) development of research and training. Also, the needs and requirements of the least developed countries as agreed in the Substantial New Programme of Action adopted in Paris last year should receive unqualified support and assistance from the international community.

We, the developing countries, can achieve the breakthrough in the field of food and agriculture. India and the Philippines have done it. My own country, Bangladesh, has assigned top-most priority to agricultural development with a view to achieving self-sufficiency in food within the shortest possible time. Last year, we were able to reduce our food deficit from over 2 million tons to a million ton. But our agriculture is still overwhelmingly dependent on nature as has been proved again by this year's drought. Therefore, we need to be better equipped and we need resources.

CHOWDHURY TALKS TO PRESS ON SOUTH-SOUTH MEET

Dacca THE BANGLADESH OBSERVER in English 27 Feb 82 pp 1, 8

[Text] The just concluded 44-nation informal consultations on global negotigations and cooperation among developing countries made a forward movement, Foreign Secretary Humayun Rasheed Chowdhury said in Dacca on Friday reports BSS.

The Foreign Secretary was talking to newsmen on return from New Delhi where he led the Bangladesh delegation at the consultations also known as South-South Dialogue.

The meeting he said succeeded in making forward movement for South-South cooperation and a common position on North-South issues although there were differences of opinion among the participating countries.

Bangladesh, he said, called for cohesion and solidarity among the developing countries on North-South issues.

He said that the major objectives of the Bangladesh delegation to project and safeguard particularly the concerns of the least developed countries both in the context of South-South and the North-South were attained.

The Foreign Secretary said that Bangladesh played an "active and contributory" role towards the success of the meeting in pursuance of the objectives and "our common approach with other developing countries on the global round of negotiations (GRN)".

He said that Bangladesh made the keynote speech on food and agriculture and many of its (Bangladesh's) proposals were incorporated in the final document which was the summary of the Conference Chairman.

Bangladesh he said made a comprehensive statement strongly pleading for cohesion and solidarity of developing countries laying emphasis on energy, water resources and agricultural inputs.

Bangladesh strongly endorsed Nepal's proposal for greater regional and sub-regional cooperation in the field of harnessing water resources for common beneficial uses particularly generation of hydro-electricity for benefit of Nepal, India, Bangladesh and Sri Lanka he said.

The Foreign Secretary said that Bangladesh also stressed on the initiative taken for enhancing regional cooperation as an action complimentary to South-South cooperation.

He said emphasis on South-South issues was placed regarding the special position of the Least Developed Countries for strengthening the overall cooperation of the Third World Countries.

He said the support to Nepal's proposal was in line with increasing South-South cooperation.

Mr. Chowdhury said "we think the sub-continent has enough water resources for harnessing for the common benefit of people in the region".

He added that hydro-electricity was a very important energy source that could replace to a great extent "our need of hydro-carbon".

Mr. Chowdhury said the South-South dialogue helped in understanding each other's position in taking fresh initiative towards the global round of negotiations already delayed by 18 months.

It was agreed at the meeting he said that the global round of negotiations should be launched without further delay.

The Foreign Secretary said that the meeting gave a new impetus to Caracas action programme on economic and technical cooperation among developing countries.

The basic rationale behind Bangladesh's approach on strengthening South-South position for the North-South Dialogue he said was not only to bring the least developed countries hardest hit by current economic crisis in to development process but also for immediate launching of various programmes that received support of UN General Assembly and the Paris Conference for their (LDC) survival.

He said the interventions of his delegation on different issues including food security, substantial increase of investment particularly for ameliorating the food situation was well received at the meeting and reflected in its final document.

He said his delegation also strongly pleaded for immediate launching of the substantial new programme of action for the least developed nations approved by the UN General Assembly and the Paris conference.

SHEIKH HASINA RETURNS FROM UK, DELHI VISITS

Dacca THE BANGLADESH OBSERVER in English 27 Feb 82 pp 1, 8

[Text] Sheikh Hasina Wajed, President, Bangladesh Awami League (Hasina) said on Friday that her trip to the United Kingdom and New Delhi was successful. She said that she addressed public meetings and had discussions with Members of Parliament in Britain during her over two-month long stay there. Talking to newsmen at the VIP lounge of Zia International Airport on arrival from New Delhi accompanied by her husband, Mr. Abdul Wajed, she said "anything could happen any time".

Replying to questions on sharp division within her party, she said it would not be correct to say division, there could be, difference of opinion among the partymen.

Commenting on statements of some recently arrested miscreants having link with Awami League (Hasina) she said that she knew many boys while many more were there whom she did not know.

Asked if she would stay in the country, she said that she had come to stay. It may be pointed out here that she did not bring her children with her. Her children are at present studying in London.

Criticising the Government, she said that this Government did not come in a democratic manner and it could not uphold democracy.

Regarding formation of National Security Council (NSC) she said that she did not find any reason for its formation.

Asked if her party would welcome change in the government in any undemocratic manner, she said time would decide.

Meanwhile, several thousand people carried by more than 100 buses and trucks went to the Zia International Airport to accord reception to the party chief. At least a dozen of party workers were injured following a clash between rival groups of Student League led by Fazlu-Chunnu and Jalal Jahangir.

The airport authoirty was put to great inconvenience to manage the crowd who gathered at the VIP lounge raising slogans.

Sheikh Hasina Wajed was received at the airport by, among others, Mr Abdus Samad Azad, Mr Korban Ali, Mr Abdul Momen Talukder, Mr Zillur Rahman, members of the party Presidium, Mr Abdur Razzak, General Secretary, Mr Tofayel Ahmed, Organising Secretary, Begum Sajeda Chowdhury, Mrs Ivy Rahman, Mr M Hanif, Mr Amir Hussain (Amu) Syed Ahmed.

Mr Asaduzzaman Khan, Leader of the Opposition, was also present.

Sheikh Hasina also spoke a few words before the crowd present at the airport to receive her.

Mr Abdul Wajed, husband of Sheikh Hasina Wajed, will be joining the Bangladesh Atomic Energy Commission next month. During his stay in New Delhi he was working for Indian Atomic Energy Commission.

Mr Wajed has completed his 600-page book on "Fundamental of electro magnetics" designed for honours students of Physics. Talking to newsmen in English Mr Wajed said that there was no bar on his return to the country. He said that he received letter from Bangladesh Atomic Energy Commission to join by March.

CSO: 4220/7935

He was addressing a Press conference at the State guest House in Dacca on the eve of his departure after a seven-day "goodwill" visit to Bangladesh.

The five-member delegation led by Mr. Pengfei during its stay visited different city development projects undertaken by the Dacca Municipal Corporation and held talks with the Mayor of Dacca, Mr. Abul Hasnat regarding exchange of cooperation between the two municipalities.

The delegation also visited Chittagong.

Besides paying a courtesy call on President Abdus Sattar, the delegation also called on Prime Minister Shah Azizur Rahman, Speaker Mirza Golam Hafiz and Foreign Minister Prof. Shamsul Huq.

Mr. Pengfei said that he and members of his delegation were "charmed" to see the efforts of the Dacca Municipal Corporation to raise the standard of living of the city dwellers.

Mr. Pengfei appreciated the hospitality extended to him and the members of the delegation and said they were welcomed wherever they went. This speaks of tremendous love of Bangladesh people for the people of China. We are going back with love and goodwill from the people of Bangladesh to the Chinese people he added.

The Deputy Mayor of Beijing said that during the visit "we noted that Bnagladesh people have succeeded in consolidation of their national independence and sovereignty and preservation of their cultural heritage and traditions".

He said Bangladeshis were hardworking and intelligent and capable of attaining economic development.

Mr. Pengfei wished for the prosperity of Bangladesh and hoped that Bangladesh would continue to play a vital role in maintaining peace in the South Asia region and the world. The Chinese people were happy to have such a neighbouring friendly country he said adding "let the Bangladesh China friendship long live and ever lasting".

Earlier Mayor of Dacca, Mr. Abul Hasnat told the Press conference that in view of the discussions held with the Chinese team decision had been taken to declare Beijing and Dacca as twin cities.

He hoped that there would be more goodwill visits between the citizens of the two cities.

PAPER REPORTS VISIT OF BEIJING VICE MAYOR

Meeting with Foreign Minister

Dacca THE BANGLADESH OBSERVER in English 27 Feb 82 p 1

[Text] The visiting five-member Chinese delegation, headed by the First Deputy Mayor of Beijing Municipality, Mr. Zhao Pengfei, called on Foreign Minister Prof. M. Shamsul Huq at the State Guest House Meghna on Friday evening, reports BSS.

Mr. Zhao told the Foreign Minister that the relationship between Bangladesh and China was deep-rooted. He said during his tour of the countryside of Bangladesh he was greatly impressed by the development efforts of the people and paid rich tributes to late President Ziaur Rahman and also to President Justice Abdus Sattar for their wise leadership.

Mr. Zhao also expressed sincere appreciation for the warm welcome accorded to him and members of his delegation during the visit.

Prof. Huq warmly welcomed the delegation and said the people of Bangladesh and China were bound by close ties of friendship rooted in history and lauded the outstanding contributions of China towards the world civilization and its self-progress.

He said that Bangladesh and China held similar views on many international issues and noted with satisfaction the growing cooperation between the two countries in various fields.

Remarks on Departure

Dacca THE BANGLADESH OBSERVER in English 28 Feb 82 p 16

[Text] The visiting first Deputy Mayor of Beijing (Peking) Municipality, Mr. Zhao Pengfei on Saturday hoped that the existing bonds of friendship and goodwill between the citizens of Dacca and Beijing would be strengthened in the coming days, reports BSS.

Mr. Pengfei said that there were lot of scopes for sharing each other's experiences in building the two great cities of Bangladesh and China.

VISITOR NOTES IMPORTANCE OF PRC-DACCA FRIENDSHIP

Dacca THE BANGLADESH OBSERVER in English 2 Mar 82 pp 1, 12

[Text] Mr. Wang Bing-Nan, President of the Chinese People's Association for Friendship with the Foreign Countries, on Monday said China "shall preserve bond of friendship with Bangladesh like the apple of the eyes," reports BSS.

Mr. Wang who is currently visiting Bangladesh leading a friendship delegation from China was replying to a welcome speech by the President of Bangladesh-China Friendship Association Mirza Golam Hafiz at a luncheon in city on Monday.

On the occasion Mr. Ataur Rahman Khan, M.P. and Jatiya League chief, Kazi Zafar Ahmed, chief of the United Peoples Party, Mr. Mohammad Toaha, M.P. and chief of Samyabadi Dal, Mr. S. A. Bari A.T. M.P., Dr Fazlul Karim, MP and Serajul Huq Mantu, MP Motahar Hussain Siddique, Editor daily NEW NATION, Chinese Ambassador Mr. Liu Shuqins and members of the friendship association, among others, were present.

Mr. Wang Bing-Nan said his delegation had not only come to visit Bangladesh with warm and friendly greetings but also to see how the people here were trying to build their economy towards a great stride.

Mr. Wang said both China and Bangladesh belonged to the Third World and they were developing countries who must set stronger for defending peace boldly.

Friendship of the Chinese people is not an experience but it is part and parcel of her long-time policy and it will have to continue, he stressed.

He described fostering of friendship among countries as the most important in today's world and expressed his deep satisfaction to see many young people in the friendship association here which demonstrated that the tie would pass on from generation to generation.

In his welcome speech Mirza Golam Hafiz said that bond of friendship between Bangladesh and China would be ever-lasting.

Earlier, Mr. Wang and members of his delegation placed wreaths at the National Mousoleum at Savar and at the mazar of late President Ziaur Rahman.

Earlier the visiting three-member delegation led by Mr. Wang Bing-Nan called on the Speaker, Mirza Gholam Hafiz, at his office at new Sangsad Bhaban on Monday morning.

They stayed with the Speaker for some time and discussed matters relating to mutual interest.

The Speaker discussed the functioning system of government and expressed his opinion that their visit will strengthen the existing bond of friendship and cooperative relations between the two countries and peoples.

Another message says the visiting Chinese friendship delegation on Monday apprised Foreign Minister Prof M. Shamsul Huq of the Chinese initiative to promote peace in Asia.

The delegation led by Mr. Wang Bing-Nan called on the Foreign Minister at his office.

Mr. Wang also reiterated Chinese efforts against all sorts of expansionism and hegemonism.

Welcoming the delegation which also included Mr. Mona Ru, a prominent council member of the association, Prof. Huq said Bangladesh and China were bound by close ties of friendship deeply rooted in history.

The Foreign Minister said that the two countries held similar views on many international issues and possessed similar sentiments on international peace and security.

He said both the countries adhered to the principles of sovereign equality and non-interference in the internal affairs of other nations.

Both the countries, he added, believed that freedom and rights of the people should be preserved in all spheres of life.

WEEKLY NOTES 'SKELETONS' IN BNP 'CUPBOARD'

Dacca HOLIDAY in English 28 Feb 82 pp 1, 8

[Text] Skeletons are literally falling out of the cupboard of the Bangladesh Nationalist Party. When police arrested a notorious criminal Kamal, on Thursday who is accused of several gruesome murders in the city recently this too was revealed that at least for a time he and some of his former accomplices were members of the youth wing of the ruling party.

As far as charges of harboring criminals go the BNP's score card is higher than any of the other political with seamy records. Earlier this month Emdadul Huq, another predator was arrested from the house of the then Youth Minister. Yet another former minister is facing charges of letting his car be used for carrying illegal arms.

Even prior to the recent avalanche of misfortune which threatens to bury the BNP camp there were shocking incidents in which the ruling party's name became involved to the utter disgust of the people.

Two young men who had [word illegible] at a police sergeant last year had sought sanctuary in the office of the youth wing of the BNP. A bank employee charged with beating up the managing director of Sonali Bank was then a stalwart of the BNP labor wing.

The arrest of the Hannan Liaquat gang has dragged the Hasina Awami League also into the murky arena of criminality.

While police investigates into the long list of crimes allegedly committed by this group--some of which had injected life-claiming violence into politics--suffice it to say that at least one of the arrested, reputed to be a gang leader, was a member of the working committee of one faction of the student wing of the Awami League.

Being thrown off-balance by the turn of events officials of the BNP and leaders of the Awami League (including the eminent lawyer Kamal Hossain) had been issuing statements claiming there was no relationship between these people and their respective parties.

Since such is the state of conscience of the leading luminaries of politics there is all the more reason why the activities and connections of the arrested persons should be investigated to the hilt.

The minimum that was expected of political leaders in a situation in which criminals were going to take charge of their party machines was that they on their own would announce investigations by themselves coupled with a commitment to purge their organizations.

They have failed the nation once again in their narrow self-interest.

Grain of Salt

Against that background the Home Minister's assertion that those leaders of society who harbored criminals would be brought to book needs to be taken with more than a grain of salt.

Those lobbies which have had enough of their stinking linens washed in public might now stage a revolt of their own against law and morality to protect their citadels of power. After all, they have battled all along to rule society conveniently and not to yield to it.

But people cannot let the moral and practical issues go unchallenged because of someone else's default. It is their children whose lives were at stake in the university, it is their women whose honor was at stake in the alleys, it is their hard-earned money which the thugs and robbers were looting.

Moreover, the design was to make them permanent victims of fear. They should tell the delinquent politicians either to show up or shut up.

And if Mr Justice Sattar, who is now President, wants to help the people in any way (and be remembered thus) he should ensure that justice is dealt quickly, before the predators free themselves through the loopholes of law.

Protection to criminals by political organizations in this part of the world was begun by the infamous Monem Khan, Ayub's hatchetman, in then East Pakistan. It became a large-scale and organized phenomenon with the establishment of "bahinis" of the Awami League after independence.

Ziaur Rahman legalized the whole set-up by official registration of youth wings and student wings of political parties. The connections with musclemen became formal, and official patronage to them was made a policy by creating recognized youth wings of political parties.

It does not need much intelligence to discover the ulterior motive, for those who qualify by age to be members of youth wings also qualify to be regular members of the party itself. This vicious link should now be broken by the parties themselves.

Otherwise, as events have shown, leaders of these parties themselves will not be able to do their politics safely and peaceably.

DACCA BUSINESSMEN SCORE ECONOMIC POLICY

Dacca THE NEW NATION in English 27 Feb 82 p 7

[Text] The country's economic condition is tottering. Rising prices of essentials and incoherent economic policy have further worsened the situation. Drastic cut in all unproductive expenditure and concentration on productive investments can only put the economy back on the rail.

This was the out come of a discussion meeting sponsored by the Federation of Bangladesh Chambers of Commerce and Industry (FBCC&I) with the objective of reviewing the "general economic situation" in Bangladesh, identifying the economic problems and finding out their solution was held on February 25, 1982 at the conference hall of the Dacca Chamber. Mr. Nuruddin Ahmed, President, FBCC&I presided over.

Mr. Nuruddin Ahmed, in his introductory speech, giving a graphic description of the economic situation, said that the country was suffering from stagflation. In this connection he suggested that the Government should drastically cut all unproductive expenditure and concentrate on productive investments for economic recovery.

He deplored the poor performance of the losing public sector and made a strong plea for serious rethinking of what nationalisation has brought to the economy of the country. The nation today needed a clear-cut decision and direction in this regard, he added.

Continuing the FBCC&I President said that in spite of Government's oft repeated emphasis on export orientation, growing dependence on imports has crippled the growth of domestic industries. He said that the credibility of the Government and its institutions, which is vital for sustained efforts for economic and social progress, was waning.

He further said that in order to attend to the needs of the general mass, the Government's policies relating to investment and spending must be firm, fair and on a realistic basis.

Concluding, he said that experience, records and reports available with the Government are aplenty to show where the finger should be placed to cure the present economic malaise.

Speakers, while discussing the current economic situation of the country, suggested return of the nationalised industries to the private sector, tailoring the imports in such a way that the indigenous industries are not adversely affected, banning of nonessential items and other items produced in the country in sufficient quantity to meet domestic needs, maintaining reasonable ratio between the increase in GDP and the money supply in order to curb inflation. They also stressed the need for completion of the projects in the Annual Development plan in time and scrupulously avoid inclusion of unapproved projects in the ADP.

They also felt that decision should be made in the light of basic needs giving high priority to the matters of prime importance. The speakers opined that the present admixture of 85 per cent public sector and 25 per cent private sector in industry was not a balanced mixture for the proper growth of national economy. Public utilities should be run by technically qualified and experienced persons who could be held responsible for any loss, they maintained. The speakers further noted that specialists should be allowed to render their services always in the field of their specialisation.

Among others, Al-haj M. A. Huq, Vice-President, FBCCI, Dr. Mizanur Rahman Shelley, Dr. Khalequzzaman Ahmed of BIDS, Dr. Anwar Hossain, Member E.C. DCC&I, Haji Mohammad Ali, Chairman Bangladesh Jute Goods Association, Mr. N. I. Khan, Chairman, Bangladesh Paper Merchants Association, Mr. M. A. Sattar, President, DCC&I, Mr. Moazzem Hossain, Chairman, Bangladesh Hardware and Machinery Merchants Association, Mr. Mesbahuddin Bablu, President, Rajshahi Chamber of Commerce and Industry, Mr. A. Qasem FCA, Member Executive Committee DCC&I, and Mr. A. Karim of Bangladesh Jute Association participated in the discussion.

Besides Dr. A. M. A. Rahim and Dr. A. Rab of Planning Commission, Mr. A. M. Mofazzal, Editor, BANGLADESH TIMES, Mr. M. Morshed Khan, President Metropolitan Chamber of Commerce and Industry, Dacca, Mr. L. D. B. Bryceson, President Agrabad Chamber of Commerce and Industry, Air Vice Marshal (Retd) A. C. Mahmud of Dacca Chamber of Commerce and Industry and Presidents and Chairman of prominent Chambers of Commerce and Industry and Trade/Industrial Associations attended the discussion meeting.

PANEL REPORT SCORES CORRUPTION IN PUBLIC SECTOR

Dacca THE NEW NATION in English 28 Feb 82 pp 1, 8

[Text] The future of public sector institutions dealing with billions of taka is becoming bleaker because of large-scale corruption, pilferage, wastage and irregularities.

Time is running out fast and it is imperative that the Government consider a "broader policy" with regard to the public sector in the greater interest of the country.

This was stated in a report of the Parliamentary Committee on Public Institutions placed before the House yesterday by the chairman of the committee Khandakar Abdul Hamid, who is also the Minister in charge of Health and Population Control, Manpower, Labour and Social Welfare.

The ten-page interim report is based on interviews with top officials and examination of statements and documents of 63 out of 482 public sector institutions during the period January to November, 1981. "Some sensational cases of bungling in the purchase of plane, chartering of ships, appointment of clearing agents, brokers and stevedores as well as import of goods and raw materials", have come to light. Instances of naked favouritism and misuse of power were also detected by the committee.

The report added, there are many instances that instead of receiving punishment the corrupt officials were rewarded with promotion.

While pointing out the malpractices and anomalies in different public organisations the committee refrained from making comment on any matter beyond its jurisdiction.

The committee observed a number of nationalised industrial units are not in a position to cope with the uneven competition of foreign goods imported by other public and private organisations with regard to marketing their own produce.

Certain nationalised industrial units deserve to be protected in order to face the uneven competition. The question of protection arises only in special cases. It does not mean that the protection should indulge in

wastage, misuse, cost escalation caused by corruption or unlimited production cost, the committee said.

The committee pointed out reported discriminatory policy in charging customs and sales taxes on the imported spare parts of the machinery of different government organisations.

It said that many organisations had refrained from explaining audit objections for years together evidently defying them.

The committee felt that the apathetic and defiant attitude of the concerned people towards the audits should be given up and stressed the need for the adoption of harsh measures by the higher authorities to enforce their accountability.

Misuse of the transports of public institutions has become a routine affair. Referring to it the committee suggested for strict control.

Unusually high overhead expenditures were also detected by the committee in these organisations. In many cases, it pointed out, the number of officers and employees is more than requirement.

Citing the instance of BRTC the report says there are 228 officers and 3,542 employees for 352 serviceable buses, that is, 10-11 officers and employees for each bus in working condition and 30 officers and 704 employees for only 165 serviceable trucks.

Its loan and loss stands at Tk 75-crore and Tk. 41-crore respectively. Every year it is to pay Tk. 6-crore on account of interest for bank loan. The committee recommended slashing of excessive expenditures.

It came to the notice of the Parliamentary Committee on Public Accounts upon scrutiny of the balance sheets that in some organisations one year's profit and loss widely differ from the previous or next year. According to the committee, the inexplicable wide gap between the two consecutive years' loss and profit is not consistent with the normal business rules of an organisation.

The report pointed out misuse of crores of taka in foreign trips by the officers in groups and in choosing expensive ways of handling various deals. The committee stressed the imperative for the punishment of those who are responsible for the misuse of public exchequer and indulged in corruption.

It lashed out at the policy of light punishment such as transfer, suspension and appointment as OSD.

The committee reported procurement of raw materials, commodities and machinery parts from particular countries, places, parties and contractors at higher rates on the plea of "meeting emergency requirements."

The report says that efforts to justify them by the concerned people often appear to be imaginary and ununderstandable.

The committee found innumerable instances of nepotism and misuse of official power and position. It observed, "malpani" (gratification) in advance has become precondition for getting contracts and credits.

The committee called for immediate harsh measures against these malpractices to save crores of taka.

Giving a detail account of the deplorable condition of the public sector institutions and their problems the committee in its report mentioned that repeated enhancement of tariff rate or price seems to be a common practice in the public sector. Although some public sector organisations forwarded clarification justifying enhancement of rate or price but these could not satisfy the committee.

The committee observed the absence of initiative in the public sector for reducing gap between production cost and overhead expenditure involved by discarding misuse, corruption and by increased utilization of production capacity.

Some nationalized industries could not reach pre-independence level of production capacity even after ten years of independence. They are continuously suffering loss. No rationale is understandable as to why those industries are suffering loss under the management of public sector. The committee does not see any reason other than managerial inefficiency, corruption, misuse and negligence behind the loss.

There are some vital industries whose inventories were not prepared and stock-taking of the assets were not made while taking over under PO-27. The committee thinks this was preplanned to allow plundering and misappropriation of the assets of the industries. The committee is of the opinion that a high level enquiry committee should be formed to take the account of the affairs that had taken place.

The Committee is of the opinion that moratorium facilities and counting of interest on the industries under heavy loss and debt and increase of employees and their salaries in the said industries should be postponed till the overall improvement is achieved. At the same time the industries should be exempted from compulsory contribution to the national exchequer to attain improvement.

It is well thoughtout opinion of the committee that running of hundreds of public organisations efficiently pursuing commercial and farsighted policy is not possible without creating honest, devoted, active and efficient working cadre force.

NONALIGNED SUMMIT PLANS--A Foreign Office spokesman on Saturday replied in the affirmative when asked if Bangladesh would participate in the Non-aligned summit to be held at Baghdad in September, reports BSS. The decision to hold the summit in Baghdad was taken at the last summit of the movement held at Havana in 1979. He said that it was in accordance with this decision Bangladesh as a member of the movement would be attending the conference. [Text] [Dacca THE BANGLADESH TIMES in Enlgish 28 Feb 82 p 1]

TRADE WITH USSR--The trade turnover between Bangladesh and Soviet Union during the last ten years has increased from 24 to 88 million dollars, Mr. V. I. Sovalev, USSR trade representative in Bangladesh said in Dacca on Monday, reports BSS. Addressing a Press conference on the eve of 10 years of Soviet-Bangladesh economic and trade relations at the Soviet Information Centre, he said that trade and economic relations between the two countries had been growing successfully. During the ten years Soviet Union had exported 780,000 tons of oil products, 128,000 tons of raw cotton and 49,000 tons of cement to Bangladesh. On the other hand, Soviet Union had imported 241,000 tons of raw jute, 216 million meters of jute cloth, 111 million pieces of jute bag, 13 million pieces of goat skins and 14 tons of tea from Bangladesh. The Soviet Union also paid great attention to purchase non-traditional items such as cables, jute carpets and handicrafts, he said. The first ever economic agreement was signed between the two countries on March 2, 1972. [Text] [Dacca THE BANGLADESH OBSERVER in English 2 Mar 82 p 1]

NEW DANISH AMBASSADOR--The Ambassador-designate of Denmark Mr Bjorn Olsen presented his credentials to President Abdus Sattar at Bangabhaban on Monday morning reports BSS. Speaking on the occasion, the new Danish envoy expressed the hope that the existing bond of friendship between Denmark and Bangladesh would continue to grow further in the coming days. Reciprocating the sentiments President Sattar assured the new envoy of all cooperation in fulfilment of his duties and responsibilities during his stay in Bangladesh. COMING YEAR 1982-1983 SAID TO BE PIVOTAL FOR ECONOMY

Jakarta HARIAN UMUM AB in Indonesian 9 Feb 82 pp 1, 7

[Article: "Minister Subroto: 1982-83 Very Important Years for the Indonesian Economy"]

[Excerpts] Minister of Mining and Industries Dr Subroto, expressed the opinion that the 1982-83 fiscal years will be very important for the Indonesian economy.

During those two fiscal years, the government will be making an effort so that the Indonesian economy will be given impetus not only by the oil and gas sector, but also by non-oil exports.

Subroto made the above statement at a working meeting with the national budget committee of the DPR (Indonesian parliament) at Senin, Jakarta.

He also said the mining and energy sector would receive fairly substantial financial support in the forthcoming draft national budget.

Export earnings from petroleum and natural gas are expected to bring in about $20-21 billion, with total exports for the 1982-83 fiscal year estimated at $26.4 billion. Earnings from non-oil exports are expected to reach around US$ 758 million.

Seeking to explain the growth of the Indonesian economy, Minister Subroto stated that Indonesia was one of the countries which had experienced a rather accelerated economic growth, reaching 9.6 percent in 1980, while the rest of the world was in a recession.

In 1980, Indonesia was am ong the countries that experienced the highest rate of economic growth in Asia, after Singapore (10.2 percent) and Hongkong (10.1 percent).

In 1981, Subroto expressed the opinion that the rate of economic growth in Indonesia would not be as high as in 1980, and would probably amount to only 7.1 to 7.5 percent.

Notwithstanding the scaled down expectations for 1981, Indonesia would still be among Asian countries recording one of the highest rates of economic growth, behind Singapore and Hongkong.

"This is an indication that our national economic resilience can withstand the storms of a recession that is deeply disturbing," he said.

In the meantime, world economic growth for 1980 was only 1.2 percent with an inflation rate of 10 percent, while in 1981 it was 1.25 percent with an inflation rate of 9.5 percent.

The world economic recession, said Subroto, is caused by the derailment of one of the three "locomotives" that is the driving force behind the world economy, while the other two "locomotives" remain stalled on the tracks because of the derailment of the first.

In a figurative sense, the three locomotives that are the driving force behind the world economy are the national economies of the United States, Western Europe and Japan. The derailed "locomotive" mentioned by Subroto represents the United States which experienced a very low rate of economic growth (minus 2 percent in 1980) accompanied by substantial inflation and unemployment.

Responding to a question raised by a parliamentarian, Minister Subroto indicated that at present there were four major problems in the mining and energy sector.

In the tin industry, a new International Tin Agreement will go into effect beginning on 1 July 1982. The problem is becoming more pressing because many tin-producing countries have not yet signed the agreement.

In the nickel, copper and bauxite industries, lower demand for these minerals does not present a very bright picture.

In the oil and natural gas sector, exports in 1980 were at their lowest because of decreased exploration. However, in 1981 Indonesian petroleum exports were on the upswing again and reached 1.6 million barrels a day.

In the electrical sector, the development of electric power at present will depend on fuel oil for about 12 percent of requirements.

In this latter sector, alternative sources of energy such as those derived from hydraulic or geothermal means will replace petroleum for the generation of electricity, while oil and oil products will be saved as an export commodity.

Minister Subroto estimated that domestic oil requirements were increasing about 12 percent a year. In 1982, these requirements will amount to 28.1 million kiloliters.

To fulfill domestic fuel requirements in 1981/82, Indonesia needs to import 42.784 million barrels of refined oil products and 36.5 million barrels of crude oil.

In 1982/83, increased domestic needs will require the import of 62.196 million barrels of refined oil products and 39.055 barrels of crude oil.

PERTAMINA DEBT DISCUSSED

Jakarta HARIAN UMUM AB in Indonesian 19 Feb 82 pp 1, 7

[Article: "Pertamina's Remaining Debt Still 1.494 trillion rupiah"]

[Excerpts] According to calculations, as of 11 February Pertamina still owes a debt of 1.494 trillion rupiah. This consists of a principle of 916 billion rupiah with 578 billion rupiah in interest. This represents the Pertamina debt to the Bank of Indonesia and other institutions.

The status of the debt was explained by the General Director of Pertamina, Joedo Sumbono, at a working meeting with Commission VI of the DPR (Indonesian parliament) yesterday at Senayan. Joedo did not specify at greater length what he meant by other institutions.

He stated that during fiscal year 1981-82 as of 11 February, Pertamina had paid an installment of 305 billion rupiah on its debt, reducing it to 1.494 trillion rupiah.

As of 30 September 1981, the balance sheet for Pertamina showed liquid assets of 2.803 billion rupiah and fixed assets of 3.188 billion rupiah. The company's trading debt amounted to 710 billion rupiah and its long term debt 2,761 billion rupiah consisting of 965 billion rupiah for the construction of an LNG plant, 1,796 billion rupiah to the Bank of Indonesia and other institutions, and equity amounting to 2,520 billion rupiah.

Calculations of profit and loss indicated an income for Pertamina of 2,486 billion rupiah, operating expenses of 466 billion rupiah and the purchase of crude oil and refined products 1,737 billion rupiah. Thus, Pertamina earned a profit of 283 billion rupiah before taxes.

Joedo stressed that the figures on the balance sheet and in the calculations of profit and loss indicating the position of the company as of 30 September, and covering the period 1 April-30 September 1981, "only give a general picture of Pertamina's financial status and are not definitive."

He said that the true figures on the balance sheet and the calculations of profit and loss could not be submitted to Commission VI of the DPR yet because they had not been approved by DKKP (governing board of Pertamina).

The provisional figures on the balance sheet and profit and loss statement were submitted by Joedo Sumbono after repeated requests by DPR Commission VI to Pertamina. The DPR request was made in accordance with Indonesian Legal Code No. 8 dated 1971 concerning the inventory of Pertamina assets.

Turning to government subsidies that still apply to four types of petroleum-based products: kerosene, solar (fuel for high rpm engines), diesel and fuel oil, the General Director of Pertamina said, "We do not look at whom the subsidies benefit; we merely apply them to the four kinds of fuel in question." Whether these subsidies are on target and benefit intended recipients is not for Pertamina determine or make any judgments about, he added.

Concerning the subsidies on the four different kinds of fuel previously mentioned, DPR Commission VI is of the opinion that they are off target and not achieving their intended purpose. This conclusion was drawn from the fact that there are many private and official vehicles on the road burning solar fuel, while the subsidies on solar were not intended for such private and official vehicles. In addition, many insecticides factories are using subsidized petroleum as the principal raw material.

On the basis of such examples, DPR Commission VI estimated that the subsidies were not achieving their intended purpose which was to channel lower-priced fuel to institutions serving the general welfare such as the state electric company, industries and public transportation. The parliamentary commission also expressed the view that it would be better for petroleum subsidies to be aimed at benefiting the consumer directly.

According to Joedo Sumbono, 6,064,929 kiloliters of kerosene or 99 percent of the total is consumed by private households and 59,650 kiloliters (one percent) by the armed forces and government. Of solar fuel, 2,496,169 kiloliters (47.2 percent) are used for industrial purposes; 2,000,034 kiloliters (37.9 percent) for transportation; 654,762 kiloliters (12.4 percent) by PLN (state electrical monopoly), and 131,837 kiloliters (2.5 percent) by the armed forces and the government.

Concerning diesel oil, 1,022,951 kiloliters (88.4 percent) are used for industrial purposes; 103,418 kiloliters (8.9 percent) are used for transportation; 30,308 kiloliters are used by PLN and 989 kiloliters (0.1 percent) by the armed forces and government.

Concerning fuel oil, 969,135 kiloliters (48.2 percent) are used by PLN; 898,385 kiloliters (44.7percent) for industrial purposes; 138,784 kiloliters (6.9 percent) for transportation, and 3,446 kiloliters (0.2 percent) for the armed forces and government.

ENERGY CONTRACTS SIGNED

Jakarta HARIAN UMUM AB in Indonesian 27 Jan 82 pp 1, 8

[Article: "Another Coal Contract to Be Signed in February"]

[Excerpts] Mining and Energy Minister Dr Subroto explained that in February of this year another contract would be signed between PN Batubara (Coal) and Rio Tinto and British Petroleum (BP) for the mining of coal in Kalimantan Timur.

Subroto made this statement at the Merdeka Palace last Tuesday after being received by President Suharto.

As it is known already, three other work contracts were signed previously with three energy firms: Arco Utah, Utah and Agip.

Minister Subroto also announced that an agreement would be signed for the geothermal exploitation of Gunung Salak which has energy reserves of four times 55 megawatts.

For the first time, part of this energy reserve amounting to 55 megawatts will be developed with Union Oil. There are three sides to this agreement. Pertamina will be encharged with harnessing the geothermal steam while PLN (State Electrical Monoply) has the task of generating electrical power.

On 9 February petroleum contracts will also be signed with five contractors. Areas to be developed will be Pelabuhan Ratu in West Java, Cilacap in Central Java, Central Kalimantan and Lombok.

With these latest five contractors, by the beginning of 1982 there will be six firms that have signed contracts for the production of oil and its derivatives with Pertamina. In comparison, said Subroto, in 1981 twelve contractors signed production-sharing contracts, while in 1980 eleven firms did so.

A journalist also raised the question of how the construction of the Dumai hydrocracker was progressing. The minister answered that "there are no problems."

"Are there not any delays on this project?" intimated another journalist. "Until now, there have been no delays," said the minister.

(Minister of Trade and Cooperatives) Radius Prawiro is the leader of a team for the Dumai Hydrocracker project which is being constructed by a contractor from Spain. Information has been received from this team that evidently construction of this project is not progressing as smoothly as the building of the refineries in Balikpapan and Cilacap. It is estimated that the Dumai Hydrocracker project will be delayed at least six months beyond what was originally planned, if the work keeps up at the present pace, said a source from the leadership team for the project.

NICKEL PRODUCTION LOWERED

Jakarta HARIAN UMUM AB in Indonesian 26 Jan 82 p 3

[Article: "As a Result of a Steadily Deteriorating World Economy—PT Inco Decreases Production of Nickel Up to 50 Percent"]

[Text] The nickel mining firm of PT Inco plans to decrease production at its smelter in Soroako, Sulawesi Selatan, as a result of the deteriorating world economy. The decrease in production will be accomplished by shutting down one of its two processing lines beginning on 1 February.

The deputy general director of PT Inco, Eng Hitler Singawinata stated yesterday that the planned cut in production would amount to 50 percent based on an annual productive capacity of 20,000 metric tons of nickel matte which would be reduced to 10,000 metric tons.

It was not stated how long the company would maintain its decreased production. Hitler only said that the firm would hold to its cut in production depending on how long it would take the world economy to make an upturn and increase its consumption of nickel once again.

With its present three production lines (the third line has never been placed in use) the Inco nickel smelter has an annual productive capacity of 30-35,000 metric tons. The highest production rate achieved by this plant was reached in 1980 when it processed 20,300 metric tons of nickel.

According to Hitler, the cut in production will result in the termination of a certain number of foreign personnel and a substantial decrease in contractor manpower utilized by PT Inco. The firm is also carrying out a reduction-in-force of permanent employees through voluntary layoffs and natural attrition by not replacing employees who quit. Hitler could not estimate how large the staff cutback would amount to, either in terms of foreign, contract or permanent personnel. "We may possibly get word on the extent of the manpower retrenchment next week," he said. At present, PT Inco employs 3791 persons, including 121 foreigners.

Hitler Singawinata explained further that during the last 2 years, the world nickel market has declined, with the consequence that the consumption of the metal has decreased and producers have held back on output and closed mines to prevent the buildup of stockpiles. So far, the market for pure nickel (electrolite nickel) in Canada has reached a posted price of US $3.29 a pound; however, the realized price has been lower. PT Inco itself since last November dropped the price of its nickel matte by 16 cents a pound from its average price of $3.01 a pound. The highest price that this firm has realized from its nickel has been $3.45 a pound.

As a result of the weakening world market, Inco Metals which is the parent firm of PT Inco of Canada, has also lowered production and has closed its smelter with a capacity of 13,000 metric tons in Guatemala. The third largest world producer of nickel, Falcon Bridge, has closed down its mine and smelter of 30,000 metric tons capacity in Dominica (West Indies), while the number two producer, SLN, is only working at 50 percent the capacity of its smelter in New Caledonia.

According to Hitler, although PT Inco has lowered production, the firm has been able to fill customer orders in Japan by drawing from its stockpiles. Based on long term contracts, Japan consumes 10-11,000 metric tons of nickel a year from Inco, although this year, the total reached 14,000 tons. PT Inco, a Canadian firm, signed a work contract in 1968. Its initial production from its first processing line at the Soroako smelter began at the start of 1977. Its second processing line began in 1979.

VIENTIANE MUNICIPALITY ORDERS CONTROLS ON TEMPLE FAIRS, PARTIES

Vientiane VIENTIANE MAI in Lao 19 Jan 82 pp 1, 4

[Announcement of Municipal Administrative Committee of Vientiane Capital, issued 11 Jan: "Festive Gatherings"]

[Text] Order No. 380 VTCP was issued on March 20, 1981 by the Municipal Administrative Committee, Vientiane Capital, concerning the role of cultural and social control in Vientiane Capital.

Announcement No. 488 VTCP was issued on March 12, 1980, concerning festivals.

Recently there have been many festivals that were held the right way and in agreement with announcement No. 448 VTCP. However, some organizations are still opposed and do things the way they want with no regard for the rules, social controls, and our fine customs. They did not take the advice of the local authorities seriously. Therefore, sometimes things get out of hand at many festivals.

In order to maintain security and encourage the unity of the people at every social gathering and for people who work together in their own local area, and

In order to implement the spirit of the Office of the Prime Minister's advisory No. 358 OPM issued on March 10, 1980,

The Municipal Administrative Committee of Vientiane Capital hereby makes an announcement for local authorities at all levels. Cadres and people within Vientiane Capital must pay attention to and follow up the advisory and protect our culture. All must act as follows:

1. Festivals and many other festive gatherings must have organizers who are fully responsible for peace and safety. They must first report to the local authorities and security officers in their own area in order to maintain peace and order.

2. If there are any family celebrations such as ordinations, the Buddhist Eleventh Month Festival, wedding parties, and household ceremonies, they must be reported to the local authorities (cantons, villages) where they live. If a host wants to have any gathering or celebration, first of all he must have

approval from the local authorities of his area and he must guarantee peace and order in all cases. The host is not allowed to take advantage of this type of activity for his own profit from the music and refreshments.

3. Temple fairs and mass celebrations which are a national custom organized by people in cantons or wards must first ask permission from the local authorities. If there is a fair, they must guarantee peace and order in all cases.

If the profits from selling drinks are for collective benefits approved by the district authorities, the organizers must be strictly checked and held responsible for security.

4. As for any celebrations that are organized by government units for any occasion, those organizations must work in cooperation with the local authorities in the area and unite themselves in maintaining security and in following the substance of this announcement.

5. For those who are responsible for fairs, or the hosts, after they are given approval to organize the fair or to have a festive gathering, e.g., movies, story singing, arts and literature performances, music, dancing, and singing, if the organizers invite any performing groups or bring in movies from anywhere to entertain, they must have a license or permit issued by the Vientiane Capital and or district Cultural Service. The theme of the shows must be the same as those performed in the past.

The local authorities must make sure not to give any approval to those who do not have licenses or who have not been checked.

Moreover, one must follow the previously announced order concerning cultural controls No. 380 VTCP issued on March 20, 1981 by Vientiane City and Province.

6. In organizing all celebrations mentioned above, there are more guidelines for the organizers or the host to follow.

A. Location-the fair area should not be an obstacle to the highway or street on which people or cars are passing by, in order to prevent accidents that might occur and inconvenience other people.

B. There must be inspection and full responsibility assumed for electricity usage and wiring. The reason for this is to assure the safety of the people who go to the fair.

C. It must be insured that the wired ratio network and hi-fi cannot be heard beyond 100 meters.

D. Celebrations must not exceed one day, and correct celebrations should not be later than 11:00 PM (23:00) except when the Vientiane Capital authority gives special approval. This aims to maintain good health and order for the people.

Henceforward from the date in the announcement, cadres, combatants, and state employees including local authorities in districts, cantons, and all the people must cooperate and carry out the order correctly for successful results. The security forces and the Vientiane Capital authorities, in particular, must carry out, attentively follow, and educate themselves according to the aims of this announcement.

TAX POLICY FOR RETAII MERCHANTS, LARGE PROFITS NOTED

Vientiane VIENTIANE MAI in Lao 26, 27 Jan 82

[Column: "Conversation with the Editor": Paying Taxes in the Market]

[26 Jan 82 p 2, 4]

[Excerpt] [Question] Many people are interested in the sales tax in the market, especially the problem concerning taxes for retail merchants who have been paying one hundred kip per month for tables, two kip more per day. For example, that is what my family is doing. I work as a cadre earning a salary from the administration, and my wife is a regular retail merchant. We have to pay one hundred kip per month. Isn't this tax too high? If we do not book the table, our business will be poor. What can we do? If we did not sell the goods our children would have to depend on their mother. You probably know how much my salary is. I am not blaming the government. She does not have many things to sell. Only those who have a lot of capital investment can pay one hundred kip per month in taxes.

I hope you can clear this up for me.

Thank you,

Somvang 1/20/82

[Answer] Dear Comrade Somvang, as a cadre you must already know that today we are confronted with troubles and a depression caused by the backwardness of the nation's economy. Our country was a colony under the imperialists for many hundreds of years. The economy was poisoned and it deteriorated. It was a colonial economy (of the old regime).

The American imperialists imposed a colonial economy to poison us. They made us lazy and shiftless and waiting for handouts. This was because they tricked us in order to make people serve their tricky plans, and because they wanted to swallow us and make us into their colony completely. After our nation was liberated, it has been six years that we have all been building up our nation in order to advance to socialism. We are confronted with many difficulties and much confusion, especially in an economy that has been carried over from the colonial economy which still hangs on and has not yet been cleared out

completely. Moreover, many small and scattered units of production have just enough to support themselves. So, it is certain that the standard of living problem still exists. This is our immediate responsibility for all of us to solve together. Comrade, do you understand if I put it briefly this way?

First of all, we must agree on the collective problem that faces us. This means we must exercise our rights to collective mastery the right way and accept it completely. To transform our economy, in particular, we turn from small scattered production to engage in collective production. This immediate responsibility must be known very well by everyone and we must start to work immediately. We have to completely stop this small and scattered production, the capitalist economy, and others that still linger on. Otherwise, we all will still have to face difficulties, especially in the standard of living.

[27 Jan 82 p 2]

[Text] We must respond quickly to the turn to cooperative and collective agriculture as the direction we have set in order to solve the problem of the standard of living. After my mentioning all this, you probably feel that I have gone off the subject. In fact, I have not. I just want you and especially all retail merchants who are scattered around, as well as scattered farmers and others, to understand our duty. I want all to understand their gradual expansion and their direction in the economy.

As for trading, the government has been very accommodating. This means the people can trade freely, but they must carry out their obligations. That is, they must follow the trade rules set by the new regime for all merchants small or large. We all have our obligation to national development, defense, building up our nation, maintaining security in society. Paying taxes is a duty for all of us who are the owners of our country in order to use it as capital for our country.

Before this, you have probably seen that there are many forms of taxes depending on individual income.

As for traders, they must regularly pay income taxes according to the income they receive with no exceptions. The example you mentioned is partly right, i.e., to pay income taxes to the government periodically based on official decree: monthly, every six months, or annually, depending on the situation. This shows our obligation to our country.

VIENTIANE MAI has already discussed market taxes. I would like to review the two systems, as follows.

1. A monthly income tax to pay for the place reservation or other income tax, and trade registration charges.

2. Charges for daily sanitation for which a cadre gives out a sales tax receipt almost every day.

(For more details, please go back to read VIENTIANE MAI where all the charges were covered).

The retail merchants often do not try to understand these two systems by thinking that they have to pay the rate of two per..., that is not true. For example, for those who sell their merchandise on the tables, they must pay monthly for the table reservation and location. Daily payment for sanitation is for those merchants who sell monthly at the tables. Small merchants who irregularly sell vegetables, fruits, and other little things will pay only for the location, and this is the smallest amount.

You must understand and not mix them up. The mother sells at the table and pays one hundred kip per month. This is not expensive, because before setting up a table to sell the goods, the income or profit must be at least one hundred kip each day, otherwise she won't set up the table (isn't that so? Think about it). Saying it this way is not meant to be sarcastic, but these are the facts. Now, whether to reserve a table or not is not an issue of whether one will be allowed to sell or not. It depends on one's merchandise. If it is a small amount and is sold irregularly, there is no need to book a table. You can sell freely according to what the distributor divides up for you. The distributors cannot keep any merchants from selling their merchandise in the market. Any goods that people bring to the market, they must seek a place to sell them. Those who own the merchandise have to follow the rules set by the distributors. For example:

-a set location;

-paying a sanitation tax and other taxes depending on the nature of the merchandise.

This is what I have repeated only in order to help you understand. If there is anything that still is unclear to you, please write to discuss it further with me.

Thanks

FRENCH INDUSTRIALISTS RETURN TO PHILIPPINES

Paris LE MONDE in French 23 Feb 82 p 21

[Article by Serge Marti]

[Text] Subjected to a de facto boycott throughout 1980 after a series of disputes that took several months to settle, French industrialists are gradually resuming normal trade relations with the Philippines.

As a result, the trade balance between the two countries, sharply out of balance in 1980 and during the first half of 1981, should once again show a slight surplus in favor of France for all of last year.

At the same time, the international financial community, which is betting on strong growth for the Asian countries in general and those of the Southeast Asian Nations Association in particular, is beginning to revise its opinion of the Philippines, where the Moslem rebellion, which has not managed to humble the government in the Mindanao area, has given rise to a number of questions on what will happen "after Marcos."

In the Philippines since 1964, at the time of the first exposition held in this country, France never really began to trade with it until 1970 with the signing of the first contracts for immediate occupancy, which essentially had to do with the cement, sugar and paper sectors.

The last to arrive in this archipelago of 7,000 islands, after the Americans and the Japanese who have always somewhat regarded it as their private hunting ground, French industrialists at first had to content themselves with the business the latter did not want to engage in and which was destined to lead to inevitable disputes.

From simple frustrations inherent in any commercial activity, especially in the field of foreign trade, between 1976 and 1978 relations between the French companies and their Philippine partners rapidly shifted to open conflict. The crisis reached its highpoint when, cut to the quick by two or three delicate deals, the Philippine Government decided to impose a de facto boycott on all French activity in the country, despite official affirmations [to the contrary].

This development was unexpected and French exports, slightly more than imports up until 1979, dropped sharply the following year (see table).

This dispute was brought on by a few issues that for many months poisoned commercial relations between the two countries, such as the one involving the firm of Creusot-Loire.

The latter, which for some time had been trying to expatriate its Firminy plant, specialized in the production of malleable cast-iron joints for central heating systems, finally made contact with the San Miguel Company, a big Philippine industrial combine which, in particular, holds the monopoly on the production and marketing of beer in that country. The two parties had agreed on the creation of a joint venture in 1978 with the San Miguel Company, which contributed a good share of the capital, as majority shareholder (60 percent) and Creusot-Loire essentially furnishing the equipment.

So, a magnificent plant — much too big — was built about 20 km from the capital, whose purpose was to produce 3,000 tons of cast-iron joints a year, destined for export. Paralyzed by the incessant power failures typical of life in Manila and by overstaffing (450 people had to be hired under pressure from various lobbies, while only 150 had been planned), the plant, which was forced to import everything for its production, including sand, ended up turning out a product that was 40 percent more expensive than those of its world competitors and could therefore not be sold.

Consequently, in 1979 San Miguel officials closed the gates of this magnificent plant, which since then has been waiting to justify its existence.

Defaulting Clients

While Creusot-Loire succeeded in rapidly getting out of the affair after cautious discussions with its Philippine partners and the country's government, the same was not the case for another French firm, Spie-Batignolles, which had to submit the dispute over the plant at Abra in the northern part of the country that sets it against the Filipinos to an international court of arbitration. Under the terms of the agreement signed in 1978, it was a matter of building a pulp mill in the vicinity of a nearby forest. Assured of being the only industrial plant, the French firm did not concern itself with access problems, which seemed to constitute a local responsibility. The fact remains that, once the mill was completed, it was impossible to operate it since the road leading from the forest to the sawmill had not been built and the stream that was supposed to carry the cords of wood was always dry. As a result, the mill has remained closed for almost a year and, now that Spie-Batignolles has thrown in the towel, a solution is still being sought with a local partner.

These two examples, corresponding point for point with the real situation, set the tone. The parties concerned toss the ball back and forth to one another, the Filipinos accusing the French industrialists of not backing their commitments to the hilt, while the latter maintain that they have delivered the equipment ordered, gone on to build the plants and install the equipment as planned, then clearing

themselves of any responsibility for the failure of these enterprises which they do not hesitate to chalk up to their partners, whose /"flightiness"/ [in italics] in terms of planning and management they underline.

These French firms are all the freer with their estimates because all these contracts benefit from a COFACE (French Insurance Company for Foreign Trade) guarantee, with the Philippine Development Bank (DBP) providing the same role locally. What in normal times was nothing but a simple debit entry assumed quite another dimension when it became apparent that the DBP had to rapidly substitute for its now defaulting local clients, thus becoming the direct go-between between COFACE and the French banks.

Now it turns out that one of the most important members of the DBP is none other than the chairman of the Board of Investors, Philippine Minister of Industry and Trade Roberto V. Ongpin, in person.

Partisan of a "Brazilian-style" development which does not enjoy — far from it — unanimity in the government, Mr Ongpin has always tried to upgrade with President Marcos ambitious projects likely to enhance the Philippine image in international circles.

We understand that, following the affairs we have just alluded to, Mr Ongpin felt all the more strongly about the French firms and that his economic approaches regularly clash with the view Prime Minister and Finance Minister Cesar Virata and governor of the Philippine Central Bank Jaime C. Laya, regarded as much more orthodox and who enjoy an undeniable audience with the international monetary and financial institutions where they were career men, hold.

The fact remains that, donning his Ministry of Industry and Trade cap, Mr Ongpin for many months helped freeze French commercial activities in the Philippines, refusing to extend the DBP guarantee and automatically excluding the firms involved from calls for bids, even though the term "boycott" was naturally never officially used.

It was not until the second half of 1981 that relations began to improve at the intervention of other members of the Philippine Government along with the action taken locally by French Ambassador Albert Treca.

Some companies faced with the same kind of difficulties have more discreetly tried to resolve them by continuing their negotiations. Thus Kloeckner Ina, a subsidiary of the West German family combine, Kloeckner, is pursuing the cooperation established between 1974 and 1977 with its client, the Batong Buhai Gold Mining Company, regarding a copper mine project north of Luzon, the biggest island in the archipelago.

The consortium created for this purpose between Kloeckner Ina and the Fives Cail Babcock Company had guaranteed to furnish the equipment and was in the process of supervising it when the local partner experienced a serious shortage of funds in 1979, forcing it to suspend operations, among others on the road that was to enable them to ship the ore to the port of San Fernando.

There again, the DBP was forced to step in, but the French consortium, which had been entirely paid off for what it had contracted to do — it is fitting to underline — is now guaranteeing to check out the equipment left at the site.

During these past few weeks Franco-Philippine relations have resumed a somewhat more normal course and businessmen are returning to Makati, the business district of Manila.

Thus some time ago the Degremont Company, which was brought to a standstill with a water treatment plant for the San Miguel combine brewery in Batangas, also on the island of Luzon, started work on the drinking water treatment station at Zamboanga, the third-largest city in the country. These relatively modest contracts were to be followed by a larger-scale operation: the water supply project for the Manila urban district. Actually, this is the third phase of the project, estimated at $500 million, and slated to be the object of a big contribution by the World Bank and Asian Development Bank. Part of that amount is to go to specialized firms. Established for several years now in the Philippines, Degremont is in a good position for the bidding that is to be opened at the beginning of 1983.

As for the Lafarge Coppee combine, the founder of a consortium notably including the Japanese firm of Mitsubishi, it has just signed a contract with PHILPHOS (Philippines Phosphate Fertilizer Corporation) providing for the construction of a big fertilizer factory on the island of Leyte, which will be operational by 1984. This complex will be supplied with superphosphates by the Republic of Nauru (formerly New Guinea), to the Philippine Government. Figuring among the 11 major industrial projects President Marcos has just approved, it will provide a sulphuric acid unit with a daily capacity of 1,500 tons, two phosphoric acid plants (600 tons a day) and one ammonium sulphate unit producing 520 tons a day.

Just so many elements that are moving toward a normalization of relations between the two countries, the effects of which should quickly be felt in their mutual balance of trade. During the first 6 months of 1981 French exports to the Philippines (essentially capital goods and semifinished products) largely doubled in comparison with the first half of the preceding year, reaching a figure of 456 million francs, and there is agreement in thinking that they probably came to a volume of about 800 million francs for all of last year, thus resulting in a slightly surplus balance in favor of France.

Evolution of Trade Between France and the Philippines
(in millions of francs)

	1979	First Half 1980	1980	First Half 1981	11 Months 1981
Exports to the Philippines	845.2	190.8	383.8	451.1	681
Imports from the Philippines	754.2	470.1	867.5	445.4	823
Balance	+91	-279.3	-483.7	+5.7	-138

PEACOCK ANNOUNCES PARTY LEADERSHIP CHALLENGE

BK051032 Melbourne Overseas Service in English 0830 GMT 5 Apr 82

[Text] Former minister, Andrew Peacock, has officially announced his challenge for the leadership of the Parliamentary Liberal Party. In a statement released Mr Peacock says there is very great concern among his Liberal Party colleagues about Australia's national leadership. Accordingly, he has decided to offer himself for the leadership of the party at its special meeting in Canberra on Thursday [8 April]. Describing the Victorian election as a watershed in national politics, Mr Peacock said it had confirmed the national trend against the Liberal Party in state byelections in Western Australia, Victoria, in Lowe in New South Wales and in city council elections in Brisbane. The former foreign affairs and industrial relations minister said the Liberals were no longer regarded as the party of economic growth, social progress and opportunity. Mr Peacock said a change in direction and new sense of purpose and a confident, but sensitive style of leadership were now required.

The prime minister, Mr Fraser, said in Melbourne today that former Minister Andrew Peacock had nowhere near the numbers to successfully mount a challenge at Thursday's special party meeting. Mr Fraser has called the meeting to resolve the matter of the leadership. He has said he is totally confident of remaining prime minister. Mr Fraser said the question of leadership challenge was first raised just before the Commonwealth heads of government meeting in October last year. He had always hoped the matter would disappear, but it had not, so it was now time to clear up the speculation. In a reference to Mr Peacock, Mr Fraser said it was an obvious distraction when somebody who had been a senior member of the ministry continually made speeches critical of the leadership or policy.

DISCUSSION ON BATTLE FOR LEADERSHIP OF GOVERNMENT PARTY

BK071141 Melbourne Overseas Service in English 1110 GMT 6 Apr 82

[From the "Australian Insight" program]

[Excerpt] The latest development in the battle for the leadership of the Australian Government has been the announcement that the deputy leadership of the principal party in the government coalition, the Liberal Party, will also be decided on Thursday [8 April]. The Liberals' present deputy leader, Sir Phillip Lynch, has declared that he will be vacating the position to enable it to be contested at the same meeting which will determine the actual party leadership. This meeting is to be held in Canberra on Thursday. The prime minister, Mr Fraser, called the meeting to settle the leadership question in the wake of the elections in Victoria which saw the loss of office of the 27-year old state liberal government.

A former minister in the Fraser government, Andrew Peacock, has declared himself a contender for the leadership of the Liberal Party and thus for the prime ministership. Again (Bill Nicholl):

The battle for leadership of the Australian Government is on in earnest. It's a numbers game with both the prime minister, Mr Fraser, and his challenger, the former foreign minister, Andrew Peacock, both claiming they have enough support to win the leadership contest when it is held here in Canberra on Thursday. More than numbers, the contest is also a question of tactics. The latest and most significant of these is the decision by the deputy leader of the Liberal Party, Sir Phillip Lynch, to stand down from his position and allow it to be contested along with that of the party leadership itself. Announcing the move, Sir Phillip said it was time he made way for a younger man. Sir Phillip is 48, Mr Peacock 42.

Sir Phillip spoke to reporters after informing cabinet of his decision:

[Begin recording] There's no pressure and I think really the matter frankly jelled in a quite firm way last weekend after discussion with the family. But its not a mere thought that emerges now for the first time and some of you, I think, would be aware of that for discussions [words indistinct] from time to time.

[Question] Will you leave politics altogether now?

[Answer] I am confident of doing well but I don't intend to conduct a public campaign for the position. My colleagues know me well enough, I think they can form an opinion of whether I am suitable for the post without any public advice from me, and I don't really intend to give any. [end recording]

In assessing the numbers for the leadership contest, it is very difficult to say who, between Mr Fraser and Mr Peacock, to say who can actually win the contest, although the odds appear to favor the prime minister. Some members of the parliamentary Liberal Party previously though possible supporters of Mr Peacock have, as the contest draws near, publicly stated their support for Mr Fraser. One is the defense minister, Mr Killen, a close personal friend of Mr Peacock. Another is Ray Groom, a former minister dumped by Mr Fraser with neither fanfare or warning.

Now the opening of the contest for the deputy leadership has further complicated Mr Peacock's position. The reason for this lies in the tactics being developed by the Fraser camp to undermine Mr Peacock's position in the Parliamentary Liberal Party. Mr Peacock, in declaring himself a contender for the leadership, stressed that the issue on which he stood was not one of personalities, but rather on the style of leadership and, more importantly, the policies being followed by the Liberal Party in government. With the vacating of the party's deputy leadership by Sir Phillip Lynch, the Liberal Party now has the opportunity of changing both the party's style of leadership and its policies and to do so, without changing the prime minister himself. With Mr Howard declared as a candidate for the deputy's job, the party will have a chance of electing someone perceived to have the ability to alter both--both style and policy. Those in the party dissatisfied with Mr Fraser, then, now have the chance to divert their frustration or anger away from actually voting against the prime minister. And where does this leave Mr Peacock? If he fails to win the leadership, someone has suggested he could nominate for the deputy leadership. But he has ruled this out saying he is a candidate for the top job and the top job alone. Whether sufficient pressure could be brought on Mr Peacock inside the party room to have him change his mind is a question that can only be answered on the day. Some political commentators believe a decision by Mr Peacock to take the deputy's position would provide a neat solution to the internal bickering over the leadership which is diverting the Liberal Party's attention from the business of government. As the Peacock and Fraser camps count the numbers, however, there is growing doubt about Mr Peacock's ability to win even the deputy leadership. But the vote could be extremely close, as it could be for the prime ministership. An indication of this is the near feverish attempts by both sides to shore up their support for the final battle this Thursday in Canberra. This is (Bill Nicholl) reporting.

CSO: 4220/514

BRIEFS

UN CONVENTIONAL WEAPONS--Australia has signed a United Nations convention that prohibits or restricts the use of certain conventional weapons. The convention, which covers weapons that may be deemed to be excessively injurious or to have indiscriminate effects, was adopted by consensus in October 1980 after almost a decade of negotiations. Included in the convention are weapons such as mines and booby traps, incendiary devices and bomb fragments that cannot be detected by X-ray. The foreign affairs minister, Mr Street, said that although limited in scope, the convention represented a major advance in the negotiations of restraint agreements in the field of humanitarian law. He said the government remained fully committed to the negotiation of further agreements on humanitarian law, in armed conflict, on balanced and verifiable disarmament and on arms control. A foreign affairs department spokesman said the delay between adoption of the convention in the United Nations and the signing of it was not unusual. The spokesman said ratification of the convention would follow a further assessment of the implications before making a final commitment to it. [Text] [BK131030 Melbourne Overseas Service in English 1830 GMT 13 Apr 82]

LIBERAL PARTY DEPUTY RESIGNATION--The deputy leader of the Federal Parliamentary Liberal Party, Sir Phillip Lynch, is to resign his position. Sir Phillip made the announcement to a meeting of Federal Cabinet in Hobart this morning. He said he would step aside at a special meeting of the Parliamentary Liberal Party on Thursday [1 April]. Sir Phillip said he felt it was time for a younger man to take on the position. There had been no pressure on him from anyone in the Liberal Party, however, he felt it was time for a change. Sir Phillip had held the deputy leadership for 10 years. [Text] [BK060712 Melbourne Overseas Service in English 0500 GMT 6 Apr 82]

CONTENDER FOR LIBERAL PARTY POST--Among other developments today affecting the Liberal Party, the federal treasurer, Mr Howard, said he would be a contender for the deputy leadership of the party's parliamentary wing and a former foreign affairs minister, Andrew Peacock, who is challenging Mr Fraser's leadership at Thursday's [8 April] party meeting says he is not interested in becoming deputy leader. Mr Fraser, the prime minister, had also issued a statement warmly praising the work of Sir Phillip Lynch. [Excerpt] [BK061136 Melbourne Overseas Service in English 0830 GMT 6 Apr 82]

INDONESIA-AUSTRALIA AIR COMMUNICATIONS--The Indonesian and Australian governments today signed a memorandum of understanding on arrangements for direct aviation communication channels for linking control centers in Jakarta, Bali, Ujungpandang, Perth and Darwin. At the signing ceremony, the Australian Government was represented by its ambassador in Jakarta, Frederick Dalrymple and the Indonesian side by Air Communications Director General Sugiri. According to Sugiri, the memorandum was the result of consultations held between the Air Communications Directorate General of the Indonesian Republic and the Australian Department of Transport. Sugiri hoped that the signing of the memorandum would serve as a starting point for a wider cooperation between Indonesia and Australia in the field of civil aviation in the future. [Text] [BK061447 Jakarta Domestic Service in Indonesian 1200 GMT 6 Apr 82]

LIBERAL DEPUTY LEADERSHIP CANDIDATES--The prime minister, Mr Fraser, says his numbers will be adequate to win tomorrow's contest for the leadership of the Parliamentary Liberal Party. Asked today in Canberra whether he would win a vote against challenger Andrew Peacock, Mr Fraser said yes, I will. Meanwhile, there now are four definite candidates for the deputy leadership following yesterday's decision by Sir Phillip Lynch to stand down after 10 years in the post. They are the treasurer, Mr Howard; the industrial relations minister, Mr Viner; the minister for the Australian capital territory, Mr Hodgman; and the health minister, Mr Mackellar. Radio Australia's political correspondent in Canberra says Mr Howard is a strong favorite to win and most Liberal MP's believe Mr Fraser will remain prime minister. VICTORIA LABOR LEADERS CONFIRMED--The two leaders of the Victorian Labor Party who led it to victory in last Saturday's [3 April] state elections have been confirmed in office. The party met today and reelected John Cain as leader and the new premier and (Robert Fordam) as his deputy. It also elected Victoria's new ministry. Meanwhile, the Liberal Party, defeated after 27 years in government, has reelected the outgoing premier, Mr Thompson, and elected outgoing transport minister, Robert Maclellan, as the new deputy leader to replace Bill Borthwick who lost his seat. 'VOPB' REPORTS COMBAT NEWS FROM MONG YAWNG, NAMTU

BK181256 (Clandestine) Voice of the People of Burma in Burmese to Burma 1200 GMT 18 Apr 82

[Text] On 31 March, a combined unit of the people's army and the Kachin Independence Army [KIA] attacked and occupied Mong Yin camp, east of Namtu, where a company office of the military government's mercenary 41st Infantry Regiment and a platoon of soldiers and defense volunteers were stationed. Eleven enemy soldiers were killed, many others were wounded and three were taken prisoner in the battle.

More than 30 assorted weapons, including 1 90-mm bazooka and 1 submachine, and a large quantity of other military supplies were seized from the enemy.

On 2 April, a combined unit of the people's army and the KIA surrounded and attacked the military government's mercenary 4th Infantry Regiment at (Saihkaung), north of Namtu. Many enemy soldiers were wounded. The enemy fled in disarray leaving behind 35 dead.

Ammunition and military supplies and 19 assorted weapons were seized from the enemy.

On 5 April, the people's army launched a suprise attack and overran the (Pong Cho) camp, near Mong Yawng, where the military government's 3d Chin Rifles Regiment and defense volunteers, who were harrassing and bullying the people, were stationed. In this battle, the military government's mercenary army suffered 3 dead and 2 wounded while the defense volunteers of the military government suffered over 20 dead and many others wounded.

The people's army seized 37 assorted weapons, including 1 pistol, 1 collapsible mortar, 1 2-inch mortar and 17 rifles, and some ammunition and a large quantity of military supplies.

The enemy's (Pong Cho) camp was burned down and destroyed by the people's army.

MAUNG MAUNG KHA DISCUSSES EXPORT PROSPECTS

BK311642 Rangoon Domestic Service in Burmese 1330 GMT 31 Mar 82

[Excerpt] The coordination meeting of the economic coordination committee of the Council of Ministers and the chairmen of state and divisional people's councils on work relating to the implementation of the objectives of the 1982-83 economic plan--the 1st year of the Fourth 4-Year Economic Plan--was held in the conference hall of the prime minister's office at 0900 today.

Present at the meeting were chairman of the Council of Ministers' economic coordination committee and Prime Minister U Maung Maung Kha, committee members who are ministers, deputy ministers, chairmen of the state and divisional people's councils and heads of departments concerned.

Addressing the meeting, Prime Minister U Maung Maung Kha said that now was the time to start implementing the objectives of the Fourth 4-Year Plan. The entire Third 4-Year Plan, he said, was a success thanks to the leadership of the Lanzin Party, the supervision of people's councils at different levels and to the cooperation of and implementation by the people.

He added that, as production increases, it would be necessary to carry out all other related work such as, storage, milling and export in a systematic and coordinated manner. Efforts must be made to ensure exportable goods are sold at competitive prices; even more efforts must be made to realize the export target of 4.25 billion kyat for the 1982-83 fiscal year.

Rice, teak and minerals, he said, play a major role among exportable goods. Therefore, cooperation is needed to ensure work is accomplished effectively at all stages--from the production stage to storage, milling and finishing stages--for those goods.

He said time varies for each economic sector as to when beneficial results can be obtained from investments. For instance, he said, in the agriculture sectors, some projects can be done in a relatively short time to achieve results but results from building dams and irrigation systems cannot be obtained immediately. The mineral and industrial sectors also need time to achieve beneficial results. The industrial sector has currently become one of the exporting sectors. As the export momentum accumulates, efforts must be made to expand and increase exports from that sector, he concluded.

PARTIES SHOULD DOWNPLAY IDEOLOGY

BK121052 Jakarta ANTARA in English 1036 GMT 12 Apr 82

[Text] Ambon, 12 Apr (ANTARA)--Coordinating Minister for Political and Security Affairs M. Panggabean called on political parties in Indonesia Saturday not to emphasize ideology. They should instead orient themselves to social and economic development programs, he said.

He said in a get-together with local military and civilian leaders in Ambon what the nation presently needed was development in all sectors of national life to raise the social and economic welfare of the people.

"Ideology we already have, that is Pancasila. The political parties therefore need not emphasize ideology. They also should be more open to all Indonesian citizens without discriminating their religion, race or ancestry," Panggabean said.

The retired army general denied criticism from several quarters saying it was not true the government had neglected political education for the people. The people's political education was attended to but not given top priority, he said.

High priority was given to national efforts at raising the welfare of the people, he added.

In the past 13 years (since the First Five-Year Development Plan) the new order government had concentrated on development programs and these programs had yielded many positive results, he said. The government was now exerting efforts to distribute the results more equitably, Panggabean said.

He said the government was not a magician, capable of achieving all its objectives overnight. The people need to realize this in order to avoid frustration or the mistake of closing eyes to the positive results of development.

The government, he explained, was confronted by many problems in its work to fulfill the basic needs of the people. For instance, there are now 24 million children in Indonesia which have to be provided with elementary schooling facilities.

Panggabean was in Ambon Saturday for a 3-day tour in the Maluku area.

PARTY OFFICIALS VIEW ELECTION CAMPAIGN

BK121036 Jakarta ANTARA in English 1014 GMT 12 Apr 82

[Text] Medan, 12 Apr (ANTARA)--The current campaigning for the forthcoming May 4 general elections had been going on satisfactorily despite a few incidents, leaders of the three political contestants told ANTARA here over the weekend.

The present campaigns had been carried out much better than those for the 1971 and 1977 general elections, they said.

Chairman of the Indonesian Democratic Party (PDI) Sunawar Sukowait said after campaigning here Saturday the first 27 days of the 45-day campaign period had run satisfactorily. The contestants, he said, had reflected an improved attitude--to win as many votes as possible only through legal means.

Without giving exact figures, he noted that formal complaints from the contestants on the execution of the campaigns had been much less than formal complaints filed in during either the 1971 or the 1977 general election campaigns.

Vice-chairman of the Muslim United Development Party (PPP) Muddin Lubis in a separate interview with ANTARA also said he must admit that the organization of the current campaigns had been quite satisfactory.

He said after campaigning for his party in a number of provinces throughout the country he had become more convinced that the better conditions of the current electioneering would give a better opening for PPP to win.

Husni Thamrin, deputy secretary general of PPP, also campaigning in North Sumata, told ANTARA the present general election campaigning had been much improved due to changes the role of the armed forces has assumed.

The armed forces, as the referee, were now standing impartially above all the three contestants, he explained.

He added the general public too had become more mature making them less vulnerable to intimidations or insinuations. The public emotions were now better controlled, Husni said.

Scheduling of the campaigns, giving one day for one contestant only to stage a mass rally, while the other two waited for their respective turns, had contributed to the smooth running of the political contest, he observed further.

Despite a few violent incidents in Java, Golkar leader Dr Suhardiman also admitted to ANTARA that the present campaigning by PDI, Golkar and PPP had been running very well.

He did not give the incidents which occurred during the initial stage of the 45-day campaign period any special significance.

'AFP' REPORTS SUHARTO ON ELECTING NEW PRESIDENT

BK050922 Hong Kong AFP in English 0258 GMT 4 Apr 82

[Text] Jakarta, 4 Apr (AFP)--President Suharto was today reported to have put his position at stake by challenging the Indonesian people to elect another president if they no longer trusted him.

"I happen to be the president this time. The president can be re-elected after a five-year term of office if the people still trust him. But if they no longer trust him, they should not elect him again but elect someone else they trust," he told a gathering of peasants at the village of Barong on Sumba Island, east of Bali, yesterday.

President Suharto's remark, which was reported by the Jakarta newspaper SINAR HARAPAN (RAY OF HOPE), was the first ever published on the controversial problem of the presidency in the wake of resolutions and petitions pouring in almost daily calling for his re-election.

President Suharto, according to the paper, flatly denied allegations that he had been running the country as he willed. He was quoted as saying that he was only carrying out the decisions of the People's Congress (Indonesia's highest policy-making body) which had laid down the basic guidelines of state policies.

The president said that all policies, including those on development efforts, had been adopted by the congress.

The congress then trusted someone, the president, to carry out the policies, he said adding, "Therefore it is not true that the president goes his own way."

He also dismissed charges that the policies were intended to make the presidency a life-long one.

"This is also not correct. The president has only a five-year term of office," he pointed out.

The presidential election will be held by the new congress next year after the parliamentary elections on May 4.

Several universities and institutes of higher learning in Yogyakarta, Central Java, last month named former Vice-President Sultan Hamengkubuwono as a presidential candidate to succeed President Suharto, who is so far the sole official candidate.

Meanwhile, the rector of the influential University of Indonesia, Brigadier General Nugroho, has threatened to shut some faculties if the students continued their strike.

He made it clear that he would not tolerate strikes, saying that the students should abide by the university's rules. Those wishing to boycott lectures could do so freely, he added.

The students have been on strike since April 1 in protest against the dismissal of student leader Peter Sumaryoto, charged with organising campus anti-government activities.

MURTOPO PINPOINTS OPPONENTS OF RULING GOLKAR PARTY

BK180839 Hong Kong AFP in English 0312 GMT 18 Apr 82

[Text] Jakarta, 18 Apr (AFP)--The Indonesian Government has pinpointed the opponents of the ruling Golkar (Functional Groups) Party whom it says should be countered in the interest of Golkar's victory in next month's general election, ANTARA News Agency reported today.

Information Minister General Ali Murtopo told some 5,000 officials of the Industry Ministry here last night that the opponents were those of the "Petition 50" which wanted to delay the election, Muslim extremists led by Imron Mohammad Zein, whose followers hijacked an Indonesian jetliner to Bangkok and raided a police station last year, followers of the "Malari Group," who staged violent demonstrations against the government 6 years ago, and those who disagree with the current government.

According to ANTARA, General Murtopo said these opponents had been trying to disrupt the government and democracy.

"They are terrorists who have caused a setback in democracy," he was quoted as saying.

General Murtopo strongly condemned the riots that ruined a Golkar campaign rally here last month.

Golkar would deal with the rioters itself if the authorities were unable to act quickly to settle the problem, he said emotionally, according to ANTARA.

He reaffirmed that Golkar should win the election with a solid majority on polling day, May 4.

Meanwhile, two men have been sentenced by a Jakarta District Court for alleged involvement in the riot. Hassan Karokaro, 45, a businessman, was sentenced to a month's imprisonment and Darso, 17, a student, 2 months. Six other people will be taken to court next week on the same charges.

The Army newspaper BERITA YUDHA (WAR NEWS) reported today that a member of "Petition 50" has defected to Golkar. The man, Sulaiman Hamzah, has expressed allegiance to Golkar and pledged to vote for Golkar, the paper said.

The defection was announced by Hamzah himself at a Golkar meeting here yesterday, an announcement that was warmly applauded, the paper added.

The defection was seen by observers as a split within the Petition 50 group which consists of leading politicians and senior military officers, including former Police Chief General Hugeng Imam Santoso, former Jakarta Governor General Ali Sadikin, former Prime Minister Dr Burhanuddin Harahap and former Health Minister Dr Azis Saleh.

TEAM SET UP TO IMPROVE UNDERSTANDING WITH MUSLIMS

BK271447 Jakarta Domestic Service in Indonesian 1200 GMT 27 Mar 82

[Text] Commander of the Security and Order Restoration Command [KOPKAMTIB] Admiral Sudomo said he believed that it is necessary for him to maintain communications particularly with the Indonesian Muslim community as KOPKAMTIB had to frequently handle extremist cases caused by elements claiming to be acting on behalf of Muslims or the Islamic religion. Admiral Sudomo stated this when he launched a social communications team between KOPKAMTIB and the Muslim community in Jakarta this morning.

He said that the occurrence of extremist cases among the Muslim community was made possible because there is still a lack of mutual understanding in a number of cases. He expressed the hope that, with the setting up of the team, a mutual understanding would prevail in several cases which sometimes could disturb national stability, which is the responsibility of the KOPKAMTIB to maintain.

Meanwhile, KOPKAMTIB chief of staff General Wijoyo Suyono said there must certainly be causes for the occurrence of extremist cases among the Muslim community which could harm national stability. He said it is these cases which KOPKAMTIB should prevent before such extremist cases occur.

The team, comprising nine members, consists of social and religious experts of the KOPKAMTIB, staff members of the department of religious affairs and of the mental development center of the department of defense and security headed by the head of the mental development center, Brig Gen Sugeng Wijaya.

The secretary general of the Indonesian Council of Ulemas, Burhani Cokrohandoko, appealed to the Muslim community to take good advantage of the communications team.

The chairman of the Indonesian Council of Ulemas, Kyai Haji Hassan Basri, said that with the formation of the team, the most important thing is that the team could be utilized to make approaches to enable us to reach a mutual understanding in various religious related problems.

SUDOMO, PARTY OFFICIALS MEET TO DISCUSS CAMPAIGN

BK171124 Jakarta Domestic Service in Indonesian 0600 GMT 17 Apr 82

[Text] The three participating parties in the general election, the United Development Party [PPP], the Functional Group [Golkar] and the Indonesian Democratic Party [PDI] have agreed that each party would strengthen party discipline, sothat the election campaign in the remaining 11 days of the campaign period would be peaceful and orderly.

In this connection, the executive committees of the political parties and Golkar agreed that the chief of the Security and Order Restoration Command [KOPKAMTIB] Sudomo would make public any excesses emerging from the election campaigns conducted by the contending parties.

At today's meeting between the contending parties and the KOPKAMTIB commander in Jakarta a proper settlement was achieved regarding a Golkar complaint over excesses in the PPP campaign in Jakarta on 13 April.

The three contending parties also agreed that in order to avoid future excesses, they would expand security teams and stick to the routes of their respective campaign tours. Each party will take necessary steps to protect its campaign posters and launch joint patrols with the police.

Today's meeting was meant to consolidate efforts aimed at conducting the general election in a secure and orderly atmosphere, while simultaneously maintaining national stability, unity and cohesion and safeguarding the process of development.

The meeting was also attended by Attorney General Ismail Saleh as chairman of the general election supervising committee and Suprapto, the secretary general of the General Election Institute.

ENVOY TO ROMANIA--Jakarta, 27 Mar (ANTARA)--The new Indonesian ambassador to the Socialist Republic of Romania, Mohammad Isnaeni, Thursday [25 March] presented his credentials to President Nicolae Ceausescu in Bucharest. [Excerpt] [BK281203 Jakarta ANTARA in English 0959 GMT 27 Mar 82]

BASIC CHEMICAL INDUSTRIES--Jakarta, 31 Mar (ANTARA)--Production of the basic chemical industries at home in 1981 were valued at RP1,150 billion up by 22 percent from the previous year's level of RP944.3 billion. Sales of the production were worth RP1,050 billion, according to Hartarto, director general of basic chemical industries at a meeting here Tuesday. Hartarto pointed out the growth exceeded the previously set target of 14 percent for this sector and 11 percent for industrial sector as a whole. Despite the rising production, exports fell in 1981 compared with 1980. Hartarto attributed the fall to an increase in domestic consumption. The decline in exports was among other things recorded in fertilizer sector which was valued only at RP13 billion in 1981 as against RP20.7 billion in 1980. Investment projects in this sector rose from 26 in number worth RP378 billion in 1980 to 67 worth RP2,700 billion in 1981, Hartarto said. [BK011317 Jakarta ANTARA in English 0706 GMT 31 Mar 82]

CABINET MEMBERS POSSIBLE OPPOSITION--Jakarta, 8 Apr (AFP)--Vice President Adam Malik today raised the possibility of two opposition political parties joining the cabinet of the ruling Golkar Party (Functional Groups) if they can adapt to Golkar's policy. Talking to newsmen after a meeting with President Malik said the PPP (the Muslim United Development) and the PDI (the Democratic Party) may get seats in the cabinet "provided they can conform with the policies." The two opposition parties had been excluded from the government by President Suharto since Golkar won a landslide victory in the 1977 general election. Although the makeup of the cabinet does not depend on the parties' win in the general election scheduled for next month since President Suharto selects his ministers himself, Mr Malik's statement is seen here as an indication that both the PPP and the PDI may be included in the coming cabinet. [Text] [BK081541 Hong Kong AFP in English 1402 GMT 8 Apr 82]

OIL SUPPLY--Indonesia's oil supply to various friendly countries will not be affected by the reduction in Indonesian crude oil production and Pertamina has no intention of reviewing its contracts with various countries, such as the Philippines, Thailand, Bangladesh and Japan. This was stated by Mining and Energy Minister Subroto during a meeting with foreign correspondents in Jakarta today. He said that the amount of oil supplied to the countries concerned will remain at the levels agreed upon in the contract. Based on the OPEC agreement on 20 March 1982 in Vienna, Indonesia is reducing its oil production from 1.6 million barrels per day to 1.3 BPD. Subroto also stressed that OPEC will not reduce oil prices, and the $34 per barrel floor price will be maintained until the end of 1982. POLISH EMBASSY CLOSING--Wellington, 6 Apr (AFP)--The Polish Embassy here is being closed for economic reasons next month. The "suspension of activities" follows about a dozen similar closures of Polish embassies round the world in the past 8 months, said the Polish charge d'affairs in Wellington, Jan Koscinski. "Business will be carried on by the Polish Embassy in Canberra and the consulate and commercial offices in Sydney," he said. Mr Koscinski notified the New Zealand Government last week and "I have got full understanding from them." He added "the reasons are purely economic and we continue to be interested in maintaining good relations with each other." The mission in Wellington was opened in 1965. Embassy staff had travel restrictions placed on their movements around New Zealand after the Polish military takeover last December. It is understood the present Polish political crisis and New Zealand's opposition to the military crackdown had no effect on the present position. PRESIDENT'S PERSPECTIVE ON DEMOCRACY SUPPORTED

Karachi MORNING NEWS in English 5 Apr 82 p 4

[Editorial: "Paving Way For Democracy"]

[Text]

FEW persons in the country will disagree with President Zia-ul-Haq's apt remark that the real problem of Pakistan was the establishment of democracy not its restoration. Restoration literally means "to bring back to a (supposed) former state or to a normal state". Pakistan never had democracy, if by democracy is meant a government of the people, by the people and for the people. Put in other words, democracy is a form of government under popular control, responsive to the aspirations and demands of the common man and depending for its continued existence on the will of the majority. It would be more appropriate, as the President said, to talk of establishment of democracy in Pakistan which has always been ruled over not by the representatives of the majority but by oligarchic groups drawn from the landed aristocracy and bureaucracy, constituting but a microscopic minority and using the powers and resources of the state to preserve their own privileges and honours, and what is more tragic, at the cost of the country and the countrymen. Therein lies the root of all troubles to which this country has been victim since it was born.

Deprecating the agitational and negative politics indulged in by some of the politicians, the President has said that the Government was seriously engaged in working out a political structure based on Islamic principles, which would be put before the Majlis-i-Shoora at an appropriate time, leading to restoration of political activities and representative government in the country. He said that the Government was steadily moving towards introduction of Islamic democracy which should provide a government of the choice of the people and also give them a sense of participation in the affairs of the state.

The President also made the straightforward statement: "The politics should be made subservient to Islamic principles." Actually, the non-existence

of democracy in Pakistan and political activities—and the politicians who have so far held power in the country—being divorced from Islam are the two facets of the same problem. In view of the popular demand from the whole country for remoulding the Pakistani society on the pattern of Islam, only a government headed by persons believing firmly in Islam, living up to its tenets in their daily lives and desiring to run the country according to Quran and Sunnah can command the support and loyalties of the majority. A government headed by such persons will qualify in modern parlance to be designated as a democracy.

Taking note of the insistent popular demand for holding elections to effect the transfer of power to the elected representatives of the people, the President said that the holding of elections and transfer of power was always fraught with some dangers in our country. The few elections held in this country he said, had left a bitter taste. Outside forces, according to him and those opposed to the ideology of Pakistan would also try to influence the results of elections by pumping in money and other resources.

The President has correctly diagnosed the malady that has sapped the strength of the body politic of Pakistan. In a society in transition, such as Pakistan, elections are the only and the safest method for effecting political, economic and social changes in keeping with justice and popular aspirations. But the pressure groups and the vested interests—a tiny group that can be counted in thousands in a population of nearly 85 million—blinded by their self-interest went to extreme lengths in rigging the elections and thus barred the way to a smooth changeover. That has been the record since the first provincial elections down to the general election in 1977. It helped them for a time but ruined the country.

And today we stand at the cross-roads, rigging, as we pointed out in these columns earlier, has been the favourite method of the anti-Islam, anti-Pakistan and anti-democracy elements of nullifying the popular will as expressed through the ballot boxes, and capturing political power in the country. Certainly, they could not do it without willing tools and accomplices in bureaucracy. Given an administrative machinery free of such corrupt and unpatriotic elements, it should not be difficult to ensure honest and fair elections at the appropriate time, making it possible for honest, patriotic and inspired Muslims to take command of national affairs.

TALKS ON FOREIGN BASES DENIED

Karachi DAWN in English 5 Apr 82 p 7

[Text] THE DISCLOSURE by President Zia-ul-Haq that the Reagan Administration's offer last year to station American forces in Pakistan had been rejected by Islamabad should help to clarify the Government's position on a vital aspect of foreign policy. That the President should have deemed it necessary to reaffirm his Government's commitment to non-alignment at this stage is not without significance. At a time when there has been much speculation in the foreign Press on the basis of reports said to be emanating from Washington, it is essential that the record be set right at the Islamabad end. Reports that Pakistan is to play a role in the American strategy in the region by providing "facilities" for the Rapid Deployment Force would obviously have proved damaging since they tended to cast doubts on Pakistan's non-aligned credentials. Hence, the President's statement that no foreign bases are to be allowed on Pakistan's soil, nor any country is to be allowed to preposition its arms here, is both timely and unequivocal. Given its security compulsions in the context of the Afghan situation, none would deny Pakistan's need to strengthen its defences. But it is equally important that the country does not jeopardise its non-aligned status or erode its sovereignty in its quest for security.

In that context, it is significant that the 3.2 billion dollar package for arms sales and economic assistance negotiated last year is based on reciprocity and equality. As affirmed by President Zia, the arrangement does not contain any stipulations that derogate from the sovereignty and independence of Pakistan. The importance of this can hardly be overemphasised, considering our past experience with treaties and agreements which were not thought to be contingent upon any parliamentary ratification. Devoid of the scrutiny and moderating influence provided by a parliamentary debate, these agreements did not always serve the long-term national interest of the country even though they reflected the thinking and orientation of the Government in power. The Mutual Defence Assistance Agreement negotiated, at the behest of Mr. Ghulam Mohammad, by Prime Minister Mohammad Ali of Bogra with the Eisenhower Administration in May 1954, after Mr. Liaquat Ali Khan and Khawaja Nazimuddin had rejected offers of similar pacts in the past, embroiled Pakistan in security arrangements with a superpower which compromised, to a large degree, Pakistan's sovereignty and independence. The agreement which provided for the stationing of American personnel here and required Pakistan to accord them special facilities and privileges, was not conditional upon parliamentary ratification and came into effect when it was signed. Similarly, the 1959 Bilateral Defence Agreement, following which Pakistan provided the Budaber base to the United States from which the U-2 took off on its infamous flight, also came into force immediately after it was signed. It is to be presumed that, in the absence of any parliamentary mechanism for evaluation and scrutiny, the Government has been extremely careful in weighing all the pros and cons of the recent military sales and economic assistance arrangements with the US. It is of supreme importance that the country firmly adheres to its non-aligned policy – a position the President has reaffirmed – and jealously guards its independence in foreign policy.

DASTGIR ON INCENTIVES FOR OVERSEAS PAKISTANIS

Karachi DAWN in English 9 Apr 82 p 8

[Text]

ISLAMABAD, April 8: The Federal Minister for Labour, Manpower and Overseas Pakistanis, Mr. Ghulam Dastgir Khan, said here on Tuesday that the Government would give maximum incentives to overseas Pakistanis to make investment in trade and industry.

He was talking to newsmen at Islamabad Airport on his return here after a visit to four Arab countries. The Minister headed an eight-member delegation to Saudi Arabia, Kuwait, U.A.E. and Qatar.

He said the Government would give rebate of 25 per cent to the overseas Pakistanis for the import of machinery.

He said that they could invest in 50 industries and the Government was developing industrial estates in various parts of the country for this purpose. He said if necessary the government would authorise its embassies in these countries to give import permits for machinery as had been allowed for Pakistanis in Britain.

Mr. Ghulam Dastgir Khan said in Saudi Arabia he met the Interior and Labour Ministers and had useful discussions. He said he was assured that positive steps would be taken to solve the problems of Pakistanis in that country. He had also discussed with the Labour Ministers of UAE, Qatar and Kuwait about the problems of Pakistanis.

He said three or four more labour attaches would be posted in Saudi Arabia and a labour attache for Abu Dhabi would be sent soon to attend to the problems of the overseas Pakistanis.

He said that the Saudi Government had decided to constitute a committee with Pakistan's ambassador as a member to solve the cases of Pakistanis who were in various jails of that country. He said that about 500 Pakistanis were convicted while about 4,000 to 5000 were still waiting for decision in their cases. The Minister hoped that the committee will solve their problems as soon as possible.

The Minister said that in his deliberation with the Labour Minister of Abu Dhabi, it was decided that in future manpower would be exported on government to government basis to avoid corruption.

During his 12-day tour the Minister met a number of Pakistanis to apprise himself of their difficulties.

COMMENTARY ON SHOORA, ISLAMIZATION

Karachi DAWN in English 5 Apr 82 p 7

[Text] It was in this atmosphere that the Majlis-Shoora began its second session, early this week, in the old National Assembly Hall. The session's importance lay mainly in its being addressed by President General Mohammad Zia-ul-Haq on the opening day. Otherwise, right from the day of its creation, the Shoora's powerless and unrepresentative character have been its main handicap. Besides, since its first session, the torrential utterances of its Chairman, Khwaja Safdar, and of, some of its over zealous members, creating hopes about elections and restoration of democracy within a year or two which turned out to be totally baseless, have made this body look as ignorant about the future plans as anyone else in the country. On the other hand, it has a great potential to serve as a red rag for the defunct political parties.

It is against the elementary norms of political science to expect that a political vacuum of wide dimension can be filled by a plethora of monologue or by resort to verbal political gymnastics. It is bound to draw other forces out in the field, if the game is desired to continue. Otherwise, the single-side game cannot last very long. At least, it will not attract any spectators, and this at present is the position of the Shoora. The general atmosphere is such that even an honest critical speech in the Shoora will be looked upon as a stage-managed show or a command performance.

Where the objective of Islamisation of laws is concerned, a feeling is growing in educated circles here, which also include senior bureaucrats, that it can be achieved more effectively and more systematically by the Federal Shariat Court, if it is strengthened and empowered fully to take cognisance of the present laws which militate against Islamic injunctions—either on its own or on request by a citizen or the government.

There seems to be much force in the argument that to ensure national unity and restoration of confidence among the people, work must start without any further loss of time for the restoration of the supremacy of the country's judiciary, besides political activity.

GOOD NEWS ON KHASHKHELI OIL PRODUCTION WELCOMED

Karachi DAWN in English 5 Apr 82 p 7

[Text] GOOD NEWS continues to flow out of Khaskheli in the Badin district. The new estimates are that 5,000 barrels per day of oil will be produced by the recently discovered five wells there. The estimate is based on first-hand knowledge by a senior official of the Ministry of Petroleum who visited the site the other day. Not only has oil been discovered in the lower Indus region for the first time but its economics are going to be better than that of any previous find within the country. Oil has been struck at a depth of just around 3,500 feet in all the wells, thus consuming one-third of the time and money required for drilling in some other places, as for instance the Potwar area. And the oil is of a very high grade. The Khaskheli oil discovery is most encouraging since the need for more indigenous oil production has never been greater than now. The country is spending 1.6 billion dollars per year on oil imports. The consumption, now one lakh barrels per day, is likely to rise to 1,60,000 by 1990. Domestic production has been about 10,000 bpd for the last four years and is projected to go up to 26,000 bpd by 1990. Much will depend, however, on the new discoveries at Khaskheli. The area's potential seems richer than was thought earlier, and there is every reason why more wells should be drilled. Unofficially, it is estimated that these five wells together may yield as much 10,000 bpd, which will be equivalent to the total indigenous production at present.

The discovery at Khaskheli has also raised the question of transporting the crude from the site to the refinery in Karachi. At present, a few tankers belonging to the National Logistics Cell have been entrusted with the job of carrying about 2,000 bpd of crude from site to the refinery. However, with the increase in the Khaskheli output, the tanker fleet may prove inadequate to the task and a pipeline may offer a better mode of transportation. It will be appropriate if preliminary work for laying a pipeline is taken in hand on a priority basis. The proposed pipeline must have enough extra capacity to handle a greater quantity. Lastly, a more intensive prospecting exercise than hitherto in the lower Indus Basin is greatly to be desired.

GOVERNMENT ESTIMATES ON EXPENSES CHALLENGED

Karachi DAWN in English 1 Apr 82 p 12

[Article by Tariq Zaheen]

[Text] Lahore, March 31: Maulana Abdul Ghaffar Ghaffari, President of Punjab Teachers Union, in an interview with "DAWN" on Tuesday (partly covered in Wednesday's issue) said that Government's estimate of Rs 7000 million, as extra expenditure to be incurred on the acceptance of the teachers' demand, was not correct. He said that according to calculations made by the Union, the maximum amount to be spent on teachers would not exceed Rs. 100 million, he added. Out of this Rs 70 million would be spent by giving house rent at the rate of 30 per cent while another Rs 30 million would be spent on the adjustment of grades and promotions.

When asked to confirm the figure of Rs. 7,000 million as the total expenditure for meeting the teachers' demands, the Provincial Additional Secretary, Finance (Budget) Mr. Zulfiqar Ali Shah, who at present is also officiating as Provincial Secretary, Finance, said "we never provided these figures to the Government." The Director, Public Instruction (DPI) Mr. Qazi, also expressed similar views when asked to comment.

Basis of Calculation

Informed sources here believe that the figure of Rs. 7,000 million was the result of an exercise conducted by the Education Department but nobody appeared to know the basis of calculation.

On the other hand, Mr. Ghaffari claimed that the figure was highly exaggerated and misleading as the actual burden on the exchequer would be far less. The Federal Education Minister, he said, was also unable to give any comments on these inflated figures.

Referring to the suggestions made by the Chairman, Majlis-i-Shoora, Kh Mohammad Safdar, that the teachers should first call off the strike to enter into a dialogue with the Government. Mr. Ghaffari said, the decision to go on strike had a long painful history behind it. He said that despite the Union's repeated reminders since 1979 which remained unheeded it had called off its strike last year only on the suggestion of the Government and had submitted a charter of demands on Jan. 21, 1981. After a prolonged delay the matter came up for discussion in the Punjab

Council in December last. On that occasion, the Provincial Education Minister had made a categorical statement that the Government had dropped the idea of considering the teachers demand as it involved huge expenditure.

Mr. Ghaffari said that in view of the statement the Union had no choice but to chalk out a programme to get its demands accepted.

Maintaining that the meetings held so far with the authorities had failed to yield any concrete results it was now for the President of Pakistan to take up the issue personally, particularly, in view of the deteriorating situation. Mr. Ghaffari claimed that on March 2, that is, just five days before launching the strike, they had a meeting with the Shoora Chairman at Islamabad and had asked him to convey their point of view to the President but that also produced no results.

Meanwhile, a high-level meeting was held here in the Governor House under the chairmanship of the Governor to finalise an agenda for the meeting scheduled for April 1 at Islamabad.

PROPOSAL TO SET UP PORT POLICE

Karachi DAWN in English 5 Apr 82 p 8

[Text] A proposal for the formation of port police has been sent to the Government for approval.

Disclosing this to newsmen at a Press conference at the KPT Staff College, the Chairman of KPT, Rear Admiral M. I. Arshad, said the mobile port police will be provided motor-cycles and equipped with the latest instruments to check the mis-handling in the port. It will directly work under KPT as in England and New York, he added.

The KPT Chairman said there was no indiscipline and crisis in port.

He said his speech during a lecture of port management and operations recently was misquoted by the Press.

Rear Admiral Arshad said he had cited an example of discipline in PIA.

A plan for the construction of a modern container terminal (cost about 1.3 billion rupees) has been submitted to the Federal Government for final approval, he said.

The work on the project is expected to start within a year's time, and will be completed in five years.

Several international agencies, including the World Bank, may assist in meeting the foreign exchange component of the project.

With the completion of the container terminal Pakistan will enter a new era of port handling, he said.

He said the congestion at the Karachi Port has been eliminated and the period of crisis which was at the port during 1978, has been overcome.

He said the Karachi Port is working on no-profit, no-loss basis. Side by side it has been undertaking new constructions, modernisation and improvements to meet the ever-increasing traffic.

Since independence most of the 21 berths have been re-constructed and now there are 30 berths at the port.

The KPT will construct three new mosques in the port area during the current year, Rear Admiral Arshad said. A number of mosques have been completed and renovated by the KPT earlier.--PPI.

NATIONAL ENDOWMENT FOR SCIENCE SUGGESTED

Karachi DAWN in English 5 Apr 82 p 8

[Text] Dr I. H. Usmani, a senior UN Energy Adviser, has suggested creation of a national endowment for science and technology and another for humanities to train and build highly trained manpower in the country.

Addressing members of the Pakistan Association of Scientists and Scientific Professions (PASSP) in Karachi on Saturday evening, Dr Usmani a former Chairman of Pakistan Atomic Energy Commission (PAEC), said the setting up of the national endowment of science would revolutionise scientific effort in the country.

He proposed that one dollar per capita be allocated for the setting up of the endowment so as to have substantial funds to train scientists and technologists upto post graduate and Ph.d. level of the age group between 25-30 years.

Dr Usmani also suggested to the Pakistan Government to advertise in foreign scientific magazines asking Pakistani scientists abroad about conditions and salaries on which they would like to work at home. He was confident the response would be quite positive in this regard.

He said that scientists and technologists in the country have failed in coming up to the expectations of the people. The need of the hour was to concentrate on training manpower for which a new effort was needed.

Dr Usmani was of the view that Pakistani scientists and technologists should be associated in matters of decision making in respect of defence matters as this will help save substantial amount currently spent on scientific projects geared to the defence of the country.

He underlined the need for spending more on scientific research and development in the country as this was a sector of vital national importance.

He said he was impressed by the development achieved in the field of agriculture and industry over the past few years. But, he felt, that this could be tripled if "sincere and serious efforts were made".

He called for giving priority to development in rural areas which have been neglected in the past. In this connection, he said, stress should be laid on rural electrification and water supply. He suggested decentralisation of electricity in the rural areas.

Dr Usmani also stated that a national energy audit should be carried out and that there was need of evolving a different philosophy in the energy sector which includes conservation of energy and greater use of solar energy.

He said a scientific service of Pakistan be introduced to give due status to the country's scientists. Dr Usmani said he would discuss proposals outlined by him with government officials.

Mr Manzur Ahmed Shaikh, Secretary, Federal Ministry of Science and Technology, in a brief speech said the idea of a national endowment was an excellent one.

Mr Shaikh said a pilot project to provide clear water in rural areas had been launched by the Pakistan Council of Scientific and Industrial Research (PCSIR) in collaboration with the Public Health Department.

Mr Abdul Hameed Chotani, Vice President, PASSP, earlier welcomed Dr Usmani.--PPI.

TASK FORCE TO STEP UP REMITTANCES

Karachi BUSINESS RECORDER in English 8 Apr 82 p 1

[Text]

ABU DHABI, April 7: The Pakistan Government has set up a task force for a detailed examination of problems faced by Pakistanis in remitting money home and possible incentives to attract more remittances through Pakistani banks.

The task force was set up because of a growing feeling in Pakistan that after nationalisation the banks had become bureaucratic, resulting in delays in transfer of money.

The force comprising officials of State Bank, Pakistan Banking Council and nationalised banks is currently on a visit of countries with concentration of Pakistani workers from where bulk of remittances is sent.

A. Rahman, a member of the force told "Khaleej Times" in an interview that the remittances by Pakistanis abroad constituted a substantial part of the country's foreign exchange earnings and the government wanted to provide all possible facilities for the smooth operation of this system.

He said the task force during its month long tour would study the procedure adopted by Pakistani banks in these countries, rates offered by them as compared to other banks and exchange houses and possible innocentives for attracting more remittances through Pakistani banks. On return the task force would submit an action plan to the government.

The plan will include a proposal that drafts sent by Pakistanis abroad should be encashed when presented at the counter of any nationalised banks even though the draft had been made by another bank.

Dr Rahman said the task force also intended to propose Investment schemes to attract more remittances into productive channels.

He disclosed that after delinking of Pakistani rupee from dollar in January this year, the amount of remittances had increased by at least ten per cent, it was mainly because of higher remittances from salaried class.

The members of the task force after visiting UAE will go to Qatar, Kuwait, Saudi Arabia, Libya, Britain and West Germany.

KARACHI'S ABORTED SUBWAY PROJECT DISCUSSED

Karachi DAWN in English 9 Apr 82 Magazine p 1

[Article by Azmat Ansari]

[Text]

Whatever happened to Karachi's underground railway project? A lot of people who earlier on thought that a subway for Karachi was a luxury may now have second thoughts about it.

The plan to dig a tunnel under the Bunder Road spine at a cost of 200 million rupees has been shelved by the government. The planner concluded: although the subway would carry between 72,000 and 76,000 persons every day, benefits would not justify the cost.

A few files and a couple of maps showing the proposed route of the subway still survive in the Master Plan Department of the KDA. There is even a map of the wall on which two routes in dotted lines are the routes suggested by the KDA and the Ministry. When the project was still hot, the KDA suggested that the route of the subway should not be under Bunder Road as proposed by the Ministry, rather it should start from somewhere close to the Karachi University, touching Gulshan-i-Jauhar, Scheme-33, Tariq Road, Shahrah-e-Faisal and via M. A. Jinnah Road and terminate at the City Railway Station.

An official whom I interviewed said that a route along the Karachi University corridor would be a more useful route than a route under Bunder Road. The population projections show that the concentration would be around the Karachi University corridor in the next 20 years and therefore a route along this corridor could serve a larger number of people.

Social costs

The environmentalists in Karachi are not particularly opposed to the subway. At least one of them said to me that while reckoning the cost of the subway, the planners do not seem to take into account the social costs that the people may have to pay in the event of abandoning the project.

In the developed world, noise is considered being increasingly felt that one of the principal causes of psychological diseases and ailments. And then it is not just the noise that we hear that is dangerous. Some sound wavelengths, although not audible, may be utterly damaging to the human system. A house or a settlement pretty close to a busy thoroughfare, may in fact be lethal for the human system.

Studies carried out in the West have shown that people living close to the flyways are twice as prone to mental derangement as people living in houses in relatively quiet areas.

A former official who worked for the Rapid Transit Cell or the Karachi Subway Project and who had lived in the United States for some time says that if a person stays near one of those flyways for two weeks he may become a mental wreck. In Karachi, now on account of the increase in traffic there has been some talk of making flyways to ease traffic congestion. A subway will take some lead off the roads, and reduce the need for having more flyovers, at least for some more years.

Already, on M.A. Jinnah Road, during peak hours on certain sections of the road the capacity for taking on vehicles reaches a saturation point. The Traffic Engineering Bureau has collected some extremely valuable data which has not yet been formally released to the Press:

On 7th March, a batch of young students, mostly from engineering colleges and the Karachi University, observed between 7 a.m. and 7 p.m. 69,772 vehicles going up from the Quaid's Mazar towards Mereweather Tower. In the same period 58,590 vehicles came down from M.A. Jinnah Road towards Guru Mandir. The break-up of the traffic observed was:

–26,428: taxis, cars, vans and wagons;
–5144: mini buses, buses, trucks, oil tankers;
14,400: Scooters and motorcycles
–247 Animal-driven cars and 23,553 rickshaws.

The following figures – as yet unpublished – collected in a week-long survey from 30 Jan until 4 Feb show that on an average 1,506 vehicles enter Business Recorder Road every hour from Lasbela, 993 go out from Business Recorder Road towards Lasbela; 1,310 enter Jehangir Road from Tin Hatti; 1,227 go from Jahangir Road towards Tin Hatti; 453 enter Bahadur Yar Jang Road from Britto Road; 587 vehicles every hour go from Bahadur Yar Jang Road towards Britto Road; 1,063 enter Jamshed from Jail Road; 908 go from Jamshed Road towards Jail Road; 2038 vehicles from M.A. Jinnah Road go towards the Old Exhibition ground, while 1,694 enter M.A. Jinnah Road from Old Exhibition.

These interesting figures show that traffic on some roads in Karachi is fast reaching a point where it cannot run smoothly, and if nothing is done to improve the situation, then, within the next few years, traffic jams may throw the entire traffic system out of gear.

Overhead rail

The need for an alternate transport system becomes acute every day. An overhead railway is ruled out because the countries which had such railways are now getting rid of them. In New York, for example, an entire overhead railway system has been dismantled because of the protests by the environmentalists and residents.

On normal working days, it is almost impossible to find a place for parking a car on I. I. Chundrigar and M.A. Jinnah Road. Every year more cars are being brought into Karachi by its citizens. By 1985 the number of households owning cars is likely to increase from 36,000 in 1971 to 118,000 in 1985. One households out of every ten will be owning a car by 1985. One can imagine how grave the parking situation will become by that time.

A subway can also ease the parking situation to an extent. In the West, a large number of car owners use subways to reach their offices largely because there is no place for parking their cars around their offices. A subway relieves a lot of pressure from the parking lots inside a city.

Other unpublished reports of survey on pollution in Karachi show that anti-smoke emission laws for buses and rickshaws are lax. Take a look at these figures:

On 7th March among the vehicles going towards Mereweather Tower between 7 a.m. and 7 p.m. 538 buses were seen emitting a high degree of smoke and 208 buses a low degree of smoke. Seventy KTC buses that travelled on Bunder Road that day emitted a high degree of smoke and 31 buses low degree. Among rickshaws 832 emitted high-degree and 137 low degree of smoke.

As a result, the extent of pollution of air in Karachi is one of the highest in the world.

ircular train

A surprisingly large number of people use the Karachi circular rail way. From the number of tickets sold at the railway stations it would appear that not more than 200 persons on an av rage board the train, but staticians figure that several thousand people use the circular railway every day travelling as they do without tickets.

The trolly buses which until some time ago were talked about more and more by people as a supplement to the existing fleet of buses in Karachi have the advantage of rapid acceleration, silent and pollution-free operations and low maintenance costs, but the disadvantages far outweigh their advantages.

Trolly buses – which look like ordinary buses requiring overhead electricity lines for power and subject to de-wiring incidents, and when this occurs traffic congestions ensue; they cannot overtake another vehicle; and the system is not flexible.

Unlike buses they cannot be re-routed quickly if the situation so demands. They cannot detour around accidents or blockages and they are subject to power failures.

Lahore and Pindi

A case for subways for Lahore and Rawalpindi is equally strong. Recent trends have shown that people in those cities are buying more cars for their daily use than they have bought, perhaps, in the last two decades.

In both Lahore and Rawalpindi – which are older cities than Karachi – streets are narrow and ill-planned. In view of the growing traffic the need for alternate means of transport become more dire and urgent

ARTICLE DISCUSSES FAISAL MOSQUE

Karachi DAWN in English 9 Apr 82 Supplement p I, III, IV

[Text] ISLAMABAD Master Plan, prepared in 1959, envisaged the construction of grand National Mosque, on high terraced land at the foot of Margalla Hills, on the axis of Islamabad's most important highway, Shahrah-i-Islamabad. The site of the mosque is a focal point for road-users approaching the Federal capital from the South; it is so located that on completion, it will be visible from a long distance, both during day and night, and will be an important landmark of the Federal capital.

In 1966, when selection of an architect for designing the National Mosque was under CDA's consideration, his Majesty the late King of Saudi Arabia Shah Faisal Bin Abdul Aziz graced Islamabad and paid a visit to Shakarparian on April 21, 1966 for planting a sapling. When general characteristics of the town were being explained to His Majesty, the location of the Jamia Masjid was also mentioned. The late King Faisal showed keen interest in the construction of the mosque and graciously offered to bear personally all expenses on its construction.

In order to obtain the best possible design for the mosque, an internatinal competition limited to Muslim architects all over the world was held by CDA in 1969, under auspices of the Union of International Architects. Top architects from 13 Muslim countries participted in the competition. The entries were judged by a jury appointed by the Union of International Architects. The jury also included a representative of the Saudi Arabian Government. The design of Mr. Vedat Dalokay was adjudged to be the best and he was awarded the first prize. He was consequently selected as the Architect for this project. The contract agreement with him was finalized in April 1970 and he was entrusted with the entire project, including overall supervision till its completion. The mosque is now being constructed according to the design prepared by Mr. Vedat Dalokay.

In 1975, applications for pre-qualification of construction companies were invited, both at home and abroad through Pakistan's Missions. Eighteen applications were received in all, and in November, 1975, twelve construction companies from within and outside the country, were pre-qualified by the CDA with the help and advice of the consultant. Tender documents to pre-qualified companies were issued in December, 1975 and tenders were opened on February 28, 1976 in the presence of His Excellency the Ambassador of Saudi Arabia Mr. Fahad Al-Modlej; Director Projects, Ministry of Finance, Saudi Arabia; and Mr. Vedat Dalokey, the main Architect of the project. Four construction companies participated. After the usual technical scrutiny of tenders and fulfilment of necessary formalities, the work was awarded to Messrs National Construction Company (Pakistan) Limited. The letter of intent was issued in June, 1976 with November 17, 1976 as the date of start.

MASTER PIECE OF ARCHITECTURE

The splendour of Margalla Hills rising North of the project site was the most important factor in moul-

ding the structure of the mosque, which resembles the form of a pyramidal tent. The background in natural combination of triangles made by valleys and ridges, the triangle as its basic element, provides perfect harmony with recurring triangular facets of the background hills.

As first prayer congregation was held by the Holy Prophet (May peace be upon him) in a tent, the project, as such, is well designed in both the directions, nature as well as religious history. The use of modern technology in its construction, coupled with inspiration from 5000 year old tradition of the area, will make this structure a masterpiece of contemporary architecture.

PHYSICAL FEATURES

The major elements included in the mosque are briefly as follows:–

A. CAPACITY

i) Site area 46 acres.
ii) Main Prayer Hall 228 foot x 228 foot x 138 foot high for 10,000 persons.
iii) Four 285 foot high minarets.
iv) Women's gallery located on Mezzanine floor with a capacity for 1500 ladies.
v) Entrance Verandah with a capacity for 2,000 persons located East of the mosque structure.
vi) Main courtyard for 40,000 persons
vii) Porticos with a covered praying capacity for 22,000 persons
viii) Courtyard towards the North for about 20,000 persons.

B AUXILLARIES

Parking facilites for 400 cars, ablution space for 200 persons at a time, cycle stand for 2000 cycles, Islamic Centre, museum, Library, auditorium, office space for mosque Administration and residence for the staff.

C STRUCTURE

The structure of the Main Prayer Hall is supported on girders rising from the four corners along valleys to a height of 133 feet in the centre. The pyramidal roof consists of hollow box type slabs and cross girders with hinge line beams running at ridge lines, adequately stiffened with diaphragm girders. At the top, the main girders are joined through decorative grid ceiling and a Summit Block. The horizontal thrust of the main girders is counter-balanced by the weight of mass concrete foundations and the four minarets located at the corners. The whole structure has been designed as a monolithic unit and constitutes one of the biggest unique buildings ventured in the medium of reinforced concrete with teh application of special construction techniques. All structural elements have been designed keeping in view earthquake effects, temperature, loading, creep, shrinkage, differential settlement of foundations in addition to normal vertical horizontal loading.

D. FINISHES

i) Exposed concrete finishes like fluted, bush hammered, board marks in patterns and fairface concrete have been specified for the structure. These finishes call for meticulous control of the design of concrete mixes and fabrication of form work, placing of concrete, application of release agents and compaction techniques.
ii) Aluminium anodized doors and windows and skylights.
iii) Teakwood doors and windows in Phase-II
iv) Flooring of stones, marble and terrazo
v) White marble clading on the roof.
vi) Fibre glass thermal insulation.

E. DECORATIVE FINISHES

The following decorative finishes have also been proposed in the mosque:

i) Turkish ceramic tiles, coloured scripture tiles and ceramic veneers.
ii) Stained glass and scriptures on Qibla wall.
iii) Coloured crystal glass on near and side walls of Main Prayer Hall.
iv) Marble and transparent glass work in Mehrab and Mimber.
v) Aluminium chandelier consisting of a sphere of 10 meters dia and ring of 40 meters dia suspended from grid ceiling.
vi) Fountains in the interior of the mosque, pedestrian entrance, ablution area, reflection pools with fountains on the North and West sides.
vii) Gold plated crescents on minarets and main crescent 'Alem' on the hall.

F. ELECTRIFICATION

i) The entire mosque will be well illuminated with flourescent, incandescent, mercury vapour and sodium light fittings, including flood lights.
ii) Under water fountain lights have been provided in the fountains.
iii) The entire mosque will be equipped with proper public address system based on laboratory backed accoustical studies.
iv) A modern lightening protection system has also been provided.
v) Two lifts shall be installed in North and South-East minarets for the public.

G. GENERAL

In addition, the complex will have a network of parking areas and properly designed external and internal utility services. The green areas adjoining the mosque shall be properly landscaped and devoted to prayers, increasing its congregational capacity from 100,000 persons to 300,000 persons.

CONSTRUCTION

The project has been split into two phases. Phase-I comprises main prayer hall, the four minarets and the four walls, podiums and some services. Phase-II includes the open courtyard, covered passages, ablution areas, fountains, three faculties of Islamic University, external and internal utility services, access roads from the East and South.

BRIEFS

MINORITY AFFAIRS ADVISER--Rawalpindi, April 8: The President and CMLA has appointed M. M. P. Bhandara as Adviser to the President on minorities affairs, with the rank and status of a minister of state with immediate effect, according to a notification issued by the Cabinet Division here on Thursday. The Ministry of Religious and Minorities Affairs would be the Administrative Ministry concerned with the work assigned to Mr. M. P. Bhandara.--APP. [Text] [Karachi DAWN in English 9 Apr 82 p 1]

RICE HUSK CEMENTING MATERIAL--Pakistan has achieved major breaktrhough in use of rice husk as cementing material replacing cement by 75 per cent and resulting in 40 per cent savings in existing building construction costs. A small house has recently been built at the Building Research Station in Karachi on an experimental basis. Officers said research on reduction in use of cement and its replacement by lime in construction work had also shown encouraging results. The Building Research Station was also carrying out research on prolonging the life of earth building in Pakistan mainly in the rural areas. Furthermore, the use of partial pre-fabrication of elements and buildings was also receiving due attention. An experiment on the use of slag, a waste material from the Karachi Steel Mills for making block to be used in construction of buildings was also underway.--PPI. [Text] [Karachi DAWN in English 9 Apr 82 p 7]

BAR MEMBERS ASKED TO QUIT--Faisalabad, April 8: A meeting of the Faisalabad District Bar Association has given a fortnight notice to its members who have joined the Majlis-i-Shoora to quit it or face expulsion from the association, according to a Press release of the Bar Association. [Text] [Karachi DAWN in English 9 Apr 82 p 8]

IDA SMALL INDUSTRY CREDIT--Quetta, April 8: The International Development Agency (IDA) has given to Pakistan for the first time an amount of 30 million US dollars (about Rs. 30 crore) for the promotion of Small industry in the country. Of this an amount of Rs four crore will be utilised in the Government projects while remaining 26 crores credit will be given to the private enterpreneurs through nationalised commercial banks. This was stated by Mr S. M. Yousuf, Deputy Managing Director of the Industrial Development of Pakistan. The credit will be given through the nationalised commercial banks while the Industrial Development Bank will carry out the monitoring of the credit. Credit to each party and upto the limit of Rs eight lakh would be given by the banks but credits beyond that limit would be referred to IDA's Washington office for scrutiny and approval. The loan which bears 11 per cent interest, is to be utilized in three years' period and it will be repayable in ten years' time. A tripartite committee with Provincial

Secretary, Industries, as its Chairman has been formed to receive and scrutinise the applications.--APP. [Text] [Karachi DAWN in English 9 Apr 82 p 15]

UNIVERSITY OFFICE BLOCK LOCKED--The supporters of Karachi University Students' Union locked the first floor of the Administration block on Thursday, says a KUSU Press release. Meanwhile, the Joint Secretary of KUSU, Mr. Ayaz Sarwat Farooqui, has sent a letter to the Students' Advisor of the University in response to the show-cause notice saying that the notice was "too vague and general." The President and General Secretary of Dow Medical College Students' Union, in a joint statement urged the authorities to acdept the demands of the KUSU. [Text] [Karachi DAWN in English 9 Apr 81 p 16]

TECHNOLOGY TRANSFER FROM JAPAN--Tokyo, April 1: Japan can help transform Pakistan's deficit-ridden economy into an economy with "sustained long-term trade surpluses within the next few years' by extending technology transfers Dr Mahbubul Haq said today. Dr Mahbubul Haq who holds the portfolio of Deputy Chairman of the Planning Commission said Pakistan "has experienced a remarkable economic recovery during recent years' led by increased agricultural and industrial production. Dr. Haq former Director of the World Bank's Policy Planning and Programme Review Department told reporters that mechanisation in agriculture was a first step towards economic development. Japanese small farm technology which did not displace human labour but increased productivity was most needed by the Pakistani farmers who owned an average of 10 to 12 acres he said. Earlier this week the visiting Pakistani official met the Japanese Government officials to discuss trade issues between the two countries including measures to stimulate Pakistan's exports.--APA. [Mahbubul Haq] [Text] [Karachi MORNING NEWS in English 2 Apr 82 p 1]

UNIVERSITY FOR MALAKAND DEMANDED--Peshawar, April 6: Farooq Mujahid, President of Jehanzeb College Students Union, has demanded the establishment of a university and technical and commerce colleges in Malakand Division. At a press conference here yesterday he said that keeping in view the strength of the students of the division, two technical colleges in the division and one commerce college at Mingora should be established so as to fulfil the longstanding demand of the students of the division. Enumerating the achievements of the union during the current session, he said that it was due to their efforts that books worth Rs. 8 000 were purchased for the college library, scholarships worth Rs. 4 000 were awarded by the Mingora municipality besides provision of transport facilities for the college students. Farooq demanded early award of scholarships for the students of district Dir.--APP. [Text] [Karachi BUSINESS RECORDER in English 7 Apr 82 p 2]

DEBATE ON WESTERN DEMOCRACY--Islamabad, April 6: The Pakistan National Centre in collaboration with the National Investment Trust is organising a debate on "Western democracy is a trap" (Maghrabi jamhooriyat ek phanda hai) in all the four provinces during the current month. The debate will be at the university level, but in the case of Baluchistan, colleges are also being associated with it. In Sind, the inter-university debate will be held at Hyderabad in the senate hall of the old campus of the Sind University on April 8. Ten speakers from six universities are taking part in it. The Sind provincial minister for education, culture and law, Mr. Justice Syed Ghaus Ali Shah will preside. In Baluchistan 11 speakers from

the Baluchistan University and five colleges from Quetta, Mastung and Loralai will take part in the debate being held at auditorium in Quetta, also on April 8. The Chairman of intermediate and secondary education, Baluchistan, Dr. Inamul Haq Kausar, will preside. In the Punjab the debate will be held at the Pakistan National Centre, Lahore on April 18 and in the Frontier province at the Pakistan National Centre, Peshawar on April 25. Prizes of Rs. 1,500, Rs. 1,000 and Rs. 500 in the form of NIT bearer units will be awarded to the winners of the first, second and third positions respectively in all the provinces. In addition the NIT will present souveniors to all participants in the debate. Winners of the first and second prizes in provinces will be invited to participate in a debate to be organised at the federal level at Islamabad. The date and subject of the federal debate will be announced later.--APP. [Text] [Karachi BUSINESS RECORDER in English 7 Apr 82 p 2]

REMARKS ON BIHARIS SLATED--The Vice-President of defunct Pakistan Muslim League, Sheikh Liaquat Husain, and Mr Ahmad Altaf, Chairman of defunct Tehrik Suba Karachi have taken exception to the statement of Sardar Sherbaz Mazari at the Karachi Bar Association, regarding repatriation of Biharis from Bangladesh to Pakistan. They point out that right of repatriation to three lakh Pakistanis stranded in Bangladesh cannot be denied by anyone. In a similar statement, the National Council for Repatriation has also criticised Mr Mazari's statement and said that it amounts to ridiculing those who sacrificed everything for Pakistan.--PPI. STUDENT FEDERATION DEMANDS WITHDRAWAL--The Central Joint Secretary of Jeay Sind Students' Federation, Mr Ghulam Husain Khawaja, has demanded the withdrawal of rustication orders against all the students of the educational institutions in Sind. Addressing a Press conference yesterday he demanded that "outside interference in the educational institutions of the province be stopped." [Text] [Karachi DAWN in English 5 Apr 82 p 8]

DISSATISFACTION OVER STATE OF ECONOMY--Political and economic strategies are interlinked. But if the requirement of keeping a balance between political compulsions and economic facts is ignored, not only the economic objectives are not realised, political interests are also harmed. This was what happened during the tenure of the previous government. Acting wisely the present government did not give priority to economics over politics. It was, therefore, able to work with a greater satisfaction during the past five years. At the same time, it is also true that results expected during the past five years have also not been happy. Even today the majority of taken-over units are working well below their installed capacity. The textile industry can hardly achieve fifty per cent of its installed capacity. Only a quarter of the projects sanctioned during the past five years could be completed. After the delinking of the rupee from the dollar, the value of the rupee has been on the constant decline. Moreover, there are reservations and apprehensions in the private sector. How can there be an appreciable progress in such a situation? Different countries have adopted different methods for achieving greater productivity and economic progress. We should also take steps in the light of our condition and ideologies. We have no other option but to pursue the way of mixed economy. But the new lines of thoughts and actions should be adopted to improve the performance of both the public and the private sector. A continued projection of satisfaction on the results of the past five years would not be correct.--Jang, Karachi, April 3. [Text] [Karachi DAWN in English 5 Apr 82 p 7]

CANAL REHABILITATION PROJECT--LAHORE, April 7--The Federal Government is very soon launching a major project with World Bank for the rehabilitation of the financial assistance of the canal network, Ilahi Bakhsn Socmro, Federal Minister for Industries said here today, while inaugurating the third convention of Pakistan Society of Agricultural Engineers. He said that this project would ensure its operational efficiency in accordance with the vastly increased needs. He said that a stage had come and here was a challenge for agricultural engineers when mechanisms must be devised to regulate water deliveries to the fields in dynamis harmony with crop water requirements. He said that everyone concerned must wage an all-out war on all losses specially in water, which was the most precious input to agriculture. A beginning had been made with the on-farm water management on the downstream side of the canal Mogah. This activity would be continued and expanded as more resources became available, he said. [Karachi BUSINESS RECORDER in English 8 Apr 82 p 3]

AWARD FOR HEALTHY JOURNALISM--President Gen. Mohammad Zia-ul-Haq last night announced an annual award of about Rs. 50,000 from the National Press Trust to be given to journalists or institutions promoting the cause of healthy journalism. Speaking at the annual dinner of All-Pakistan Newspapers Society at a local hotel here, he said the award would be put at the disposal of APNS to be given by it at its annual function along with other awards. President Zia hoped that this small gift from him would be helpful in adding new chapters to the glorious book of journalism. [Excerpt] [Karachi DAWN in English 31 Mar 82 p 1]

BAR ASSOCIATION EXPELS MEMBERS--The Karachi Bar Association on Monday expelled five advocates from its membership for not resigning from the Majlis-i-Shoora. This is in pursuance of a resolution passed unanimously at a general body meeting of the KBA held on March 20 urging "such members to resign from the membership of Majlis-i-Shoora within three days," says a Press release. The advocates who have been expelled from the KBA are: Mr Obaidur Rehman, Syed Saeed Hassan, Mr Sharaf Faridi, Mir Nawaz Khan Marwat, and Mr Zahoorul Hassan Bhopali. The Honorary General Secretary of the Association, Mr Rasheed A. Razvi, in separate communications to the five advocates said that since no intimation about their resignation from the Majlis-i-Shoora was received till March 29, "we have to inform that in terms of resolution you are expelled from the membership of the KBA. Consequently, you have ceased to be a member of the KBA with immediate effect." [Text] [Karachi DAWN in English 31 Mar 82 p 12]

EXPULSION OF MEMBERS RESENTED--Mr Obaidur Bahman has, in a communication to the President of the Karachi Bar Association, protested against the decision to expel five members of the Association including himself, for their failure to resign from the Federal Council. He said on Wednesday that "an august body like the Karachi Bar Association is expected to follow its own Constitution and principles of natural justice". He objected to the passage of the resolution by the Association without giving an opportunity to the concerned fellow advocates who are members of the Federal Council to explain their position. Mr Obaidur Rahman said, the action taken against him and others was an attempt "to influence the coming elections of the bar and to divide it". [Text] [Karachi DAWN in English 1 Apr 82 p 6]

PAKISTAN-UAE COOPERATION--Abu Dhabi, March 31: Pakistan and the UAE have agreed to study a draft of an agreement on cooperation in labour affairs and organisation of Pakistani labour for work in UAE. Both sides have also agreed that suggestions

by the Pakistani side on issues relating to Pakistani workers would be discussed by a committee consisting of Labour Ministry officials and the Labour Attache at the Pakistan Embassy here in order to find solutions. This follows discussions between Mr. Ghulam Dastgir Khan, Pakistan's Labour Minister and his UAE counterpart, Mr Saif al-Jarwan, here on March 27. Later Mr Dastgir told a news conference that Mr Jarwan had assured him of the UAE Government's constant endeavour for the welfare of the Pakistanis in the country. Replying to a question, Mr Dastgir said the two Governments were discussing an extradition treaty, but declined to go into details as the matter fell within the jurisdiction of the Home Ministry of the two countries. He said Pakistanis were working in 40 countries and his Government was keen to ensure their welfare and do everything possible to improve their lot. Mr Dastgir said he had handed over a message of President Gen. Mohammad Zia-ul-Haq addressed to the President and Deputy Prime Minister of UAE. In his message, President Zia extended his greetings and appreciated the increasing cooperation between the two countries.--PPI. [Text] [Karachi DAWN in English 1 Apr 82 p 10]

TUFAIL'S FOREIGN TOUR--Lahore, April 4: Mian Tufail Mohammad, accompanied by Prof Khurshid Ahmad and Maulana Khalil Hamdi, will be leaving here on Monday on a month-long visit to three Muslim countries, namely Egypt, Kenya and Saudi Arabia. They will reach Cairo on April 6 to participate in a function being held in connection with the thousand years celebrations of Jamia al-Azhar. After a three-day stay in Egypt, they will proceed to Kenya to participate in a conference of World Assembly of Youth Student leaders belonging to Islamic movements of the African Continent, beside leaders of Islamic movements from all over the world, would participate. After a week's stay they will proceed to Saudi Arabia to perform Umra.--PPI. [Text] [Karachi DAWN in English 5 Apr 82 p 6]

PAKISTAN RAILWAYS--NEW APPOINTMENTS--Lahore, April 4: Pakistan Railways' new Chairman, Mr Abul Kalam on Sunday formally took charge of his office from Mr Mohammed Siddiq, who has proceeded on leave preparatory to retirement. Under the new arrangement, Mr Abul Kalam will also hold the office of Secretary Railways, and will sit in Islamabad. Meanwhile, Mr Amanullah Zafar has assumed, the charge of the newly-created post of General Manager (Administration and Operation). Mr Abul Kalam was previously Managing Director of the Karachi Shipyard while Mr Amanullah held the post of Additional Secretary, Planning Division in Islamabad. According to a PR spokesman the entire offices of the Railway Board will not shift to Islamabad, before the new Budget while the General Manager Administration and Operation will sit in the Railway Headquarters in Lahore. [Text] [Karachi DAWN in English 5 Apr 82 p 12]

TEACHERS WANT TALKS--The executive committee of Pakistan College Teachers Association (Sind) at its meeting on Sunday protested at the "treatment meted out to the teachers in the Punjab and NWFP" and "noted with regret" the attempt to spoil the image of the teaching community in the eyes of the public. The meeting demanded that the service conditions of eachers of government and nationalised institutions should be uniform, and appealed to the Governor of Sind to direct the authorities to convene a meeting of the representatives of teachers and the relevant departments to work out the modalities of a sclution and their implementation. [Text] [Karachi DAWN in English 5 Apr 82 p 12]

CAMPUS QUIET--The Karachi University Campus remained calm yesterday, but some crackers were exploded by unknown students. A spokesman of the KUSU said in a Press release that show-cause notices had been received by two more students--Mr Humaiyun Naqvi and Mr Rishad Khan--who were arrested from the campus along with three students including the General Secretary of KUSU on Thursday. The Students' Adviser has now issued fresh show-cause notices to the five University students, M/s Mahmood Ghaznavi, Shakilur Rehman, Ayaz Farooqui, Saifuddin, and Ali Muntazim. The fresh notices have been issued on the letterhead of Students' Adviser. Meanwhile, the acting Nazim of Islami Jamiat-i-Tulaba, Karachi University Unit, has criticised the issuance of fresh show-cause notices. [Text] [Karachi DAWN in English 5 Apr 82 p 12]

UNITED STUDENTS' MOVEMENT DEMANDS--The leaders of the United Students' Movement have demanded that the problems of the Karachi University be solved through negotiations and "outside interference be stopped". Addressing a Press conference they reiterated the proposal of a code of ethics to determine the future course of student-administration relationship. The USM leaders said they wanted withdrawal of rustication orders of all the students irrespective of their affiliations. They also demanded release of all the arrested students. The USM leaders alleged that workers of the rival group had manhandled three students at Dawood College on Saturday. They also alleged that a revolver shot was fired during the incident. They demanded action against those responsible. [Text] [Karachi DAWN in English 5 Apr 82 p 12]

SIND PROFESSORS ACTION--The Professors Association of Sind has decided to dissociate itself from the Sind Teachers Co-ordination Committee because of "its transgressing its limits". In a Press release, the Association also welcomed the announcement made by the Punjab Teachers Action Front which decided to call off the demonstration scheduled for Monday on the assurance of Federal Government.--PPI. [Text] [Karachi DAWN in English 5 Apr 82 p 12]

ISLAMIC MAYORS CONFERENCE--ISLAMABAD, April 7--The second general conference of the mayors of the Islamic capitals will be inaugurated by President Gen. Mohammad Zia-ul-Haq here on Thursday. Over one hundred delegates from 39 Islamic countries, and six observers from the affiliated bodies of the Organisation of Islamic Conference (OIC) will attend. Most of the delegates, including Engr. Abdul Kadir Koshak, Secretary-General of Islamic Capitals Organisation, have already arrived here. Habib Chatti, Secretary General of the OIC flew in to Islamabad today. [Karachi BUSINESS RECORDER in English 7 Apr 82 p 6]

MAJLIS ADOPTS OMBUDSMAN ORDER--ISLAMABAD, April 7--The Majlis-e-Shura today adopted with 24 amendments the draft establishment of the office of Ombudsman (Federal Mohtasib) Order, 1982, and recommended for its enactment. The Ombudsman, to be appointed by the President, will diagnose, investigate, redress and rectify any injustice done to a person through maladministration. The House approved the amended draft with an overwhelming consensus. There was only one dissenting voice. Chairman of the Majlis, Khawaja Mohammad Safdar presided over the Majlis session. The draft order was debated in the house for three days during which ninety-one members participated. 169 amendments were tabled by the members which were reduced to 24 after a meeting lastnight between the Law Minister Sharifuddin Pirzada and the members who had moved the amendments. The Chairman Khawaja Safdar disallowed another motion on the publication of proceedings of the Majlis in a daily and observed that while he would like the press to report objectively, he would not favour imposing any restrictions on the press. STATE-OWNED ENTERPRISES MANAGEMENT CHANGES CANCELLED

Manila PHILIPPINES DAILY EXPRESS in English 3 Apr 82 p 9

[Article by Samuel V. Senoren]

[Text] A drastic move to overhaul the hierarchy of government-owned or controlled corporations has been quietly called off.

The major revamp ordered by President Marcos early last month would have separated the positions of chairman of the board and president of government enterprises.

The presidential directive would have clipped the powers and authority of officials of top government companies who hold the positions in a concurrent capacity.

The order, however, could not be immediately carried out because of the firm ties these officials already have with the international business community.

Although the directive has not been implemented, a government bank--the Philippine Veterans Bank--is likely to comply with it.

A banker who used to head another commercial bank has already been tapped to become PVB president.

PVB is presently headed by retired Gen. Romeo Espino as chairman and president. Espino assumed the presidency following the retirement of Esteban Cabanos early this year.

The President's directive addressed to Cabinet members early last month said that "in the event that the two positions are presently held by one person, steps shall be taken within three days to separate them and the Office of the President will be notified of the resolution of the governing board to this effect in order that the President may order the election or appointment of either the chief executive officer or the chairman."

The same directive said that "if the charter of a corporation provides for a concurrent chairman of the board and chief executive officer, appropriate recommendations for the amendment of its charter should likewise be submitted within three days to the President."

Had the directive been implemented, it would have affected primarily Energy Minister Geronimo Z. Velasco who is both chairman and president of the country's largest corporation--the Philippine National Oil Co. and GSIS general manager Roman Cruz Jr. who is also chairman and president of Philippine Airlines.

Questions were raised as to whether the Central Bank, Monetary Board or the Development Bank of the Philippines were covered by the directive.

The CB and the Monetary Board are headed by Jaime Laya while the DBP is headed by Cesar Zalamea as chairman and chief executive officer.

In the case of the PNOC, it was noted that most state-owned oil companies are headed by one individual who holds the top positions in a concurrent capacity.

Observers say the set-up makes it easier for the company to deal in the oil market where transactions are sometimes done on a purely personal basis.

In the case of PAL, it was pointed out that most of its major deals have been negotiated by Cruz and that a disruption in the hierarchy could affect the airline's standing in the world aviation industry or lead to repercussions on PAL's international commitments.

LOG EXPORT BAN URGED

Manila PHILIPPINES DAILY EXPRESS in English 3 Apr 82 p 9

[Article by Resty Perez]

[Text]

THE PRESIDENTIAL Committee on Wood Industries Development (PCWID) has asked the government to stop log exports starting May 1 because the country's forest resources are fast depleting

PCWID said the country at present has only about 17 million hectares of forest lands, of which six million are already denuded.

The remaining forest areas, it added, are being cut at an alarming rate of 80,000 hectares a year prompting forestry experts to link reports that the resource base is inexhaustible and renewable

PCWID said that log exports must be totally phased out and the development of the wood processing industry be given more emphasis.

PCWID pointed out that the rationalization of the wood industry "can only be effectively implemented if log export is phased out."

PCWID said that between 1970 and 1974, 83 percent of all logs cut were exported and only 17 percent of the volume were processed locally.

It added that the wood processing plants were operating at only 47 percent of their rated capacities resulting in high cost of production.

Moreover, logs of the highest quality are exported while the rejects are processed into "poorly-made" wood products

THE Philippine Wood Producers Association (PWPA), on the other hand, wants the log ban implemented only after 1982.

It also asked the government to adopt a scale-down version of the old log export policy of allowing only logging concessions with processing plants to export logs

The log export ban has been delayed for the past six years after two extensions were given by President Marcos

The extensions were granted to "cushion a radical change in government policies that would inevitably affect the industries' position in the country's balance of payments."

LIMITS ON SHARIAL COURTS GIVEN

Manila PHILIPPINES DAILY EXPRESS in English 5 Apr 82 p 3

[Article by Al Labita]

[Text] The setting up of shariah courts in Mindanoa does not imply that the Muslim Filipinos will be governed solely by their own legal system.

A pamphlet prepared by Esteban B. Bautista, a senior law lecturer of the University of the Philippines, says the "Muslims will continue to be governed by laws of general application."

Bautista was one of the members of the presidential commission that drafted the Code of Muslim Personal Laws of the Philippines.

The code, embodied in Presidential Decree 1083, is now the subject of an eight-week training institute for about 50 Muslim lawyers, /ulama/ and /asatidha/ [in italics] at the western Mindanao State University here.

The training, scheduled March 10-May 6, is in preparation for the establishment next year of the shariah courts in the predominantly Muslim areas of Mindanao.

The courts will be manned by those who successfully undergo the training and pass the special bar exams to be administered by the Supreme Court.

The Supreme Court, which has jurisdiction over the Muslim shariah courts, is one of the agencies involved in the implementation of the code.

The others are the Muslim Affairs Ministry, the Justice Ministry, the Institute of Islamic Studies of the University of the Philippines and the Center for Arabic and Islamic Studies of the Mindanao State University in Marawi City.

The courts will adjudicate cases involving Muslim personal laws only such as personal status, marriage and divorce, rights and obligations and property relations between husband and wife, paternity and filiation, parental authority, support and maintenance, and succession or inheritance.

Bautista said the laws that will continue to be applied to the Muslims include the Revised Penal Code (except, in certain cases, as to bigamy),

the land registration act, the public land act, the mining law, the forestry law, the fisheries act, tax and customs laws, commercial laws and many others.

"The Civil Code itself will continue to be applied to the Muslims, except insofar as it relates to persons and family relations and succession," Bautista said.

He said the adoption of the Muslim legal system "does not mean that it is an independent legal system without regard to other laws or the national interest."

"Like other laws, the Muslim legal system is subject to the constitution," he said.

The UP law lecturer said non-Muslims in the Muslim areas need not fear that they will now be governed by the Muslim legal system.

"It will apply to them and other non-Muslims in other areas only in limited instances provided for in the code," he said.

The provisions of the code on marriage and divorce, for instance, will apply to a non-Muslim whose marriage to a Muslim is in accordance with the code or other Muslim law, Bautista said.

CAVITE CONSTABULARY COMMANDER ASSAILED

Manila PHILIPPINES DAILY EXPRESS in English 3 Apr 82 p 3

[Text] THE CAVITE Beach and Resort Owners Association pressed for the relief of PC provincial commander Lt. Col. Romeo Odi for alleged "militarization" of the province.

Through its chairman, George Agregado, managing director of Garden Coast Resorts, the association asked Assemblyman Jorge G. Nunez to relay the sentiment of the business sector of the province to the proper authorities.

Nunez was the guest of honor and speaker at the induction of the Garden Coast Homeowners Association last March 28.

* * *

AGREGADO, in a welcome address, said Col. Odi should be held responsible for giving the provincial commander a bad image. He said the provincial commander has continued to defy the instruction of Defense Minister Juan Ponce Enrile ordering the dismantling of all checkpoints.

While these checkpoints serve no good purpose, the PC authorities in the province have failed to check or solve a number of crimes in the province.

Agregado said that the holdup last week at the Lido Beach Resort staged by a group of heavily armed men shows the utter lack of respect by criminal elements for the PC/INP command in Cavite.

He also recalled that last September three persons were wounded when a crowd at Villa Susana Beach Resort was fired upon by men armed with Armalite rifles as evidenced by empty Armalite cartridges found in the vicinity.

And the irony of it all, he added, is that inspite of many witnesses, nobody has been arrested.

* * *

AGREGADO said that it is only during the tenure of Lt. Col. Odi, as PC provincial commander, that the governor and the municipal mayors of the province have find it necessary to bring peace and order problems of Cavite directly to the attention of the Ministry of National Defense.

The Cavite Beach and Resort Owners' Association unanimously approved a resolution supporting the steps taken by he governor and the Cavite Mayors' League in denouncing the Cavite PC/INP command to the Minister of National Defense.

POTENTIAL JAPANESE THREAT

Manila PHILIPPINES DAILY EXPRESS in English 5 Apr 82 p 4

[Article by Teodoro F. Valencia in column, "Over a Cup of Coffee": "U.S. Will Save Money if Japan Rearms"]

[Excerpt] Let's go slow about encouraging Japan to rearm. We might regret it. Whether we like it or not, Japan will rearms so she wont disappoint the United States. [as published] The United States will save money by making Japan bear the cost of her own defense and contribute to the fulfillment of the American anti-communist plans. America, too, might be sorry later.

The Japanese national discipline is still there. If Japan never rearmed after World War II, it was because the United States prevented her during the early years following the end of World War II. In that period of time, Japan prospered because she did not have to spend for defense. And she liked it a lot. Today, the Americans are jealous of the Japanese who are prospering while they are going under due to heavy military preparations. Also, America wants Japan to spend for arms so that American business can have a fair chance against the Japanese.

The Japanese have been secretly telling the Americans that they want to rearm. However, the ASEAN countries apparently do not understand this. Hence, the trip of US Defense Secretary Caspar Weinberger to Japan and the Philippines and other destinations in Asia. Now, Japan must be reassured that we don't mind if she rearms. Who knows? That may just be what the Japanese are aching to do to contain Soviet and Chinese pressures. But the Japanese sword can be turned against the United States later- Japan never forgives an enemy, specially one that defeated her. The United States has never been good at knowing who's a friend and who's an enemy.

PROTECTION OF WORKERS' RIGHTS URGED

Manila PHILIPPINES DAILY EXPRESS in English 5 Apr 82 p 4

[Editorial]

[Text]

SERVING notice that the government will not hesitate to arrest strikers whose motives dubious, Labor Minister Blas F. Ople the other day warned workers against illegal and hasty mass actions that would undermine the stability of the state.

He expressed the suspicion that some unions are using collective bargaining to promote social and economic instability for their ulterior political objectives. Such actions designed to promote destabilization of the government will not be tolerated, he said.

Ople probably had in mind the numerous strike notices filed with the labor ministry and the actual strikes waged by workers that were later ruled as illegal but continued by unions to press for their demands. These strikes, some of which have tended to be explosive, have caused severe labor-management strains even as they spelled huge losses for the struck firms.

While it is probably true that subversive elements are seeking to exploit the labor unrest in many firms to pursue their goals, it would be well for the labor minister to reassure the workers that their rights and prerogatives would be upheld and protected by the government. It should perhaps be stressed that his warning was a statement of fact that subversive elements within the labor ranks will not be countenanced and not a veiled threat against the more militant and vocal workers.

It is not remote that some workers would view the minister's warning in the wrong light. Destabilization, after all, is such a broad and abstract term that it could be wrongly applied to mean almost anything not in the interest of public order or the welfare of many.

Of course, there is cause for worry when labor unions defy court orders or labor ministry directives for a return to work either because the strikes have been found to be illegal or have been certified for compulsory arbitration. While this could mean that some workers are being manipulated by subversives elements, this could also be an indication of a sagging faith and confidence in the labor ministry to aptly protect the workers' welfare.

What the Ministry of Labor and Employment can work on at this point are measures that would safeguard labor rights and enhance the welfare of workers. There have been many complaints, for instance, of harassment and the use of goons, security guards, and even law enforcers against legitimate strikers -- although this has been greatly minimized by the agreement reached between workers and the defense ministry. There are also unresolved issues, like the granting of the 13th month pay on top of the Christmas bonus, which the ministry and the courts should clarify. The Batasan picketing and anti-scab bill still has to be passed.

The presence of subversive elements within the ranks of labor is almost a certainty. But it would be very difficult for them to gain ground if the workers know the government is there to protect them and see to their best interests.

COMMERCIAL BANK ASSETS RISE

Manila PHILIPPINES DAILY EXPRESS in English 3 Apr 82 p 10

[Text] **THE** combined assets of commercial banks reached P168.9 billion at end-February 1982, an improvement of 1.3 percent or P8.2 billion over the previous month, the Central Bank reported yesterday.

CB data showed that the assets of private domestic banks and branches of foreign banks rose by P1.1 billion or 1.1 percent and P2.1 billion or 13.1 percent, respectively, or a combined increase of P3.2 billion.

However, the asset expansion was partly offset by the P1-billion or 2.1-pecent drop in the resources of the Philippine National Bank (PNB) which accounts for over 20 percent of the resources of the banking system.

The CB said the increase in resources of both private domestic banks and the branches of foreign banks was shown in the improvements of their due from other banks of P1.2 billion and P767 million, respectively.

The drop in PNB's resources was mainly due to the P1.5-billion or 12-percent dip in its cash assets, 42.3 percent in deposit with the CB, and 42 percent due from other banks.

Loan portfolio, the major earning asset of banks, rose by only P453 million or .4 percent -- about one-sixth of the expansion recorded in January, the CB said.

Traditional loans and discounts which accounted for 68.8 percent of total outstanding loans went up by P731 million or one percent. Other loan components increased by P2.3 million.

On the other hand, trading account securities and interbank loans dropped by P299 million and P198 million, respectively.

INVESTMENTS, another earning asset, had the highest increase in February at P694 million or 4.2 percent. Additional investments in trading account securities of P534 million accounted for 76.9 percent of the increase during the month.

Deposits which declined in January dropped further by P15 million in February. The deterioration was due largely to the drop in PNB's domestic demand deposits of P890 million, and foreign time accounts of P453 million.

On the other hand, domestic savings and time accounts of private local banks rose by P156 million and P218 million, respectively. Savings deposits of branches of foreign banks also increased by P126 million.

To meet the system's fund requirements, banks borrowed heavily as bills payable rose by P895 million or 1.8 percent, 71.6 percent of which was in deposit substitutes of PNB and branches of foreign banks.

Private banks, which reported a rise in deposits of P1.1 billion, reduced their bills payable by P361

million, 86.8 percent of which were deposit substitutes.

During the month, the larger banks, i.e., those with assets over P3 billion and over P2 billion up to P3 billion, increased their asset. The small banks, i.e., with assets up to P2 billion, experienced a P179 million or 2.2 percent decline in assets, mainly because of the slow deposit growth and repayments of maturing bills payable, the CB said.

AMERICANS HOLD LARGEST FOREIGN INVESTMENTS

Manila PHILIPPINES DAILY EXPRESS in English 3 Apr 82 p 9

[Article by Rosario A. Liquicia]

[Text]

THE Americans were the biggest single group among foreign investors in the country from 1968 to 1981, statistics from the Board of Investments (BOI) shows.

A report reveals that from 1968 to 1981, the Americans poured in P2.669 billion or 28.7 percent of foreign investments approved by the BOI during that period.

The BOI during the 4-year period, approved investments amounting to P23.187 billion, 60 percent of which was local with the balance of P9.29 billion accounted for by total foreign investments.

The amount of P23.187 billion represents investments approved by the BOI under the Investments Incentives Act, the Export Incentives Act, the Agricultural Investments Incentives Law, and the Foreign Business Regulations Act.

* * *

EARLIER, the BOI announced that it approved during 1968-1981 investments of P16.6 billion in priority areas, projects registered with the BOI which receive government incentives.

However, the amount of P23.187 billion includes investments approved under the Foreign Business Regulations Act (RA 5455) which are not entitled to incentives

* * *

THE Americans, being ready in the country while other foreign investors were still "feeling their way around," had in 1968 investments amounting to P57 million or more than half the total foreign investments of P97.5 million at that time, the BOI reports says.

Last year, American investments approved by the BOI totalled P495.8 million, or only 25 percent of total foreign investments last year.

As the share of American investments declined, the share of other investors, like the Japanese and some European investors, increased.

The Japanese were the second biggest single foreign investor with P1.868 billion or 20.1 percent of total foreign investments from 1968-1981, the BOI statistics shows.

* * *

ALTHOUGH Japanese investors already made some investments in 1968, the BOI report shows, it was only in the early 1970's that investments from Japan picked up.

The BOI report further states that investments from Europe during the 14-month period was P2.781 billion or 30 percent of total foreign investments during that period.

Broken down to individual country-investors, the biggest European investors were the British with P886.3 million or 9.53 percent of total foreign investments approved during 1968-1981, followed by the Dutch with 5.6 percent share and the Swiss with 5.27 percent then the Germans with 3.51 percent share of the total foreign investments during the 14-years period, the BOI report shows.

BRIEFS

U.S. BASES' VALUE QUESTIONED--The United States assures us of continuing help and friendship. If the US can just stop adding to our troubles by not sheltering terrorists who are out to blow up this country, we'll be grateful. With regard to the US bases, they are here to help the United States, not the Philippines. The US Supreme Court decision on a case filed by an American who was fired from Clark Air Base and replaced by a Filipino puts to rest all arguments that the bases agreement, not being a treaty ratified by the US senate, cannot be enforced against American citizens. This puts agreements between the United States and other nations in legal focus. So the US Supreme Court has ruled that Filipinos may be hired as employes and workers at the US bases in this country over Americans who used to enjoy priority. The next problem is whether or not the US bases officials will positively implement the order. The US Supreme Court decision is not directive but only permissive. The rest is up to the base officials. The record does not give room for too much optimism. [By Teodoro F. Valencia] [Excerpt] [Manila PHILIPPINES DAILY EXPRESS in English 3 Apr 82 p 4]

GEOTHERMAL POWER PLANT CONTRACT--Tokyo--Mitsubishi Heavy Industries and two affiliates have jointly received a turn-key order for two 55 megawatt geothermal power units from the National Power Corp. of the Philippines. The contract value is about yen 12 billion ($48.9 million) and delivery is scheduled for May and August 1984, respectively, Mitsubhishi Heavy Industries said. The contract includes the supply of turbines, cooling towers and auxiliary equipment by Mitsubishi Heavy Industries and the supply of generators and electrical equipment by Mitsubishi Electric Corp. The other Mitsubishi company involved is Mitsubishi Corp. The power units will be installed at the Makiling and Banahaw power stations to supply power to Central Luzon island areas, including Manila. (PNA) [Text] [Manila PHILIPPINES DAILY EXPRESS in English 3 Apr 82 p 9]

SPANISH ECONOMIC MISSION--Spain, whose phenomenal growth during the past 15 years brought it to the 11th position among the world's industrial producers, is gearing up for expanded economic relations with the Philippines. A 30-member businessmen's delegation, composed of senior leaders in seven industry groups, will come to Manila on April 15-16. The seven industries are banking, shipbuilding, cement and construction, telecommunications and electronics, engineering, machinery and heavy equipment, and trading. The mission will be headed by Manuel Prado Y Colon de Carvajal and Juan Maria Arenas, director general of exportation in the Ministry of Economy and Commerce. [Text] [Manila PHILIPPINES DAILY EXPRESS in English 3 Apr 82 p 10]

MINDANAO REGIONAL COUNCILS MERGED--In our lead story today, the presidential move on the autonomous regions of Mindanao. The regional councils of the two autonomous governments in Mindanao have been combined into one body. President Marcos issued presidential decree 1843 to merge the two bodies in line with the joint communique issued by the president and Saudi King Khaled recently. It will be recalled that President Marcos last month visited Saudi Arabia to hold wide-ranging talks with top Saudi officials. Saudi King Khaled and President Marcos signed a joint communique to confirm that steps would be taken to merge the two executive councils into one. The merging of the two councils of regions 9 and 12 implements the Tripoli accord of 1976. The merging will also be submitted to the people of the two autonomous regions in a plebiscite to be supervised by the commission on elections on May 17. The plebiscite in the two autonomous regions coincides with the country's Barangay elections. [Text] [HK080031 Manila Far East Broadcasting Company in English 2330 GMT 7 Apr 82]

MOVE AGAINST DISGUISED TERRORISTS--All military field commanders have been ordered to institute preventive measures immediately against communist terrorists reportedly masquerading as army troopers and disarming special paramilitary forces members. Armed forces chief of staff General Fabian Ver ordered all field commanders to carry out effective measures. His order came in the reports that members of the civilian home defense force in Cagayan and Misamis Occidental were disarmed by fatigue-uniformed men. There were other incidents reported in Zamboanga del Sur and Cagayan. [Text] [HK070059 Manila Far East Broadcasting Company in English 2330 GMT 6 Apr 82]

WARNING ON PARALYZING INDUSTRY--President Marcos has warned Labor leaders against moves to paralyze industry. The president said labor unions infiltrated by subversives are being closely watched. He said they pose no real threat to the government, but the government will not allow them to disrupt the economy. [Excerpt] [HK050029 Manila Domestic Service in English 2330 GMT 4 Apr 82]

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

CONGRESS-I MP DISCUSSES RELATIONS WITH U.S., PAKISTAN

Calcutta THE STATESMAN in English 19, 20 Apr 82

[Article by Madhavrao Scindia]

[19 Apr 82 p 6]

[Text] The see-saw of international relations sways dangerously on its fulcrum. There is a real threat of it disintegrating in a heap on what is being treated as the "playground" of the great Powers. But with it will succumb humanity, as we know it, leaving to the "unfortunates" who survive the tangible legacy of a scorched earth, and the intangible one of shattered values and dreams. Unless the very approach undergoes a radical transformation, the future is grim. It is across such stormy and tempestuous seas that India has to chart the voyage of the ship of her foreign policy.

No one is quite sure of the shape the world will take and what the future will take and what the future holds. We are witness to confrontation between Powers dedicated to change and those wedded to the maintenance of the status quo; between powers feverishly indulging in exploitation and those attempting to arrest that exploitation, between Powers committed to perpetuating the thesis of spheres of influence, and those fiercely asserting their independence and sovereignty. The world is regrouping into a myriad fiercely independent, locally redoubtable entities. We are moving into a prismatic world whose exact hues are still hazy.

Nationalism

Afghanistan, Poland and the Latin American situation have led to a sharp deterioration in super Power relations. However, the days of a few mighty Powers dominating the world seem clearly numbered. The flame of nationalism is asserting itself across many lands and proxy leaderships facing this resurgence of nationalist sentiment find themselves desperately at bay. Iran and now Poland are examples of this emotional awakening in what were formerly docile client States. All indications point to this trend continuing with further upheavals in Latin America and West Asia to the detriment of the USA, and in Eastern Europe where the Soviets will be at the receiving end.

In fact, great Power rivalry and their total absorption in a senseless arms race has cast its dark shadow over our part of the world. With the changes in Iran and Afghanistan, the whole focus of international relations has shifted to the sub-continent, Military and naval activity in the Indian Ocean, the continuing uncertainty in Afghanistan and the induction of a new generation of weapons into Pakistan have undoubtedly aggravated India's security environment.

The role of the USA has been unfortunate to say the least, aptly described in Selig Harrison's words as "a monumental self-defeating blunder," which will only succeed in "fanning the flames of anti-Americanism in the sub-continent."

Ever since the first year of the Reagan Administration, Indo-U.S. relations have come under severe pressure. In the Pentagon's annual military posture statement for 1981, the Administration clearly admitted that it intended to improve its military balance in Southwest Asia, a new geopolitical construction of the USA, of which Pakistan is an important member. The ostensible aim is the limitation of Soviet power and the containment of the possibility of direct Soviet military intervention and it is thought by Washington that Pakistan best fits into this scheme of things. How dangerous for the world that the foremost nuclear Power should base its foreign policy perspectives on such short-term and simplistic thinking.

Generation

Even assuming that the Soviet Union intends to intervene in Pakistan, which I cannot see it doing, does Washington really feel that Pakistan can stop it? Besides, it is well accepted that most of the high-powered weapons being supplied to Pakistan cannot be used on its western front, but only on its eastern front towards India. By this unwarranted and unnecessary action peace-loving and non-aligned India suddenly finds itself looking down the glistening black barrel of new generation weapons. In the circumstances, our endeavours to provide adequately for our defence places a severe burden on our economy, delicately poised at the take-off stage.

Compounding this further the stand the USA took on the much-needed IMF credit facility, its de facto unilateral abrogation of the Tarapur agreement and the denial of vital spare parts for the plant leaves us with the feeling of a sinister conspiracy aimed at blunting the potential of a country poised to play a significant role in the world--a country whose only crime in American eyes seems to be its outright rejection of the status of a client State. Washington seems to be ready to sacrifice U.S. interests in India for the sake of its ties with the military rulers of Pakistain in the hope that various forms of strategic cooperation will prove possible in the hope that the projected Rapid Deployment Force will acquire access to Pakistani ports; in the hope of naval base facilities and the restoration of U.S. electronic intelligence stations in Peshawar. Yes, some of these aims have been revealed by no less a person than Admiral Thomas H. Moore, former chairman of the U.S. Joint Chiefs of Staff.

Predicament

It is sad to see the predicament that the U.S. Ambassador in New Delhi has been left in by his Administration. Mr Harry Barnes can only express his confidence that Pakistan will not misuse American arms against India, surely more wishful thinking than conviction when one casts one's mind back to certain events in 1965 and 1971. Facing a turbulent internal situation, American strategic projections suit General Zia admirably. But what about America? In the constant changing graph of international relations, is it wise to slam the door in the face of a peace-loving and potentially great country? Is it wise to slam the door in the face of one of the most industrialized nations in the developing world? Is it wise to slam the door in the face of a country whose technological advance has culminated in such brilliant scientific achievements as membership of the exclusive satellite club and the conquest of Antarctica?

The USA is the second largest democracy in the world, and professes to be the champion of the democratic cause. Yet ironically, it seems to feel much cosier in its relationship with the largest Communist nation than with the largest democratic one! Its role in El Salvador, Nicaragua, Guatemala and its relationship with South Africa are glaring to even the non-discerning eye. There may be some truth in the saying that no country has permanent friends, only permanent interests. But even permanent interests must be based on some minimum principles of international morality, otherwise one's credibility fast erodes as is happening with Americans.

Even in the USA's relations with China, Taiwan is proving a difficult hurdle. In fact, Alexander Bovin, a respected political commentator said, talking of the Sino-American partnership, that "It is a partnership without confidence or, let's say, with a minimum of confidence. They now regard each other with more suspicion than previously. History is not only the past and the present, but also the future. And that which can be seen as a success today can turn out for Americans to be a complete failure tomorrow..."

[20 Apr 82 p 8]

[Text] There are clear indications that the Soviet Union and China are attempting to mend their fences with the Soviet call for new border talks and Chinese probes in the direction of economic cooperation. After Ayatollah Khomeini, Iran too, may be full of uncertainties with wide and far-reaching implications.

Cannot the foreign policy planners in the White House envisage the possibility of a changing situation where it becomes imperative for us both to have a much closer working relationship in the quest for peace, stability and development? Indeed, the very fragility of Pakistan's internal situation could culminate in the complete overturning of the American apple cart if a democratically elected Pakistani leader came to power with a popular mandate. Can Washington not see the possibility of a backlash in Pakistan against previous American dealings with military dictatorships? American policy in Pakistan is fraught with grave dangers for countries in the region, but most of all for the USA itself and for the American future in this part of the world.

India has a vested interest in a stable Pakistan. The collapse of Pakistan would mean the removal of an important buffer between us and a part of the world which is very disturbed. It would mean the de facto sharing of a common border with a very sensitive region in which the super Powers are deeply embroiled. And let us not forget that Chankya had said that common borders are always ultimately followed by the emergency of new friction points.

Abject Poverty

Above all, we are fighting a war in India--a war against abject poverty; and under the leadership of our Prime Minister we are determined to win this war. We are determined to succeed in giving a fair deal to the farmer toiling in his field; to the worker labouring in the factory; to the proletariat suffering crushing economic burdens and social injustice. And what may I ask would be the economic consequences of conflict with Pakistan? What would be its effect on the outcome of this crusade against poverty? It would be disastrous, catastrophic.

It is obvious that a war with Pakistan not only goes against the very grain of the philosophy of peaceful co-existence which has guided the basic Indian approach ever since the days of Mahatma Gandhi and Jawaharlal Nehru, but also goes against our national self-interest. Surely, enlightened public opinion in Pakistan understands this? Can we forget that basically we originate from the same stock; that only due to certain circumstances, whole families were separated, but that citizens of Pakistan were, are and will always remain our brothers and as brothers we will always respect our individual sovereignties? Can we simply wish away the bond between the peoples of the two sovereign countries which has endured for centuries? I feel convinced that this underlying amity and brotherhood between the peoples of the two countries still remains.

Unfortunately, it seems almost as if it is deliberately suppressed and kept dormant to serve the ends of a few in Pakistan who rule with no mandate from the people and therefore do not necessarily reflect their true aspirations. This can be the only explanation for the Pakistani regime's inconsistent behaviour. A tranquil relationship may destroy the very raison d'etre of the Pakistani military dictatorship. Otherwise what reason is there for Pakistan to repeatedly reject India's no-war pact offer right from 1949?

I quote Jawaharlal Nehru, the supreme architect of our foreign policy whose impact endures even today. He said in Parliament on August 14, 1951, "Our approach is not, if I may say so, one of piety or pacifism. It is an approach based on hard facts and on a cold-blooded realization of facts. Since we want to avoid war we offered Pakistan a "No-War Declaration" which Pakistan did not wholly accept or agree to. And even a few days ago this offer was repeated, but they declined to accept it..." Repeatedly from 1951 onwards we have been making this offer and on every occasion it has been rejected. Last year General Zia himself said that a "no-war pact would not be worth the paper it was written on." Then, all of a sudden, a few months later he makes the offer of a "no-war Pact," almost as an after-

thought, a postscript. And when India responds positively just before the second phase of talks are to commence in Islamabad, his representative at the U.N. Human Rights Commission in Geneva comes out with a preposterous statement; in effect throwing a spanner into the works. This is followed by innocent surprise at India's strong reaction.

Many Sacrifices

This country, through the great sacrifices made by its people, under the leadership of such giants as Gandhi, Nehru and Subhas Chandra Bose, achieved its own freedom from the colonial yoke. This country pioneered the struggle for freedom in other parts of Asia and Africa. It was in this country that thousands of young men and women with smiles on their faces sacrificed their lives at the sacred altar of national liberation. Such a nation is compared to regimes that perpetuate injustice and oppression in Palestine and Namibia! As long as the Palestinians do not get their homeland and the Namibians do not get their independence, no free nation can consider itself truly free. Unless such injustice is eliminated our own freedom cannot be truly complete. These have been the sentiments of our Government and our people and yet the Pakistani delegate had the gall to compare us to the oppressors when the world knows how our heart bleeds for the oppressed.

We understand the sentiments of friendship that must surely exist in Indian and Pakistani hearts in spite of the last two wars, forced on the two peoples by military dictatorships in Pakistan. But let not the Pakistani military regime misuse our sentiment for the people of Pakistan. Let the present rulers of Pakistan not mistake this for weakness. Like envy, aggression grows on appeasement, every success it achieves inflames it further. It will be a sad day for the people of our two nations if this destructive flame succeeds in setting the sub-continent alight. For in spite of any subsequent military success achieved, in the ultimate analysis the only victor will be those interests whose aim is to retard the blossoming of the bud of progress in our two great nations.

General Zia is obviously catering to three audiences. When he speaks of Soviet expansionism and the desire for a cordial relationship with India, he caters to American listeners in the hope of generous military aid. When he speaks of Kashmir and raises the bogey of aggressive Indian intentions he is talking to Pakistanis. And when he refutes the possibility of Pakistan being used as a willing tool by the USA for military facilities, he is talking of India. How can one maintain these three divergent signals to three different audiences and yet be consistent? The Pakistani offer loses credibility. General Zia is torn between the compulsion of trying to sabotage his own offer on the one hand, and trying to develop it on the other.

A Smokescreen

In any case, no-war pacts have had a chequered history. The Briand-Kellogg pact in the late twenties did not endure. The Molotov-Ribbentrop pact was torn up by Hitler within two years in 1941. The Molotov-Matsuoka pact was renounced by the Soviets in 1945 before declaring war on Japan. Within a short period of the signing of the Panch Shila agreement between India and China in 1954, China started nibbling at bits of Indian territory in Ladakh. The Sino-Soviet mutual security pact of 1950 met with a similar fate. History has shown that no-war pacts are, in most cases, used as a smokescreen to play for time. As Dorothy Thompson writes, "The trouble with non-aggression pacts is that they are only made for avoiding war--which is not the same thing as achieving peace."

That is why the friendship pact which Mrs Gandhi has consistently stressed upon has much more relevance and significance. A friendship pact has a much more positive element; a much wider dimension. It opens up a wide vista for active cooperation and abiding goodwill. This is the objective that Indian diplomacy has to set before itself.

But friendship is a two-way street. Friendship must, and does, exist between the peoples of the two countries. If the Pakistani Government is really genuine about its intentions towards India, let there be a freer exchange of culture. Let there be more trade, leading to greater mutual benefits. Let there be a more open border to enable brother to meet brother. This would automatically lead to confidence replacing suspicion, and the re-emergence of the traditional ties between our two sovereign peoples.

The world today is in torment. We stand at the crossroads. The human being is the only species on the globe with the capacity to alter his own future. Will he take a giant step forward towards the goal of economic emancipation for all in a climate of peace and tranquillity--or will he tumble backwards into the gaping pit hole of complete self-destruction? This is the question that confronts us all. Only we have the power to decide for ourselves.

G.K. REDDY TELLS INDIAN STAND ON FALKLANDS

Madras THE HINDU in English 20 Apr 82 p 1

[Article by G.K. Reddy]

[Text] New Delhi, April 19--An effort is being made by some Latin American countries for a non-aligned initiative to settle the Falkland Islands dispute by bringing the United Nations more actively into the picture, according to reports reaching here.

The sponsors of this move are maintaining that whatever the origins of this dispute, it involves decolonisation and as such the U.N. has a responsibility to intervene and find a peaceful solution to this problem.

But other non-aligned countries including the bigger ones like India feel that the more immediate need is to avert the danger of an armed clash between the British and Argentine forces. Since the U.S. was now engaged in a mediatory effort, it is no use duplicating the peace move with a non-aligned initiative at this stage.

The whole British case for restoration of its sovereignty, or reoccupation of the Falklands as a starting point for any negotiated settlement is based on the argument that Argentina has no right to seize the islands through military action.

A country like Britain with a record of voluntary relinquishment of its farflung empire it is claimed, is entitled to better international understanding without being dubbed as an unrepentent colonial power bent on retaining these remote islands over 12,000 km away from its shores.

Unjustified: But the non-aligned countries which are opposed to British reoccupation of the Falklands are reported to be arguing that, if Argentina which is 800 km away from the bulk of these islands was not justified in resorting to military action to enforce its claim, Britain was entitled even less to retake them by despatching the bulk of its fleet to the South Pacific to intimidate it.

The only way out of the tangled situation, in the opinion of those opposing the British bid to reoccupy the Falklands, is to turn over these disputed island to the U.N. as a trust territory whose future could be determined in due course in accordance with established procedures for decolonisation.

It appears that Cuba, as current president of the non-aligned community, has mooted this idea behind the scenes, without openly identifying itself with the move because of the U.S. allergy to any suggestion emanating from it. But the U.S. delegation at the United Nations, which is aware of the attempts of some non-aligned countries to intervene in the Falklands dispute, has been discouraging them from doing or saying anything at this stage when the Secretary of State, Mr Alexander Haig, is engaged in delicate negotiations.

A number of African countries are reported to be somewhat critical of the reluctance of the more important non-aligned countries to intervene in a dispute involving decolonisation, all because they do not want to offend Britain.

Mediation efforts: But the majority of non-aligned countries which participated in the ministerial meeting of the coordination bureau in Kuwait earlier this month, felt that there was no harm in awaiting the outcome of the U.S. mediatory efforts before initiating any moves of their own for bringing the U.N. more actively into the picture.

The British continue to maintain that they cannot abandon the 1800 odd inhabitants of these islands and transfer the territory to Argentina against their wishes in the name of decolonisation. But once Argentina agrees to withdraw its forces, the present Government in Britain may not be totally averse to the idea of involving the U.N. in determining the future of the Falklands after ascertaining the desire of its people.

Cautious stance: The Indian policy is to avoid any entanglement in this controversy other than reiterating its stand that the dispute should be settled peacefully without further resort to force. But some of the non-aligned countries have been privately taunting it that after what it had done in Goa to put an end to Portuguese colonisation, India should not be sermonising to others on the virtues of a peaceful settlement of such disputes.

A point that is conveniently overlooked by the critics of India's cautious stance is that in Goa the bulk of the local population was of Indian origin and would have indisputably voted for merger with India if the people were given the choice to exercise their option. In the case of the Falklands, almost the entire population is of British stock and have no filial links with Argentina.

The Latin American countries which are pressing for a non-aligned initiative do not dispute this fact but they do not consider it as enough justification for the continued retention of these islands by Britain.

ANALYST GIVES BACKGROUND TO GANDHI SAUDI VISIT

Madras THE HINDU in English 18 Apr 82 p 2

[Article by G.K. Reddy]

[Text]

THE Prime Minister, Mrs. Indira Gandhi, is now on a trip to Saudi Arabia: 26 years after her father had gone there in 1956 to return the visit of the late King Ibn Saud, an old-fashioned monarch who continued to value his country's friendship with India even after partition. But Indo-Saudi relations have not been particularly close or cordial after his death, since the Pakistan factor tended to strain, and at times even sour, the traditional links by creating some unfortunate misapprehensions about each other's policies and intentions.

After the spadework has been done behind the scenes, Mrs. Gandhi has taken the initiative to improve the relationship to the extent possible in the present circumstances. A person who has played an important role in preparing the ground for her visit, interestingly enough, is no other than Mr. Yasser Arafat, the fiery PLO leader who sees no contradiction in maintaining a beneficial relationship with the Saudi monarchy, the very fountain-head of Islamic orthodoxy, while continuing to espouse ardently the cause of Arab socialism.

Pillars of stability

The PLO leader wants India and Saudi Arabia to get closer without prejudice to their respective commitments and aspirations, since these two countries are the main pillars of political stability in the region. Any conflict or clash of interest between them, in his view, would have a deeply unsettling effect by exposing the entire area to increasing foreign interference.

As the home of Islam's two holiest shrines, Saudi Arabia wields considerable influence over the world's 700 million Muslims, one-third of whom live in the Indian sub-continent. A secular State like India, with nearly 100 million Muslims, plays a much more important role in shaping the destinies of the area and influencing the attitudes of its peoples.

There are at present two brands of Islamic fundamentalism pulling the bulk of the world's Muslim population in opposite directions. The Saudi variety with its powerful religious appeal aims at uniting all Muslims in the name of the Prophet, while the new Iranian variant seeks to purify the Islamic faith by purging the deviates who have proved unworthy of it. The two look upon the heretics preaching Islamic socialism and others campaigning against excessive orthodoxy with grave suspicion, as though they are the enemies within the fold who have to be fought first. The real enemies of Islam who have subjugated and exploited them all these years come next.

Explosive situation

It is this strange interaction of prejudice and ignorance, combined with misplaced fervour and intolerance, that has created a highly explosive situation in West Asia, making the oil-rich States even more vulnerable to internal subversion and external pressures than the impoverished desert Sheikhdoms plagued by blood feuds and privation.

The ferment set in long before the Shah of Iran lost his throne. General Zia-Ul-Huq executed Bhutto, the Soviets moved into Afghanistan, the sanctity of the Holy Mosque in Mecca was violated by political extremists, the Iraqis invaded Iran and Sadat was killed by his own countrymen.

The passions unleashed by these turmoils have had a deeply unsettling effect on the Islamic world, making the more pragmatic minded realise that in the final analysis God

helps those who are prepared to help themselves without leaving everything to the heavens.

A country that has benefited most from this traumatic experience is Saudi Arabia which started realising the limits of its phenomenal oil wealth and political importance as the main element of stability in the region. The 5,000 odd princes and princelings who share power and the spoils of oil wealth have developed over the years their own pattern of desert democracy based on a tightly run family system.

The monarchy is not accountable to any elected representatives for its actions, but the people who have the right of approach to the king himself are allowed to ventilate their grievances and seek redress without questioning the legitimacy of the system. This dispensation has generated step by step a degree of sensitivity at various levels of the ruling family, making the more important ones respond in their own way to the wishes of the people.

Obscurantism given up

It is this dispensation that has encouraged the educated and modern minded princes in the Saudi royal establishment to start shedding the obscurantist traditions inherited by them. The present Crown Prince Fahd, who functions virtually as Prime Minister under the benign guidance of his elder brother, King Khalid, has rallied round him a dozen well-educated and liberal-minded princes to modernise the regime and keep abreast of global developments.

It is this new set of princes that have helped the Saudi monarchy to get out of its cocoon and establish a warm relationship with the PLO, cultivate the liberal Arab regimes, keep away from extremists like Qadhafi, refrain from identifying itself unduly with Egypt and shed its superior airs in dealing with volatile neighbours like South Yemen.

The better educated Saudis are not unaware of the fact that historically the Arab had suffered much more grievously at the hands of the Ottoman Empire that enslaved them in the name of Pan-Islamism than the Western imperialist powers which finally freed them from Turkish dominance.

The slogan of Islamic unity has not been able to put a gloss over the grim reality that the Muslim countries by and large are more divided than united as a result of geopolitical rivalries, religious animosities or nationalistic ambitions. For no single cause-not even in their crusade against Israel —have these countries been able to stand together for any length of time, as demonstrated painfully by the behaviour of Egypt.

It is against this general background that Saudi Arabia has started responding to India's moves for better bilateral relations as a starting point for greater understanding in coping with problems of regional stability and peace. The new Saudi rulers also have got over the earlier fears that anybody who wanted to be friendly with them was interested only in siphoning off some of their oil wealth and not really cultivating them. It is realised that there is no incompatibility involved in a secular country like India striving for a better accord with a theocracy like Saudi Arabia without any ulterior motives.

The Saudis know quite well by now that India wants them to be friendly with Pakistan and help in its economic development, with the only reservation that they should not get mixed up in subcontinental politics by financing its arms purchases. This is a fair proposition which King Khalid, Prince Fahd and their brethren cannot object to if they are indeed keen on strengthening Indo-Saudi relations.

Similarly, India is not going out of its way to press for substantial Saudi investments in its economic development, but only pointing out the opportunities open for capital participation if the country chooses to take advantage of it. The offer of Indian technical assistance in some selective spheres has also been made in a similar vein without giving the impression that India is queuing up with the other supplicants for the Saudi largesse.

No quarter to communalism

The Ministers and officials accompanying Mrs. Gandhi on this trip will discuss the prospects for increased trade, technical assistance and industrial participation only in the context of the political framework emerging from the Prime Minister's talks with the Saudi hierarchy. It has to be based on the clear understanding that, whatever be the nature of the Saudi relationship with Pakistan, it should scrupulously avoid the impression of backing Islamabad in its disputes with India either directly or through the Islamic nations. A secular country like India with nearly 100 million Muslims cannot afford to allow any outside country, whether it is Islamic or non-Islamic, to engage in activities that easily could be misconstrued as encouraging communalism.

Once these bilateral hurdles are overcome, there should be no difficulty in India and Saudi Arabia reaching a degree of understanding on how they should work together in promoting stability and preserving peace in the region. There are no conflicts of interest between them in coping with the Israeli problem, striving for an early end to the Iraq-Iran conflict, discouraging the extremists in the area from interfering in the internal affairs of neighbouring countries or attempts to export either Islamic fundamentalism or Arab socialism to them.

Mrs. Gandhi could not have chosen a better time to pay this visit since the Saudis themselves have been veering round to the view that they should stop playing the ostrich and share with countries like India the responsibility of promoting a spirit of inter-dependence among the rich and poor countries of the region.

As a country of only seven million people which has been the prime beneficiary of the twelve-fold increase in oil prices in less than a decade, pushing up its income from a modest $10 billions to $120 billions a year, Saudi Arabia is unable to absorb and assimilate this bonanza without creating economic disparities and generating social tensions in the region.

The big challenge to the Saudi leadership is how to respond to the new realities of financial power without running into political difficulties in the bargain. And the new dialogue with India can help to provide the missing element of pragmatism in its philosophy of co-existence with the neighbouring peoples, both Islamic and non-Islamic, in this highly volatile region where oil and politics have proved to be a highly inflammable combination.

OFFICIALS REPORTEDLY DEBATE FUTURE DEFENSE STRATEGY

Madras THE HINDU in English 21 Apr 82 p 1

[Article by G.K. Reddy]

[Text] New Delhi, April 20--The bi-annual conferences of the Army, Air Force and Naval Commanders which used to be routine meetings in the past for discussing the organisational and logistical problems of the three services have become increasingly important in the wake of the changing security environment in the region.

Apart from generating a better awareness of the country's defence burdens these conferences enable the political leadership to get better acquainted with the top Commanders of the three services and get to know their thinking on strategic issues.

The Prime Minister, Mrs Indira Gandhi, has been addressing each one of these conferences and sharing her thoughts with the respective service chiefs and their colleagues on the geopolitical aspects of defence, besides listening to their professional assessment of national security problems. The discussions that follow behind closed doors take the shape of a debate on defence strategy for the next decade as seen from both political and military angles.

The three services are gratified that despite financial difficulties the Government has been finding money to obtain latest equipment to replace obsolescent weaponry, improve mobility and enhance fire power to enable them to cope with the complexities of modern defence. The Army continues to get the lion's share because it happens to be the largest service, but the Air Force and Navy have not been lagging far behind in acquiring highly expensive weapon systems.

Spirit of comradeship: The Government is heartened by the new spirit of comradeship and coordination that has developed between the Army, Air Force and the Navy in recent years by overcoming the old inter-service rivalries and grievances. There is evidence of greater professionalism now in the attitudes of the three services free from the old rancour over civilian dominance.

The main accent is not on expanding the armed forces by adding more men to the three services for raising new fighting formations, but on improving the calibre of the existing units by re-equipping them with the most sophisticated weapons. The Indian Army today is the fourth largest in the world in terms of its numerical strength and operational capability, ranking next only to the American, Soviet and Chinese land forces. The Air Force, though comparatively small in numbers is a compact arm with more teeth and striking capacity than any other Air Force in Asia including the Chinese air arm.

The Navy is, no doubt, still very small compared to the other two services, but it has also been expanding rapidly without publicising its new acquisitions. It is developing into a two-ocean naval force to cope with the maritime responsibilities on both the East and West coasts against the background of increasing big power rivalries in the Indian Ocean.

New weapons: The Jaguars, MIGs and Mirages are not the only ones that India has been acquiring for its defence. The new T-72 battle tank is only one of the many new field weapons that the Army has been getting to replace its old equipment with the very latest versions. These included a wide range of rocket weapons, guided missiles, radar controlled anti-aircraft guns, more powerful artillery and anti-tank weapons. The Navy has been concentrating on faster frigates, missile boats, submarines and other equipment for offensive-defensive operations.

The upgradation of the cadres has also provided the extra incentives required for stepping up the morale of the armed forces. But the three services are faced with a serious decline in the numbers of promising young men coming forward to seek careers in the armed forces. The pay scales and living conditions do not compare well with the opportunities open to them in civilian life.

The Defence Ministry is quite concerned about this aspect and is taking steps to make military careers more attractive for well educated young men. Meanwhile, the Government is doing whatever is possible to encourage those already serving in the armed forces to stay on longer without seeking premature retirement to switch-over to more lucrative jobs in civilian life.

The human aspects of defence are thus receiving due attention to enable the armed forces to combine their sense of dedication and commitment with a reassuring feeling of social security and better career prospects. It will take some time to make the country's youth better aware of the new opportunities open to them in the armed forces.

ACCOUNTS COMMITTEE REQUESTS DEFENSE PROJECT REVIEW

Bombay THE TIMES OF INDIA in English 18 Apr 82 p 9

[Text]

NEW DELHI, April 17.

CASES of undue delays in the executive of developmental projects in the field of aeronautics have led the public accounts committee to ask for a comprehensive review of the defence ministry of all major developmental projects initiated during the last 15 years.

This review should ascertain the reasons for delays and attempt to correlate the effect of the delays on the morale and combat-worthiness of the defence personnel, the committee has said in its report presented to the Lok Sabha this week.

The committee wants this study to identify the projects which were abandoned half way and to go into the reasons why these were abandoned.

The committee wants representatives of the defence research organisation, three services and Hindustan Aeronautics Ltd. (HAL) to be associated with this study.

The report covering the case of replacement of a basic trainer aircraft, emphasises the need for closer and continuous co-ordination between the minister of defence, defence research and development organisation, department of defence production and HAL.

The committee has hoped that the modification of the old basic trainer aircraft, which is accident-prone, will be done without any further hitch so as to ensure that the existing training aircraft are put to the maximum use and the training of pilots which has been affected adversely over the last few years is resumed on the normal pattern.

The committee notes that the number of incidents in which HT-2 aircraft has been involved has been quite severe — the rate being as high as 43.09 per 10,000 flying hours in 1978-79.

The committee noted that the search to replace HT12 as basic trainer aircraft, which had been inducted in service in the air force in 1953, was started as early as November 1965.

It regretted that five and a half precious years were lost in the search for the elusive common trainer aircraft. The feasibility report prepared by HAL in February, 1969, remained in cold storage till September, 1974, and HAL was "kept waiting" for the government's decision.

The project proposal passed through various stages running into several hurdles and according to the latest anticipation, the new trainer aircraft is expected to be inducted in service only in 1985-86.

FINANCE MINISTRY ISSUES 1981-82 ANNUAL REPORT

New Delhi PATRIOT in English 20 Apr 82 p 5

[Text]

The balance of payments position remained under pressure during 1981-82 with foreign exchange reserves declining by Rs 1,292 crores (up to 31 January 1982).

This was the position even after taking credit for the receipt of Rs 637 crores under the International Monetary Fund's (IMF) extended agreement, according to the 1981-82 annual report of the Finance Ministry.

However, in other fields, the report has many good things to say, including deceleration in the inflationary pressure.

The growth in real gross national product (GNP) in the first two years of the sixth Plan is expected to be significantly higher than the target growth rate of 5.2 per cent per annum during the plan period, the report said.

The GNP is likely to show an increase of 4.5 per cent in real terms in 1981-82, on top of 7.5 per cent in 1980-81. The improvement in economic situation which commenced from the second half of 1980-81, gathered momentum in 1981-82. Industrial production is likely to increase to eight per cent and agricultural production by three per cent.

There was a marked decelaration in inflationary pressure in 1981-82, the report stated. The annual rate of inflation, on a point-to-point basis, as measured by wholesale price index, came down to 2.0 per cent in the first week of March, 1982 from 15.6 per cent in the first week of March 1981.

The report said the monetary and credit policy of the Reserve Bank of India (RBI) continued to aim at containing inflation through restrictions of bank credit. Several steps including, raising of the statutory liquidity ratio, and cash reserve ratio in banks and increase in bank rate were adopted to reduce excess liquidity. As a result of these measures, monetary expansion in 1981-82 witnessed significant moderation.

The policy of extending the bank network in the rural areas continued during the year. Commercial banks opened 2,517 branches during January-November 1981. Of these, 2,010 or nearly 80 per cent were located in rural areas.

PLANNING COMMISSION PRESENTS 1981-82 ANNUAL REPORT

Calcutta THE STATESMAN in English 22 Apr 82 p 7

[Text] New Delhi, April 21--The Planning Commission has intensified efforts to discipline the economy, accelerate development in the key and core sectors, speed up poverty alleviation programmes and remove economic imbalances in the country. This was stated in its annual report presented to Parliament today. During the year, periodic analysis and review of the economy were undertaken. This was in respect of agricultural and industrial production, performance of the infrastructure sectors, trend in wholesale and consumer prices, money supply and bank credit and balance of payments.

With regard to financial resources, the commission prepared estimates of resources of the Centre and the States for the plan for 1982-83 and analysed the central budget for 1981-82 to assess the scheme of financing the Centre's plan for 1981-82.

The State's budgets were analysed to find out deviations from the scheme of financing the annual plan for 1981-82. Following the study of post-budgetary developments in financing the central and State plans, measures were suggested to make the annual plan financially viable without reliance on deficit and overdrafts.

The agricultural division finalized reports of the group on disaster preparedness and management, land use plan for Sikkim and the Fuelwood Study Committee. A high-level expert group set up to examine the working of the integrated rural development and other poverty alleviation programmes has completed its report.

Power development was given high priority and a detailed review of all major schemes, including delivery schedules, equipment and construction programmes were made to identify the spheres and factors which contributed to deficiencies in project implementation.

All projects with an aggregate capacity of more than 3,000 MW were approved up to January 1982. These included six hydel and five thermal power stations costing Rs 1,409 crores, while 19 coal mining projects with an ultimate capacity of 16.7 million tons and involving a capital cost of Rs 310 crores were cleared up to February 1982. Besides, projects with critical linkages were cleared for advance action to reduce their gestation lag.

EXPERT TELLS PROBLEMS OF NEPALESE IN NORTHEAST

Calcutta THE STATESMAN in English 17 Apr 82 p 6

[Article by A.C. Sinha]

[Text]

DESCRIBING the three main categories of Nepalese settlers in Assam, Nagaland, Meghalaya, Manipur, Tripura, Mizoram and Arunachal Pradesh, A. C. Sinha, who is head of the sociology department at the North-Eastern Hill University in Shillong and also the author of a book examining the class composition of Sikkim's political elite, says that the comparatively backward north-eastern tribes are bound to resent the prosperity of hard-working and enterprising immigrants from Nepal who have contributed handsomely to the economy. Dr Sinha claims that settlers are often involved in border disputes and in conflicts between the armed forces and extremist movements, which does not make them more popular. He also traces Gurkha revivalism to the alienation of second-generation Nepalese immigrants, while arguing that the sub-continent's geo-political conditions, and the open borders between India, Nepal and Bhutan, make it impossible to prevent infiltration.

NO Nepalese settlement is reported from north-eastern India prior to the 18th Century. The first meaningful contact in this region was in 1817, when the Cuttack Legion, consisting of a thousand "Hindustanis" and Gurkhas, took part in the Sylhet Operation. This was the beginning of the series of expeditions among the north-eastern hill tribes in which Gurkhas took part.

After being released from the army, Gurkhas were encouraged to settle down in the north-east as faithful allies of the British administration. The region was sparsely populated then by isolated, backward and, at times, hostile hill tribes, ruled by deputy commissioners. Being used to an undulating topography, and being temperamentally closer to tribal communities, the Nepalese—Hindu, Lamaist and animists alike—were naturally accepted by both the British and local tribes.

But the region ceased to be controlled by distant rulers after 1947. The local communities were encouraged to take part in their own affairs; political awareness and participation followed improved education and communications. Meanwhile, Nepalese migration continued unabated. Since the influx into Sikkim and Bhutan was greatly contained in recent years, there was a tremendous corresponding increase in migration to the north-east. Unlike earlier soldier-settlers, the new immigrants were unskilled peasants known for their thrift and industriousness. They reached the barren uninhabited forest fringes and the marshy Brahmaputra quagmire, cleared the jungle, started dairy farming, and were soon an inalienable part of the economy

UPSET BALANCE

Apart from the economic, political and cultural consequences, this pressure upset the population balance and generated demographic tensions. Assam's Nepalese population rose from 101,335 in 1951 to 132,925 in 1961, and to 353,673 in 1971. While Assam's 1961-71 decennial growth rate was 34.95 per cent, for the Nepalese in the State it turned out to be 46 per cent. There were also substantial numbers of Nepalese in Tripura, Mizoram, Manipur, Nagaland, Meghalaya and Arunachal Pradesh. If we add Bhutan's Nepalese population (200,000 in 1969), Sikkim's (180,000 in 1971) and that of West Bengal's northern districts (a rough estimate of between 1,200,000 and 1,500,000) the total came to about two and half million a decade ago.

Even at the modest rate of a 25 per cent increase during the last ten years, the number of Nepalese in the region is about three to three and a half million. This increasing presence creates a host of problems for indigenous people as well as for immigrants.

The latter fall into three broad categories. First, there are Nepal's pastoralists and marginal farmers, herdsmen and cultivators who move out of the hills in search of new opportunities. His only capital is cheerful perseverance, a sturdy physique the ubiquitous khukri at his belt and the cap symbolizing Sagarmatha (Mount Everest) on his head, and a readiness to do anything to make a living. He can be dairyman, sharecropper, agricultural labourer, porter, smith, carpenter, or even errand boy. These men set themselves up at some distance from tribal villages, often even in reserve forests where they fell trees. A cosmopolitan outlook, relative cultural omnivorousness, and polygamous habits enable them to acquire partners. The number of wives a Nepalese has increases his productive capabilities, both economically and biologically. Even small children add to the working force.

North-eastern tribesmen are traditionally jhum cultivators. But because of education, roads, conversion to Christianity, State welfare schemes, and constitutional safeguards, many are taking up white-collar jobs. As they adjust to modern patterns, they invariably employ Nepalese to raise cash crops (potato, vegetables, spices and fruit) on their farms—often communal land that they have acquired—because their own tribespeople are neither available nor competent enough for agricultural work, in lieu of wages. Slowly but steadily therefore, the Nepalese are occupying valuable agricultural land which is really communal property. While the tribal jhumia remains a marginal farmer like his forefathers, the Nepalese newcomer acquires modest affluence.

This is potentially an explosive area of conflict between the immigrant and the autochthon. With the connivance of some tribals, many Gurkhas have acquired landed property in spite of legal safeguards. But what might look like criminal transgression is often initially condoned by local tribal communities which realize that the Nepalese have developed resources that are of benefit to educated, urban tribal leaders.

But fricton does occur, two instances of which may be described. The Marapani region on the border of Okha (Nagaland) and Sibsagar (Assam) was a reserved forest and, by tradition, known as a Lotha tribal area. But slowly, the Nepalese infiltrated into Marapani, and with them came Bengalis and Biharis. The region being a subject of dispute between Assam and Nagaland, some of the Nepalese settlers have title papers from both governments. But the Assam police helped Nepalese domiciled in Assam, as well as Bengalis, to encroach on disputed land in Nagaland which led to a bloody reprisal raid by the Lotha Nagas in 1978. In another incident, a clash between Sema Nagas and Nepalese settlers (March, 1978) at the trijunction of Okha, Mokokchung (Nagaland) and Sibsagar (Assam) took toll of about 200 Nepalese lives. In both cases, the feeling that Nepalese were alienating tribal land appears to have been the main cause of violence.

GOOD PEASANTS

Secondly, soldiers have been encouraged, since the end of World War II to settle down and reclaim the foothills, forest fringes and river banks in Arunachal Pradesh, Assam, Nagaland and Manipur. These ex-soldiers have all the qualities of good peasants, coupled with military training, and are, therefore, officially regarded as loyal citizens who support the establishment. Their newly acquired settlements are the thriving cen-

[illegible] of a prosperous peasantry, army pensions providing the added advantage of a regular cash income. The money is invariably invested in land, visible prosperity provoking jealousy since it is inevitably contrasted with the relatively indolent and less achievement-oriented tribal people.

A further complication arises because ex-army settlers are invariably concentrated on the frontier where extremist and secessionist movements are often active. The loyal Nepalese are accused of providing data on strategy and logistics to the armed forces, and are thus resented by the local population. The best example of such a situation was in Manipur in April, 1980 when several Nepalese-inhabited villages, in the Sagolmong area of Central district, were burned down, houses destroyed and cattle killed. This is no ordinary area. It was from here that R. K. Tulachandra, the Prepak leader, and some of his comrades were earlier captured, so that the rebel attack was clearly inspired by the lust for vengeance.

Finally, artisans and semi-skilled professionals comprise a sizable section of the Nepalese population, moving from one urban centre to another. They are employed partly, fully, occasionally and even seasonally, in various vocations, a number being engaged in traditional (caste?) occupations. The Nepalese fill the role of intermediary semi-skilled professionals between the unskilled local community and sophisticated white-collar professionals from other part of India in hill townships. The demand for their skills has increased with the expansion of construction works, electrification programmes, commercialization, the advent of modest industrialization, extension of transport and communications, and other welfare activities. This is in addition to working as smiths and carpenters, plumbers, cleaners, masons, mechanics, tailors, drivers, electricians, helpers, porters, construction workers, pony-cart drivers, muleteers, vulcanizers, watchmen, gardeners and bus conductors. Nepalese men are invariably available for private or corporate agencies for any sundry labour on modest payment.

The kind of work they do is relatively new to the north-east and there is little competition from local communities. Unlike pastoralists and soldier-farmers, these semi-skilled urban Gurkhas rarely come into direct conflict with indigenous people. Their skills are appreciated, and they do not attract the envy of their non-Nepalese neighbours, because they are seldom outstandingly rich. In spite of their substantial contribution to the economy, they maintain a low profile and being Nepalese, are able to join Hindu, Buddhist or Christian social, cultural or religious festivities.

URBAN CLASS

Two other significant categories of north-eastern Nepalese deserve mention. First labourers employed by the Border Roads Organization, Railways and other public undertakings, and secondly, the emerging urban white-collar class. The former is invariably a floating population; it is rarely organized, and is devoid of political consciousness or any awareness of its plight. The urban white-collar man is a new breed, invariably born, brought up and educated in the north-east, and knowing no other home. These second generation immigrants speak local dialects, have a number of friends, patrons, and enemies among the local community, and are organizationally affiliated to local voluntary associations. But they also remember the sufferings of their fathers and grandfathers, and are politically aware and culturally conscious of their status as Indian citizens.

When these articulate and educated young people are made to feel that they do not belong to the dominant local community, their bruised ego seeks consolation in evoking memories of the great Gurkha past and Hindu traditionalism to support movements like the "Uttarkhand" demand. They then support the pan-Nepalese solidarity movement, providing the lead for airing genuine Nepalese grievances. Since they compete with local people in the search for not enough white collar jobs, they are automatically objects of suspicion.

The international border between Nepal and India has been made effective in recent years. But simple rural Nepalese are unable to understand the nuances of legal citizenship, or the distinction between Nepal's Nepalese and Indian Nepalese. It is an impossible distinction in view of the open borders between India, Nepal and Bhutan, and because of the sub-continent's geopolitical situation. The north-east's traditional tribal practice of loyalty to its chiefs has also crumbled. Hence, it is not possible to allow "small groups" to continue to pursue their livelihood on the forest fringes, for they are no longer unnoticed. The Nepalese dependents of local chiefs have to register as voters, and every legal settler who claims to be Indian has to be allowed to exercise his constitutional rights. However, a number of Nepalese enjoy multiple citizenship—of Nepal, India, and possibly also of Bhutan. Given this situation, the expectations of the hill communities of north-east India are bound to clash with the traditional privileges of Nepalese settlers.

NEWS AGENCY INTERVIEWS LOCAL GOVERNMENT ADVISER

Dacca THE NEW NATION in English 18 Apr 82 p 3

[Text] Mr Mahbubur Rahman, Adviser in charge of Local Government said in Dacca Friday laws and measures for eradication of corruption by the present Government would be enforced at all levels without any discrimination.

Whoever was found guilty, whether he was an ex-Minister, ex-MP, high official or a petty Government official at Thana level, or Union Parishad Chairman or member would be punished in accordance with law, he said, adding that Martial Law Government did not suffer from any political constraints.

The Adviser was talking to BSS at the end of his three-day visit to Comilla, Noakhali and Chittagong.

Mr Mahbubur Rahman underlined that to perform these great tasks cooperation of everybody was needed and vigilance on the part of every citizen against corruption and malpractices was required.

He said that credibility and accountability of the Government officials must be restored. None should be retained without a return, he pointed out.

He said that officials even at Thana level would have to account for and submit periodical balance sheets of their activities and functions to their superiors and competent authorities. Local people also must be attentive and intelligent in realising service from the Government officials.

Mr Mahbubur Rahman, replying to a question, listed lack of economic activities, little opportunity for employment and agriculture development, bad communication system and power supply as the basic problems in the rural Bangladesh.

He said that the present Government being fully aware of these problems was busy in formulating policy, preparing plan and projects for development of the rural areas, giving priority to less developed areas and communities. There must be a balanced and equitable development in all parts of the country, he asserted.

He said that if the countrywide canal digging programme and the other projects undertaken by the previous Government were found to be useful and productive they would be allowed to continue. But, he added, in carrying out these projects unnecessary expenses and political consideration must be avoided. The local people should be inspired for voluntary participation.

WASHINGTON CORRESPONDENT ON IMF LOAN, WORLD BANK

IMF Loan Review

Madras THE HINDU in English 19 Apr 82 p 5

[Article by N. Ram]

[Text] Washington, April 18--The latest high-level review of the performance of India's LFF arrangement with the international Monetary Fund has re-emphasised the nature of the external scrutiny of the Indian economy as well as the pressure that is being exerted and developed.

While Indian officials have attempted to keep even the agenda of the discussion secret, the information available from other sources here shows that the thrust of the questioning and to some extent grilling, in the Fund's Executive Board on Thursday concerned not (at least at this stage) monetary or fiscal performance--but a range of "structural issues" relating essentially to administered prices, resource mobilisation and allocation, and the import and export control regime.

At one point in the discussion, the U.S. representative raised pointed questions about the results of the changes in administered prices and was told essentially that it would be difficult to evaluate the results so soon. However, it was made clear that the Reagan Administration would look for more specific evidence on the way the arrangement and the economy performed on the "structural" front. There was also some questioning on the balance of payments situation and the Government of India's approach to it, covering briefly and superficially issues such as defence spending.

The discussion of the IMF staff's performance review came at the end of the second lap and the beginning of the third lap in a first-year arrangement that would permit India to draw a total of 900 million SDR (over the abridged year) in three instalments. Following the Executive Board's approval of the staff review of performance over this lap, India is in a position to draw the third instalment of 300 million SDR (as briefly reported).

Performance Clauses: A more substantive review and discussion of the performance of the arrangement as well as of the Indian economy will take place at the end of the first stage (June 30, 1982). At that point, India will be obliged to negotiate with the IMF new "performance clauses" as well as other conditions relating to a wide range of fiscal, monetary and economic issues. The second stage of the five billion SDR arrangement under the extended fund facility will come before the Executive Board for a major discussion prior to approval.

Some fresh information that is available on the protracted process of negotiation of the original arrangement reveals that the Fund management gave the Government of India a more difficult time than was publicly acknowledged before putting together the deal. At one point the problem related to the balance of payments estimates and projections, with the IMF management pressing for a particular profile and for more specific commitments. (Revised figures were provided).

Heavy Leaning on Supply Side: The Fund's Managing Director, Mr J. De Larosiere, also emphasised the heavy weighting of the Indian adjustment programme on the "supply side." The Fund management pressed the Government of India for more specific and deeper commitments with respect to both import liberalisation (a quantification in this area) and resource mobilisation.

At one point, the documentation reveals New Delhi expressed concern over the Fund staff's formulation or language relating to resource mobilisation and import and export policy--on grounds of "political sensitivity" in India--but essentially accepted the terms and language when the arrangement was finalised.

The issue of "containing" social subsidies also came up naggingly in the negotiations.

The new material makes it clear that while some of the formulations or language or emphasis were contested, there was no resistance by New Delhi on any of the policy issues.

So far, the U.S. stance with respect to the Indian arrangement has made a couple of things clear. Unlike as in the case of the recent World Bank loan for a refinery conversion and upgrading project in India, the Reagan Administration has chosen not to oppose the EFF arrangement in its current development. Its game plan seems to be to raise the policy pressures and the conditionality built into the three-year arrangement incrementally. Seen in another way, it is clearly an approach of extracting more and tougher "structural adjustment" as the cost of multilateral external flows to a country in balance of payments difficulty.

Problem on the Macro-side: With respect to India, the approach was usefully indicated by the U.S. Executive Director, Dr Richard Erb, in January (see THE HINDU of January 23 for a detailed report on the interview to this correspondent). "I don't think there was anything on the finaicial or monetary side that stood out "per se" as beingthe sign of the problem on the macro-side, usually where there is a balance of payments problem, it's because there is excessive growth in credit and money and excessive fiscal deficits. In those cases, the adjustments may be necessary on the monetary-fiscal side. In other cases, it may be eliminating price rigidities, reducing restrictions on say, the allocation of resources in the country, reducing restrictions on imports and exports--with the objective of making the economy more efficient."

India clearly fitted into the second category.

Using the Big Leverage: There are obvious divergences involved in the approaches of the Reagan Administration, other Western Governments, and the IMF management, but it is fairly clear that the current thrust of the conservative external approach to India's economic problems and policies--using the big leverage provided by the five billion SDR deal--relates to tackling so-called structural rigidities in the economy on the internal and external fronts. The shaping of the second stage of the arrangement that is expected to commence without interruption in July 1982 through another round of negotiation with the IMF management and after the Executive Board scrutiny, should provide a more accurate measure of the tightening of the screws.

'Confidential' World Bank Assessment

Madras THE HINDU in English 20 Apr 82 p 9

[Article by N. Ram]

[Text] The sustained pressure from the World Bank in favour of more "open" economic policies in India--with respect to an exported growth strategy, import liberalisation, domestic and external resource mobilisation, a liberalised investment climate, "realistic" exchange rate management, a new emphasis on the private sector, containment of social subsidies, and a stance of "inflationary contraction" towards the growth of monetary resources and bank credit--is documented in a 300-page study that includes an array of statistical tables.

The confidential assessment of the Indian economy, including its prospects, has become available to THE HINDU in Washington. It represents an annual exercise that serves (after it is edited and sanitised) as the basis for discussions in the Aid India Consortium that is scheduled to meet in Paris in a couple of months.

A first reading of the material shows these to be some of the notable components of the World Bank's assessment and prescription relating to the Indian economy.

(1) An endorsement of the performance of the economy in 1981-82 and the policy measures taken, along with notice of the weaknesses, constraints or problems connected with the balance of payments, the situation of the power, coal and railway sectors, the allocation of investment, the productivity of industry, imbalances in agriculture, the development of irrigation and population control.

Increases "insufficient"

(2) Increases in Plan outlays for 1981-82 and 1982-83, while "encouraging" are insufficient to meet the real investment levels planned for the public sector for the Sixth Plan period as a whole.

(3) Three categories of economic issues are particularly important at this juncture. First, the process of domestic mobilisation of resources must be intensified to raise the level of savings above 25 percent of gross domestic product (GDP) by the end of the Sixth Plan: external resources will, meanwhile, be needed to finance a sizable current deficit: and in the medium-term, foreign exchange resources will have to be generated within the economy to reduce this deficit. Secondly, the "efficiency" of capital utilisation in key sectors, notably irrigation and infrastructure must be addressed. Thirdly, there are major population and population policy issues to be tackled.

(4) With respect to resource mobilisation in the public sector, the savings-investment gap relating to the sector is anticipated to rise from 5.3 percent of GDP in 1975-80 to about 7.3 percent of GDP in 1980-85. The policy of granting price increases to selected commodities and services in the public sector must be consolidated and developed. The various measures are estimated to have generated additional revenues of approximately Rs. 15.7 billions in 1981-82 and are expected to net higher revenues in subsequent years.

(5) The resource mobilisation efforts by the State Governments are inadequate and disappointing. Without additional special measures, only one-half of the relevant savings target will be achieved by the end of the Sixth Plan.

Higher Interest Rate Suggested

(6) The Government of India must take special steps to generate additional resources through its capital recovery policies. For example, it must levy a higher interest rate, adjusted periodically to reflect inflation for the "effective recovery" of capital financed by the Government.

(7) Since administered prices are generally set on a cost-plus basis without adjustment for revaluation of capital assets, there is a built-in tendency for the pricing system to understate the capital cost of commodities and services in inflationary conditions and bring about a lower recovery rate than would be required to replace the existing physical assets over time. A "more flexible" approach to pricing commodities and services to facilitate a higher capital recovery rate would be consistent with Government policy (and World Bank prescription) of bringing administered prices "more into line with economic costs."

(8) Further price reforms are needed in price-administered industries to encourage efficiency and make possible the growth of enterprise savings.

External Resources

(9) In the eighties, the Indian economy must rely increasingly on external resources. The situation has obviously become considerably more difficult than it was in the seventies, with large balance of payments deficits and declining reserves posing a challenge. Current account deficits are anticipated to be above two percent of GDP for at least the first half of the decade. The higher reliance on external resources implies liberal growth in imports, accompanied by improvements in infrastructural performance, industrial modernisation and accelerated export growth as a "top priority."

The projections for total exports (FOB) are: $10 billions in 1982-83, $11.6 billions in 1983-84, and $13.5 billions in 1984-85. The corresponding projections for imports (CIF) are $17.6 billions, $20 billions and $21.75 billions. The adverse current account balance is projected to peak in 1983-84, at a level of $5.19 billions.

(10) The flow of concessional aid (net) is anticipated to be $1.8 billion in 1982-83, $1.85 billion in 1983-84, and $1.9 billion in 1984-85. Medium and long-term borrowing (net, and including IMF credit) would be, for these three years, $2.604 billions.

Given the deteriorating climate for concessional aid, India has no choice but to rely to an increasing degree on non-concessional borrowing and the Extended Financing Facility (EFF) arrangement with the International Monetary Fund represents a significant step in this direction.

Assuming that the availability of new concessional capital remains constant in real terms, the level of non-concessional borrowing required to maintain reserves at a minimum level (equivalent to three months of imports) will be over 60 percent of net capital inflow by 1984-85.

To "adjust" to this tough seenario for the eighties and to "borrow successfully" in the international capital markets, India must keep up "a consistently successful" export performance supplemented by import substitution only where "economically justified" and develop a suitable investment and policy environment.

(11) Exchange rates are likely to come under pressure and the deterioration in the real effective exchange rate between 1979 and 1981 might hold portents. The exchange rate indices have behaved "quite appropriately" in 1981-82.

(12) With respect to private foreign investment, the process which was started under the Foreign Exchange Regulation Act of 1973 is "near completion." The experience of the past half decade shows that the application of FERA need not be an obstacle to more rapid growth of private foreign investments. In fact, the number of collaboration agreements approved annually since 1974 suggests that FERA does not have "any particular impact."

"Technological Inflow"

The United States has emerged as the major supplier of technology, followed closely by West Germany and the United Kingdom. The other noteworthy sources of "technological" inflow "through collaboration are Japan, Switzerland, France and Italy.

Nearly two-thirds of the collaboration agreements covering the period 1970-79 related to five major industries--industrial machinery, electrical equipment, chemicals, machine tools, and metallurgical industries. The dilution of FERA has encouraged collaboration in areas of sophisticated technology and one result has been a noticeable decline in research and development on previously transferred technology.

Private foreign investment is expected along with commercial borrowing, to play an important role in financing India's foreign savings during the 1980s. It is not quite clear why direct foreign investment has thus far played only a modest role, given the "generally favourable domestic environment" and apparent gains.

With the new official policies encouraging foreign investment in high technology and export-oriented activities and with India's "excellent" record with respect to repatriation of profits, no expropriation, and adherence to due process of law, it should be possible to woo foreign capital in a bigger way.

(13) Continued official capital flows are important. As further deterioration in the current account deficit is anticipated during the remainder of the Sixth Plan (as part of the "adjustment process" begun 18 months ago), there is likely to be considerable strain on financing requirements.

The World Bank's analysis shows that if concessional assistance were to fall significantly below the current levels, India would be hard pressed to resist sharp cutbacks on imports so as to maintain creditworthiness in the face of continuing deterioration in the terms of trade and substantial current account deficits. And this would mean a reduction in the economy's growth prospects.

More Critical Role of External Sector

(14) The role of the external sector in the Indian economy is "certainly more critical now" than at any point during the past decade. The Government of India has acknowledged this change.

Imports play a "critical role" in promoting the efficient utilisation of resources in the Indian economy: they form the "principal means" by which competitive pressures can be introduced generally into the economy: and at least in the short-term the "significant challenges of modernisation" can be met only through "greater reliance on imports of key equipment." Exports also have an important role to play in encouraging a more efficient use of resources and in improving the allocation of "scarce resources for development."

(15) Restraint in the growth of monetary resources and bank credit is necessary for combating inflation. The rate of growth in monetary resources and bank credit is necessary for combating inflation. The rate of growth in monetary aggregates and in net bank credit to the Government have been reduced since August 1981 and continued restraint is called for in view of the large investment programme envisaged in the Sixth Plan.

The tightening of net bank credit to the commercial sector since October 1981 has been felt by industry--causing "some difficulties" in financing the increase in production--but it is "unavoidable to dampen inflation and to avoid its resurgence."

(16) Containment of subsidies and action to pass on the costs to the consumer are important.

Tribute to "Incomes Policy"

(17) A tribute is paid to the "effective incomes policy" of the Government of India, again in the name of anti-inflation. The adjustment of wages and agricultural procurement prices "with a lag" and "to a lower extent than the actual inflation rate" is claimed to have contributed to "lower inflationary expectations." However, the inflation rate is seen to be "a source of uncertainty."

(18) Although demand in some sectors has proved lower in the most recent period than was anticipated earlier, the evidence available to the World Bank at this stage "does not suggest the emergence of a demand-induced industrial recession in 1982-83." Significantly, the "aggregate demand situation" is seen as "not unduly restrictive on output," but having "a salutary restraining effect" on overall inflation and in particular on price increases of manufactured products.

(19) The coming mid-term review of the Sixth Plan (summer 1982) should offer a chance to the Government of India to "readjust Plan allocations as warranted."

(20) Over time, investment as a proportion of gross domestic product has risen significantly (to reach 24 percent in the early eighties) and this means that an increasing amount of capital has been used to produce a given amount of output. Some of this is unavoidable but a key task is to harness the current investment rate to achieve higher growth by "improving the efficiency with which capital is used."

At a time when a qualitatively new external role has been instituted in economic policy-making for India, the World Bank's uninhibited view of the Indian economy and its policy prescription hold outstanding interest--as can be seen from the above "20 point" extraction.

INDIA PLANS BORROWING FROM ASIAN DEVELOPMENT BANK

Bombay THE TIMES OF INDIA in English 22 Apr 82 p 12

[Text]

NEW DELHI, April 21 (PTI): India has informed the Asian Development Bank (ADB) that it would like to commence borrowing from 1983 onwards.

According to the finance ministry, the amount of loan and the details of projects will be worked out with the bank after a decision is taken on the size of the third general capital increase.

India is likely to borrow $2 billion from ADB during the sixth plan period which ends in March 1985.

The ADB is currently engaged in getting an agreement on the replenishment of the Asian Development Fund (ADF) from which soft loans are extended to poorer member-countries of the region. The progress in this regard and the capital increase will come up before the 15th annual meeting of the ADB to be held in Manila from April 28 to 30. Mr. Pranab Mukherjee, Union finance minister, is expected to lead the Indian delegation.

The bank's new president, Mr. Masao Fujioka, has said that he would vigorously pursue the bank's resource mobilisation programmes.

In 1981 the ADB approved loans totalling $1,678 million for 54 projects in 15 developing-member countries. Of this, soft assistance was a little over $530 million.

India is the third largest subscribers of bank's capital after Japan and USA and has so far not drawn any loan. In view of its balance of payments difficulties and cuts in the share of IDA credits, India is forced to seek ADB assistance.

After a mere $30-million worth of contracts that India secured for export of goods and services to bank financed projects in the first 10 years, the figure now exceeds $120 million.

India is the only developing country-member of the bank which has bagged a significant amount of consultancy contracts. The areas of operation of Indian companies in bank assisted projects include, irrigation, rural credit, dairy development, power, development banks and railway rehabilitation.

PLANNING COMMISSION SAYS LAND REFORM IS SLOW

Madras THE HINDU in English 19 Apr 82 p 10

[Text]

NEW DELHI, April 18.

The Planning Commission has urged the States to speed up land reforms so that the task is completed by 1982-83 as envisaged in the Sixth Plan.

The Commission is concerned over the tardy progress over land reforms. Not only is the declared surplus much lower than the original expectations but the States have also been slow in the take-over and distribution of surplus land. Though land records have been updated in some States as part of the resurvey operations, the requisite machinery is yet to be set up in some others for updating the records.

Under the revised ceiling legislation which came into operation in 1972, according to the Planning Commission, only 15.89 lakh hectares have so far been declared surplus in different States. Out of this 10.49 lakh hectares have been taken possession of and about 8 lakh hectares distributed to 12.82 lakh landless agricultural workers.

The figures relating to the land declared surplus and the area taken possession of given by the Planning Commission do not, however, wholly tally with those given by the Union Agriculture and Rural Development Ministry. According to the Agriculture Ministry, the area declared surplus under the revised land ceiling laws in all the States is 41,07,056 acres which works out to about 16,42,821 hectares while the area taken possession of is 26,89,274 acres corresponding to 11,75,709.6 hectares (an acre is equivalent to 0.4 hectare).

Under the 20-point programme, special efforts have to be made by the States to implement agricultural land ceilings, distribute surplus land and complete compilation of land records by removing all administrative and legal obstacles.

Land ceiling legislation relating to private land holdings exists throughout the country. As the progress of the implementation of these laws has been hampered by complicated legal procedures, the State Governments have already been advised to restrict the number of appeals and revisions and they may have to set time-limits for filing of appeals and revision petitions.

SIGNIFICANCE OF NONALIGNED LEADERS' VISITS NOTED

Madras THE HINDU in English 22 Apr 82 p 9

[Article by G.K. Reddy]

[Text] New Delhi, April 21--The President of Algeria, Mr Chadli Bendjedid, is arriving tomorrow on a three-day visit to India on his way to China after a stopover in Belgrade where he had wide-ranging talks with the Yugoslav leaders on the present state of the non-aligned movement.

This is the first-ever visit to India by an Algerian Head of State, although the two countries have established fairly extensive economic cooperation and been working in close concert on many international issues.

The Indian Government is attaching considerable importance to this visit because of the increasingly important role that Algeria has been playing both as a leading member of the non-aligned movement and as an active participant in the efforts of the Group of 77 at the United Nations. The Prime Minister, Mrs Indira Gandhi and the External Affairs Minister Mr P.V. Narasimha Rao, will discuss the third world problems with him in great depth since Algeria happens to be the current chairman of the Group of 77 which is spearheading the campaign for global negotiations.

Vietnam Minister's Visit: Another equally important visitor to Delhi this week will be the Foreign Minister of Vietnam, Mr Co Thack, who arrives on Saturday for talks on bilateral and regional problems. The Vietnamese Government is keen on India's cooperation not only in the revival of its war-ravaged economy, but also in promoting better understanding among the countries of the region.

No Longer Suspicious: The Indian approach to the problems of the Indo-China States has both long-term and short-term objectives aimed at establishing a mutually beneficial relationship with Vietnam which is fast emerging as the most important country in South-East Asia. Once the Kampuchean issue is settled to the satisfaction of the ASEAN States, Vietnam will be able to display greater resilience in the conduct of its foreign relations, without being unduly beholden to any country, not even the Soviet Union.

A significant aspect of the current South-East Asian situation is that the ASEAN countries have started not only reconciling themselves to the reality of Indian recognition of Kampuchea but also realising that India had taken this step on its own initiative and not at the behest of the Soviet Union. The ASEAN countries are no longer looking upon India with grave suspicion as though it has willy-nilly allowed itself to be used as a trojan horse by Moscow to exert pressures on others in the region to accept the "fait accompli" in Kampuchea.

ASEAN Rethinking on India's Role: The fact that India had not even indirectly urged them to follow its example and recognise the Heng Samrin regime has helped to reassure the ASEAN countries that they could count on India to play a helpful role in finding a solution to this tangled problem. It is this realisation that had encouraged the Thai Government to talk of utilising India's good offices during the External Affairs Minister, Mr P.V. Narasimha Rao's recent stopover in Bangkok on his way back from Vietnam for finding a basis on which the regional countries could get together to discuss the Kampuchean question.

Regional Cooperation: The Vietnamese, too, want India to use its influence with the ASEAN countries to open a dialogue with them not only on Kampuchea but also on the wider issue of regional cooperation. Though it is too early yet for India to make any specific moves in this direction, the follow-up talks with the visiting Vietnamese Foreign Minister will certainly help to carry forward this effort to the stage of sounding the two sides on how they should proceed to deal with the problem in a regional context, without involving China, the Soviet Union and the United States in it.

Arafat's Visit: An equally important and perhaps more interesting personality to visit India in the latter part of next month will be the PLO President, Mr Yasser Arafat, who played a part in the improvement of Indo-Saudi Arabian relations. He was to have come to India on his second visit within two years before the end of this month but the trip had to be deferred because of Mrs Gandhi's preoccupation with the elections.

STEPS TAKEN TO ENCOURAGE INDUSTRIAL GROWTH

Industry Minister's Announcement

Bombay THE TIMES OF INDIA in English 22 Apr 82 p 1

[Text] New Delhi, April 21 (UNI)--The government today enlarged the list of industries open to large houses and FERA companies to stimulate industrial growth and step up exports.

The decision to revise the list in the productivity year was announced in the Lok Sabha by industry minister Mr Narayan Dutt Tiwari while replying to the debate on the demands for grants for his ministry.

Mr Tiwari also announced a new scheme which would ensure increased utilisation of industrial capacity as part of the plan to liberalise investment procedures.

Mr Tiwari said the changes made in the list were aimed at stimulating industrial growth in the core sector as well as in industries with export potential or import substitution, for adoption of advanced technologies, for economies of scale and for giving encouragement to units with potential for large scale ancillarisation.

He said large houses and FERA companies would be eligible to participate in the establishment of industries in the list, along with overt applicants, provided the specific item of manufacture was not reserved for the public sector or small scale sector.

Ordinarily such companies would not be permitted to establish industries outside the list, except where the product was predominantly for export--60 percent export in respect of items not reserved and 75 percent export in the case of items reserved for small scale sector.

The changes, Mr Tiwari hoped, would further improve the industrial and investment climate in the country and that the large house and FERA companies would respond in adequate measure so as to help in achieving the socio-economic objectives of the industrial policy.

List of Industries

Madras THE HINDU in English 22 Apr 82 p 9

[Text] New Delhi, April 21--The Government today enlarged the list of industries open to large houses and FERA companies to stimulate industrial growth and step up exports.

Following is the list of industries:

Metallurgical industries: Ferro alloys; automotive castings, SG iron castings, steel castings and steel forgings; non-ferrous metals and their alloys, including aluminium foils, and sponge aluminium foils.

Boilers and steam generating plants.

Prime movers (other than electrical generators): Industrial turbines; internal combustion engines; alternative energy systems like solar and wind, and equipment therefor and gas/hydro/steam turbines from 20 MW to 60 MW.

Electrical equipment: Equipment for transmission and distribution of electricity including power and distribution transformers, power relays, HT-siwtch gear, synchronous condensers; electrical motors; electrical furnaces including industrial furnaces; X-ray equipment; electronic components and equipment; component wires for manufacture of lead-in-wires and hydro/steam/gas generators from 20 to 60 MW.

Transportation: Mechanised sailing vessels upto 10,000 DWT including fishing trawles; ship ancillaries; commercial vehicles; public transport vehicles including automotive commercial three-wheeler jeep type vehicles, industrial locomotives; personal transport vehicles; passenger cars; automotive two-wheelers and three-wheelers.

(Regarding two-wheelers, only expansion of existing units, subject to an export obligation of 25 percent on additional capacity).

Specialised automotive components such as pistons and piston rings, fuel injection equipment, auto-electricals, such as starter motors, generators, spark plugs, rear axle assembly, brake and clutch assembly, tyre, tube valves, wheels for automobiles and bimetal bearings.

Industrial machinery including specialised equipment: High performance and high fidelity industrial valves as may be specified by the Industry Ministry; centralised lubrication systems; gears, gear boxes and couplings, rolls for paper mills, rolls for rolling mills, pollution control equipment and process equipment and utilisation of recycling of wastes.

Machine tools, including controls and accessories: Jigs, fixtures, tool and dies of specialised types and cross land tooling; engineering production aids such as cutting and rorming tools, patterns and dies and mining tools.

Agricultural machinery: Tractors.

Earth moving machinery: Earth moving machinery and construction machinery and components thereof;

Industrial instruments: Indicating, recording and regulating devices for pressure, temperature, rate of flow, weight levels and the like.

Scientific and electromedical instruments and laboratory equipment.

Nitrogenous and phosphatic fertilizers falling under inorganic fertilizers under "18-fertilizers" in the first schedule to the I (D and R) Act, 1951.

Chemicals (other than fertilizers): Heavy organic chemicals including petrochemicals; heavy inorganic chemicals; organic fine chemicals; synthetic resins and plastics, man-made fibres: synthetic rubber: industrial explosives; technical grade insecticides, fungicides; weedicides and the like; synthetic detergents and miscellaneous chemicals (for industrial use only), including catalysts and catalyst supports; photographic chemicals, rubber chemicals, polyols, isocyanates, urethanes, etc., speciality chemicals for enhanced oil recovery, heating fluids, coal tar distillation and products therefrom, tonnage plants for manufacture of industrial gases, high altitude breathing oxygen/medical oxygen, nitrous oxide, refrigerant gases like liquid nitrogen and carbon dioxide in large volumes, argon and other rare gases, alkali/acid resisting cement compound and leather chemicals and auxiliaries.

Drugs and pharmaceuticals: For FERA drug companies.

Drug intermediates from the basic stage for production of high technology bulk drugs and high technology bulk drugs from basic stages and formulations based thereon with an overall ratio of bulk drug consumption (from own manufacture) to formations from all sources of 1:5.

For non-FERA companies.

All bulk drugs and formulations with an overall ratio of 1:10 between the value of production of bulk drugs and of formulations.

Paper and pulp including papers products. Industrial laminates.

Automobile tyres and tubes, including automobile tyre tube valves.

Rubberised heavy duty industrial beltings of all types.

Rubberised conveyor beltings.

Rubber reinforced and lined fire fighting hose pipes.

Plate glass: Float glass; toughened glass insulators and glass fibres of all types.

Ceramics: Refractories; furnace lining bricks-acidic, basic and neutral and cermic fibres.

Cement products:

Portland cement and gypsum boards, wall boards and the like.

High technology reproduction and multiplication equipment.

Carbon and carbon products: Graphite electrodes and anodes, impervious graphite blocks and sheets.

Pretensioned high pressure RCC pipes.

Rubber machinery.

Printing machinery:

Web-fed high speed offset rotary printing machines having output of 30,000 or more impressions per hour. Photo composing/type setting machines. Multi-colour sheet-fed offset printing machines of sizes 18 x 25 inches and above. High speed rotogravure printing machines having output of 30,000 or more impressions per hour.--PTI

PAPER GIVES STATISTICS ON ARRESTS UNDER MARTIAL LAW

Dacca THE NEW NATION in English 26 Apr 82 pp 1, 8

[Text] More than 3600 persons were rounded up in the metropolis alone during the post-Martial Law days on various charges including violation of curfew.

Of them around 1700 persons who were taken into custody for alleged violation of curfew and traffic rules have been released in the meantime.

Others were arrested in connection with robbery, murder, pilferage, possession of firearms and stolen goods, immoral trafficking and corruption.

According to government handouts, 1750 arrests were made in the Martial Law Zone-E comprising Jessore, Khulna, Faridpur, Kushtia, Barisal and Patuakhali districts till April 13 after the proclamation of Martial Law on charges of anti-social activities, corruption, abuse of power, possession of firearms and misappropriation of government funds.

Huge quantity of arms and ammunition were also recovered from the ML Zone-E. The recovered stock of arms and ammunition included 3 pistols, 2 revolvers, 5 rifles, 5 chopped rifles, 12 shot guns, 24 pipeguns, 4 rocket launchers, one hand grenade, two daggers and 549 rounds of ammunition.

Besides, over 240 persons including former ministers, former MPs, leading businessmen, political leaders and government officials were either detained or apprehended by the law-enforcing agency from different districts of the country.

Most of them have been charged with corruption, abuse of power, misappropriation of government funds and anti-state activities.

Former Deputy Prime Minister Jamaluddin Ahmed and S.A. Bari AT, four former ministers Majidul Huq, Habibullah Khan, Saifur Rahman and Abul Hasnat who is also Mayor of Dacca Municipal Corporation and two state ministers Tanbir Ahmed Siddiqui and Atauddin Khan, were among them.

Besides, some former MPs including Zillur Rahman, Nasiruddin Sardar Kalu, Dil Mohammad and Akhtaruzzaman Alamgir of BNP were also arrested.

The political leaders who are now in detention are BNP Joint and Secretary General Ferdous Ahmed Qureshi, Suranjeet Sengupta of Ekota Party, Prof. Nazmus Sadat of Jessore District BNP, Jessore District BNP Treasurer Shahidul Islam Rabiul Alam and Ashoke Sen, respectively president and secretary of CPB, Sechchasebak Sangathan Central Committee member Borhanuddin of Jessore district, Gonotantrik Party leader Mr Alam and Golam Majid of Workers Party, who is also editor of Jessore, based daily "Ranar" Hasan imam, Advocate Ali Hossain Moni, Salam and Asoke Kumar of Jessore JSD and Mymensingh Awami League leader Rafiquddin Bhuiyan.

Dr Enamul Huq, Curator of Dacca Museum was recently arrested. Some retired officials were also arrested.

The arrested businessmen include Dr Anwar Hossain, Morshed Khan, Aziz Mohammad Bhai and Mohammad Zahir.

Three commissioners of Dacca Municipal Corporation are also in the custody of police.

Some of the arrested persons including Saugatul Alam of Jagannath college, who is a leader of the BNP's student wing and Mohammad Zahir have already been released.

Col (retd) Nuruzzaman, former Chairman of Muktijoddah Sangsad and R.B. Shaha, principal of a metropolitan school were picked up on the first day of the Martial Law and given one month's detention. Now their detention has been extended to six months.

It is learnt that the charges against Col (retd) Zaman include his objectionable speech at Baitul Mukarram square, provocative write-up against army in his weekly attempt to undo the judgement of the Court Martial against the assassinators of late President Ziaur Rahman.

CSO: 4220/7217

JUTE PRODUCTION EXPECTED TO SUFFER MAJOR SETBACK

Dacca THE NEW NATION in English 26 Apr 82 pp 1, 8

[Text] Jute production will suffer a major setback this year, it is widely feared. The reasons are many including scarcity of seeds, lack of loans, competition from Aus crop and above all the disincentive of a perennially bad price.

This year a total of 18 lakh acres would be under jute cultivation. Of this 12.5 lakh acres would be under the intensive jute cultivation project. The target of production has been fixed at 55 lakh bales from the intensive projects comprising 400 acres of land. In each scheme the non-intensive areas would produce another 20 lakh bales.

Earlier the National Economic Council had passed a resolution to substantially increase the production of jute by increasing the per-acre yield and raising it to 5.2 bales. The resolution, however, was not found feasible by the extension officials and was abandoned at last and the estimated production target was fixed at 4.5 bales per acre.

The target fixed for this year's acreage did not exceed that of the last year. The only change that has been made in the current plan is the expansion of intensive cultivation area from 10 to 12.5 lakh acre while the non-intensive area was reduced to 5.5 lakh acres from 8.0 lakh acres of the last year. The production last year totalled 52.48 lakh bales.

The year before last the total acreage under jute cultivation was 15.68 lakh acres which produced 49.37 lakh bales. Regarding the scarcity of jute seeds an official told New Nation that total requirement for this year's production was more than 40 thousand maunds but the available stock of seeds are about 30 thousand maunds. Last year the jute-seed crisis hit a peak in many years when the available seed stock was 15 thousand maunds against an actual demand of 35 thousand tons. The small seed multiplication capacity of the Jute Research Institute which is the national mainstay in this regard, is the major contributor to the shortfall. The government has no plans to import jute seeds from India or any other jute producing country in case of scarcity now or in the near future.

Government each year provides loans for the jute growers to meet the comparatively high cost of jute production. But these loans cover only 30 percent of the total loan demand. This year during the primary stage of the jute strategy the total amount of loans to be disbursed were fixed at 12 crore but it came down to about taka eight crore when the annual development programme was cut by a large measure in December last.

The reduction of disbursible loans in the wake of price rise of insecticides and fertilizers will affect the farmers, it is felt. Underlining the sapping interest of farmers in jute growing, a competent observer said that for some years at a stretch farmers have been getting niggardly price for jute and a sense of frustration has been taking hold. Jute cultivation needs more money, care and labour than its close rival, Aus. The annual announcement of jute policy, rather than coming to their rescue throws them into deeper trouble by confirming that not even the cost of production can be recouped.

DEPARTMENT OF MINES REPORT FOR 1981-82 NOTED

New Delhi PATRIOT in English 20 Apr 82 p 5

[Text]

Production of copper and zinc this year is expected to be higher than last year and a 10-year programme for development of mineral resources in the ocean has been formulated.

These are certain features of the annual report of the Ministry of Steel and Mines (Department of Mines) for 1981-82 released on Monday.

According to the report, the development of mineral resources in the ocean would cover various aspects of off-shore surveys and exploration as well as research and development activities in the area of mining of manganese nodules.

As for production of copper, the report speaks of the highest potential of copper in Bihar's Singhbhum district and refers to the detailed exploration scheme taken up in the area by the Mineral Exploration Corporation to assess its full potential. It informs that a study of the integrated development of the Singhbhum belt for a phased enhancement for copper production would be taken up by Hindustan Copper Limited.

The report says detailed exploration of the lead-zinc deposits at Rampur Gucha having been completed in record time, a large-reserve potential considered adequate for an investment decision for development of the deposit has been revealed. Consultants for preparation of the detailed project report for the mine and concentrator have also been selected.

The report highlights the fact that research and development activities has been given a major thrust in public sector undertakings and organisations under the Department of Mines covering geology, exploration, mining, beneficiation and non-ferrous metallurgy.

PETROLEUM MINISTRY REPORT FOR 1981-82 QUOTED

Calcutta THE STATESMAN in English 22 Apr 82 p 1

[Text] New Delhi, April 21--The country was likely to import less crude and petroleum products during the current year, resulting in an estimated saving of Rs 700 crores in foreign exchange, according to the 1981-82 report of the Department of Petroleum, the Ministry of Petroleum, Chemicals and Fertilizers.

According to the report, the total requirement of imported crude oil in 1981-82 was estimated at 15.30 million tons and of petroleum products, 5.47 million tons. The foreign exchange required for these imports was likely to be Rs 5,200 crores.

However, during 1982-83 it was estimated that the country might have to import 14.4 million tons of crude oil and 4.45 million tons of petroleum products which, at prevailing prices and exchange rates, would cost Rs 4,500 crores in foreign exchange.

Between April and December 1981, 11.55 million tons of crude oil was produced in the country from its on-shore and off-shore fields. The share of the Oil and Natural Gas Commission was 9.28 million tons of this. The ONGC produced 5.37 million tons from its off-shore project, Bombay High, and 3.9 million tons from its onshore fields in Gujarat and Assam.

Oil India, another major oil exploration and production agency which became a wholly government-owned enterprise when 50 percent equity on Burmah Oil was acquired on December 14, 1981 produced 2.27 million tons of oil between April and December.

A notable achievement of the ONGC in its on-shore operations was the discovery of natural gas in Kudara in Ankleshwar (Gujarat) and Baramura in Tripura and the discovery of oil in Sisodra also in Gujarat and Napamua and Naharhabi in Assam.

The ONGC discovered oil and gas in the first well drilled in the northern Palk Strait in the PH-9 structure in the Cauvery basin. The agency also discovered oil and gas in a new structure, B-57, located about 35 km east of the Bombay High fields.

Further wells were being drilled in these structures to assess the production potential of the two new fields.

Oil India succeeded in discovering oil in the Begapani well No.II in March and the analysis of results indicated that the reservoir could be fairly extensive.

With the recent commissioning of the 6-million-ton Mathura refinery, the total refining capacity in the country would increase from 31.80 million tons to 37.80 million.

The report said that with the take-over of the Digboi refinery from Assam Oil on October 14 all refineries in the country were under the public sector.

AGRICULTURE MINISTER SPEAKS IN LOK SABHA DEBATE

Record High Production

New Delhi PATRIOT in English 20 Apr 82 pp 1, 7

[Text]

INDIA'S foodgrain production is expected to be an all time high of 134 million tonnes in the current agricultural year despite the damage caused to the crops by the recent rains and hailstorm, Agriculture Minister Rao Birendra Singh declared in the Lok Sabha on Monday.

Replying to the three-day debate on the demands for grants of his ministry, he said that wheat production was expected to be 37.6 million tonnes as against 36.5 million tonnes during the last year. Similarly, production of rice, potato, cotton, oil seeds and other crops had shown an upward trend, he added.

However, it appears that the ministers in his enthusiasm to announce the record production slipped up by saying that the production was 'exepcted to be 137 million tonnes'. He later went a step further to say that the figure would be 'ever higher —137.5 million tonnes.

It was only later, perhaps, that the officials pointed out the slip up to the minister which resulted in the official correction that the production would be 134 million tonnes.

Mr Singh said that the previous best production was 132 million tonnes but it had come down to 109 million tonnes in 1979-80 because of one of the worst droughts faced by the country.

Forcefully refuting the Opposition contention that foodgrain production had not increased appreciably in the past the minister said that our achievement was being appreciated by the entire world but not by the Opposition.

If it had not increased, how could we have fed the teeming millions of the country, he asked.

Moreover, in the past several years, actually since 1976, the country had not imported foodgrains, except in 1979-80 when large areas were under drought, he pointed out.

PROCUREMENT PRICES

Strongly defending the Rs 142 per quintal procurement price of wheat, criticised as inadequate by many members, including some from the ruling party, Mr Singh said that it was fair and would satisfy the farmers.

Asserting that the Government was always keen to give fair and remunerative prices to farmers, the minister said that the wheat procurement price had gone up from Rs 117 to Rs 142 within two years.

There has been 10 per cent increase in the procurement price of rice and support price for coarse grains, groundnut, soyabean and other crops had also gone up to give a boost to their production, he added.

The minister also announced that the Land Acquisition Amendmentment Bill had taken final shape and hoped to introduce it in the current session.

Replying to the members' demand for parity in the prices of agricultural commodities and industrial goods, the minister asserted that more than parity had been ensured in the matter.

In the past 12 months, the wholesale price index of all commodities rose by 1.7 per cent while that of agricultural commodities by 6.3 per cent, he said

CREDIT POLICY

Mr Birendra Singh said the best had also been done in the matter of agriculture credit and by the end of the Plan period Government hoped to raise the credits to Rs 5,400 crores.

He said attention was also being paid to provide adequate quantities of seeds in the coming year.

The minister said Government had accepted over 2,000 of the 2,361 recommendations of the National Commission on Agriculture.

Mr Birendra Singh said Government was adopting a policy of equitable distribution of sugar factories in the country and the underdeveloped areas would also be looked after.

Enlisting several strides made by the country in the field of agriculture, the minister said fertiliser consumption had gone up from 69,000 tonnes in 1950-51 to nearly six million tonnes now

Again, the production of fertillsers had risen from 30,000 tonnes 30 years ago to the four million tonnes at present.

He agreed with the view expressed by a majority of the members participating in the debate that farmers should be given a better deal.

He said the farmers constituted the backbone of the nation and the Government wanted to do the maximum possible for them.

Buffer Foodgrains Stock Low

New Delhi PATRIOT in English 20 Apr 82 p 5

[Text]

The buffer stock of foodgrains in the country is below the stipulated level Agriculture Minister Rao Birendra Singh informed the Lok Sabha on Monday reports PTI.

In reply to questions by Mr Harihar Soren, he said as per decision taken in 1978, a buffer stock of 12 million tonnes of foodgrains was required to be maintained over and above the operational stock ranging between 3.5 million to 3.8 million tonnes on 1 April and 8.2 million to 8.8 million tonnes on 1 July of a year.

The present stocks being below this level, efforts were being made to build up the stocks by maximising procurement as well as regulated release of foodgrains for their judicious utilisation, Mr Birendra Singh said.

The Agriculture Minister informed the House that Government had constituted a technical group in April last year for working out the national buffer stock policy for foodgrains for the sixth Plan period.

Asked about the statewise target of buffer stock, Mr Birendra Singh said since buffer stock was maintained on all-India basis, the question of fixation of the state wise target did not arise.

Mr Birendra Singh informed the House that total stocks of foodgrains, rice, wheat, and coarse grains—with the Centre and the State governments as on 1 April last year was 9873.4 thousand tonnes.

Mr K C Haldar complained that West Bengal did not have sufficient stock of foodgrains. The Minister replied that the State had a stock of 4.48 lakh tonnes of foodgrains in March this year. A buffer stock of five to six lakh tonnes had been maintained in West Bengal during last three years. This was a good stock.

BRIEFS

ENVOY TO GHANA--New Delhi, April 20--Mr Gurcharan Singh, at present Director of the Africa Division in the External Affairs Ministry, has been appointed High Commissioner to Ghana, the Ministry announced today. He succeeds Mr P.A. Nazareth.--PTI [Text] [Madras THE HINDU in English 21 Apr 82 p 10]

AGREEMENT WITH TOYOTA--New Delhi, April 20--The DCM Engineering and Electronics Division announced today that it has finalised collaboration arrangements with Toyota of Japan for the manufacture of light commercial vehicles in India. An agreement was signed recently by Dr Vinay Bharatram, Executive Director of DCM, and Dr Elji Toyoda, president of the Toyota Motor Company Limited. Steps have been initiated for a joint venture company to be launched under the name of DCM-Toyota Limited. It will set up a plant for manufacturing 15,000 light commercial vehicles per annum in a backward district of Uttar Pradesh. A letter of intent has already been obtained by DCM. Papers are now being submitted to the Government for the conversion of the letter of intent into an industrial licence. The Industry Ministry, meanwhile, has pointed out certain flaws in the application submitted by Hyderabad Allwyn Metal Works Limited for a collaboration arrangement with Nissan Motor Company Limited of Japan for the manufacture of light commercial vehicles. The application has been examined by the Directorate-General of Technical Development but found incomplete in certain respects. [Text] [Madras THE HINDU in English 21 Apr 82 p 10]

SOLAR CELL PRODUCTION--Bangalore, April 16--The Control Equipment Division, one of the three Bangalore-based units of the State-owned Bharat Heavy Electricals, has entered into an agreement with the Indian Space Research Organization to supply 100,000 solar cells worth about Rs 3.5 crores. These will be used in future space missions. Based on the technology developed by the Bhabha Atomic Research Centre, Bombay, the Control Equipment Division has established facilities for the manufacture of spare-grade solar cells. The division, which had a record production of Rs 34.21 crores during 1981-82, supplied "static excitation" equipment of 210 MW to the Korba, Chandrapur and Kolaghat thermal power stations and converters to Tata Iron and Steel, Mukund Iron and Steel and the Bokaro and Salem steel plants. The electro-porcelain division which is celebrating its golden jubilee this year, has started work a plant at Jagdishpur in Uttar Pradesh where high tension insulators will be manufactured. On the export front, the Control Equipment Division has supplied equipment worth Rs 50 lakhs to Malaysia. The Electro-porcelain Division's insulators worth Rs 77 lakhs have been sold to several countries. [Text] [Calcutta THE STATESMAN in English 17 Apr 82 p 12]

ONGC RECORD PRODUCTION--Bombay, April 19 (PTI)--The Oil and Natural Gas Commission (ONGC) has achieved an all-time record production of Rs 670 crores in 1981-82 against Rs 480 crores in the previous year. ONGC Chairman Col S.P. Wahi told a group of visiting newsmen from Assam here today it was estimated that the ONGC would produce 70 percent of the oil requirements of the country by 1990. ONGC's eastern region has set a record in the output of crude, from 1.8 million tonnes last year to 2.1 million tonnes this year, Col Wahi said. He had visited the eastern region headquarters at Nazira to personally congratulate the employees on their excellent performance. He said that the Commission had intensified its operations in the eastern region by commissioning 19 rigs as against the 15 now in operation are reviving some of the sick oil wells. [Text] [New Delhi PATRIOT in English 20 Apr 82 p 5]

ASSAM-NAGALAND BORDER ACCORD--Kohima, April 17 (PTI)--The governments of Nagaland and Assam have signed an agreement to resolve the boundary dispute between the two states. The agreement reached yesterday at the end of a high-level meeting here decided to adhere "in letter and spirit" to the accord reached between the chief ministers of both states in Shillong in January 1979 in the presence of the then common governor. Both sides also agreed to follow agreements reached between the chief ministers in the presence of the Union home minister and governor in Delhi in April 1979. The chief secretaries and police chiefs of both states signed the agreement yesterday, the minutes of which were released here today. Both sides have agreed to withdraw the Nagaland Armed Police and the Assam police posts from the Rengma, Nambar and Diphu reserve forests to defuse the situation and restore the position as it existed in the disputed areas before February 20, 1982, the date of induction of the nap. [Text] [Bombay THE TIMES OF INDIA in English 18 Apr 82 p 9]

KNITWEAR TO USSR--Bombay, April 17--According to Mr M.I. Radchenko, Dy. Soviet trade commissioner more than 90 percent of the output of India's knitwear industry concentrated in Ludhiana and employing 5 lakh workers, goes to the USSR. Speaking at House of Soviet Culture on Wednesday on "Soviet-Indian Cooperation Prospects and retrospects" the Soviet executive revealed that big Soviet orders stimulated the development of India's traditional industries and emergence of new ones. It has given a new impetus to garment, knitwear and handicraft industries. Striking a note of optimism he said that by 1985 Soviet Union will import more engineering goods from India and give fillip to engineering industries, too. ALKATIRI ON FUTURE OF MAUBERE PEOPLE

Maputo TEMPO No 600, 11 Apr 82 pp 17-21

[Report on interview with Mari Alkatiri, foreign affairs minister of the Democratic Republic of East Timor, by Antonio Souto, in Maputo in late March]

[Text] At the end of 1974, FRETILIN sent an alert to the international community: Indonesia was preparing for a military occupation of East Timor and the results would be tragic. However, countries in the best position to avert the tragedy, countries like Portugal, Australia and the United States, had other interests and chose to ignore the alarm. Today, some 7 years after the moment when all this could have been averted, it is estimated that 200,000 Maubere people have been massacred or lost their lives in combat.

As long as the Maubere people exist, however, FRETILIN will fight for their independence. These are not words of desperation. On the contrary, they are said with serenity and confidence in the future by one of the most distinguished leaders of FRETILIN, Mari Alkatiri, member of the Central Committee of that liberation movement and foreign affairs minister of the Democratic Republic of East Timor [RDTL].

"We are fighting a difficult battle, but we are determined and we know it is impossible to eradicate an entire people. Therefore, we are certain we will win."

We talked with Mari Alkatiri a week after a general meeting of the Central Committee Overseas Delegation, held in Maputo from 5 to 15 March.

Our conversation covered the current status of the Maubere people's struggle, relations with Portugal, the nonaligned movement and the socialist countries, internal crises of organization and even accusations that have been made against FRETILIN.

For us, it was a matter not only of understanding the possibility of victory--which, sooner or later, Alkatiri has no doubt will come about--but also the problems which the Maubere people are experiencing today in the struggle, their failures and successes.

"In this current phase of our combat we are witnessing a revitalization of the struggle and not, as some say, a retreat." In this statement by Alkatiri, which at first struck us as more a diplomatic statement than an evaluation of the facts, we could nonetheless understand the reason for his serenity and certainty of victory.

He explained that there is a revitalization because there has been a qualitative step forward in the nature of the struggle, as a result of changes in tactics and strategy.

"If we compare it with what happened in Mozambique, we see that here there was a possibility of continuous and secure growth. Initially, our growth was rapid and premature. From 20 May 1974 to the end of that year, we grew from a few founders to a majoritarian organization. On 15 August, when we determined to launch a generalized armed insurrection, we had only 25 men in arms. By the end of that month we had an army and by 15 September we controlled all the territory. But our army had been trained by the colonialists.

"Hence we inherited the colonial armed forces that came over to our side, but they were not prepared for the guerrilla warfare that was necessary to effectively resist the Indonesian invasion."

"So in view of our obligation to fight for the sovereignty of our country and the integrity of our people, until 1978 we had to fight a war of positions, with guerrilla warfare as a secondary activity."

"To move to more effective political and military action, we had to give up our concern with maintaining large areas under our control."

Alkatiri further explained that the change, in which guerrilla warfare became primary, was not simply a military matter. It meant an intensification of the popular nature of the combat. This was also a time of significant betrayals and desertions by officers following the death of Nicolau Lobato, president of FRETILIN, on 13 December 1978.

"But after that we began to see solid military advances, which made it impossible for the enemy to keep the situation under wraps. An indication of the increasing popular support for our struggle is that the church in East Timor, which initially opposed FRETILIN, now supports us."

If today the guerrilla war can be consolidated and broadened in a country completely surrounded and occupied by a powerful enemy like Indonesia, it is solely because of the popular roots of FRETILIN. Zones now "controlled" by the occupation army are secure rearguards of support to FRETILIN.

Submission to Djakarta Blackmail

Nonetheless, Mari Alkatiri did not conceal the material difficulties in waging this battle. He spoke of the lack of material means to respond to the people's desire for liberation and to combat the enemy. He listed the problems in

establishing effective communication between combatants inside the country and those abroad.

These difficulties are not only because of the military might of the occupying army, but because Indonesia is a strategic area in world geopolitics, and also because the various riches owned by Indonesia (one of the world's largest producers of petroleum, rubber and lumber) lead countries to take political and diplomatic positions opting for good relations with the Djakarta regime, or at least not antagonistic, instead of denouncing the massacre of the Maubere people, much less providing material support for their liberation struggle.

Thus, to the internal difficulties in the struggle are added international cynicism and timidity.

East Timor File: for Internal Consumption

"We made an intensive analysis of the Portuguese role in East Timor, and once again we concluded that they have responsibilities they cannot ignore," Alkatiri said, referring to the recent meeting of the Central Committee Overseas Delegation. He also pointed out that FRETILIN remains open to dialogue to find just solutions.

He also accused the Portuguese Government of confining itself to declarations of intent. As an example, he reported that in various contacts with countries friendly to Portugal, they had said that they would abstain in any UN vote on East Timor, because the primary responsibility for such a stand rests with the Portuguese Government and it has not taken any initiative.

"In all our informal contacts with Portuguese officials, we came away with the impression that certain officials were prepared to take some action, but, in light of the facts, we have to think again."

Alkatiri added that "there are no political forces, except for isolated individuals, in favor of East Timor's annexation by Indonesia.

"Nonetheless," he explained, "we reject any attempt to make the problem of East Timor an internal matter for Portugal. This only indicates a lack of seriousness and a disregard of the sacrifices of our people, who were under Portuguese colonial rule for centuries."

The RDTL diplomatic minister made this accusation, noting that it was only last year, for the first time in 6 years, that the Assembly of the Portuguese Republic debated the matter. "But this was because of the impact of the International Tribunal. However, the debate was not aimed at finding solutions but was for internal consumption. The right attacked the left; the left defended itself and counterattacked, filling the newspapers. They only wanted to establish who was to blame. We know who was to blame. What is needed now is a solution...which they have not come up with to date, nor have they dared to search for it."

According to Mari Alkatiri, the so-called "East Timor File," which filled the Portuguese press during the International Tribunal in Lisbon, "was the Portuguese Government's public attempt to recover its image in the East Timor case and also to distract attention."

In its references to relations with Portugal, FRETILIN noted that "President Ramalho Eanes took a position that set him apart from the other organs of government, a certain concern with finding a solution to the problem."

FRETILIN also referred to several commitments of intent assumed by Portugal, from Article 307 of the constitution to the communique of 12 December 1980. "These documents have not been followed by any practical action to date, however."

Nonaligned: Delicate Situation

If Alkatiri's criticism of Portugal was directed more at the "lack of seriousness with which the government organs have approached the East Timor problem," the issue is a more delicate one for the nonaligned countries. "Here the issue is more sensitive, because here we see more clearly that there are large interests at stake, overriding principles."

"If the movement ignores that one of its members is denying independence to an entire people, is violating the orders of a sovereign state and refusing to recognize the existence of another nonaligned state--if the movement ignores all this because the aggressor is one of the nonaligned countries, then the movement is guilty of negating its very reason for being attacked, one need only be a member."

"Although the movement has taken stands regarding the East Timor problem, particularly in Columbia and Havana, we feel it has done very little," Alkatiri told us, explaining that interests in Indonesia constitute the currency used to buy the betrayal of principles by certain member countries.

"This has held back the condemnation of the expansionist policy of Djakarta and full recognition of the rights of our people."

The maneuvers to transfer the next nonaligned meeting from Baghdad to Djakarta and the attempt to have Indonesia assume the presidency after Iraq were also included in the examination of FRETILIN's foreign policy concerns.

"If that happens, we will have the movement presided over by a colonizing power," Alkatiri warned, adding: "What force would such a movement have to criticize South Africa and Israel for their annexationist and colonialist policies?"

Mauberes Above All

Equally important in FRELIMO's foreign relations is action "to clear up certain accusations."

"We are aware that for a long time we have been accused by some of being 'Maoists,' and by others of perhaps being 'Muscovites.' The fact is that the only justification for these accusations is that they do not want to see us as the Mauberes we are. They cannot understand that, for us, the Maubere people come first, with all their dignity and desire for independence. We cannot understand how it can be believed that a people would fight to be something that they are not."

The FRETILIN leader later explained that his organization has "the greatest respect for all peoples and, regarding the socialist countries, they have experience which merits a good deal of reflection. "But above all," he reiterated, "we are Mauberes."

He added: "There is a tendency to look at a movement in terms of what country it has ties with, instead of seeing if it is tied to its people. For us, a movement deserves support only if it is tied to its people. Otherwise, it should be opposed."

To this clear statement of principles, Alkatiri added: "We challenge anyone to prove that FRETILIN does not represent its people."

Before ending his denunciation of these accusations, Alkatiri added: "When an attempt is made to label us, there is also another reason. When someone wants to duck support for the movement, he thinks up an argument to justify his position publicly."

Mutual Support in Pacific Zone

In solidarity with other movements, FRETILIN gives particular attention to the struggle of the Indonesian people. "Today we can say that we already have strong relations with the Indonesian democratic opposition."

Alkatiri also assigned importance to the struggles taking place in West New Guinea, Borneo, the Celebes, Sumatra and the Moluccas. In the South Pacific there is the example of the victory in Vanuato, as well as the progress of the struggle in New Caledonia.

"There is a whole range of opposition fronts with which we are seeking to establish cooperation, within our strategic and tactical limits. These struggles can play an important role in our struggle, and vice versa.

The RDTL foreign affairs minister also referred to southern African examples: "They are lessons to the world, and broaden our bases of support."

He also feels that the issue of disarmament and a New International Economic Order are important aspects. "We firmly support the people's struggle for peace and for a new international economic order because these are vital issues for all peoples and future generations." His concern also derives from the fact that the current situation in these areas constitutes a serious threat to the people of the South Pacific.

Crises Further Unite Us

Since its foundation in 1974, FRETILIN has been confronted with desertions and betrayal by some of its leaders. There have been attempts to interpret these as the collapse of the organization and the end of the liberation struggle. In this regard, Alkatiri commented:

"We feel that all liberation movements have experienced internal crises. They take very similar forms: assassination, divisionism and so on. FRETILIN is no exception, particularly under the circumstances in which we found ourselves."

He said that to face and overcome these disagreements, "we had to grow more cautiously."

The rapid and premature growth of FRETILIN meant that "after a certain time, two basic lines emerged, one essentially military, which saw weapons as the solution, and another one which saw men as the determining factor for victory."

Thus the contradiction between the faction that called for a quick victory, a militarist faction, and one that emphasized the necessity of a prolonged people's war. Faced with a powerful enemy like Indonesia, the first solution was impossible.

"Out of this disagreement came the defection of Xavier do Amaral, in September 1977, and then Alarico Fernandes. After these two betrayals, FRETILIN became more cohesive, which made it possible to develop a more effective people's war."

The consolidation of internal positions dictated a new type of activity abroad. "At this point, when the country had entered a rather hectic phase, we outside were having difficulties, primarily because we did not know what was happening and were limited in our ability to keep abreast of developments, so our work came to a kind of standstill."

It was in this context that the meeting now held in Maputo came about, along with the campaign to reform and reorganize FRETILIN activity abroad, a process which will culminate in a General Conference of Overseas Cadres, to take place in the Mozambican capital in the first half of next year.

"There is a whole range of problems contributing to the upheaval we are experiencing. Nonetheless, the patriotism which unites us has allowed us to give serious thought to the problems and to find the correct solution," Alkatiri declared, adding finally:

"Today we can say that we are even more determined and that we have a better understanding of our priorities. We are clearer in our minds about the problems facing us and the tasks ahead of us."

INDONESIA TO CHANGE FOREIGN CONTRACTING POLICY

London ARABIA in English No 8, Apr 82 p 43

[Text] The Indonesian government is having to make amendments to its controversial "counter-purchase" policy, introduced at the beginning of the year. The policy stipulated that any foreign contractor winning an Indonesian government contract worth over 500m rupiah ($1.46m) should import Indonesian commodities, other than oil and gas, to a similar value.

Foreign suppliers failing to meet this obligation were told they would face a fine amounting to half the value of the goods they fail to import.

Not surprisingly, the announcement of this arrangement provoked strong criticism from foreign contractors, who said it was deliberately intended to benefit Indonesia's biggest trading partner, Japan. Government spokesmen in Jakarta denied this, claiming that contractors were simply seeking a scapegoat for their own inability to compete with the Japanese.

Nevertheless, the government has responded by relaxing some of the earlier provisions. Exemptions have been established for companies operating joint ventures with Indonesian state firms, those carrying out contracts financed from soft loans and consultants providing professional services. According to Trade Minister Radius Prawiro, the total value of goods which foreign firms will now have to promise to import will come to less than three per cent of the overall value of Indonesia's international trade – a 25 per cent reduction from the amount originally envisaged. Government officials now think the scheme will boost exports by something less than $1bn a year.

Indonesian exports are badly in need of a boost. Oil exports rose in value in 1979 and 1980 but domestic demand for oil is growing steadily by 10-12 per cent a year and the volume of sales is being eroded. In 1980 total exports earned the country $21.9bn, of which $15.7bn was accounted for by oil and gas. In 1981, however, according to statistics published by the Central Bank, overall exports fell dramatically to $16.2bn, of which a much larger percentage ($13.1bn) was due to oil and gas.

The drop in non-oil and non-gas exports has been sharp, but some of it at least has been attributable to Indonesian government policy. Income from timber exports, for example, stood at over $1.9bn in 1980 but fell to under $1bn last year because of attempts to establish a domestic timber-processing industry to enable the country to export higher-value timber products such as plywood.

At the beginning of March the government announced its intention to halt all log exports by 1985.

Exports of plywood have already more than doubled since 1980 and exports of veneer have increased by over 300 per cent.

Income from palm oil, meanwhile, slumped in 1981 as a result of regulations designed to force local consumers to use domestically-produced oil for cooking in place of imported coconut oil. Shrimp exports have been cut to conserve stocks. Earnings from rubber dropped from $1.16bn in 1980 to $850m last year because of weak prices, while revenues from coffee were undercut by low demand. Tin prices have also fluctuated wildly in recent months (see p.38)

It is in an attempt to rectify these trends and to boost the market for Indonesian goods that the counter-purchase policy has been introduced. At the same time, however, the authorities in Jakarta are evidently hoping to balance the rapid increase in Indonesian imports that has coincided with the downturn in non-oil and non-gas exports. Imports of capital goods are said to have risen by about 20 per cent in real dollar terms, and there is little hope of restraining this increase if the country is to establish a manufacturing base.

BIOGRAPHIC INFORMATION ON INDONESIAN PERSONALITIES

[Unless otherwise noted, the following information on Indonesian personalities has been extracted from Indonesian language sources published in Jakarta]

FUAD HASSAN--Fuad Hassan was born in Semarang (Central Java) on 26 June 1929. He is chief of the Research Office in the Indonesian Ministry of Foreign Affairs and professor in the Faculty of Psychology of the University of Indonesia. He graduated from the Faculty of Psychology of the University of Indonesia in 1958. He obtained his Ph D degree in the psychology of social philosophy in 1962 from the University of Toronto in Canada, with a dissertation entitled, "Neurosis sebagai konflik existensial" [Neurosis As an Existential Conflict]. He was dean of the Faculty of Psychology of the University of Indonesia (1972-1976); director of the Strategic Studies Institue of the National Defense and Security Council (1972-1976); and Indonesian ambassador to Egypt, Sudan, Somalia, and Djibouti. He was a member of the experts on political questions for the chairman of the Presidium in the Indonesian Supreme Command [KOTI] in 1966. He was a member of the Mutual Assistance Parliament (DPR-GR) and of the Provisional People's Consultative Assembly (MPRS) in 1968 and a member of the Indonesian Delegation on the occasion of the formation of ASEAN [Association of Southeast Asian Nations] in 1967. He has written extensively on ASEAN questions and on Asia in general. A number of his books have been published. [Text] [Jakarta PRISMA in Indonesian No 2, Feb 82 p 108] 5170

HERSRI S--Hersri S was born in Yogyakarta on 3 May 1939. He is a translator and free-lance writer. He graduated with a bachelor's degree in publicity science and community science in the Faculty of Social and Political Affairs of the University of Gadjah Mada in Yogyakarta (1960). From 1957 to 1960 he taught at a number of high schools in Yogyakarta and Semarang. He participated in preparing the military history of Military Region VII/Diponegoro and subsequently worked in the Secretariat of the Bureau of Asian-African Writers in Colombo, Sri Lanka (1965). From 1971 to 1978 he was a farmer on Pulau Buru [Ambon]. He is active in writing for a number of magazines and daily newspapers. He also wrote and made broadcasts as a literary and theatrical critic on the Indonesian Radio Service in Yogyakarta and Semarang. Apart from that he has translated numerous books from foreign languages into Indonesian. [Text] [Jakarta PRISMA in Indonesian No 2, Feb 82 p 108] 5170

JOMO K. SUNDARAM--Jomo K Sundaram is an assistant professor [profesor madya] in the Faculty of Economics of Malaysian National University [Universiti Kebangsaan Malaysia] at Bangi, Selangor, Malaysia. He is the director of the Social Analysis Institute (INSAN), a member of the editorial staff of the magazine NADI INSAN [The Pulse of INSAN], and chairman of the editorial board of the JURNAL EKONOMI MALAYSIA [Malaysian Economic Journal]. He obtained a BA degree in economics from Yale University in the United States (1973), a Master's in Public Administration from Harvard University (1974), and a Ph D from Harvard (1977). He has taught at Malaysian Science University [Universiti Sains Malaysia] in Penang. His book, "Economic Development and Social Class in Malaya," will be published by Oxford University Press. [Text] [Jakarta PRISMA in Indonesian No 2, Feb 82 p 108] 5170

MOHAMMAD SADLI--Mohammad Sadli was born in Sumedang (West Java) on 10 June 1922. He is a professor of economics in the Faculty of Economics of the University of Indonesia in Jakarta. He studied at the Technical Faculty of the University of Gadjah Mada (1949-1952) and continued his studies in economics at Massachusetts Institute of Technology in the United States (1954-1956). He graduated from the University of California in Berkeley in the United States (1957). He obtained a doctoral degree from the Faculty of Economics of the University of Indonesia (1957) and took a course in international studies at Harvard University in the United States (1963-1964). He was chairman of the Supervisory Body for Foreign and Domestic Capital Investment (1967-1973), minister of labor (1971-1973), and minister of mining (1973-1978). He has been active in writing for the mass media. [Text] [Jakarta PRISMA in Indonesian No 2, Feb 82 p 108] 5170

SOETJIPTO WIROSARDJONO--Soetjipto Wirosardjono was born on 1 November 1937 in Nganjuk, East Java. He is deputy chief of the Central Statistical Office for statistical plans and analysis. He is general chairman of the Indonesian Family Planning Association, director of the Development Studies Association, and deputy chairman of the Association of Students and Experts on Indonesian Demography. He completed his studies in statistics at the University of the Philippines in Manila, Republic of the Philippines (1964). He was general manager of the Business Registration Body of the Indonesian Chamber of Commerce and Industry in Jakarta (1972-1979); secretary of the Regional Elections Committee for Jakarta for the LPU [General Elections League] (1970-1972); chairman of BKS-AKSI [Cooperation Body of the Indonesian Fine Arts Academy] (1969-1979); chief of the Research Center for City and Neighborhood Affairs in Jakarta (1972-1978); and secretary of the Central Statistical Office (1977-1980). He was editor-in-chief of the journal WIDYAPURA (1976-1978). He has been active in attending seminars in Indonesia and overseas. He has written extensively and is co-author of the book, "The Unsteady State" (Hawaii, East West Center, 1975). [Text] [Jakarta PRISMA in Indonesian No 2, Feb 82 p 108] 5170

SOEHARSONO SAGIR--Soeharsono Sagir was born on 17 January 1943 in Tegal [Central Java]. He graduated from the Faculty of Economics of Padjadjaran University in Bandung (1960); obtained a certificate in economic planning from the Advanced School of Planning and Statistics at Warsaw University (1963); and was in the doctoral program at Padjadjaran University in Bandung. He was a teacher in Indonesian Armed Forces educational institutions and in the Faculty of Economics of Padjadjaran University. He was also an extraordinary teacher

at the Bandung Institute of Technology and at Parahiyangan Univeristy in Bandung. He was dean of the Faculty of Economics at Padjadjaran University (1968-1972). He is an economics columnist in several newspapers and is active in attending seminars in Indonesia and overseas. [Text] [Jakarta PRISMA in Indonesian No 2, Feb 82 p 108] 5170

COLONEL (MARINE CORPS) MUNTARAM--Colonel (Marine Corps) Muntaram, who up to the present was chief of the Navy Provost Service, last Thursday [25 March] took over the office of chief of staff of the Marine Corps from the former incumbent, Brig Gen (Marine Corps) Soeharmo Hariantho. Brig Gen Soeharmo Hariantho, who was chief of staff of the Marine Corps for about 5 years, will take over his new post as commanding general of the Navy Training Command in Surabaya. Colonel Muntaram was born in Cianjur [West Java] 47 years ago. He completed his training at the Joint Staff and Command School in 1977 and graduated from the National Defense Institute in 1981. Previous posts he has held included: commander of the Marine Corps recruit training battalion; commander of the Navy Commando Battalion; assistant III in the Marine Corps battalion assigned to Marine Corps Headquarters [KKOAL]; officer assigned to the amphibious unit, Marine Corps Training Center [PPAKO]; staff officer III in the Marine Corps Training Center; staff officer III in 1st Marine Battalion; staff officer III and deputy commander of 1st Marine Battalion; staff officer at the Marine Corps Training Center; staff officer I at Jakarta Naval Base [PUALDA]; assistant director of Marine Corps Amphibious and Anti-Amphibious Operations Center [LPAAKO]; staff officer I, Navy Commando Troops [PASKOARMA]; deputy commander of the Marine Corps Training Center; staff officer II, Navy Headquarters [OPAGA/SUAL 2, MABAL]; military police, Navy Headquarters [POM ABRI MABAL]; chief of security office, Military Police, Defense Area II; Navy Provost Marshal's Office; and chief of the Navy Provost Marshal's Office. Military operations to which he was assigned included the following: in 1958, Operation Merdeka and Operation Detap II in North Sulasesi, as well as Operation Sapta Marga in West Sumatra; in 1973 he was assigned to international duties as a member of Garuda Unit IV in Vietnam. Some 20 years ago Colonel Muntaram, who at the time was a Marine captain, married a young woman from Blitar [East Java] named Devie. Up to the present this happy family, which lives in Cilandak Marine Complex in South Jakarta, has been blessed with five sons and daughters. GEN SURONO REKSODIMEDJO--Coordinating Minister for Social Welfare Surono Reksodimedjo on Tuesday, 23 March, married Mrs Suwarti Tjokrosiwojo (47 years old) at the bride's home, Jalan Sudirman 52, in Cilacap [Central Java]. This ends the minister's period of mourning since his first wife, R A Winarni, died at Gatot Soebroto Hospital in Jakarta on 6 March 1980. The bride, Suwarti Tjokrosiswojo, is the sister of the late R A Winarni and has lived as a widow since her husband, Maj Gen R Soemitro, died on 3 March 1978 of a heart attack. At the time of his death the later General Soemitro was commander of Military Region VII/Diponegoro, Central Java. According to the elder brother of the bride, R Soedjarwo, the marriage between Minister Surono and his younger sister was in accordance with the wishes of their mother before she died 3 months ago--or 100 days, to be exact. Her intention was that the ties between the two families should not be broken. Soedjarwo went on to say that the late R A Winarni was the eighth child in the Tjokrosiswojo family. Suwarti is the seventh child in the family. She had three children by the late Major General

Soemitro, while the late R A Winarni left a son who is now about 8 years old. On Wednesday morning [24 March] the newly-weds left for Yogyakarta to take a plane for Jakarta. At about 7:00 pm the same evening Minister Surono and his wife were the guests of President and Mrs Tien Soeharto at Cendana Palace. [Excerpts] [Jakarta KOMPAS in Indonesian 25 Mar 82 pp 1, 12] 5170

SENIOR NAVY OFFICERS RETIRE--Seventeen Senior Navy officers stood in a line Friday afternoon [2 April] on the parade ground at the "Bumi Moro" Navy Section of the Armed Forces Academy in Surabaya. They were part of the 25 senior officers who retired at a ceremony presided over by Navy Chief of Staff Admiral Waloejo Soegito. Those who retired at the traditional, torch-lit ceremony were: Vice Admiral Mahmud Subarkah, Rear Admiral Soeparno (currently commander of the Military Security Service in Jakarta), Rear Admiral D Fardjaman, Marine Maj Gen Sardjono Suprapto, Rear Admiral Mas Wibowo, Rear Admiral Atung Soedibyo, Marine Maj Gen M Anwar Kusuma, Rear Admiral R J Sulamet, and Commodores Soebandi, Abdul Basit, Aris Munandar, Tata Abubakar, Abdul Madjid, Dr Soebidya S, R Basuki Hardjawijana, Soekotjo Poerwoatmodjo, Mochamad Suud, R Soekamto, Sudarmun, Siswo Margono, M Ralie, and R S B Djatikusumo. VIENTIANE MILITARY, PUBLIC SECURITY FORCES DISCUSS 1982 PLAN

Regional Forces Meeting

Vientiane VIENTIANE MAI in Lao 4 Mar 82 p 1

[Text] On the evening of 27 February 1982, in Saisettha District, Vientiane capital, there was a closing ceremony for the successful regional forces training in Saisettha District capping the year's achievements that were the subject of the meeting that began 25 February 1982.

The honored guests who participated in the ceremony were General Choummali, assistant chief of staff of the LPLA Supreme Command; Maj Keo Vongsa, chief of the Saisettha District Regional Forces Command; the party committee and district administrative committee; and over 70 cadres, combatants and government employees.

In the ceremony, the representatives of this organization reported on the successful training and the outcome of the cadres' and combatants' work in national security in the preceding year and the new policy and the plan that will be carried out next to implement it.

After that, General Choummali gave a speech in which, before anything else, he praised the cadres and soldiers of Saisettha District who conscientiously and effectively performed their duty to maintain peace and security in their own district.

Moreover, he pointed out the enemies' tricks aimed at destroying them, namely, expansionist Beijing, the American imperialists and their followers, the reactionary forces who want to incite our people.

At the end he asked all cadres and combatants to increase their love for their country and socialism, increase the unity among the people, and carry out their jobs as brave cadres and combatants. He asked everyone to fight for new and greater victories to greet the LPRP Third Congress.

Security Forces Meeting

Vientiane VIENTIANE MAI in Lao 4 Mar 82 pp 1, 4

[Text] On the afternoon of 27 February 1982, in Sikhottabong District, Vientiane capital, there was a ceremony to summarize the preceding year's achievements by the Youth Union Administrative Committee of the Public Security Forces (PSF) in this town and to adopt a new plan for 1982 to implement the plan set by the party committee and the district administrative committee and to prepare to welcome the coming LPRP Third Congress.

The honored guests who participated in this meeting were Mr Khamyot Inthanam, a member of the Vientiane City Party Committee who also holds the post of Sikhottabong District Party Committee secretary, along with representatives of the PSF Youth Union Administrative Committee of the capital, representatives of young district men and many young people.

During the ceremony, one of the young men's representatives summarized the results of the PSF Youth Union for this district, which successfully and effectively carried out their job in the past, especially in protecting and maintaining public security. In this endeavor they work conscientiously and intensively with the regional Guerrilla Militia to carry out guard duty in many different areas within their own district. Meanwhile, they contributed their labor to increasing animal husbandry and other agricultural production. This is to carry out, step by step, the slogan, "self-sufficiency, self-reliance" in food supplies.

After that, Mr Khamyut Inthanam gave a speech to the young men. First of all, he praised the achievements in their work as a result of their determined effort to maintain security in their own district in the past year. Moreover, he warned the young men to be alert and to be ready to fight at any time against the enemies' clever tricks aimed at inciting and creating factions among the ranks of young men.

In closing, he emphasized that the strength of these young men is like the right hand of the party. He asked the young men to be strong and to achieve new and greater victories to welcome the Third Congress of our party.

CEREMONY HONORS CHAMPASSAK GUERRILLA UNITS; AWARDS GIVEN

Vientiane SIANG PASASON in Lao 27 Feb 82 pp 2, 3

[Article by Champassak Province reporters: "Meeting To Summarize Activities and To Praise Military Forces in Champassak Province"]

[Excerpt] Under the sky of Pakse District on 5 February 1982 was the warmth of the sunrise of a new day. In the Military Theory School in Champassak Province, a meeting was held to summarize the guerrilla war to successfully wipe out counterrevolutionaries.

It was exactly 0900 when officials of the LPLA Supreme Command, officials of the Southern Region Army Command, the party committee, the provincial administrative committee and the provincial military command all entered the meeting room, which was decorated with flags and pictures of party and government leaders. Deep red banners with white and pink letters proclaimed, "Long Live the LPRP, Organizer and Leader of All Victories of the Lao Revolution," "Long Live the Honored and Glorious LPDR," "Long Live Marxist-Leninist Victory," "Wholeheartedly Hail the Meeting Summarizing the Guerrilla War Movement To Wipe Out Enemies in 1981" and "Raise High the Spirit of Being Ever Ready and Alert in Overcoming the Enemies' Tricks."

When it was time, the ceremony was opened in the presence of the following individuals: Mr Sounthon Thep-Asa, member of the party Central Committee and secretary of the Champassak Province Party Committee; Maj Gen Somsak Saisongkham, alternate member of the party Central Committee and deputy minister of defense who also holds the post of assistant chief of staff; Mr Thongin Thammakot, deputy secretary of the provincial party committee and chairman of the Provincial Administration of Champassak; Colonel Labia, party committee member and official of the Southern Region Army Command; Lieutenant Colonel Sichan, party committee member and an official of the Champassak Province Military Command; other honored guests from the Southern Region Army Command; party committee members and the provincial administrative committee; and several party committee members of the provincial military command.

The participants in this exalted meeting were outstanding combatants, national heroes, party committee members of provincial and district administrative committees, party committee members of the provincial military command and more than 240 representatives of guerrilla units from many areas. Mr Thongin

Thammakot, chairman of the ceremonies committee, officially opened the ceremony. He pointed out the great significance of this meeting, being held in the midst of a situation in which our people have won great victories in many things in carrying out the task of the first year of the First Five-Year Plan of the government. We smashed and destroyed the reactionaries' tricks and took part in insuring the success of 1981 production. The amount of agricultural tax collection was the same as planned. We will determinedly protect our country and advance it towards socialism and prosperity.

After that, Mr Sounthon Thep-Asa, chairman of the ceremonies committee, read a speech in which he expressed admiration for the brave sacrifices made to protect our country, build socialism, mobilize the people to be enthusiastic in contributing their initiative and energy to protect their own country and build the new socialist economy. in his speech, he said that in the past we improved many populated areas. In this process, national security was well protected. There were many cadres, combatants and people everywhere who scored new successes. In our province, 47 units were selected as outstanding and 1,245 comrades were chosen as outstanding. Of these, 823 comrades are in guerrilla units. At the end of his speech, Mr Sounthon emphasized that our achievements marked the first step in the first year of the government's 5-year plan. From now on, the party, military and people of our province must unite to improve their weak points and deficiencies and overcome many difficulties in continuing to carry out the plan for 1982, the second year of the 5-year plan.

After that, Mr Somphon, the head of the provincial institute awards section read the accounts of the president, the prime minister, the Ministry of Defense, the chairman of the Champassak Province Administrative Committee, and the provincial military committee praising the regional forces and Champassak Province's guerrilla unit, all of whom have done an outstanding job in wiping out robbers in the last dry season in 1981, for which one collective unit received the independence medal first class and a victory banner. Four collective units received the third class medal and a victory banner for supporting the revolution and leading the task of protecting, transforming and building socialism. One comrade received the medal of victory first class. Another received a second class. Five collectives received commendations from the government. Two hundred and twenty-three comrades received commendations from the government; 2 received the medal of bravery third class from the Ministry of Defense; 32 district companies and guerrilla units in Champassak Province received the medal of bravery third class from the Ministry of Defense; and 5 provincial and district military units and 195 comrades received commendations from the Ministry of Defense. Five hundred and ninety-eight comrades received commendations from the chairman of the Champassak Province Administrative Committee and 231 comrades received commendations from the Champassak Province Military Command. Also on this occasion, some gifts were given to guerrilla soldiers' families.

CADRES ENCOURAGED TO MOONLIGHT IN COTTAGE INDUSTRIES

Vientiane MEGNING LAO in Lao Jan 82 pp 6, 11

[Column: "Problems in Life"]

[Excerpts] [Letter] Based on the policy of the party and government, there is a plan to mobilize our cadres' families to turn to building up our family economy. We all agree with the plan from the higher echelon regarding this problem. In the reality of daily life, if a family expands its family economy, its standard of living will improve.

However, there is one problem in our unit that is often discussed, for example:

1. Animal keepers. People sometimes come to the office just to show their faces, use office hours for finding animal food and then return to the office when it is almost quitting time.

2. Silk-weavers. People sometimes report trouble in their families by using the excuse that their children are sick or that they themselves are sick, in order to stay home to spin and weave.

In a situation like this, what should we do to assure the collective policy concerning family economic expansion, specialized tasks and domestic solidarity?

We hope you can look into this and give us some views. We believe that this lesson will be very beneficial to other units as well.

Vientiane, 15 January 1982
Representative of Women's Association Committee
Mrs Khamsi

[Response] The party and government have always been concerned about the standard of living for all cadres and government employees. Along with many policies, they have opened the way for families of cadres and government employees to expand their family economy in order to steadily improve their standard of living. Before carrying out this policy we must study things so as to have a thorough understanding of both sides: the government and the family.

1. As for the problem of those raising animals, we can see that things are complicated because those who have to get food must do so during office hours in order to find the places involved, and to be successful they must make several trips. We all should understand this problem. As for the animal keepers, they must try their best to make appropriate arrangements within their families to do whatever they can to reduce the number of office hours needed to run their family errands. Animal raising should be done gradually. It should not be more than one can handle, otherwise it will affect one's health and collective work. In the beginning we might want to raise a small number first to study how to do it and to accumulate capital, and after that we can expand gradually, depending on our ability and individual circumstances.

2. As for weaving, we should pay attention to it and expand it. Based on what we mentioned concerning the families that both raise animals and weave, weaving is more convenient than animal raising because the loom is something that does not demand food as do animals. If we are busy we can leave it alone 2-3 days a week without worrying that it might die, as an animal would. Weaving does not take a lot of space as animal raising does. In residential areas in towns there is a limit; there is no room to raise animals. It would be better for us to turn to weaving. There were many cadres who did this in the past. From now on, we should encourage and expand this activity. The reason for this is to increase family income, improve the standard of living, and revive our Lao women's handicrafts, which were neglected by the old regime. As our old women used to say "hang the cotton gin and spinning wheel on the wall and let them gather dust." The party and the government encourage us and ask us to revive it. We will be the ones who take down the cotton gin and the spinning wheel and dust them off.

As for the cadres who work in government units whose job is to weave silk, they should set aside time to do it correctly. With regard to this problem, we should try our best to avoid using official hours to do personal jobs. In a case where we live far from each other, it is hard to check. It is only because of our cadres' honesty that the organization will be able to protect our cadres.

As for those who do not have specialized tasks but have the capability for family economic expansion, they should turn to building up the family economy according to the policy of the party and government. The reason for this is to help reduce the burden of the government further, and also to improve the economy in families, to help the husband concentrate on doing his job and to provide security for the children and help them progress in their studies.

Concerning the above problem, all levels of the Women's Association Committee--for example, the unit that has to contact other women--should increase political and ideological study in order to raise the level of awareness and improve attitudes toward future problems. We must fight against any ideology or actions that are not honest for the organization and raise the awareness of the collective mastery. We should be responsible for collective work as well as our family work in order to carry out effectively our jobs assigned by the organization and our family responsibilities as wives and mothers.

These are the only views we wish to give for now concerning this problem. If you do not think this is clear enough or if you have any more questions, please send them in. We will be ready to discuss them with you in future columns.

May you all succeed in your responsibilities for improving the organization and family economy according to the policy of the party and the government.

GOVERNMENT AIMS UNCLEAR, BUT TALKS WITH POLITICIANS NEEDED

Karachi JANG in Urdu 13 Mar 82 p 3

[Editorial: "Administration Should Take the First Step in Solving the Political Dilemma"]

[Text] A federal minister, according to a report from the JANG correspondent, met several political leaders as a representative of the government for the purpose of arranging an exchange of views with them on the current political situation to gain an awareness of their thinking and so that they could be made aware of the government's intentions and proposed steps. It has been indicated that this government representative, Mr Mahmud Ali, met Sardar Sherbaz Mazari after meeting Nawabzada Nasrullah and then returned and had further talks with Nawabzada Nasrullah. It has been indicated that some other leaders are also being contacted and, in order to deliberate on the matters, a conference is being held in Islamabad 14 and 15 March. The governors of all four provinces have been invited to attend. Hope has been expressed that the president, when he next addresses the nation, will shed light on his political program. If the present contacts with the political leaders prove fruitful, the nation will be informed in that regard as well.

At this point, we cannot say with certainty what the objectives of Mahmud Ali's mission are, what the latest thinking of the government is or what the reactions are of the leaders who have been contacted. There are so many contradictory and unrelated reports about the political lines along which the government wants to move that no opinion can be formed with certainty. The president has said that his Islamic steps and other strategies will take 10 years to bear fruit. His ministers talk in a tone that gives no impression of the government's moving toward reconciliation and understanding. The other day a federal minister accused some people of creating havoc by digging up corpses from the past. Another person has equated the unity of some people in the political parties with the revolt against the blood of our martyrs. In the report that was published on President Zia's conversation in Jiddah, he was quoted as saying that when his mission is completed he will hand over the reins of government to an honest man and depart. From these statements, it seems that the present government will not transfer power to an elected institution or to a majority party in it, but to an honest person selected at its own volition. The matter of a general election aside, we don't even know how this person will be elected and what modus operandi will be utilized for the

transfer of power. On the other hand, the chairman of the Federal Advisory Council, though he is not a government spokesman but holds a high place by virtue of his rank, is giving the insistent impression that the elections are not far off. The other day he even talked about holding the elections at very short notice. From all this, the picture of the government's political thinking, preferences, plans and objectives that emerges before the nation is not a clear one. We are not saying that this state of uncertainty is being maintained deliberately. But the reality is that nobody knows along what lines and in what direction the government is headed. It is clear that such a situation is not in the interest of a nation nor does it present an enviable image of the government. It can be said that either the government is confused or is deliberately confusing the public, and either way the impression is not favorable.

On this basis, it is the exigency of time that the government express its political thinking before the people and tell them in no uncertain terms along what lines it plans to move to resolve the country's political dilemma. If the report of the JANG correspondent to which we alluded in the beginning is correct, we will regard it as a symptom of the government's political thinking being well intentioned and healthy. If both the domestic and foreign issues are kept in view and an early decision is intended, then it would be wise to arrange soon for a serious parley with the political leaders. At first it can be done on an individual basis, and after the ground is broken, it can also be done in group form. Although responsibility for the success of the contacts will lie with both the government and the political leaders, the initial responsibility will lie with government because it alone will decide about making the move. If it decides that the time to establish a democratic government has come and the people should be given a chance to elect their representatives, then the creation of understanding within the political circles will not be difficult. So far, two schools of thought have appeared. One political group is for holding elections within 90 days under martial law, whereas the other believes in setting up a provisional civilian government first and then holding the elections under its supervision. Fortunately, the group of the former school of thought, though not desirous of participation in the civilian government, has announced that it will not be a stumbling block in its path. Under these circumstances, the search for and discovery of a workable formula for the interim period should by no means be difficult.

We regard both the government and the political leaders as patriotic and as realists, and if they once agree to deliberate on extricating the country from its present political crisis, it will not be hard to find a plausible and mutually acceptable solution. If the qualities of good intentions and sincerety are evident and if the objective is clearly the interest of the country, then the most complicated issues can be solved. If the government moves with a belief in God and takes the necessary measures to bring about understanding with the political groups, the best wishes of the patriotic elements will be with it.

PRESIDENT CALLED ON TO ACT QUICKLY TO AVERT POLITICAL CRISIS

Karachi JANG in Urdu 25 Mar 82 p 3

[Editorial: "President Zia-ul-Haq's Mission"]

[Text] President Zia-ul-Haq addressed an unscheduled news conference late last night at Lahore airport before leaving for Rawalpindi. During the press conference, while expressing his displeasure at the newspapers, the president talked freely about readers' demands, political activities, the conduct of politicians, elections and the restoration of democracy in Pakistan. The president criticized the newspapers, especially the Urdu newspapers, and said that the news published in the media gives the impression that Pakistan has no future, and that one cannot say for sure whether Pakistan's ship of fate will reach the shore or sink into the sea. The president complained that the press does not write anything about the helpless plight of patients and mal-administration in the hospitals and does not ask the teachers why they were on a strike at a time when exams are approaching, when they could very well have chosen some other time for making their demands. The readers know a good deal about the problems referred to by the president and as such we do not wish to engage into a controversy on these issues.

In the same press conference, the president said that if he wished he could close down all the newspapers the next day and if people held rallies, he could have them put behind bars. The president added that no one will so much as raise a voice of dissent. The president, in his capacity as the head of state and the chief martial law administrator, can close down the newspapers not only for 5 years but forever and no one can say anything. Previously, during democratic regimes or under martial law administrations, when governments placed restrictions on the newspapers or closed them down, except for the affected employees who lost their jobs no one ever demanded restoration of publication of the newspapers or protested against the restrictions. If anyone ever raised his voice it was only to fulfill formalities or make his presence known. The reason for this is that the politicians themselves are not happy with the newspapers, especially big newspapers, because the newspapers do not give them the importance they seek. We are grateful to our judiciary, because of which, even though belatedly, our tears are sometimes wiped.

In a country where people have lost half of their country and did not even so much as turn around and ask who was or was not responsible for this greatest of sins or crimes and what punishment was meted out to them, a country whose

people have seen their constitution abrogated and new constitutions formed time and again and did not so much as raise their voice in protest, a country whose politicians and elder statesmen quarrel among themselves like children and cannot get together to save the dignity, honor and reputation of their country--if in such a country the newspapers are closed down for 5 years or, for that matter, forever, no one would ever raise his voice in protest. The president was right about that.

During this press conference, the president also said that the conditions were still not favorable for holding elections, the elections will not be held now and if elections were held under present conditions a serious crisis would occur, a crisis so serious that it would make people forget the seriousness of the events that occurred in 1977. Political parties, he said, have disappointed the people. We agree to a great extent with the views expressed by President Zia-ul-Haq. There is no doubt that the political parties of this country and their leaders have disappointed the people. Similarly, there is also no doubt that during the long 4 years and 9 months of the present martial law regime, our celebrated political parties and distinguished politicians did no "homework" whatsoever except to attend or give banquets. Until now they have not been able to work out any political formula acceptable to the majority of the people that could also solve the problems referred to by the president. Similarly, President Zia-ul-Haq's statement that the politicians thus far have not been able to reach an agreement on the establishment of a national government is also not incorrect. If the newspapers of recent months are carefully studied, it becomes quite clear that the politicians did not accomplish anything concrete other than to issue statements against one another and indulge in accusations and counteraccusations. We will also have to ponder whether there is any political party in the country that could win a decisive majority if the elections were held and be able to form a strong government. In our view, under the present circumstances it seems doubtful that even a coalition government formed by more than one party would be able to remain in office for long. Then the question is how the current crisis can be resolved and how our armed forces can be honorably discharged from this difficult position.

In this context, we would like to respectfully draw the president's attention to the fact that inasmuch as the political parties and our politicians have been responsible for the political instability currently prevailing in the country, he too cannot totally absolve himself from this responsibility. During the nearly 5 long years, why did he not try to bring one or more political parties to the line he had in mind, even though, according to him, some of the politicians are his personal friends, who he has described as patriots? Under the circumstances, when, according to the president himself, political parties have failed to bring propriety to either their work or politics, and the ways of the government and the politicians are wide apart, the statements of the president that he will not leave until his mission is accomplished and that martial law will remain in force as long as it is needed are causing concern and misgivings in the minds of the people. Our country cannot tolerate uncertain conditions much longer. He is well aware of the political parties in the country. If the president believes that the political parties cannot accomplish his mission, then he should find ways and means of resolving not only the political crisis facing the country but also ways of honorably discharging the armed forces from the present difficult position. He should come

forward to save the country and himself, so that the political deadlock can be resolved and people having identical views with the president and "those who would go along if they find the right path" could help accomplish his mission.

President Zia-ul-Haq is a God-fearing, virtuous and sincere man. No one wishes that he fail to accomplish the virtuous objectives he has in mind. We, too, for our part, would wholeheartedly like to submit that if he does not act quickly, we are afraid that just as during the past 4 years and 9 months he could not move even an inch in the direction of political stability, he will again face disappointment and it may be too late to do anything. This is the only way of taking the country out of serious and revengeful politics and revengeful political crisis.

EDITORIAL CALLS ON MUSLIM COUNTRIES TO UNITE BEHIND AFGHANISTAN

Karachi JANG in Urdu 21 Mar 82 p 3

[Editorial: "Salute to the Afghan Mujahedin"]

[Text] Today is Afghanistan Day. All democratic countries of the world have dedicated this day to the struggle of the freedom fighters of Afghanistan. All the democratic countries of the world today pay tribute to the spirit of the freedom fighters of Afghanistan, the undying spirit of freedom that even the all-powerful forces of the Soviet Union have not succeeded in subduing. The Afghan Mujahedin have been fighting against one of the most powerful armies of the world for almost 2 years in a state of destitution. Despite the fact that hundreds of thousands of Afghans have lost their hearths and homes, the resolve of the Afghan Mujahedin has not been shaken. They are determined to continue their struggle through the coming generations. They know that they cannot expect to win a victory against a great military power like Russia. They do not have even one one-hundredth of the military aid they need in their struggle against Russia. They have the moral support of the democratic countries of the world but the funds they need so badly are not easily forthcoming. Afghan Mujahedin makes up for the paucity in funds by their spirit, valor, fearlessness and their faith in God. This is why they do not expect immediate success; on the contrary, they know that they will have to continue fighting for quite some time to come and they also know that if they do not win this war, their coming generation will have to continue the struggle.

There are many aspects relating to the problems of the Afghan Mujahedin. One of these is that Afghanistan is a Muslim country and its population is 100 percent Muslim. In this sense, Afghanistan is an important member of the Islamic world. It is the collective responsibility of the entire Muslim world to try to liberate Afghanistan from foreign domination. But it is deplorable that up to now, the Muslim world has done nothing but pass resolutions. Only a few wealthy nations have given some help in the name of Afghan refugees.

The Afghanistan issue poses a challenge to the Muslim world. If the Muslim world was to unanimously demand that Russia withdraw its forces from Afghanistan, Russia would have to give their demand serious consideration. This can only happen when the Muslim world unites. In fact, this is not the case. There are many Muslim countries that cannot afford to strain their relations with Russia. To such countries we would like to say that unity among Muslim countries can be more beneficial to them than their friendship with Russia.

The Muslim world by uniting will not only liberate Afghanistan from Russian domination, but in the future no big power will ever have the courage to commit aggression against Muslim territory. If the leaders of the Muslim world comprehend this point, the Muslim world would become a great power today.

The second aspect of Afghanistan is that it is a poor and backward country in the Third World. Poverty and ignorance is rampant. From the point of view of education, the people of Afghanistan are considered to be the most illiterate people in the world. Today the wealthy nations of the world, specially the big powers, sympathize with the Third World. Everywhere the Third World is being discussed. Russia in particular condemns the exploitive policy of the imperialist countries in strong terms. But it invaded Afghanistan and uprooted 3.5 million people from the hearths and homes and is not the least ashamed of the land it has thus acquired. The hypocrisy of the big powers is the greatest tragedy of the 20th century.

The third aspect of Afghanistan is that it has always supported a policy of nonalignment. During the last decade, Russia and India have been in the forefront in propagating the policy of nonalignment. India received the blessings of Russia for its role as leader of the nonaligned movement. But when Russian soldiers invaded Afghanistan, the neutral and nonaligned countries of the world did not show any reaction. On the contrary, India practically supported the Russian action. Today, when the Afghan refugees demonstrate to protest the arrival of some Russian leaders in New Delhi, Indian police beat them up. One good effect of the Russian action has been that it brought into open the truth of the nonaligned movement.

At any rate, it is a fact that the United Nations, the Islamic Organization Conference, the nonaligned movement and the Third World have done nothing more than express verbal sympathy. The Afghan people are fighting their war of independence all by themselves. They do not expect to be successful overnight, but they have staunch faith in God and are determined to continue their struggle for years to come. We salute these freedom-fighters.

DOUBTS EXPRESSED ABOUT ISLAMIC SOCIAL JUSTICE CLAIMS

Karachi JANG in Urdu 3 Apr 82 p 3

[Article by Arshad Ahmad Haqqani: "The Islamic Teachings of Justice and Obligation"]

[Text] Dr Mahbubul Haq's claim that in implementing his economic policy he will adhere to the concepts of Islamic justice and obligation is a very large claim. Justice is a very comprehensive and forbidding term, and even if we look at just its economic aspect its demands are all-embracing. The first demand of justice between individuals and society is that there be no difference or discrimination between them in their fundamental rights. They should be provided with uniformity of opportunities. Everyone should have the opportunity to advance in life. For this to be so, it is necessary that the entire new generation have the opportunity to avail itself of a single, uniform system of education so that it will be possible for all young people to start the race of life under similar conditions. What is our situation here? The literacy rate is 24 percent. That is, three-fourths of the population do not even have a chance to obtain an education. The overwhelming majority of those who do have education is in such a dire strait that the less said of it the better. The overwhelming majority of those of the nation's children who are so fortunate as to be in school are studying with teachers who, because of their poverty, have now gone on strike. In contrast, there are educational institutions in this country where it can be said without exaggeration that thousands of rupees are spent on each student every month. Can any honest man have the temerity to mention the fulfillment of the demands of justice in society when there exist such superior and inferior classes in the educational system? Dr Mahbubul Haq has mentioned free, compulsory education up to the matriculation (i.e., high school) level. If you are able to arrange for a uniform curriculum and similar conditions of education, and to give the children of the entire nation the right to enter various institutions on the basis of their performance and ability, then we will be able to say that you have introduced the justice of Islamic education in one department.

What is the condition of medical facilities? Millions of people in this country, yes, without exaggeration, tens of millions, do not have the necessary resources to obtain proper care and treatment. They are sticken with various kinds of diseases but can do no more than get charms and spells

and prayers or seek treatment from some charlatan hakim or doctor. There is nothing more they can do. How can you mention justice in society in the presence of such conditions? Dr Mahbubul Haq has said that 30 million people in Pakistan are living below the minimum standard of living, that is, under conditions lower than the lowest bearable level of poverty. The next 30 million above this level are less indigent, but for them too, as the English saying goes, it is "a struggle to make ends meet."

Then there are the lack of opportunities for employment. If one looks at the bitter feelings and sharp emotions of those young people who are without connections and recommendations one does not see the slightest reflection of the concept of justice anywhere. A young man is born in a poor household; he sees his parents and brothers and sisters thirsting for, rather writhing in their desire for the necessities of life. He himself wants to accomplish something and to advance for their sake, but he finds all doors closed. If he manages to find a foothold somewhere he must put up with a hundred difficulties and a thousand insults. But after all this what does he have? Is there any comfort, any peace of mind, anything to fulfill his longings, to give him courage to live his life? No. Instead of these, he will be caught up in a continuous feeling of deprivation, injustice, oppression, pain and frustration, which will produce in him a deep bitterness and madness. How can you talk of the Koran's teaching of justice in a society in which you do not make possible uniformity of opportunity? And what would your claim deserve other than to be met with a vitrolic, derisive laugh?

Our social values, morals and mores are the product of a capitalistic system of life. We call on the name of Islam and will not so much as take a bite to eat without it, yet what arrangements do we have for social welfare? What institution do we have to help needy, misfortunate young men and women? What institutional arrangement is there to fulfill the wish of the orphan, and the poor, and the middle class white collar family to preserve their self-esteem? There is so much anguish in society, so much greed, so much feeling of each for himself, of gluttony, that we should be ashamed when we talk of the system of Islamic justice. The Iranians say that their revolution was a revolution of the humble against the haughty. This is the spirit of Islam. That change or revolution which does not raise up the humble and force the haughty to prepare to take the path of moderation is anything but an Islamic change or Islamic revolution. The very essence of Islam is the eradication of oppression; and oppression is the opposite of justice. So long as there remains the inequality which is now in our society, the horrifying, shameful great distance between various classes in their means and condition of life, if we so much as mention the system of justice and obligation in Islam we will be guilty of the worst kind of hypocrisy and deserving of what befalls those, according to the Koran, who don't do what they say.

While it is doubtless true that Islam does not acknowledge absolute equality in some fields, still the essence of its teaching is justice between man and man, between class and class, between man and woman, and between the individual and the state. This teaching is side by side with the order to establish justice throughout the entire Koran. So far as obligations are concerned,

these too are demanded by the spirit of Islamic teaching. The Koran considers all humanity one people, and all Muslims one family, rather, one single body, and thus shows the path of obligation. It is the teaching of Islam that all men are brothers and are descended from one father. Muslims are like one body. All the food and resources given them by God are to be shared; are for the use of all. They should fill the needs of all. Islam cannot conceive of condoning selfishness such that in the name of the sanctity of the right of private property, one individual could deprive another individual, or one class another class, of the use of its possessions when the other had need of it. The spirit of the teaching of Islam is that necessity has supremacy over the claim of possession. In the first place, the person with property should in his own right relinquish his property and fill the need of the needy, but if he does not do so, then the state has the complete right to intervene and give the truly needy the excess property. The concept of property and means as a trust is understandable, since Islam has given Muslim society the status of a family. The concept of the absolute right to property cannot be acceptable.

Unfortunately, the bitter truth is that the majority of the classes in our society which tithe according to the economic teachings of Islam are those very people who not only support the absolute right to property and resources, but feel that Islam came into existence just to protect their property, and that its greatest teaching is that you cannot touch the earnings of someone else. Without doubt, Islam has strictly forbidden taking and using the property of a brother by false means, but Islam also does not permit the maintenance of islands of excess in a sea of need. It respects the rights of the individual but also reminds him of his social responsibilities. The new deputy chairman of the Planning Commission has resolved to make the Koranic teachings of justice and obligation his guide, so let him make his heart strong, his honesty powerful, his thought revolutionary, and start his work. The tie to the love of property and special class distinctions has become second nature for those privileged classes of our society who have attained their rights. It will not be easy for them to change overnight. This will require a long war, and we cannot say to what extent Dr Mahbubul Haq is aware of its gravity and importance.

But we cannot refrain from saying that the establishment of justice has become a necessity in Pakistan, as in other societies of the world, and that if you do not do so happily and willingly, those agents and stimuli which are today demanding it will after long discontentment be forced to search for other paths for its fulfillment. Oppression, inequality, discrimination, walls and distances, and great differences between men can no longer continue. They must be lessened and erased, whether as a result of Dr Mahbubul Haq's planning or as a result of these conditions as yet unknown.

Then too, it is an insult to man that he should be treated like a dumb animal and not oppose this treatment; not protest it or try to change it. Pakistan is a normal nation, and those intellectual, psychological and mental waves which are running through the third world are here too. Then too, it is a fact that we continually call on Islam and do not even eat a bite of food without it. We have stopped the country's political journey for the last five

years for the sole reason that we have not yet found a framework for an Islamic political system. The fundamental justification the rulers give for their continuance in power is that they want to complete the founding of an Islamic society. When we give Islam so much importance that its promulgation is given as justification for maintaining in power an unelected government, you cannot escape negative criticism and reaction if you ignore the social and economic teachings of Islam. If Islam is to be promulgated it will not be enough to spend five years searching for a political framework. We will have to go the whole way; at least we will have to erase the great difference presently found between the haughty and the humble. We ask that you put into effect a uniform system of education in the whole country; enter children in important institutions not on the basis of the weight of their parents' purse but on the basis of the weight of the children's intelligence; make medical facilities common enough so that at least it will be possible for everyone to receive treatment for common diseases; stop the construction of houses which are like palaces, and adopt moral and legal policies to have families reside in those already existing according to the space available; stop the large number of luxury goods; stop the unnatural standard of housing and the profligate way of life of some; consider all of humanity to be human, don't consider some to be sheep and goats and beasts of burden; and provide opportunities for advancement for all. Then your friendship for Islam will be meaningful and the country too will shine with the light of justice and fairness and brotherhood and solidarity. Empty shells of slogans and verbal promises will not fill stomachs, and no one will give any weight to what you say. Dr Mahbubul Haq, it is said, left his high post in the World Bank because the new leader of the institution had begun to ignore the interests of poor countries and push them into the background. It will not be out of place to expect that after returning to his homeland he will act on this praiseworthy sentiment and, so far as he is able, will live up to his word that he will implement the new plans for the construction and progress of the country under the guidance of Islamic concepts of justice and obligation. Our prayers are with him, but the difficulties are such that it is hard to say how much help our prayers will be to him.

PRESENCE OF U.S. BASES REJECTED; SELF-DEFENSE STRESSED

Karachi JANG in Urdu 6 Apr 82 p 3

[Editorial: "Sahabzada Yaqub Khan's Clarification"]

[Text] Minister of Foreign Affairs Sahabzada Yaqub Khan has denied that the American administration ever asked Pakistan for bases or other facilities for stationing foreign troops or stockpiling arms on its soil. The foreign minister told reporters in an informal meeting in his office that the question of an American request for bases in Pakistan simply has not arisen. The foreign minister, commenting on the speech President Zia gave before the Advisory Council the other day, said that the president was alluding to the question of U.S. bases in Pakistan raised by some American visitors to Pakistan who were not representatives of the administration during talks regarding the $3.2 billion aid agreement. In fact, the president made the point in his speech that such a thing was out of the question.

It has become clear from a timely statement by Yaqub Khan that the proposal of American bases in Pakistan was not put forward by the representatives of the American administration. Now it is evident that such a proposal was put forward during the U.S.-Pakistan economic and defense aid talks and also who put it. Though the proposal did not come from the representatives of the American administration, President Zia, while rejecting it on behalf of the people of Pakistan, said that if 85 million people cannot defend themselves then nobody else can do it for them. Thus, the president rejected the idea of bases of any power, not only the United States, on the soil of Pakistan. Now two points have become clear from the statement of the president and the clarification of the foreign minister: that a request for the bases in Pakistan was not made by the American administration and that Pakistan rejected any such possibility.

After these clarifications, the debate as to whether the United States wants bases in Pakistan and whether Pakistan has acceded to this request should be ended for good. Pakistan is a free, sovereign and nonaligned nation. The Pakistani people got this country after a long struggle and the Pakistani people have fought three wars in their short history of 34 years for the defense of the country's freedom and existence. If aggression is committed by an external power in the future, the Pakistani people will defend it fully. President Zia is right in saying that if 85 million Pakistani people cannot defend themselves then no foreign power can do it for them. Pakistanis are a self-respecting people and no self-respecting people can rely on a foreign power for their defense.

SALARIES FAIL TO KEEP PACE WITH PRICES; REFORM NEEDED

Rawalpindi TAMEER in Urdu 22 Mar 82 p 2

[Editorial: "The Outdated Pay Structure"]

[Text] As the struggle by the teachers for an increase in pay and other benefits continues, doctors in Punjab, presenting their demands, have notified the government that they are beginning their token strike. These are not the only government servants who are miserable because of inflation and higher prices. The truth is that every person on a fixed income, even if he is in grade 21 or 22, is experiencing difficulty in making ends meet. The government has the largest payroll of any institution and therefore even a small pay increase raises its expenditure greatly. This is why the government delays making decisions in this regard. Often, the lack of funds is given as the excuse. But the hardships of the government employees are also legitimate. They also have to purchase consumer goods from the marketplace. As for the marketplace, the prices of these goods rise every month and these people have no recourse but to protest. This is a problem to which the government will have to find a solution. Increases or minor changes in the salaries of some people when demands are pressed, will not solve this problem. Before freedom, the natives were not treated well in regard to salaries during the British regime. However, their pay during that period with respect to prices was much better than it is now. If there has been a 10-fold increase in salaries since then, prices have gone up 20 or 30 times. This is why everybody who has any skill or higher education prefers to work abroad.

We think now the time has come to examine all aspects of this issue and to make attempts to create a system that will give skilled and educated people a respectable place in society and pay according to their ability and training. When a Ph.D., a doctor or an engineer in this country cannot earn as much as a person going abroad can earn as a laborer or a minor businessman, it is very disheartening and creates a great many social and political problems. The pay and remuneration system has now become so outdated that it is beyond reform.

ARBITRATION COMMISSION REJECTS GENERAL WAGE RISE

BK141442 Melbourne Overseas Service in English 0830 GMT 14 May 82

[Text] The full bench of the Australian Arbitration Commission has decided against granting a general wage rise. At the same time it has called a conference to consider the future of the wage fixing system. The decision has pleased employers and the federal government and disappointed unions and the opposition. It follows the first national wage hearing since the centralized system pegging wages to cost of living increases was abandoned in July last year.

The Australian Council of Trade Unions [ACTU] has sought a community catch-up rise of $25 a week--about U.S.$27--for workers who were not included in a recent round of wage increases. The president of the Arbitration Commission, Sir John Moore, said in handing down its decision that such a rise would mean a substantial increase in labor costs at difficult time for the economy. He said the full bench had difficulty identifying the lag in community wages claimed by the ACTU. Sir John said wage hearings conducted during the next few months on a case by case basis would be critical not only to the economy but to the future of wage determination. He said he had called a conference for (?17 August) to examine the future of wage fixing which could involve returning to a structured centralized system or moving to a more decentralized approach.

The industrial relations minister, Mr Macphee, later said the decision of the full bench had made a significant contribution to an atmosphere of wage moderation and a lower level of industrial disputes.

The opposition spokesman on industrial relations, Mr Hawke, said he was concerned that following the decision the strong would get stronger and the weak would get weaker.

The director of the Confederation of Australian Industry, Mr (Selidc), said it was the sort of decision that employers hoped for, putting the onus on the unions to decide what their wages policy should be.

The president of the ACTU, Mr Dolan, said claims by individual unions following the decision could lead to industrial disruption depending on the reaction of employers.

The ACTU executive passed the resolution stating that a campaign for increased wages and shorter hours would continue.

BRIEFS

DEPLOYMENT OF FORCES OVERSEAS--Australia's civilian defense chief has warned that it would be imprudent for Australia to neglect its long-term national interest by assuming a global military role. Secretary of the Defense Department (Bill Prichet) said it would be feasible to train and equip a multiservice defense force for deployment in areas remote from Australia, such as the Persian Gulf. But he told a conference in Sydney that defense planners would be cautious at developing a defense force geared exclusively or predominently for involvement in remote areas even though regional indicators were at present reassuring. [Text] [BK161103 Melbourne Overseas Service in English 0830 GMT 16 May 82]

TRADE WITH SAUDI ARABIA--Trading ties between Australia and Saudi Arabia have been strengthened this week with the inaugural meeting of the Australia-Saudi Arabia Joint Commission. Speaking in Melbourne today, the Saudi minister of commerce, Dr Sulaym, said it was hoped the new commission will increase trade between the two countries. Australia currently imports more than A$500 million worth of products, mainly oil, from Saudi Arabia each year, while in return, Australia exports just under A$280 million worth to the Middle East kingdom. Dr Sulaym said there was plenty of opportunity for Australian exports to increase. He said Saudi Arabia was interested in tapping Australia's expertise in the field of mineral resources development. [Text] [Melbourne Overseas Service in English 0830 GMT 7 Apr 82]

COAL LIQUEFACTION INDUSTRY--New Zealand's Energy Minister Mr Birch has suggested that Australia and New Zealand jointly developed multimillion dollar coal-to-oil liquefaction industry. Speaking at Brisbane, Mr Birch said it will be far more beneficial for both countries to develop the industry on a joint basis rather than a competitive one. Mr Birch said he was particularly interested in a recent in-depth study of the development of coal liquefaction industries in two Australian states, Queensland and Victoria. He said the technology used to develop these industries in Australia would be of major value in the development of a New Zealand liquefaction industry. Mr Birch was speaking after visiting Central Queensland coal fields as a guest of the Queensland's government. He said his visit to the fields would help the New Zealand Government assess Australian coal companies that have stated an interest in developing large coal fields on New Zealand's South Island. Meanwhile, the minister for primary industry, Peter Nixon, has announced the removal of one of the

major obstacles to free trade talks between Australia and New Zealand. Mr Nixon told an agricultural field day in Victoria that an agreement had been reached on including dairy products in the round of talks to establish a closer economic relationship between both countries. He said the agreement was consistent with Australia's condition to safeguard the interests of the Australian dairy industry. [Excerpt] [Melbourne Overseas Service in English 0830 GMT 3 Apr 82]

SURPLUS IN BALANCE OF PAYMENT--A record net inflow of capital during April has resulted in a large surplus in the latest balance of payment figures. The Bureau of Statistics says almost $2 billion came into Australia during April mainly as a result of companies borrowing overseas. The result is a surplus of about 1.2 billion in the balance of payment. The balance of trade also improved last month because of lower imports of goods, such as machinery. [Text] [BK131255 Melbourne Overseas Service in English 1500 GMT 12 May 82]

AUSTRALIA DEVELOPS ANTI-MISSILE 'DECOY'--Australian defence scientists have developed a decoy which could protect ships from missiles similar to that which wrecked the destroyer Sheffield. It has undergone successful trials in Australian waters. The system, known as project Winnin, consists of a small havering rocket deployed away from the ship. It dispenses a sophisticated range of electronic communications, including radar and infra-red signals which are designed to attract an incoming missile. THAI DELEGATION ARRIVES FOR BORDER TALKS

BK201645 Rangoon Domestic Service in Burmese 1330 GMT 20 May 82

[Text] An 11-member [figure as heard] Thai delegation headed by Thai Deputy Foreign Minister Dr Arun Phanuphong flew into Rangoon this evening at the invitation of the Government of the Socialist Republic of the Union of Burma. The Thai delegation was received at the airport by Deputy Foreign Minister U Tin Ohn, Burmese Ambassador to Thailand U Soe Myint, Thai Ambassador to Burma Phirat Itsarasena and responsible officials of the Foreign Ministry, the Ministry of Home and Religious Affairs, the Land Survey Department and the Thai Embassy in Rangoon.

Director General of the Thai Foreign Ministry's Treaty and Legal Department Dr (Sathit Satiyasaiya), Deputy Under Secretary of the Interior Ministry (Lakphum Phaksi), Director General of the (?Administration) Department (Chalong Bhiranasuk), Director of the Naval Hydrographic Department of the Royal Thai Navy Rear Admiral (Rot Hoprasit) and responsible officials of the office of the National Security Council, the Land Survey Department and the Foreign Ministry accompanied the deputy foreign minister as members of the Thai delegation.

The Thai deputy foreign minister and his delegation will hold talks with the Burmese side headed by Deputy Foreign Minister U Tin Ohn on matters concerning the Mae Sai-Mae (?Moei) border area.

PAPERS ON CONTENT, PROCEDURE OF TALKS WITH PRC

Madras THE HINDU in English 5 May 82 p 1

[Article by G. K. Reddy]

[Text] NEW DELHI, May 4.

An 11-member Chinese delegation led by the Vice-Foreign Minister, Mr. Fu Hao, who is equivalent to a Secretary in the Government of India, is arriving on May 15 for the next round of official level talks on the border dispute.

The Chinese delegation will spend the first two days in private consultations, as the Indian team did when it went to Beijing in December last, to prepare for the talks which begin on May 17 and will go on till May 21, according to current indications.

There are reports of a major overhaul of the Chinese Governmental set-up, including a drastic reduction of Vice-Premiers from 13 to two, followed by a parallel curtailment of the number of Cabinet Ministers from 52 to 41 and Vice-Foreign Ministers from 10 to 4 indicating that Mr. Deng Xiaoping's bid to consolidate his hold is far from complete.

The name of Mr. Fu Hao has not been specifically mentioned in the Xihhua report as one of the four Vice-Foreign Ministers who have been retained, but in the absence of any official announcement to the contrary the Government of India is proceeding on the assumption that he would be leading the Chinese delegation.

However, the reported changes have left many observers of the Sino-Indian scene wondering whether in the midst of this widespread shake-up Mr. Fu would be coming with a comprehensive brief to engage in substantive discussions on various aspects of the border question. But as a veteran diplomat who is well acquainted with the complexities of this problem he is not going to shirk from discussing the border issue in depth if only to explore the possibilities of a settlement, even if he is in no position at this stage to commit his Government to any particular course of accommodation.

At the last round of talks in Beijing, the two sides merely reiterated their basic approaches without getting down to the guts of the problem. But they will have to move forward during the Delhi round to the stage of at least exchanging views on their respective concepts of a settlement, before entering into serious negotiations at a later stage.

Real task: The real task at these talks is not to just keep talking to avoid the impression of a breakdown even if the two countries are unable to make any tangible progress during these discussions. The whole emphasis will be on identifying the common ground, if any, between the divergent approaches that could serve as a starting point for substantive negotiations.

There have been some preparatory talks in Beijing between the Indian Ambassador, Mr. K. S. Bajpai, and the Chinese Foreign Ministry, but these exchanges were by and large confined to procedural matters for conducting the discussions in a more purposeful manner to set the right tone for the subsequent rounds of this dialogue. Otherwise, neither side was expected to nor willing to disclose its negotiating strategy nor indicate how far it was prepared to go at this stage in coming to grips with the border problem.

For psychological reasons, however, the two sides are equally keen on keeping up an atmosphere of expectation that with the necessary determination to resolve this dispute it should not be beyond the capacity of India and China to evolve a mutually acceptable compromise. But until they have gone through the probing stages and are reasonably satisfied about each other's desire for a settlement, it is not possible to start serious discussions on the elements of mutual concessions that could conceivably lead step by step to a comprehensive settlement.

The process of sustaining some degree of optimism during this confidence building stages will inevitably involve a corresponding

effort to carry forward the process of normalisation in other spheres like economic and cultural relations, while the two countries make a serious endeavour to resolve the border dispute. Due attention is, therefore, being given to this aspect in the preparation of the briefs for the next round of the official-level discussions.

Envoy coming: The Indian delegation to the talks will be led by the Secretary in the External Affairs Ministry, Mr. Eric Gonsalves, who has been handling these Sino-Indian negotiations. It will include Mr. Bajpai, who is arriving on May 9 for advance consultations. He will go back to Beijing to make his farewell calls before returning to Delhi a few weeks later to take up his new appointment as Secretary in place of Mr. Gonsalves when he goes to Brussels as Ambassador

BORDER ISSUE MAJOR PROBLEM

Calcutta THE STATESMAN in English 5 May 82 pp 1, 9

[Text] **From Our Special Representative**

NEW DELHI, May 4.—Senior officials of India and China will resume their talks here to find ways of normalizing bilateral relations and to find a solution to the contentious border issue.

A 10-member Chinese delegation, headed by Mr Fu Hua, Vice-Foreign Minister, will arrive here on May 15 to pick up the threads of the bilateral dialogue from where they were left at the last round in Beijing about four months ago. The talks beginning on May 17 will conclude on May 21.

Mr Eric Gonsalves, Secretary in the Ministry of External Affairs, will lead the Indian delegation. The Indian Ambassador in Beijing, Mr K. S. Bajpai, will be here on May 9 for consultations at the Foreign Office.

The talks are expected to cover a wide range of subjects including trade, economic cooperation and cultural relations. Both sides are committed to work towards normalizing relations. But then the problem facing them will be to find a mutually acceptable solution to the border issue with China in control of vast slices of Indian territory in the north, central and eastern sectors of the India-China border.

There has been some relaxation of tension in the relations between the two countries during the past two years—the one to contribute most to this was, of course, the Chinese decision last year to let Indian pilgrims visit Mansarovar. There have been exchanges at other levels as well. For instance, a Chinese Press delegation is currently visiting the country. But much will ultimately depend on how far the Chinese are prepared to go to meet the Indian position on the border issue. This would indeed hold the key to the outcome of this and other rounds that may follow.

Our Special Representative in Calcutta adds: Mr Jiang Yuanchun, Deputy Director, International News Department of the People's Daily and leader of the seven-member Chinese Press delegation now visiting India, said in Calcutta on Tuesday that there was no difference between the Press and the Government regarding the policies pursued by the Government in his country. The Press in China supported the Government's policies on national development and peace and journalism in his country had become an important medium for propagating the Government's policies and programmes to the masses.

He, however, said that the Press did not spare erring Ministers and officials for whose sake the people suffered. Reporters had freedom to investigate and write critical stories which often jeopardized the position of Ministers and officials. No attempt was made to suppress facts as this was not permissible under the Chinese constitution. Recently the Press wrote critical pieces about a Minister who, after having food in a hotel, did not pay his bill in full.

Mr Jiang praised the efficiency of Indian journalists and said that they did a better job than their Chinese counterpart. Technologically also, the Indian Press was more advanced. Chinese characters were standing in the way of modernizing the production techniques. Since there was no typewriter which featured Chinese characters, editors and reporters had to write pieces in their own hand.

Mr Jian said that the support by the Chinese Press and radio to some Indian political elements during the cultural revolution was a wrong policy of the Government. China did not believe in interfering in the internal affairs of any country. The Chinese Press did not publish stories which it thought were the internal affairs of other countries. When asked whether the Chinese Press published stories about Maneka Gandhi leaving Mrs Ghandi's house, he replied in the negative. "This is an internal affair of India", was his remark.

He lauded the role of the Chinese Press in the process of democratization in his country. The Press, he said, had no role when it was totally controlled by the "Gang of Four". He said that there was no question of China condemning the USA on developments in El Salvador as the USA had committed no aggression in that country.

Earlier in a brief speech, he said that the delegation had come to India to promote the age-old ties and friendship between the two countries.

SINGAPORE DEVELOPMENT OF BATAM ISLAND REVIEWED

BK151109 Hong Kong AFP in English 1027 GMT 15 May 82

[Text] Singapore, 15 May (AFP)--A Singapore trading company has won a massive $400 million (U.S.$190 million) contract to supply granite to the island of Batam, it was reported today.

Comfort Marine, which has delivered 3 million tonnes of granite to the Batam Industrial Development Authority (BIDA) since last month, is getting the assorted sizes granite from Agaleim quarry in the south Malaysian state of Johor, the BUSINESS TIMES said. Barges are being used for the delivery of the rocks, expected to be completed in 2 years. Batam Island is about 22 km (13 miles) from Singapore.

Construction of infrastructure facilities has been in progress for the last 2 years when the Indonesian Government decided to go ahead and develop Batam into an industrial centre to complement Singapore.

An Indonesian Embassy official here told the paper that the infrastructure facilities on the island should be ready by 1985.

Construction of a 300-room hotel and airport, and the enlargement of the harbour is underway. Fifty percent of the road network linking the three main industrial areas of Sekupang, Batu Ampar and Nangsa have been completed, the official was quoted as saying.

Meanwhile, 35 companies and factories dealing in shipping and cargo handling, beef and meat processing, a metal fabrication yard and a pipe-coating plant, have already started operating from the island. To date some $76 million (U.S.$36 million) have been invested in various projects on the island, the BUSINESS TIMES said.

The development of Batam Island into an industrial centre has the official backing of Singapore although it has no investments in the project.

In November 1980 the two countries signed an agreement to slash red tape and to facilitate the movement of capital, men and machines to Batam to speed up its development.

BRIEFS

WEST GERMAN LOAN--Indonesia and West Germany concluded a financial cooperation agreement for the 1982-83 fiscal year in Jakarta on 14 May. The agreement covers a $52.45 million loan for the financing of a number of development projects, including the Bukit Asem Coal Mining project and electrification projects in West Sumatera Province. It will also be used partly to finance the construction of projects launched in the previous fiscal year. [BK191507 Jakarta Domestic Service in Indonesian 0700 GMT 14 May 82 BK]

TIN EXPORT FROM SOUTH SUMATRA--South Sumatra exported 2,785 tons of tin, worth $40,295,000 in March 1982. Nearly 1,375 tons of the volume was shipped to Singapore and the rest to EEC countries. In February 1982, the figure stood at 2,125 tons with a total value of $32,186,000. [BK191507 Jakarta Domestic Service in Indonesian 1200 GMT 16 May 82 BK]

ZAMRUD OIL FIELD PRODUCTION--Jakarta, 11 May (ANTARA)--Contractors of Pertamina, American companies California Asiatic Oil Co and Texaco Overseas Petroleum Co, have started to produce oil at the Zamrud field in Riau at the rate of 21,300 barrels per day. Production is carried out by PT Caltex Pacific Indonesia (CPI), a joint venture company formed by the two contractors, the Public Relations Office of Pertamina announced Monday [10 May]. The more than 20,000 barrels production come from 8 of 11 wells that have been drilled at the Zamrud area. The other three wells will soon be linked with the production network of Zamrud. Zamrud is the last of four oil fields which are now producing in the Beruk-Zamrud project area. [Excerpt] [BK131315 Jakarta ANTARA in English 1315 GMT 11 May 82]

KAYSONE PHOMVIHAN DISCUSSES TRANSITION TO SOCIALISM

Vientiane BULLETIN QUOTIDIEN in French 6, 8-10 Mar 82

[Article by Kaysone Phomvihan, general secretary of the CC [Central Committee] of the Lao People's Revolutionary Party [LPRP] and prime minister of the Lao Democratic People's Republic, first published in the NOUVELLE REVUE INTERNATIONALE--PROBLEMES DE LA PAIX ET DU SOCIALISME, September 1981: "The Strategy of the Transition to Socialism"]

[6 Mar 82 pp 7-10]

[Text] The transition to socialism is a logical continuation and devleopment of the revolutionary process in this country. Relying on the principles of Marxism-Leninism and fortified by the experience of fellow countries, our party initiated a policy for the socialist transformation of society after the victory in 1975 of the national democratic revolution in Laos. This policy has its origin in the political program of the LPRP and has the objective of "meeting all the conditions necessary for a direct transition to socialism and bypassing the capitalist stage of development."

Since this goal was set by the 2nd LPRP congress in 1972, the party has devoted itself to developing and perfecting its strategy, adapting it to the political, economic and social tasks of the transition period.

We are making our way toward socialism, and we are carrying through with the general laws of socialist revolution discovered by Marxism-Leninism. Our party seeks to apply them creatively and adapt them to the specific facts of life in Laos.

"The concrete analysis of a concrete situation," that is the cardinal Leninist principle that we are applying to develop our strategy in the transition period.

What, then, is special about the present situation in Laos?

First, it must be emphasized that Laos is the outpost of socialism in Southeast Asia; it is on the front line of the confrontation between the socialist and capitalist systems in this region. This country suffered for several decades under the yoke of colonialism and imperialist aggression; it is still under bitter attack and subversion by reactionary forces. Reactionary feudalism, former colonialists, American imperialists, hostile governing circles in Thailand and other ASEAN [Association of Southeast Asian Nations] nations, the Peking

expansionists and hegemonists in collusion with the imperialists and reactionaries of every stripe, all these represent the combined forces against which we must constantly struggle. The enemies of our revolution are working in concert. They are arming and sending commando units and pirates against Laos, they are carrying on psychological warfare, engaging in economic sabotage, and seeking to provoke trouble in the country in an attempt to overthrow the people's government and roll back the process of social transformation.

What conclusions can we draw from these facts?

Our party considers, first, that the peaceful edification of Laos should be closely tied to the consolidation of the armed forces and the improvement of their combat readiness in order to defend the country's independence and the people's revolutionary conquests. Historical experience supplies irrefutable evidence: a revolution that cannot defend itself is condemned to death. Then, every step of the way, we must unmask the main enemy and concentrate our efforts on defeating him. Against our enemies we turn a policy of principle that consists in determinedly combating their intrigues and defending the conquests of the revolution. This policy is applied with flexible tactics, which is particularly important for a small country that has no great economic power or any great potential for defense. While refusing to compromising on matters of principle, our party seeks to avoid crisis situations in foreign policy.

Firmness and flexibility characterize our relations with Thailand, the other ASEAN countries, the United States, and other Western countries. In general, our foreign policy strives to ensure peaceful international conditions favoring the building of socialism in Laos. Our foreign policy aims especially at developing cooperation with all the countries of Southeast Asia on the basis of the principles of mutual respect, indpendence, and peaceful coexistence in order to ensure peace, stability, and prosperity in this region of the world.

The third conclusion to be drawn from Laos's special position is that it implies a link between the national and international tasks of socialist transformation in our country. The LPRP considers Laos to be an integral part of the socialist community. We are constantly strengthening our ties of revolutionary solidarity with Vietnam and Kampuchea, which has freed itself from the genocidal regime of Pol Pot and Ieng Sary. We attach special importance to the increase in cooperation with the Soviet Union and sister countries. While relying mainly on our own ways and means, we are also counting on the aid and support of socialist countries, which is an important factor for success in the defense of revolutionary conquests and in building socialism in Laos.

Another objective characteristic that is being taken into close account in developing and perfecting the strategy of transition is the country's low level of economic and social development. There is practically no heavy industry in Laos. Before the revolution, the country had a few hundred small businesses, essentially in light industry and food; each rarely employed more than 20 people. At the time, the United States helped build several businesses by using imported raw materials; they delivered their production to the Americans and their local servants and functioned as a nursery for the moneyed bourgeoisie. The new government has nationalized them.

The economy of Laos was caught until recently in the vise of feudalism and colonialism; it is still largely agricultural, with some small production from scattered family farms. Cottage industries have sprung up in several regions of the country, but they are generally no larger than family shops. Agriculture is unprofitable and has not yet succeeded in meeting the needs of the population. In some places, archaic methods of farming are still in use, and the division of labor does not go beyond the village or even the family. Trade exists only on the plains and in the towns.

The extension of commerce is hobbled by a lack of seaports and terrible transportation facilities. The country's present social system is characterized by a variety of economic structures. There are five of them: public (agricultural businesses and nationalized industries); cooperative, which includes a large part of the farmers (40 percent of the families in the rice-growing regions) and the artisans; mixed or state capitalist structures; private capitalism; and, finally and most frequently, small production units, where patriarchal, clan and tribal ties are sufficiently strong. The large majority of the Lao population lives in conditions of feudal underdevelopment. This means we have to build socialism by bypassing not only the capitalist stage but also that of centralized and developed feudalism. Having said this, what can we deduce from it that might be useful for our strategy?

First, our strategy must be one that is irreversibly directed toward a gradual transition to socialism. In this day and age we can skip the stage of developed feudalism and capitalism, but we cannot do the same with other stages objectively necessary for building the new society without jeopardizing the building of socialism. Thus, the party cannot agree to make transformations where the groundwork has not yet been laid. It rejects the temptation to socialize and collectivize too quickly without regard for actual conditions and to "install" socialism solely through administrative methods. After all, V. Lenin repeatedly emphasized that such behavior only undermined the building of socialism.

The party seeks to evaluate realistically the means at its disposal and the possiblities open to it. The 7th general meeting of the CC of the LPRP in 1979 noted that the country is at the very first phase of the transitional period. By our estimates, the transition to socialism will go through several stages and will take about 20-25 years, maybe even more, because it will depend on the course of events. The 7th general meeting emphasized that in moving into a new social order economic and social transformations and the building of socialism should be done simultaneously and be closely linked. In doing so, the building of socialism shall play a basic part. Why? Simply because there is practically nothing left for us to transform directly.

[8 Mar 82 pp 5-8]

[Text] Any further change can be made only by creating new productive forces and establishing new production arrangements. The decisive transformations for the present stage of the revolution have already been completed: the old government apparatus has been done away with; the power of the workers has been instituted; town and city lands, natural resources, and the property of the moneyed middle-class, large feudalists and other reactionaries has been nationalized; the bases of the public sector of the economy, including more than 500 businesses, have been laid; and an effective system of state control over the activity of private enterprise leaders has been set up. In order to enter

the new stage of transformations equivalent in depth and significance to the previous ones, it will be indispensable to lay the material and social groundwork, that is, to develop the forces of production, ensure conditions that will establish new productive relationships, raise the masses' living standards, etc. Obviously these tasks can be done only by laying the appropriate material and technical foundations starting with existing economic structures, including private capitalism.

Does all that mean a kind of moratorium has been invoked concerning future transformations? Obviously not. It simply means that social mutations must be brought about scientifically by keeping in mind the real needs and possibilities that exist in this respect.

Our revolution must first set about solving the problems inherent in the transition period, when, to cite the words of Lenin, the majority of the people is made up "not of workers who have learned in the school of capitalist factories but of typical representatives of the mass of exploited workers and by peasants burdened by the yoke of medievalism."

The working class in Laos includes some 50,000 workers. Adding administrative and military civil servants, they comprise 3 percent of the population. The rest are mainly farmers; the stratum of small businessmen and artisans is also rather important. As for the nation's middle class, it has always been small, and its members can now be reckoned at a handful. Is the transition to socialism possible in such a country?

Our experience and the previous experience of Mongolia and Vietnam indicate that it is. Indeed it is, if the campaign to install the new regime is led by the party, and the party adheres to the positions of the working class, which is itself informed by Marxist-Leninist ideology. In our context, the main thing is not the number of workers in the party but their adherence to the interests and objectives of the proletariat, not to mention the consistent application of Leninist principles concerning leadership of the masses and building the party. That was the starting point of the PPRL, which was born from the union of the national liberation movement and Marxism-Leninism. That is why it has been able to take on successfully the role of leader of the revolution and lead it to victory, with the solid union of the working class and farmers as forged by the party as the decisive factor. This factor will remain the decisive one until socialism is achieved. Under the specific conditions prevailing in this country, this will be the primary factor for achieving the dictatorship of the proletariat, which is the main instrument for defending revolutionary conquests, proceeding towards building socialism and reeducating the mass of small producers for the purpose of drawing them into collective production.

An especially important aspect that we always consider in developing the strategy for the transition period is the multinational composition of our country's population, for no nationality predominates. Laos is inhabited by nearly 70 nationalities and ethnic groups at various stages of economic, social and cultural development. The nationalities question is one of the basic ones of the Lao revolution and in building socialism in this country. The party seeks to integrate the solution of this problem with the tasks of socialist transformation of society; it is striving to give cohesion to the nationalities and ethnic groups in Laos by considering their individualities and common interests in the struggle for a better future.

Our cultural backwardness throws up serious obstacles to the transition to socialism. Our people have a rich and ancient culture that was interrupted by colonialism. Before the revolution, 97 percent of the population was illiterate. We have attacked illiteracy with great success in recent years; more than 80 percent of the people have learned to read and write. But there is a lot left to be done in this area, and it is only a first step toward the cultural revolution that we still have left to achieve.

In general terms, these are the main characteristics of the transition period in Laos. The party pays careful attention to them both when it sets some course of strategy in the transition to socialism and when it plans which forms and mechanisms to use in implementing the strategy.

The 4th general meeting of the CC of the LPRP in 1977 set forth the program of 3 simultaneous revolutions in the transition to socialism: a revolution in production, a scientific and technical revolution, and an ideological and cultural revolution. The first of the three is to play the leading role, the second occupies a key position, and the third will be somewhat more advanced than the other two.

These three revolutions are the component parts of a single process. They are closely related and markedly influence one another. A new society, productive forces and new means of production, and a new man, those are the objectives of these revolutions, which can be achieved only if undertaken simultaneously. However, each one has a particular place in the process of social development, each has its own function, and each pursues its particular objectives, which are shaped by the needs of building socialism.

What are the production goals of the revolution in the first stage of the transition to socialism? They consist first in completely restructuring the system of property, which means doing away with the capitalist private-enterprise economy and installing a socialist property system in two forms: property of the entire people and collective property. Then socialist production methods must be given the dominant role in the national economy; the workers must be guaranteed the right to be the collective rulers of the country. The way must also be found to transform individual production units into a great socialist production unit. The major objective for Laos is to turn the natural economy into a trading economy. The revolution in production methods will completely do away with the natural economy. That means it will have to reach into all the regions of the country, even the most remote and hard to reach; otherwise they will remain backward (as, for example, in Thailand, where the cities are modern while the countryside remains medieval). The disappearance of the natural economy is a decisive factor in transforming the psychology, lifestyle, and working methods of the rural people, who still do not know how to work and live as modern times require; these people have always lived in closed patriarchal communities and work only to feed themselves. The transformation of the natural economy has another important feature: Laos can effectively participate in the commercial, financial and other activities of the Council of Mutual Economic Assistance and thus become an entirely independent member of that organization only if it has suitably developed commercial production and trade. The production revolution has basic importance, but it cannot by itself lead to putting appreciable socialist production into practice and ensure the continued development of production conditions.

[9 Mar 82 pp 5-8]

[Text] In Laos, the most acute question concerning the transition to socialism is the following: how can the new production forces be developed and work productivity increased? The answer cannot be found outside of scientific and technological progress. Therefore our party considers the scientific and technological revolution to be a major one in the process of simultaneously carrying forth the three revolutions. What objectives does it set for itself? They consist in applying under the special conditions of Laos the achievements of science and technology in agricultural and industrial production, in improving management of the economy, in assimilating the advanced production experience of other countries, and in using effectively the scientific and technological aid of the socialist countries. Also, we should be able to realize full profits from our cottage industries as we seek to raise them gradually to a mechanized level of production. Thus, the scientific and technological revolution is essential for a backward country to do away with poverty and underdevelopment, thus taking the first steps toward the total victory of socialism.

The ideological and cultural revolution is a necessary and major factor in the transition to socialism. It aims to transform the awareness of the masses and their way of life and to form a new man permeated with a high degree of revolutionary spirit and extensive education; it is also intended to provide qualified people to manage the economy and society. Even recently, the large majority of the Lao people were illiterate, because they were victims of the policy of enforced ignorance applied for long years by the colonialists and the feudalists. In the area of ideology and education, the revolution must therefore take precedence over the others. The party is particularly attentive to the education of youth. In line with the LPRP's general policy, the press, radio, cinema, art and literature are to have much larger scope in order to meet the increased needs of building socialism. Also, the party is struggling against the vestiges of feudal and colonial ideology and culture and against the outdated customs and traditions inherited from the old society. The establishment of a new socialist culture and the training of the new man are important elements that will effectively stimulate new means of production and the scientific and technological revolution.

Our party is aware of the considerable difficulties to be overcome during the transition period. However, we also know our country's and peoples' potentialities. We started from a very low level of production, socio-economic relations and education. But laying the foundations of socialism does not mean starting from scratch. Success in national economic recovery and development achieved under the 3-year plan (1978-80) shows that our workers are capable of solving great economic problems under the direction of the party. Several dozen factories were built in those years; the second stage of the Namngum hydroelectric plant was finished, making it possible to increase electrical output considerably; nearly 5,000 km of roads were repaired or constructed; and aircraft and automobile companies were founded.

Our country has great natural resources; favorable conditions exist for developing forestry, agriculture and animal husbandry. We have great energy reserves and useful minerals: iron, coal, non-ferrous metals, raw materials for the cement industry, and others. The 8th general meeting of the CC of the LPRP (1980)

set forth a program of social and economic development for Laos for the period 1981-85 (the basis for the first 5-year plan of our Republic); its plans for the maximum use of all these possibilities.

The basic objectives of our 5-year plan are to strengthen the construction of the economy, to extend the state and collective sectors in the economy, improve the people's living standards, to strengthen national defense, and to speed up the scientific, technological and cultural progress of the country. For the 5-year period, the plan provides that national production shall increase 65-68 percent; the volume of agricultural production, 23-24 percent; industrial production, more than twice; and by the end of 1983, illiteracy among young people shall be erased. Substantial changes in the structure of society will be necessary to carry out the plan. The plan also provides, in particular, that by the end of the 5-year period the numerical composition of workers and state employees will reach 40-45 percent. Implementation of the plan will be the decisive step in the first stage of Laos's transition to socialism. What are the essential problems of the country's economic development?

First, there is the structural problem. To solve it, industry, agriculture and lumbering must be put under a single agro-industrial structure on a national scale. Also, agriculture and lumbering must give impetus to the development of industry, which will stimulate them in its turn. Conditions in this country are not favorable for accelerated industrialization in the first stage of the transition to socialism. At the moment, the country cannot provide the equipment, labor and management for construction and industry. That is why the implementation of a socialist economy in this country consists in beginning with the development of agriculture and lumbering, which shall meet the needs of the population and national defense and make wood products for export in exchange for machinery and industrial equipment. The basic task of agriculture is to solve the food problem in coming years and to make it eventually unnecessary to import food products.

The party considers the grouping of farmers into cooperatives as the decisive condition for transforming agriculture and lumbering into a structure on which an industry can be built. We shall also lay the foundations for a state agricultural and lumbering economy. In doing this, we shall consider the condition and existence of agricultural areas, natural resources, economic experience and traditions of the regional population involved. This will help to reorganize production systematically, judiciously distribute and use natural resources and labor in accordance with the unified state plan.

The party also attaches great importance to another aspect of the structural problem: the establishment of a proper relationship between locally and centrally managed economies. This will involve optimal use of the principle of democratic centralism in the national economy. A few years ago, especially in 1976-77, the effectiveness of our economic policy suffered from a tendency toward excessive centralism. We are correcting that and at the same time trying to avoid rash decentalization of the economy. The party feels that in the initial stage of building a socialist economy, when agriculture and lumbering are the basis for industrial development, the regional economy should be developed first and that the greatest efforts and amount of resources should be devoted to it in order to lay the bases for a centrally managed economy. To do this, it is indispensable to reorganize the system of distribution of labor, centralization and

cooperation in production first at the provincial and then at the national level. This seems to be the best way for Laos, because it meets the objective needs of the transition period, which is shaped by the transition from small commercial production to large-scale socialist production.

In practice, economy-building in our country and in other socialist countries reveals the need to make widespread use of the law of intrinsic value, commercial relations, balanced management, credit, prices, and profits in order to ensure correct relationships between production and consumption and accumulation and consumption. This means that one of the first things that must be done is to set up an efficient organization of trade and distribution. There was a time when we underestimated the importance of all this.

[10 Mar 82 pp 4-7]

[Text] It has been emphasized that the national economy can develop, wider production be stimulated, the people's material needs be met, and society's increased wealth be insured only if trade and distribution are well organized, price policy is applied judiciously, purchasing and marketing are done properly, and distribution costs are reduced in order to encourage trade and satisfy in a timely manner the needs of industry. Achieving all that will make it possible to overcome contradictions in the economy in the transition period, namely contradictions between the possibilities of production and the needs of the population, between capital formation intended to speed up economic development and the growth of consumption as well as to improve the material condition of the masses.

To solve these complex problems, we are making great use of fellow countries' experience in making the transition to socialism, mainly the Soviet Union. The new economic policy, the works of Lenin, such as the immediate tasks confronting the soviets' governmental power and the tax in kind that they collect, all have particular importance for us. The ideas they express constitute the strategy outlined by the 7th general meeting of the CC of the LPRP. Basically it is a specific expression of the general principles of the NEP [New Economic Policy] formulated by Lenin and applied to Laos. The Leninist thesis on commerce as a "link" in the chain of historical events "which we must seize with all our might as the government of a proletarian state and as leaders of the Communist Party" has become the byword in Laos for the present transition period, where commerce is the main channel of distribution.

We are encouraging domestic trade by all possible means; it will almost double in the coming 5-year period. We are actively helping develop foreign trade, in which our plans also provide for growth. The state is also encouraging, within limits, private trade, which it controls. The government is stimulating trade between urban centers and the countryside, and transportation development is helping with that. Domestic traffic in merchandise will increase 85 percent in the 5-year period. Rules are being introduced on collecting taxes in kind. These rules are stable and uniform for the whole country and will make it possible to increase harvests, consolidate the process of cooperativization, raise buying volume, supply food to the population on a larger scale, and help stimulate agricultural production. Farmers are being encouraged to sow for a second harvest. If, for example, a farmer plants another crop on his field during the dry season, it will not be taxed. The income tax on cooperatives has been reduced considerably; in mountain regions, where farming is very difficult, it is not collected. The state encourages the use of advanced methods of farming.

Thus, farmers who are starting to practice irrigated rice-growing are exempt from the farm tax for 3 years. All these measures tend to transform old means of production and to form new ones, to restructure the distribution of labor, and to create the technical and material bases for making the transition directly to socialism.

History has placed a heavy responsibility on our party for the destiny of the revolution and the future of the Lao people. If we are to fulfill this responsibility honorably, we shall have to maintain unswervingly the three unities: unity of the people, unity of the party, and unity of Laos with its fellow socialist parties.

The unity of the people in the transition to socialism is an extensive and close alliance of city and country workers, intellectuals, and all levels of the population, including representatives from former leadership circles who have willingly agreed to be reeducated in order to become true workers. The indissoluble alliance between workers and farmers grouped together in cooperatives is the nucleus of this great unity. In the process of accomplishing the three revolutions, the party is striving to strengthen and perfect education and organization within the working class so that it may have the leading role in society. The LPRP is also actively working on education among the farmers in order to unite them as the process of socialist collectivization takes place. The national intelligentsia has an extremely important role to play in accomplishing the tasks of the transition period. We are therefore being careful to educate it in the spirit of Marxism-Leninism and of a close alliance between the workers and farmers. The party also supports members of the nation's middle class, religious and other sectors of society who align themselves with progressive and patriotic positions and are supportive of state policy.

In striving increasingly to consolidate the unity of the people, we are paying ever more attention to the problem of nationalities. The party is constantly extending activities tending to raise the level of educational effort among the various ethnic groups, to improve instruction and cultural and medical aid in regions populated by national minorities, and to train cadres from the different ethnic groups for building socialism. The activities are also intended to ensure close cohesion of the masses within a broad, united national front and within various social organizations, such as unions, youth and women's organizations, and others.

It is vitally important for us to consolidate the interior unity of the party. As it is the guiding force of the people and the headquarters of social construction, the party must be solidly united and have a single ideology and a single will. Only then will it be able to draw the workers and the whole people into the effort for the transition to socialism. Intent as we are on consolidating unity in the ranks of the party, we are aware that the LPRP was formed in a country characterized by special conditions and by backward social relationships. Our cadres and party members obviously could not help being influenced in their conceptions by this fact. We are therefore continuing to struggle against petit-bourgeois views, the farmers' patriarchal mentality, and the influence of feudal, bourgeois and imperialist ideology. At the same time, we are vigorously confronting all manifestations of opportunistic attitudes and combating all kinds of

petit-bourgeois illusions and deviationist tendencies. One of the main orientations of the party's ideological activity is the internationalist education of its members and of the whole people. This orientation flows organically from the LPRP's strategic policy, which is intended to consolidate unity with fellow parties in the socialist community and with the international communist workers movement. Our party's internationalism springs from its revolutionary traditions, its ideology, and its political stance. The solidarity of countries where socialism exists and of other world progressive forces have helped us overcome the colonialists and imperialist aggressors. It is helping our people today to advance confidently along the path of building socialism.

TIN PRODUCERS ASSOCIATION JUSTIFIED

BK171221 Kuala Lumpur International Service in English 0800 GMT 17 May 82

[Unattributed commentary]

[Text] The three tin producing nations of ASEAN--Malaysia, Indonesia and Thailand--have agreed in principle to the formation of a Tin Producers Association among themselves. It is also open to other tin producers who would like to join the grouping. This decision was taken after a 2-day meeting in Kuala Lumpur over the weekend by the countries' ministers in whose portfolios lie the tin mining industries.

This is a defensive measure to safeguard the interest of the tin producers and not, as some consumer countries are likely to view it, as a mechanism of confrontation. It is a poor response from them for the ratification of the sixth international tin agreement that has forced the ASEAN tin producing nations to get together to form such an association. This can be seen from the fact that to date and past the April deadline that only slightly more than 50 percent of consumer votes has been received. For the agreement to come into force provisionally, 55 percent of the votes is required from both the producer and consumer countries. And for the agreement to come into force definitely, 80 percent of votes is required from both camps.

Producer countries have produced more than the required 80 percent of votes, thus indicating that given the option they would prefer the international tin agreement [ITA] which has served both producers and consumers well in the past 26 years. This can also be seen in the willingness of producer countries to make further efforts from now until 1 June to get more consumers to join the tin pact.

Rather than taking the view that the producers in ASEAN are out for a confrontation, consumer nations should instead give their support to them. Besides the uncertainty of ratification of the sixth ITA, there is the depressed prices of tin to consider thanks to the United States. Its General Services Administration's unloading of tin from its stockpile has caused havoc in the world market despite the fact that the United States is a member of the fifth international tin agreement.

There was jubilation among both producing and consuming countries when the United States joined the fifth pact for the first time. As it turns out its membership has been more destructive rather than productive. Since its entry into the fifth ITA it has been working more often than not against the spirit and essence of the tin pact which is to maintain order in the market for the mutual benefit of both the producers and consumers.

In 1977, when there was a shortage of tin, it failed to answer producers' pleas to ease the prevailing shortage by unloading tin from its stockpile. Last year, when there was an oversupply of the metal in the market, instead of holding back its release, it went against the wishes of the producers and started to unload the metal from its stockpile. If this is not enough indication of its destructiveness, further proof can be seen in its dumping of 100 metric tons of the metal on a weak market on the very day that the International Tin Council made export controls mandatory. Despite this the United States could still say that it will cooperate even if it is not a member of the sixth ITA.

Against such U.S. actions and the uncertainty over the ratification of the sixth ITA, is it any wonder then that producer countries would resort to all means possible to safeguard their own interests?

BRIEFS

FRENCH MINISTER ENDS VISIT--French investors have reached agreement with local partners for the setting up of two joint venture agricultural projects. Another three joint ventures are in the final stage of negotiations. The projects are prefabricated housing, aquaculture and the building of hospitals. This was disclosed by a French official in the 51-member French delegation led by the French deputy prime minister, Mr Michel Jobert, at Kuala Lumpur International Airport before leaving for home this evening. He said France attached great interest to Malaysia. This was demonstrated by the large delegation led by a high-ranking minister on a 5-day visit to Malaysia. The delegation included 35 leading businessmen, six bankers and 10 officials. He pointed out that the French leader had an overall review in all fields of its cooperation with Malaysia through discussions and talks with Malaysian leaders. He added that more French investment in Malaysia could be expected in the near future. [Text] [BK111427 Kuala Lumpur Domestic Service in English 1330 GMT 11 May 82]

JANUARY OIL, NONOIL EXPORTS--Peninsular Malaysia exported a total of 422,880 tons of crude petroleum valued at 282.3 million ringgit in January, more than half of it to Singapore. The republic was sold a total of 274,990 tons of the commodity valued at 183.4 million ringgit. Japan was sold a total of 147,890 tons valued at 99 million ringgit. In January last year, a total of 419,969 tons valued at 304.7 million ringgit were exported to Singapore, Japan and the United States. Peninsular Malaysia also exported a total of 119,704 tons of rubber valued at 229.5 million ringgit in January. Export of tin and tin concentrates during the month totalled 6,090 tons valued at 212.3 million riggnit with 3,100 tons or about half of it valued at 108.3 million ringgit going to Holland. [Text] [BK161505 Kuala Lumpur Domestic Service in English 1130 GMT 16 May 82]

JANUARY TRADE SURPLUS--From a deficit of 609 million ringgit in December, peninsular Malaysia recovered to record a trade surplus of more than 98 million ringgit in January. The recovery was achieved through a reduced import from 2,311 million in December to 1,450 million in January and export from 1,702 million to over 1,548 million ringgit. Preliminary figures released by the Statistics Department showed that machinery and transport equipment valued at 544 million ringgit continued to form the bulk of the import for January. This was followed by mineral fields, lubricants and allied products valued at 260 million and manufactured goods valued at nearly 205 million ringgit. OPPOSITION PARTY TO BAN U.S. NUCLEAR WARSHIPS VISIT

BK120313 Hong Kong AFP in English 0248 GMT 12 May 82

[Text] Wellington, 12 May (AFP)--New Zealand's opposition Labour Party is to make a direct approach to France over its continued nuclear testing in the South Pacific, and would ban American nuclear warships from its ports.

Labour leader Bill Rowling has told applauding party delegates in Wellington the time "has come for more direct action" on the testing issue. He said he would put the case personally to French President Francois Mitterrand in July this year.

Mr Rowling said he would seek the backing of Pacific island national states beofre his meeting with Mitterrand. In his most open warning yet, Mr Rowling told the United States a Labour government will ban its nuclear warships from New Zealand's ports.

He said with the present visits of nuclear warships (like the cruiser USS Truxten later this month) the United States was "thumbing its nose at a large body of New Zealanders' and he again called for changes to the Anzus Alliance. "In recent times we have made it abundantly plain that Anzus is no longer acceptable in its present form."

Mr Rowling said he has raised the issue with U.S. leaders like Vice President George Bush, "with the expectation that our views, and the views of a growing number of New Zealanders on the question of nuclear weapons in the Pacific, would be respected."

"I do not regard a flag flying visit of nuclear ships into the harbour of this city (Wellington) as respecting the views of New Zealanders on this question."

The 600 delegates gave his statement a foot stamping, clapping and cheering ovation. Mr Rowling wanred if other nations do not respect New Zealand's wishes "then we will take such unilateral action as is necessary."

He rejected claims by both the United States and New Zealand's National Government that banning nuclear warships from New Zealand ports was incompatible with a revised Anzus defence pact.

UNITED STATES AID CONCEPTS TO THIRD WORLD DENOUNCED

Lahore VIEWPOINT in English 13 May 82 p 6

[Text]

DEFINING its future aid policy, the Reagan Administration has issued new guidelines which state bluntly that henceforth US aid will be tied directly to the pursuit of America's strategic interests. The full text of the document prepared by the State Department has not yet been released officially, but the restricted circulation allowed has permitted informed publicists to analyse its basic features and its possible consequences. Assessing the change, one US diplomat has said that "the new policy sets out an explicit rationale for spending aid money as a lever for advancing US defence policy", and concludes that "it was the death knell of the liberal notions from the 1960s about world economic development as an end in itself".

Since his assumption of office, President Reagan has been responsible for limiting aid to the Third World and international agencies responsible for development in countries suffering from acute food shortages and economic stagnation. Increasingly, US aid has concentrated on what is called security assistance. It is argued, without any real explanation, that military hardware will be more useful for stability than more aid to balance the budget, feed more people, or modernise the economy. The new policy declaration will, therefore, cause no great surprise.

The United States embassies and aid agencies have been given a new order of priorities. The directive lists eight possible justifications for extending financial help. The top category is that of countries where aid can directly advance US strategic aims or where the United States can obtain military facilities. It is said, with a strange disregard for realities, that military aid, not economic assistance, has a better chance of maintaining stability in areas where America has a stake. Therefore, US aid will now have direct political and often military purposes. For example, what is called restoring "the strategic focus" to assistance programmes will mean that on the top of the list of recipients will be countries like Israel and Egypt or El Salvador. The second highest category covers what are described as friendly countries that are ready to offer military facilities, as for example Oman, Somalia, Kenya, and, some US policy-makers hope, Pakistan. Then come countries

whose political institutions are said to be under threat from outside Powers or whose governments are engaged in a struggle against what, in the State Department book, is described as communist-backed terrorism. Another theme of the new aid plan is to help stabilise countries that are prepared to join the campaign against the spread of Soviet influence and are willing to extend opportunities for US business to expand its activities and influence in foreign markets. The very last item on the list refers to grant of aid in terms of international solidarity for the broad purpose of general economic growth with a view to improving living conditions for the people.

The new aid policy crystallises the attitudes manifested by the Reagan Administration in its recent decisions and the advice often given by the President himself that the poorer countries must not expect the richer industrialist States to continue to help them, and that they should try to learn about the blessings of free enterprise and open their doors wide to foreign investment. That no country acting on such advice has succeeded in overcoming its problem does not seem to concern US theorists. Reaganomics, in the opinion of many American economists, promises chaos for the US economy —which has already registered the largest rate of unemployment in forty years—, but whatever its results at home for the rest of the world, and particularly the developing countries, the possible consequences can only lead to unmitigated disaster. This also means that whatever scant hope remained that resumption of the North-South dialogue may lead to the first hesitant step towards a new international economic order will vanish. More important, the short list of countries qualifying as recipients of US largesse will have to think again about accepting the US aid in view of the conditions laid down. If every recipient must become an active partner in serving US strategic interests—which embrace, for example, the protection and maintenance of Israel and backing it in its vandalism and supporting its aggressive designs, and US plans for establishing hegemony over the Gulf area because of its oil resources, or keeping in power blood-thirsty dictatorship in Latin America—the countries concerned will necessarily be compelled to revise their policies and seek other means of developing their defence potential and buttressing their economies.

JAMAAT-I-ISLAMI CRITICIZED FOR PRO-WEST STAND

Lahore VIEWPOINT in English 13 May 82 p 11

[Text]

SINCE their wrath fell upon two dailies, the students' wing of the Jamaat is busy fighting a losing game —for battle it cannot be called.

Now, the Islami Jamiat-i-Talaba's thunder squads (as their toughs are now known in educational institutions) succeed in getting boys and girls out of the classrooms, since the already bullied teachers sit in their staff rooms, or find it safer to let the students go their way without trouble.

The latest attempt by them is trying out joint students-labour protest rallies, and if the Jamaat's Punjab Secretary is to be believed newspapers publishing 'obscene material' will not be guaranteed safety (his latest statement said so).

The Islami jamiat-i-Talaba, Punjab office-bearers, on the other hand have warned the authorities that their 'patience' in not marching on should not be misconstrued as any kind of weakness, for they have been assured of being joined by workers, teachers, lawyers and some other sections of the public. One wonders why they have not mentioned a section of journalists as well, which in their camp were also quite reluctant since the criminal assault on newspaper offices.

IJT'S TACTICS DENOUNCED

Lahore VIEWPOINT in English 13 May 82 p 11

[Article by Hussain Naqi]

[Text]

FEW of us were aware that Mian Tufail Mohammad's recent jaunts to a particular set of Islamic countries would include a call on Egyptian President Hosni Mobarak, to congratulate him on the success of the Camp David Accord.

As the leader of a highly centralised organisation, the Jamaat-i-Islami, Mian Tufail must have taken his party's *shoora* in confidence before going to Egypt, in order to compliment the Egyptian President on a so-called accord which has been opposed not only by Arabs, but also by the Organisation of the Islamic Conference and even pro-West and pro-U.S. Rabita-i-Alam-i-Islami.

The Camp David Accord brought recognition for the Zionist entity from Egypt and more violent persecution of the Palestinians, both within and outside the lands occupied by the racist Zionists.

Positive violation

It is also worth noting that Mian Tufail's Jamaat not only behaved in a manner contrary to public opinion in the Muslim world, but also violated the publicly-held official position on the Camp David Accord. As such it cannot be believed that Jamaat sacrificed its position to obtain the release of a couple of hundred *akhwans* in prison since the late Anwar Sadaat's days. It was, in fact, in keeping with its pro-U.S. stance, which was being covered up under one pretext or another.

Now it appears, this group of so-called Islamic ideologists, which has definite links with similar pro-U.S. and pro-West organisations working under religious cover, were ready to come out in open support on an unprincipled compromise on the Palestinian people's basic right of freedom of self-determination. As for the Pakistani people, this is not the only or the first instance of Jamaat taking a position opposed to their basic postulates.

On the Palestinian issue Pakistan's position has been clear since its inception, and the Quaid-i-Azam had, even before the inception of Pakistan, made this enunciation. The people of Pakistan, therefore, will always uphold the cause of Palestinian sovereignty over Palestinian territory.

All machinations to the contrary will only alienate those conniving against the Palestinian people's cause.

PAKISTAN-INDIA NO-WAR PACT DIALOGUE, RELATIONS ANALYZED

New Delhi INDIA TODAY in English 15 May 82 pp 54-62

[Article by Suman Dubey]

[Text]

FOR A diplomatic pantomime that has, for three decades, yielded few punch lines, the latest tableau between India and Pakistan over a no-war pact was a familiar scenario to the vast audience on both sides of the border. The script, the lines, the actors, the props and the setting had echoes of past history. The surprise lay in the ease and rapidity with which the impromptu script of the pact disintegrated amid a cacophony of recriminations from both protagonists. The tragedy lay in the fact that, at a time when both countries are on an extravagant arms-buying spree, a no-war pact could have been the most significant breakthrough in Indo-Pakistan relations in a decade. The irony lay in the fact that the 10th anniversary of the historic Simla Agreement, the last conclave which brought peace for the subcontinent, is just around the corner in July.

Yet, if last fortnight's events were any indication, the last thing on the minds of the cast was the tentative dialogue on the pact. Mrs Indira Gandhi was closeted with Riyadh's white-robed rulers convincing them that India harboured no ill designs on its neighbours. Pakistan's new Foreign Minister, Sahabzadah Yakub Khan was wooing the Chinese leadership in Beijing at a time when relations between Beijing and New Delhi are finally at thawing point.

His Indian counterpart, P.V. Narasimha Rao, was nibbling noodles in Japan and dangling some hooks of his own for closer ties between the two Asian giants. And Zia himself, the most controversial member of the subcontinent's diplomatic quartet, was rewriting the history of Kashmir when he told veteran journalist Kuldip Nayar in Islamabad that the three northern districts of that disputed territory, Gilgit, Hunza and Skardu, were an inalienable part of Pakistan (*see interview*).

Jaundiced Views: If this didn't seem to be an exercise in confidence building between two very suspicious neighbours, it was hardly out of keeping with the disposition of the lead performers involved. Indian and Pakistani policies towards one another are basically the handiwork of just two people, Mrs Gandhi and Zia, and neither has so far given much evidence of being able to rise above their jaundiced perceptions of one another and get down to doing serious business. Mrs Gandhi, ever suspicious of the military dictator in Zia, remains convinced that the General is bent upon undoing her painstaking handiwork which produced the epoch-making Simla Agreement. Zia, convinced that Mrs Gandhi remains an unremitting hawk on the subject of Pakistan, finds it just as hard to overcome his fear that she plans once again to dismember his country.

Thus, the General could hardly have chosen a worse moment last month to tell his Majlis-i-Shoora, a federal advisory council hand-picked by him to give the martial law regime a public face, that he was appointing three "observers" to the Majlis from the northern areas. "Why upset a status quo that even Pakistan has respected for 35 years?" queried a veteran Indian diplomat in Pakistan.

Nor did it help matters when it appeared clear that Islamabad was talking in two voices. Zia's remarks were an unexpected departure from his prepared text and

when he later confirmed his view to Nayar. Pakistani diplomats pleaded with Nayar to put Zia's "northern areas" remarks off the record. Had Zia asked him, Nayar says he would have complied; as it was, Nayar published the relevant extracts in his syndicated column. Later, in the course of a relaxed 90-minute interview with INDIA TODAY held over two sessions, Yakub Khan waived discussion on the northern areas question on the plea that he had to first answer the Indian Government "through proper channels" before talking to a newsman. No answers have yet materialised, but an official asserted that "it was not intended at any stage to throw into the fray another issue which might be considered contentious."

Clumsy Response: With that it was patently clear to even the most optimistic observer that the tentative Indo-Pakistan dialogue had degenerated from the sublime to the ridiculous. India didn't exactly cover itself with glory with its clumsy response to Pakistan's original offer. Indeed, had it persisted with its knee-jerk reaction that Zia was merely stealing an idea first proposed by Nehru in 1949, Indian officials would have effectively set the clock back one decade: the 1949 offer required international arbitration, a concept finally buried with the Simla Agreement.

It was bad enough when India's Bali Ram Bhagat and Pakistan's Agha Hilaly—who had smoothed the way for the Shahi-Rao parleys last January in a secret visit to Mrs Gandhi as a Zia emissary last year—should find themselves in a slanging match befitting fishmongers rather than diplomats at the Human Rights Commission in Geneva. It was worse when, piqued at Hilaly's comparison of Kashmir with Palestine and Namibia, India chose to postpone the talks indefinitely and Mrs Gandhi resumed her war-threat-from-Pakistan refrain.

Not to be outdone, Pakistan's foreign office unexpectedly went to town to protest at remarks attributed to departing Indian Ambassador Natwar Singh in which he allegedly belittled the two-nation theory and seemed to advise Pakistan to cut its armed forces by half. The Pakistanis didn't take time out to find out that Singh had been misquoted and that the censored Pakistani press, which tends to depict its neighbour in less than flattering terms, declined to print corrections issued by the Indian Embassy. Observed Natwar Singh wryly: "Indo-Pakistan relations are accident prone. We have to keep applying diplomatic first aid."

Complex Exercise: Diplomatic hospitalisation was what the two countries appeared to need most last fortnight as they were back to their familiar roles of blowing hot and cold on well-worn issues. "The no-war pact is beginning to look like a squash ball that has been bounced off too many walls," wryly observed a Pakistani diplomat in Islamabad. Wrote Inder Malhotra in the *Times of India*: "The prolonged negotiations, stalled since the end of February, have degenerated into an essay in scoring debating points." The two were once again viewing each other through what Yakub Khan described as "some strange refracting medium that seems to distort our perceptions of one another".

In India this denouement seemed to confirm its worst doubts. Zia, never seen to be particularly trustworthy, simply seemed to confirm his archetypal image of a military ruler more interested in making propaganda to shore up his image at home and among his allies than in getting down to brass tacks. Did India really want to negotiate with a man who very clearly had no popular sanction and, in the process, perhaps unwittingly, prolong his undemocratic rule? Hadn't Zia told Indian journalists—for example, Rajendra Sareen of Public Opinion Trends (POT) on June 7, 1981—that the "Simla Agreement provided an adequate and comprehensive framework for the normalisation of Indo-Pakistan relations"? Why was he now so keen on a brand-new no-war pact which, as he had once told INDIA TODAY (February 16-29, 1980), was "not worth the paper" on which it was written?

If Zia was really so concerned with tension on his Afghan borders, why hadn't he moved even one military unit off the calm and undisturbed Indian border to keep the peace following the huge influx of 2.6 million Afghan refugees or guard against military incursions from a regime Pakistan refused to acknowledge? Hadn't Mrs Gandhi's special emissary Sardar Swaran Singh, as long ago as late 1980, made it clear that India had no interest in creating difficulties for Pakistan and would look the other way if the troops manning the Indian border were thinned?

Above all, douots came frothing to surface that Zia's position on Kashmir was hardening and that he was using the cover of the no-war pact negotiations to present India with a *fait accompli* of integrating the northern areas and tossing the dispute back into the international arena in spite of the Simla Agreement which describes it as an issue to be settled purely bilaterally. And, if Zia was making capital out of the negotiations, what guarantee was there that once he had a no-war pact under his belt he would not simply turn his back on everything else: the joint commissions, trade, cultural agreements, and the entire diplomatic paraphernalia that usually ties two neighbours trying to be friendly with one another.

Doubts can obviously be contagious, and some of these ideas were also riding high in the minds of Pakistani diplomats who, watching the fragile Indo-Pakistan dialogue crack, were trying to read the pieces. In background briefings and formal interviews, officials in Islamabad's imposing foreign office spelt out what can only be described as the moderate line, in contrast with the harder positions outlined by Zia. The arguments are on one point, at least, unequivocal. Pakistan is feeling its way towards a new agreement that will commit the two countries to abjure force.

THE MAN who fields the formal questions in the foreign office, newcomer Yakub Khan, does so with a dexterity which belies his newness to the job but speaks eloquently of his 10 years as ambassador in some of the world's toughest capitals (INDIA TODAY, March 31, 1982). Sitting in a period chair, a benign depiction of Pakistan's founder Mohammed Ali Jinnah gazing serenely from a wood-panelled wall, the nattily dressed Yakub Khan gesticulates agitatedly with carefully manicured hands as he strikes a conciliatory note from the start. His first remarks on Pakistani soil on replacing Agha Shahi were to outline the importance of India in his scheme of things. The collapsed dialogue over the no-war pact is his first, abrupt test.

"The no-war pact endorses and reaffirms the position stated in the Simla Agreement," he says in carefully measured tones, feeling his way with care. "It is obviously a desirable end to pursue at a time when tensions and suspicions in our region have reached a high point." Asked why there is any need to duplicate the Simla Agreement at all, Yakub Khan bounces back more quickly, "What, the question could be asked, what would be the disadvantage of signing such a pact even if it is a reinforcement of a position that already exists? I find it difficult to understand what the reasons could be for being suspicious, for regarding such a suggestion with suspicion."

Yakub Khan agrees that a no-war pact without progress on other fronts—travel, cultural exchanges, trade—would be a futile aim. "In fact, as you know, the joint commissions would be tackling just that. What we would not like to see happen is a substitution of the no-war pact by merely the joint commissions. We think the two should complement each other. In fact, our position is that the signing of such a pact would create conditions which would be more comprehensive and deeper on other fronts by dispelling, dissipating the clouds of suspicion which at the moment seem to haunt certain quarters."

Strategic Connection: Still, he is not yet prepared to take up Mrs Gandhi's offer of a friendship treaty. Mrs Gandhi, says Yakub Khan, brought up the idea of a friendship treaty informally with Pakistani journalists visiting India. "Next day we were told officially—that Mrs Gandhi had mentioned this idea only because a Pakistani journalist had referred to the Indo-Soviet treaty. As you know, the Indo-Soviet treaty has military clauses reflecting a strategic connection between the signatories. Indo-Pakistan relations have a different context. A non-aggression treaty could be given a number of titles which can be discussed. The substance of an agreement is much more important than its name."

It was significant that, as the fortnight drew to a close, it was Yakub Khan, a man who forsook a promising military career rather than accept what he saw to be his country's wrong policies in erstwhile East Pakistan in 1971, should have taken the initiative to try and resume the dialogue. Pakistani officials gave the impression that while they did not want to seem to be over-

anxious or over-zealous, they were keen to see the no-war pact through. "The ball is in Delhi's court," said one. Yet, only days later Yakub Khan had written to Narasimha Rao saying that he wanted to continue with the talks on the basis of the February I communique issued after the first round of talks, an initiative which saved India from having to find an opportune excuse to resume the dialogue.

There are good reasons for Pakistan's persistence. The strategic view from Islamabad is far from reassuring. To the far west, Iran's Islamic revolution has apparently stabilised but with Ayatollah Khomeini's regime far from secure, and the superpowers hardly reconciled to its peaceful existence, the country remains in an unpredictable limbo. Across the border in Afghanistan the presence of Soviet troops is far from reassuring even though a political settlement with the Babrak Karmal regime could be had for the asking and the Soviets are unlikely deliberately to provoke a greater sense of insecurity in Pakistan. Yet, the gnawing fears persist: people close to the martial law regime speak of the Soviets training legions of young tribesmen from among the Pathans and Baluchis for possible subversion of the country's sensitive western tribal reaches.

Sensitive Border: "All of a sudden, our entire western border has come alive," says retired brigadier Noor Hussain, director of the nine-year-old Institute for Strategic Studies. "If that doesn't shake the policy makers in the Indo-Gangetic plain, then I don't know what will. What you don't seem to realise is that the Soviets are in the traditional security zone of the subcontinent, yet the same psyche seems to be at work as when the invaders of the past came through the Khyber Pass."

And, from the verdant avenues of Pakistan's tidy capital—which one journalist says consists of bores, bureaucrats and boulevards—the view towards India isn't particularly reassuring either. After two wars, each of which paved the way for the dismissal of a military regime, Zia knows that he has neither the military muscle nor the industrial might to wage war with India. The F-16s notwithstanding, Pakistan's overall punch—military and economic—would eventually be no better than a temporary lurch in comparison with the weight of India's military and economic might.

Even though in strictly military terms there is rough parity on the long Indo-Pakistan border, nobody is in any doubt in Pakistan that if a war did not fortuitously end in a stalemate it would be a disaster. "We can't afford a war," says Tahir Ayub, a son of Field Marshal Ayub Khan. "It will be total ruination." Even a Zia opponent such as Sherbaz Khan Mazari, leader of the Baluchistan-based National Democratic Party is explicit: "Zia wouldn't be foolish to launch a war. Past experience teaches that that would be the end of his rule."

Changed Policy: Pakistan's ally, the United States, is likely to look askance at any war-like adventure the Zia Government might have in mind. There is reason to believe that the Reagan Administration has travelled some way from the time when it whole-heartedly embraced the Fukuyama report (INDIA TODAY, September 1-15, 1981) and embarked on its single-minded pursuit of strategic overkill along Soviet frontiers. Speaking at Karachi's Institute of Foreign Relations, a recognised public platform for diplomatic statements, US Ambassador to Pakistan Ronald I. Spiers corrected an earlier policy statement last fortnight when he told a high-level Pakistani audience that "American weapons are supplied for use only in self-defence".

Earlier, Spiers had been quoted by a Karachi daily as saying that the United States imposed no conditions on the use of arms it supplied. Though American assurances on this score have in the past been hardly worth the paper on which they were written, Spiers did go on to say, "We are confident they would not be used for aggression in any direction, and we do not believe that Pakistan intends to attack India or that India intends to attack Pakistan." Debunking a popularly held myth in Pakistan, Spiers, undoubtedly aware of Mrs Gandhi's proposed visit to Washington, said that though India and Pakistan had their differences, "We do not believe that it is anybody's (meaning Soviet) proxy."

IN FACT, the US interest at the moment seems to be to bolster the morale and muscle of the martial law regime so that it can play a more useful role in the Gulf, an area of prime strategic interest in Washington, if it is called upon to do so. Writes Girilal Jain, "Pertinent for us is the fact that the Americans appear to have concluded that Pakistan needs assurance of security on its eastern borders in order to be able to play any worthwhile role in the Gulf." Some two million Pakistanis already work in the Gulf.

sending home $3 billion a year—a sum in no mean way responsible for the relative prosperity in Pakistan, and for shoring up its import-oriented, deficit economy—not to mention the Baluchis who fight for the Oman army, the Pakistani pilots who fly fighters with an Arab flag, and the division stationed in Baluchistan for contingencies beyond Pakistan's borders.

Pakistan's alliance with the United States is far from universally welcome in Pakistan. The country's popular anti-US sentiment—expressed in a particularly ugly fashion when the US Embassy was attacked and set afire in November 1979—has been somewhat curbed by the Soviet thrust into Afghanistan. But there is resentment at the enormous influence Washington wields in Islamabad. "Pakistan foreclosed an independent policy on Afghanistan the minute we took arms from the US," complained a well known Pakistani journalist. The Pakistan People's Party (PPP), is even more forthright in its condemnation. "Zia is a stooge of Reagan," says one leader who has served time in jail. "As soon as we come to power we will recognise the Karmal regime. The Soviets are good neighbours for us."

Perhaps Zia was paying lip-service to these sentiments when he dropped his bombshell in the Majlis-i-Shoora last month, saying that the US had asked if it could station troops and military equipment in Pakistan for contingency requirements. Hurried consultations with the Americans later produced the somewhat less than convincing explanation that "certain visitors and other persons who did not represent the US Administration" had suggested US bases in Pakistan while the two countries were discussing the arms package.

Zia also seemed to realise that having bought himself an impressive package of arms, he would have to make more than a token declaration to smooth feathers ruffled by his action. It was no coincidence that the first talk of a no-war pact came in the concluding paragraphs of a press release announcing the US-Pakistan arms deal—hardly the place for a major, genuine diplomatic initiative. The Soviets, now a close northern neighbour, were hardly likely to view his new military toys with any more favour than India—or even the Gulf countries who can hardly be expected to rely on Pakistan if it can't clear the decks with India. It was not for nothing that Mrs Gandhi's highly successful Saudi visit was viewed with alarm in Pakistan.

Popular Support: More than any of this, the most powerful impulse that has kept the Zia Government on the track of the no-war pact is the vast popular support for it. "I am amazed," says a scholar of diplomacy. "In India you have open minds about everything but in regard to Pakistan you don't frequently draw the right conclusions. You don't see the full significance of a government like this one offering India a no-war pact. Even the opposition to this government and its enemies have not criticised it. My mind boggles that the penny hasn't dropped." Adds a renowned columnist: "Only a Punjabi general could have made this offer and not be accused of a sell-out."

Nothing is more palpable in the context of Indo-Pakistan relations than the disappointment that the two neighbours have made such scant progress towards the pact. The subtleties of diplomacy and the complexity of argument mean little in the face of the emotion that seems to have come to be invested in the three small words. "Does it represent caprice," asks the scholar tilting at India's suspicions of the no-war pact offer, "or the groundswell of a people wanting to bury the hatchet?"

There is no mistaking the widespread popular feeling. It runs like a thread of hope in formal interviews and random conversations alike. It is most potent among common people—shopkeepers, businessmen, white-collar workers, students, people with relatives and friends in India, and those who've never been there. Kashmir as an issue, crops up spontaneously by exception. Even those who speak stridently of Pakistan's own identity or their misgivings about India (*see box*) invariably qualify it by extending their hand, however tentatively. The popular mood is so far removed from the stereotype firmly lodged in Indian minds that it borders on the incredible.

The popular self-image of Pakistan has been transformed beyond recognition. There is no more talk of one Pakistani soldier being equal to three Indian jawans, or a 1,000-year war, or even of avenging the humiliation of 1971. In its place there is an acute consciousness of how much smaller Pakistan is than India, how unequal, suddenly, has become the power balance in the region. What seems to have clinched the change was Mrs Gandhi's re-election in January 1980, at about the same time that the Soviet forces crossed into Afghanistan. "We have not forgotten that the last time the security interests of India and the Soviet Union coincided, it meant the break-up of our country," says a dour politician in Karachi. The unspoken fear is that the same thing might happen again.

Uneasy Views: The anxiety about India's intentions peppers conversations with all sorts of people. The occasional politician will argue that there is no threat from India, but enough publicity is usually given to India's arms purchases—exactly like the wide dissemination in India of Pakistan's arms purchases—to make people feel uneasy. Last fortnight, India's contract to buy Mirage fighters from France was emblazoned in all papers. Strangely echoing the suspicion voiced in India, an opposition leader asked, "Pakistan is no longer a challenge to India, but we fear who is India buying its arms against."

Yet, evident as it is, popular Pakistani preoccupation with India is increasingly getting overshadowed by the apparent discontent with the military regime. "I am 100 per cent sure India won't come to Pakistan," says a PPP functionary. "The Simla Agreement is very clear about war. The issue is elections. I feel the integrity of my country is in doubt if people's representation isn't given." In a country where the armed forces have traditionally been held in high esteem, the open criticism of the army's domination comes as a surprise.

According to recent regulations, 20 per cent of civilian government jobs have been reserved for the armed forces—10 per cent each for serving and retired people. Last fortnight the Government told the Majlis-i-Shoora that of 42 Pakistani ambassadors abroad, 17 were from the armed forces. There is resentment that army officers are finding their way into universities, as secretaries in government ministries, and at the top of such key government corporations as Pakistan International Airlines, the state-run oil and gas concern and the Water and Power Development Authority.

Fragmented Threat: Muted though it is, criticism of the martial law regime is commonplace. Charges of corruption abound. Not that Zia faces any particular threat to his regime. The opposition parties, about a dozen of them, are fragmented and the Movement for the Restoration of Democracy (MRD) is moribund. In recent weeks the leaders of the opposition groups have again been meeting clandestinely even as Zia has cracked down on dissenters (INDIA TODAY, April 30, 1982). But till the opposition parties find a resurgent leadership to capture the nation's imagination like Benazir Bhutto, who has been incarcerated in jail and in house arrest for quite some time now, or popular issues on which to throw down the gauntlet, the challenge will remain subdued.

Zia knows as much. Last fortnight, he told the Lahore Chambers of Commerce and Industry that martial law would continue a "reasonably good time" and elections would be held when the country achieves political, economic and social stability. For the moment, at least, that put the lid on any expectations that the General, who has twice gone back on his word to hold elections, might have a change of heart.

Chafing at the martial law chain that surrounds them, the political parties nevertheless are mostly solid in their support of the no-war pact. On the far right, Gafoor Ahmed, chief of the Jamait-e-Islami, a well-organised cadre-based party which is said to have a tight code of discipline, says, "I'm in favour of it. The bifurcation of the country was not meant to bifurcate hearts for ever." A middle-of-the-road grouping like the National Democratic Party is more concerned with internal problems than with Pakistan's tussles with India. "I think the no-war pact is necessary," says Mazari, adding the rider: "An elected government will have to ratify the pact."

Refusal: There is, however, a divergent political stream which takes a different course. "India cannot afford to negotiate with a military regime. It must wait for a democratic alternative to take office," asserts Maulana Shah Ahmed Noorani, president of the Jamait Ulema-i-Pakistan, an Islamic Sind-based party. "If something is done by the military government, the elected government would change it. The military government is not an elected government. We will not take responsibility for any pact signed by a non-elected government."

The PPP, riding a groundswell of popularity sustained by the memory of Zulfikar Ali Bhutto and, ironically enough, the military government's persecution of his widow Nusrat and daughter Benazir, emphatically insists that the Simla Agreement is an effective enough deterrent for a war between the two countries. "Zia wants to push the Simla Agreement aside and replace it with one of his own making," says a Bhutto loyalist.

But however discordant the political chorus seems, ultimately, a no-war pact stripped of its hyperbole content, is as complex and paradoxical as relations between the two countries have been all these years. No leader or diplomat worth his or her salt would link a no-war pact with a mutual lowering of military guard. Similarly, Indian negotiators, present or future, will hardly settle for just a no-war pact. The basic aim, in Indian eyes, is a friendship treaty erected on the foundations of the joint commissions.

Opportune Moment: Yet this is precisely where the paradox lies. For the first time since partition, popular opinion in Pakistan and in India strongly favours a rapprochement. At no other time in the history of the two neighbours has the atmosphere for friendship and mutual goodwill been more opportune. The ball, however, is not in Pakistan's court, as Indian leaders insist, but in India's, merely by virtue of its pre-eminent position, its vast size and population and its more powerful international clout.

It is clearly time for statesmanship. If Anwar Sadat could bell the Israeli cat is there any reason why, with much less to lose, Mrs Gandhi cannot write another chapter into the sorry tale of Indo-Pakistan relations to match the achievement of the Simla Agreement? Any reconciliatory gesture will carry more weight and credibility if it emanates from the big brother. It will be viewed as an act befitting a regional power, perhaps paving the way for the ultimate goal of reducing military arsenals being stockpiled on both sides of the border. The alternative would be a mockery of diplomacy.

LETTER CRITICIZES TOURISM POLICY AND FALSE HOPES

Lahore VIEWPOINT in English 13 May 82 p 3

[Text]

I AM sorry, but when I see special issues (I *never* go through them) on tourism, I really want to cry.

Tourism doesn't work like this – that's why I liked U NO WHO this week (May 6). I can see the white spots, of course, where the scissors went to work. All the same, he made his point.

I would like to ask one question, one question alone, of the ladies and gents who try to push and glamorise Pakistan as a land likely to be placed on the tourists' map as a *must* – What do YOU want when you travel?

Whatever the answer, we must face up to the fact that much of it we can't offer, and the beauties and the attractions, and so on, which we do go on about, are fast falling into disrepair and neglect–through indifference. You simply can't take a safe bet on the glorious valleys and mountains–you find them all over the world –with all the pluses we can't offer.

I believe that if you can create a vital *national* tourist traffic, offering your own people all their beauties and treasures in an air of being well-looked after, with pride, with true historical perspective, with cheap comfortable travel, you will have travelled at least part of the way. This cant of laying our bets on foreign exchange really should stop now.–*REALIST, Lahore*

ZIA SUPPORTS ROLE FOR ARMY

Lahore VIEWPOINT in English 13 May 82 p 13

[Text]

ELABORATING on his earlier themes of "Islamic democracy" and "elections on non-party basis", the CMLA-President, General Muhammad Ziaul Haq, has declared that in the future political setup, the Army will have a permanent role to prevent frequent recourse to martial law.

Talking to newsmen in Multan on May 6, Gen. Ziaul Haq explained that a "higher command council" comprising the Prime Minister, Defence Minister and the three service chiefs would be set up "to avoid conflicting decisions regarding the country's foreign and domestic problems".

However, the CMLA-President reiterated that general elections would be held only when he (Gen. Zia) was sure that they would lead to "positive results".

Always in picture

Explaining why he favoured a permanent role for the army in politics, Gen. Zia said that by virtue of the importance of the armed forces in the defence of the country it was imperative that they were kept in the picture regarding all national and international issues facing the country.

The armed forces, being the country's only "well-organised" and "well-disciplined" institution, could play an "effective" and "constructive" role in the administration of the country, the General declared.

The armed forces, he insisted, must be involved in the affairs of the country so as "to avoid any crisis in the future and to lead the country to progress, stability by defending not only our frontiers but also our Islamic ideology on the basis of which Pakistan had come into being".

Observing that all the constitutions in the country (of 1956, 1962 and 1973) had failed "to meet our needs", Gen. Zia said that Pakistan being an Islamic State needed no constitution since "we have to seek guidance from the Holy Quran and Sunnah".

Gen. Zia disclosed that the Advisory Committee for Islamic Ideology had submitted to him its report about the mode and system of elections in the light of Islamic principles. The Council, he said, had proposed that all candidates for election should fulfil "certain conditions" and only "true Muslims" would be allowed to contest.

"I have certain ideas in my mind and my colleagues have also their own thinking and we are all working on a formula and a legal framework order under which elections will held", Gen. Zia further disclosed.

On Saturday, Gen. Zia, while talking to newsmen in Rawalpindi, further elaborated his proposal regarding elections on non-party basis He was of the view that the election could not be held with 78 political parties in the

country. However, he said, he had just given an idea and no final decision had been taken in this regard.

Gen. Zia said that once he was assured that the number of political parties could be reduced to one or two, then he would prepare to lift the restrictions from political activities.

The same day, Pir Sahib of Pagara, said in Lahore that his party would take part in elections even on non-party basis. He, however, said that this would be under "protest" as his party believed in free functioning of political parties.

Not for restrictions

Replying to question, he said the Muslim League could not agree to recommendations of the Council of Islamic Ideology for imposing restrictions on candidates for contesting elections. He said that all voters had the right to contest elections and there should not be restrictions of age, qualifications or observance of religious rituals

Non-party elections would neither suit the nation, nor the armed forces the Pir said. He opposed Gen. Zia's suggestion for "active role" for the armed forces.

'BLACK DAY' OBSERVATIONS REPORTED

Lahore VIEWPOINT in English 13 May 82 p 13

[Text]

THE Islami Jamiat-i-Talaba observed a 'black day' on Friday in protest against the arrest of some of their members in the wake of attack on two newspaper offices in Lahore last month.

According to a Press release of the Jamiat, hundreds of students in various colleges, the University of the Punjab and the Engineering University participated in the 'black day' and demanded immediate release of all the arrested students. A number of labour leaders, belonging to the defunct Jamaat-i-Islami, also attended the protest rallies, the Press release added.

Threat to launch campaign

The Jamiat leaders, including Amirul Azam, Hafiz Suleman Butt, Saeed Saleemi, Ashfaq Mehr and Tayyab Shaheen, addressed the protest meetings at various campuses and warned the Government to release all the arrested students within a week or they would be compelled to launch a country-wide movement

Amirul Azam said that the Jamiat had so restricted its campaign to "peaceful demonstrations", but the Government should not take it as our weakness. "If we are forced to come out, we can release our friends within hours", he added.

Saeed Saleemi said that the Jamiat was "peaceful" because of its Amir's orders, but if it was allowed to accountability of those who had committed violence on students then "the nation will see how powerful the Jamiat really is". He alleged that Pir Sahib Pagara had provided arms to the Quaid-i-Azam students Federation in the Engineering University.

Nobody will stop us

Hafiz Suleman told the students that the Jamiat was powerful enough to get released all its members. "If the Government will not pay attention to our demand, we will be forced to come on the streets and at that time nobody could be able to stop us", he added.

The speakers said that the Jamiat's fight was against "yellow journalism" in the country and the Government, instead of supporting it, had taken "ruthless actions" against "innocent" students.

Mian Tufail also warns

Earlier, the Amir of the defunct Jamaat-i-Islami, Mian Tufail Mohammad, who recently returned from a foreign trip, strongly criticised the Government for arresting Jamiat students. He said that when a compromise had been reached between the newspapers and the Jamiat, there was no justification for keeping the students, in jail.

Meantime, on Saturday, the Summary Military Court No. 2 sentenced four students of the F.C. College to one year's R.I. and a fine of Rs. 10,000 to Rs. 15,000 each.

Only 26 are in Jail

That day, about fifteen students of Engineering University, belonging to the Jamiat, were released from the Camp Jail. There are now only 26 Jamiat students in the Kot Lakhpat Jail. They have been sentenced by military courts. All others arrested have already been released.

CORRUPTION IN CEMENT MARKETING CRITICIZED

Lahore VIEWPOINT in English 13 May 82 p 15

[Text]

AS THE "construction season" gets into full swing, the prices of building material have started soaring and artificial scarcity, particularly of cement, has been created There is a flourishing black market in cement as also adulteration. It has been estimated that the prices of construction material have gone up by about 20 to 30 per cent in the last four or five weeks and a further increase is feared.

Good quality bricks which were selling at even less than Rs. 400 per thousand are not available for less than Rs. 500. Similarly, the price of crushed stone was Rs. 6 per one square foot a month ago but it is now selling at Rs. 8 to Rs. 9

Most serious problem

The most serious problem is, of course, cement. The State Cement Corporation has officially acknowledged that it is being adulterated and that the stuff is in short supply. Retailers have alleged that the stockists are exploiting the situation because the SCC has failed to evolve a balanced distribution and supply policy.

According to retailers, Lahore had been flooded with cement due to heavy imports and people had no problem in purchasing it from anywhere and according to their requirements more or less at the price fixed by the Corporation. In winter, cement was available at a price even lower than the fixed one. Up to the end of March, the position was the same. But in April, cement began disappearing and the price per bag rose from Rs. 65 to Rs. 75 in a matter of days.

"Centre of corruption"

Retailers charge that the railway godowns on G.T. Road are the "centre of corruption", where agents of stockists posing as retailers make bulk purchases at somewhat higher prices. The other method is that such people induce stockists into sharing the profit thus accruing and the latter usually agree in order to save themselves the bother of selling it to people at their own places. Another trick: at least five kilograms of cement are pilfered from each bag and extra bags are filled and sold at anything between Rs. 80 to Rs. 85.

Yet another method of making money at the expense of the consumer is to add stone powder to the extent of 30 per cent to make 100 bags into 130. The more enterprising resort to shortselling as well as adulteration.

COMMERCIALIZING EARLY EDUCATION ATTACKED

Lahore VIEWPOINT in English 13 May 82 p 4

[Text]

LAHORE is traditionally known as the city of schools and colleges but the situation has never been as 'sanguine' as it is now. Passing through narrow streets or busy thoroughfares one can see all sorts of odd-named schools And as an additional attraction there is always inscribed singificantly the words "English medium". We speak and eologise Urdu but in fact we all wish, in fact love, to hear our children speak in English. In principle, we uphold that Urdu should be the medium of instruction but in practice we haven't been able to rid ourselves of the European-standard complex.

It is there, reigning supreme in the inner lanes of the walled city or in other areas like Shadman, Shah Jamal, New Garden Town, Model Town and, of course, Gulberg.

Higher education in our country is the cheapest thing available, whereas initial education is forbiddingly expensive. This unruly growth of schools, of doubtful standards, have all the more, made initial education something unapproachable for a family of moderate means. They charge exorbitant fees, not to mention fees they extract in the name of Meena Bazaars or annual funds, etc. Uniforms, books, all must be bought from the "recommended" shops. See a small child of five or six years carrying books to school. The massive weight of the bag is out of all proportion to his bodily strength. The constant weight makes him dislike his books . . . . Organisers of newly-opened schools more often than not employ teachers who are prepared to work for the lowest salary. Teachers are exploited, while they in their turn take vengeance on the children. . We have made education a commercial enterprise . . . A child in such schools is not a serious responsibility but a lifeless commodity to be exploited.–*RAI NAZAR HAYAT, Lahore*

ABDUL GHAFFAR KHAN'S PLEA FOR SANITY

Lahore VIEWPOINT in English 13 May 82 p 15

[Text]

THE former Red Shirt leader, Khan Abdul Ghaffar Khan, has said that tension between the United States of America and the Soviet Union and danger of war in this region pose a threat to Pakistan and other countries of Asia.

Talking to newsmen at the Lady Reading Hospital, Bacha Khan expressed the apprehension that the present situation of confrontation between two super-Powers in this region could be more damaging for Pakistan than anyother country of the region. The most unfortunate aspect of our history, Bacha Khan said, was the fact that despite 35 years of independence we were still discussing which system of government we wanted.

For what fault?

"I spent fifteen years in jail during the British Raj and that was understandable. But what surprises me most is that why I was kept in jails for seventeen years after independence. What was my fault? Was I imprisoned because I participated in the liberation struggle against the British?" Bacha Khan asked sadly.

It was the Khudai Khidmatgar Movement which had forced the British to leave the country and at that time the Muslim League had been playing the rulers' game, he added.

Bacha Khan said that ironically in Pakistan the people who fought for independence were labelled "traitors" and those who had joined hands with the British were honoured as "patriots".

GAS FIELDS, DISTANCE FROM KARACHI

Karachi PROGRESS in English May 82 p 3

[Map

CSO: 4220/046

GAS PRODUCTION FIGURES, FACTS STATED

Karachi PROGRESS in English May 82 pp 1, 8

[Text]

"PAKISTAN's requirements of commercial energy are met by gas, oil hydel power, coal, LPG and nuclear power. According to statistics compiled by the Government, the share of each in the energy mix is: natural gas (excluding that used as feedstock in the fertiliser industry) 41.9 percent, Oil 36.3 per cent, hydel power 16.0 percent, Coal 5.5 percent, LPG 0.3 percent and nuclear power 0.2 percent" (Sui gas 37 percent; associated gas and gas from Mari, Sari and Hundi less than 5 percent).

This was observed by Mr. H. M. Sohail, technical manager, PPL, at the Institute of engineers, Karachi, on 5th April. The subject of the talk was Availability of Natural Gas in Pakistan.

Mr. Sohail thanked "the Institute of Engineers, and particularly its Vice President Engineer Zahid Ali for inviting me to talk to you this evening."

Before dealing with the subject he touched briefly on the energy scene presently obtaining in the country.

The share of natural gas in the total energy supply was 41.9 percent, but excluding imported oil and considering indigenous sources alone the share of gas went up to 62 percent.

Pakistan's natural gas industry was born in the year 1952 when Pakistan Petroleum Ltd., discovered large reserves of natural gas at Sui. The field was brought on production in 1955 and after 27 years of production the field had now reached almost the optimum level of production. The speaker reiterated that production was increased to meet demand and the field, though only 30 per cent used up had reched the maximum level in 27 years. Production from the field was expected to remain at the current level for about 20 years before it begins to decline.

"According to one estimate the demand for gas over the next five years is expected to double. Therefore, the supply of gas from the existing producing fields will fall short of demand. The known reserves of gas are being developed but they too may not be enough to meet the demand."

It is therefore imperative to accelerate the pace of exploration activity in the country so that more reserves could be found. "Our salvation lies in discovering new reserves of gas. This is not as difficult as it may appear to be and my suggestion would be that extensive seismic and geological surveys in the more promising areas should be conducted to locate possible gas bearing structures. More wells should then be drilled to increase the prospects of finding big reserves."

The discovery of natural gas at Sui and more importantly, its commercial utilisation at the end of 1955 resulted in a spurt of drilling activity. Seven more gas fields and a small oil pool were discovered in the fifties.

A sketch on Page 3 shows that six more gas fields were subsequently discovered, bringing the total to 13. Of these Sui and Mari and two smaller ones, Sari Sing and Hundi have been put on stream. Some associated gas is also produced from Meyal and Dhulian oil fields.

The total proven original recoverable reserves of natural gas are estimated at nearly 18 trillion cubic feet. Average daily production from the fields on stream at present stands at: Sui about 800 million cubic feet; Mari 115 MMCF; Sari-Hundi 7 MMCF; associated gas about 55

Pakistan's Energy Supply by Source and Percentage Share of Each Source (1971-72 to 1980-81)

Note: Figure for 1980-81 are provisional. Contribution of nuclear power in the energy mix in 1979-1980 was negligible.

MMCF.

Two gas transmission systems emanate from Sui, one to the north right upto Peshawar and the other to the south upto Karachi. The southern system, owned and operated by Sui Gas Transmission Company, consists of two pipelines—the original 16" diameter 347 miles long pipeline on the left bank of the Indus and the second 18" diameter 305 miles long pipeline on the right bank. This second line passes through the Sari/Hundi gas fields which are hooked on to this system. The nominal capacity of the two pipelines with compressors installed on the first line is 270 MMCFD.

The two gas distribution companies KGC and IGC purchase gas from SGTC and sell it to their customers in Karachi and other areas of Sind.

The gas transmission and distribution system in areas north of Sui owned and operated by Sui Northern Gas Pipelines. On its transmission system SNGPL also purchases the associated gas produced by Pakistan Oilfields from its Dhulian and Meyal oilfields. The transmission capacity of Sui Northern Pipelines stands at 415 MMCFD.

Raw Sui gas contains certain impurities—H_2S & CO_2. These are removed at a purification plant owned by SNGPL and SGTC and operated by SGTC. Presently the gas purification plant has nine banks with a total gas processing capacity of 670 MMCFD.

Pakistan Petroleum Ltd., discoverer and producers of Sui gas field, sells gas at Sui to SGTC, SNGPL, and WAPDA. WAPDA purchases raw gas for their 439 MW thermal power station at Gudu.

Today almost all the industry in areas south of Sui to Karachi and in the north upto Peshawar, Mardan, Charsadda, Takhtbai etc., is running on Sui gas.

Now to maintain production at the maximum production potential of the field not only will PPL have to drill additional wells but will also be required to install compression facilities over the next few years. This, according to rough initial estimates, should cost several hundred million dollars. On the basis of maximum production potential of the field at 880 MMCFD, PPL has committed to supply 290 MMCFD of purified gas to SGTC, 409 MMCFD of purified gas to SNGPL and 110 MMCFD of raw gas to WAPDA for Gudu Thermal Power Station.

Work is now underway to develop two dormant fields, Pirkoh and Dhodak. The former is being developed for gas and the latter for condensate production. Gas produced at Dhodak will probably be re-injected into the reservoir for maintaining pressure.

Pirkoh gas field, some 45 miles north of Sui gas field is being developed by OGDC with the assistance of the Asian Development Bank. The field is proposed to be integrated with SGTC's transmission system by laying an 18" diameter transmission pipeline between Pirkoh and Sui. This integration project will be dovetailed into the Indus Right Bank Pipeline (IRBP) Compression Project and will make available additional gas supplies for the southern part of the country. Initially 72 mmcfd of gas will be available from Pirkoh in 1983.

The project for increasing the transmission capacity of the Sui-Karachi pipeline from the present 270 MMCFD to 397.5 MMCFD is also underway. This is being done by installing gas compressor stations on the mainline at Shikarpur and Dadu and a side stream booster compressor station at Sari/Hundi along the route of the 18" diameter Indus Right Bank Pipeline. The project is expected to be completed by end 1982 or early 1983.

For the supply of gas to Quetta and areas enroute a pipeline is being laid from the 18" diameter Indus Right Bank Pipeline (IRBP) transmission system from an offtake point about 44 miles down stream Sui.

This is an S.G.T.C. project and on its completion consumers of air mixed LPG at Quetta should be assured of a continuous energy supply from a more dependable source. The Quetta Pipeline Project is expected to be completed by 1983.

Another project, now being planned is a 14" diameter 35 miles long gas pipeline from an offtake point on SGTC's Indus Right Bank Pipeline right upto Lasbela for the supply of gas to Galadaris 2000 tonnes per day cement plant and other projects being set up in that area. The pipeline will have a free flow capacity of 44 mmcfd.

The Sui Gas Transmission Company also plans to install standby gas purification facilities at the Sui Purification Plant and standby gas compression facilities at the company's existing gas compressor stations.

To sum up, In the larger interests of the country's economy and to meet future demands of gas the development of other gas fields should proceed along with the development of Pirkoh now underway. Effort should also be made to find new reserves of gas.

(Due to pressure on space a much abridged version of the talk is published here. A future issue will carry the full text.—Ed).

BRIEFS

HIGH COURT BAR'S DEMAND--Lahore, May 13--The Lahore High Court Bar Association has demanded the restoration of the 1973 Constitution to "ensure the rights of the people to be the final arbiters of their destiny." This demand was made at an emergency meeting of the Association held here today under the chairmanship of Mr Abid Hussain Minto, the president of the Association. [Text] [Karachi DAWN in English 14 May 82 p 22]

ZIA BREACHED ON BALUCHISTAN--Quetta, May 11--President General Mohammad Zia-ul-Haq was briefed about the development schemes in Baluchistan in Quetta this morning. He was informed with the help of maps and charts that under the provincial Annual Development Programme 2070 million rupees had been spent on more than 800 development schemes in the province during the last five years. The main sectors of development were Water, Power Irrigation, Agriculture, Communication, Health and Education, etc. In addition 3,650 million rupees had been spent during the same period on Federally financed projects in the province. The President expressed his satisfaction over the pace of development and directed to further accelerate the tempo of development.--APP. [Text] [Karachi MORNING NEWS in English 12 May 82 p 8]

COLLEGE TEACHERS' STRIKE CONTINUES--The professors and lecturers of the nationalised cadre in Sind; including Karachi; continued their indefinite strike for the 9th day yesterday in support of their demands. An emergency meeting of the Executive Committee of All Pakistan Lecturers-Professors Association is being held in Bahawalpur on May 15 to consider the President's appeal asking the teachers to call off their strike. While efforts are underway to bring to an end the deadlock; strike continued in all parts of the city. According to Sind Lecturers Association some positive development is expected to take place in next two days to resolve the crisis. [Text] [Karachi MORNING NEWS in English 14 May 82 p 1]

ARRESTED FOR OBJECTIONABLE HANDBILLS--The Arifwala Police have registered a case against a student of tenth class and his four "accomplices" under MLR 16. Zahid Munir and the others were charged with pasting anti-government handbills at the local college campus. Police registered the case on a report from the principal of the college, Mr Abdul Haq. [Text] [Lahore VIEWPOINT in English 13 May 82 p 16]

LEADERS' RELEASE DEMANDED--The first meeting of the newly-elected managing committee of the District Bar Association, Sukkur, has expressed its deep concern over the continuing detention of Miss Benazir Bhutto, Rasool Bux Palejo and Asghar Khan and demanded their immediate release. It also demanded the release of all political prisoners, students and trade union leaders. [Text] [Lahore VIEWPOINT in English 13 May 82 p 16]

TEAM TO NEGOTIATE FOR SAUDI LOAN

Manila PHILIPPINES DAILY EXPRESS in English 13 Apr 82 p 2

[Text]

A TOP-LEVEL government team will negotiate with Saudi Arabian officials for a P110-million loan to finance five training centers for Muslim workers.

Labor Minister Blas F. Ople said he and Economic Planning Minister Placido Mapa had been directed by President Marcos to continue negotiating with Saudi Arabia officials on the establishment of training centers in Zamboana City, Dipolog City, Marawi City, Cotabato City and Sulu.

* * *

THE PHILIPPINE government had sought financing of the training centers during the state visit of President Marcos last March in Saudi Arabia.

The Saudi government had approved in principle the proposal, Ople said.

The loan, to be funded from the Saudi Arabia Development Fund will carry minimal interest rate, he said.

Saudi Labor Minister H. Al-Ansari is expected to visit the Philippines in September and Ople, in turn, visit Saudi Arabia in October.

* * *

MEANWHILE, the administrator of the newly-formed Philippine Overseas Employment Administration, Patricia Sto. Tomas, promised to have the contracts of workers going abroad processed in one day.

The POEA had absorbed the Overseas Employment and Development Board, Bureau of Employment Services and the National Seamen Board in the recent labor ministry's reorganization.

Sto. Tomas said the POEA will tap the hearing officers of the abolished BES and NSB to act on complaints of workers against illegal recruiters.

POWER STRUGGLE SEEN AFTER MARCOS

Cebu City VISAYAN HERALD in English 12 Apr 82 p 4

[Column by Danny M. Gonzales: "Power Struggle Seen"]

[Text] AS I POINTED out earlier, sooner or later, Pres. Marcos will have to go — out of the presidency. How? This all depends on the circumstances. All the possibilities are there. A coup d'etat could depose him. His health might deteriorate further making it too weak for him to dispose of his duties. Or he could die.

WATCHED WITH BATED BREATH

THUS, MR. MARCOS is being watched — with bated breath — by a lot of people: his enemies and friends, especially the pretenders to his throne. When will the Marcos reign over this country end? Everyone knows it will end. But not one is certain when the end will come and what is the nature of such an end. The next best thing to do, as most are now doing, is to watch him, his political maneuvers — when he'll trip up; and his health — when he'll kick the bucket.

WHAT WILL FOLLOW

WITHOUT meaning any harm to him, assuming that Pres. Marcos will be out of the top post of the land — what happens next? To those who are opposition-inclined in their sentiments, let me disabuse their minds of the thought that an opposition leader will, overnight, be the new leader to be installed immediately after Marcos bows out. Of the many opposition leaders in the country today, not one is that politically entrenched as to effect a quick takeover. As for the other strong opposition leaders — like Aquino and Manglapus — they are out of the country; their initial problem — after hearing the news of Marcos' fall — would even be how to get back into the country. When they do get back, it will be too late. Somebody else had taken over; and they will just have to do a little more waiting for the right timing — an opportune one, that is.

POWER PLAY

WHAT IS envisioned by a lot of people when Marcos is gone is nothing less than a power struggle among the big guns within his circle. Among

the names mentioned as likely to be involved, not necessarily in the order of their importance or influence, are Defense Minister Juan Ponce Enrile, Gen. Fabian Ver, the First Lady, Labor Secretary Blas Ople, Gen. Fidel Ramos, etc. How the struggle would come about, armed or otherwise, everyone has his own version of it.

A PROTRACTED ONE?

WILL THE power struggle be a protracted one? This all depends on how effective the strongest among the contenders is. If the forces of the contending parties are evenly matched, a prolonged conflict could take place — and it will then be some kind of a war of attrition that the peace-loving among us could only mourn over, assuming we survive the power carnage.

ANOTHER BLOW

WHAT WILL happen will be another blow to the country — economically and politically. Such a power struggle would derail the country's peace. And whatever semblance of peace is attained after it will be an uneasy one. For what assurance is there that no further trouble would erupt? So, business will be in doldrums. And the political instability that will prevail is one undesirable but inevitable reality that the Filipinos have to face and overcome.

A MIRACLE

HOWEVER, the religious among the people have not lost hope. They are still praying that a peaceful takeover would be effected. That some kind of political miracle would avert a power struggle that is bloody and glory. Big power is tempting. But the protagonists, being Filipinos and mostly Catholics, there is always that possibility that their greed for power would be subdued — that they would not go to the extent of grabbing it at all cost, acting like mice or wolves, but as true human beings made aware of the reality that power is not really everything.

EDITORIAL: FREEDOM OF SPEECH THREATENED

Cebu City VISAYAN HERALD in English 14 Apr 82 p 4

[Text] A military official who has been allowed by President Marcos to retire has left behind him as one of his last official acts as Enforcer of Broadcast Media Association an order to close a popular radio commentary.

The order of Col. Jose Guillem to stop Lawyers Migs Enriquez and Vic Villordon from continuing with their commentaries on Radio DYLA was one act worthy of the condemnation of all freedom-loving Filipinos.

Not only is the attempt an act of muzzling the press but the act itself is a monumental blunder violative of the individual rights to free speech enshrined in our Constitution.

The order not only abrades the fundamental concept of due process but is a repression in its totality. What the commentators have merely done was to put acts of public officials before the acid test of ciriticsms testing whether their official acts could survive public standards of morality and expectations. But those who complain have realized the cutting edge of public contempt when even high echelons recognized the damage they have done to government image and good government. Hence, the counter-attacks and reprisals.

All these have utilized as instruments military power but in the process have crucified long-cherished values of freedom of speech.

Attempts have been made at control and suppression in many stations like DYRE, DYRB and others, and on many other commentators, the latest one in Negros where a commentator was banned for life, but these ugly inroads and assaults against freedom and individual rights must now be resisted at all cost.

The people of Cebu must rally behind the commentators and station DYLA on a common stand against the repression.

Otherwise, the Cebuanos whose image is that of a freedom fighter and freedom lover in the tradition of Lapulapu will be put to unmitigated shame and ignominy.

Will the Cebuanos allow this travesty?

RADIOMEN DEFY STOP-BROADCAST ORDER

Cebu City VISAYAN HERALD in English 14 Apr 82 pp 1, 2

[Article by Mike Ynclino]

[Text] A local radio station has defied an order of the Kapisanan ng Mga Brodkaster ng Pilipinas (KBP) to stop the broadcast of programs hosted by lawyers Migs Enriquez and Vic Villordon, now known as "conscience of the airlanes" here.

The KBP order was contained in a letter addressed to DYLA manager Monsignor Achilles Dakay who earlier sought clarification and specification of charges against the two radio commentators. The KBP Standards Authority thru its Director for enforcement Col. Jose G. Guillem cited violation of KBP broadcast guidelines by Enriquez and Villordon for allegedly challenging to a duel President Marcos and Col. Jesus Hermosa, former Deputy Commander for Administration of the PC-INP in RECOM 7, for alleged irresponsible attacks on Atty. Adela Marcos San Ramon (a kin of the President), and BFD Regional Director Jose Gapas.

Reacting to the order ALU Vimcontu titular head Democrito Mendoza reportedly told the commentators that he would support them in their fight against the KBP stop-broadcast order. DYLA station manager Monsignor Achilles Dakay had earlier assured the two that he would not implement the order and fight to forestall it.

Enriquez and Villordon meanwhile continued to hold their programs at the said radio station defying the stop-broadcast order of the KBP.

In a related development, Cebu's mass media practitioners were today alarmed at the implications of the order. Al Alinsug, president of the powerful Cebu Tri-Media Association (CTMA) and publisher of the Visayan Herald disclosed that CTMA members and other media men in Cebu will rally behind the two beleaguered media men in their fight for press freedom. In a press statement Alinsug said:

"To say the least the order is whimsical and narrowminded. Col. Guillem does not realize the implications of his act. The order reflects the illusion that we are still in a state of martial law."

In condemning the repression, Alinsug continued:

"Such Hitleric repression stabs into human freedom and dignity and has no place in a civilized society. All mediamen worth their salt must stand solid to defend the cause of free speech. Enriquez and Villordon are incidents; their cause is our cause. All Cebu Tri-Media members are called to a meeting on Saturday to take up the issue. As a mediaman I personally condemn the act of Col. Guillem."

Enriquez and company have assailed the order as a blatant excuse to allegedly silence them from the airlines because of their critical comments against powerful and corrupt government and military officials. They said that the move of the KBP is said to be a clear violation of the constitutional guarantees against press freedom.

Supporters of the crusading commentators had voiced their sympathy and support for them. Some callers during the program "Saksak Sinagol" have even hinted that violence may ensure if the order would be implemented as the people who support Enriquez and company might understand it as the start of a crackdown on militant critics of the administration.

In a letter to Monsignor Dakay, Enriquez said that the violations mentioned in the KBP order are entirely new and different from the charges mentioned in an earlier letter of Col. Guillem dated January 22, 1982, which specified only two violations.

Enriquez also said that the letter of Guillem dated March 27, 1982 is allegedly so worded as to contain findings or conclusions of law and facts, allegedly finding them guilty of the offenses charged. Morover, Enriquez disclosed, that the concluding portion of the same letter from KBP imposes a penalty not only on him but also on Villordon who had allegedly never been previously notified of any charges against him.

As it is today, it looks like this would be an interesting test for the media men against an apparent clampdown on the militant press in Cebu.

SUPPORT FOR RADIOMEN'S DEFIANCE

Cebu City VISAYAN HERALD in English 15 Apr 82 p 1

[Excerpt] A high official of the Integrated Bar of the Philippines (IBP), Cebu Chapter, has expressed condemnation of the act of Col. Jose Guillem, Enforcer of Broadcast Media Council, of ordering the stopping from broadcast of two radio commentators of a local radio station here.

Lawyer Bernardito A. Florido, President of the IBP-Cebu, has branded the closure order poised against Lawyers Migs Enriquez Jr. and Vic Villorden of Radio DYLA advising them to go off the air as "an assault on the basic Constitutional freedom."

Florido considers the closure order as "subversion of presidential policy, recalling that "the President has time and again publicly announced the full guarantees of freedom of speech and the press," as he has time and again encouraged the general public to expose anomalies and irregularities perpetrated by government officials.

The IBP President vehemently denounced Guillem's act saying that the closure order is the act of "minions of the government which try to embarrass the President."

PRESS CONFERENCE ON HUMAN RIGHTS

Cebu City VISAYAN HERALD in English 15 Apr 82 pp 1, 13

[Text] "Once again, the onslaught of military atrocities has been launched with wanton ferocity by the abusive militaristic regime," says a spokesman of the Nagkahiusang Katawhan alang sa Tawhanong Katungod (NKTK), an organization in Mahaplag, Leyte for the promotion of people's human dignity and welfare.

As a manifestation of their Christian solidarity to the cause of the poor farmers, the Visayas Ecumenical Movement for Justice and Peace (VEMJP) is holding a Press Conference on April 16, 9:00 a.m. at Pete's Kitchennette. This came about when the NKTK approached various sectors, of which VEMJP is one, requesting them to support their determined efforts against the recent spate of tortures, illegal arrests and detention and other forms of harrassments being inflicted on the farmers of their area.

VEMJP, a federation comprising various groups, organizations and institutions concerned for justice and defense of human rights invites all media people and all others interested to attend this conference. This will be an opportune time for all to be adequately informed of the present issue besetting our torment-stricken brothers.

UNEMPLOYMENT, STRIKES A SERIOUS MATTER

Cebu City VISAYAN HERALD in English 6 Apr 82 p 7

[Article in Business & Industry Column by Eddie R. Gandionco, Business Editor-Consultant: "Unemployment and Strikes are Pressing Concern of Gov't"]

[Text] The government, particularly the Ministry of Labor and Employment (MOLE) is focusing its attention to the increase unemployment rate and the increase number of strikes in many commercial and industrial establishments. However, the labor ministry considers more critical the problem of unemployment than the wage-levels of workers. It can not be denied that there is a worsening of unemployment today. The worst in our history.

The nationwide unemployment rate more than doubled during the first three months of 1982 and is believed to rise further in the second quarter. According to government statistics, the unemployment rate reached 40 percent in Metro Manila alone while the nationwide unemployment rate went up to 30 percent at the end of 1981.

The ranks of unemployed at the end of 1981 were swollen in March of this year by workers who were laid off or terminated by business and industry because of poor sales and unfavorable economic conditions. In short, everybody went on retrenchment. As of March 15 this year, labor ministry reports pointed to about 100,000 workers who had lost their job for the two-and-a half months of 1982. The reports of the ministry does not include those who were terminated but not reported. If so, workers laid off could thus be greater than the 100,000 figure.

The already difficult unemployment situation is compounded by the numerous strikes taking place all over the country today. At the end of 1981 there were an estimated 257 strikes, most of them in Metro Manila. It is my thinking that the present labor situation is caused by government's mandated higher pay and more benefits for workers which was decreed for the past three years. Had the government listened to the position of then former NEDA boss Gerardo Sicat and the employers confederation to temporarily freeze on wages and allowances, the increase of the unemployment rate could have been controlled. While wage increase favors the workers, they reduced the capability of business and industry to create more jobs and thus increase unemployment.

Lately, the labor ministry has change gear. It now favors leaving wage-allowance increases to collective bargaining between labor union and management. If push through, it is better late than never. However, the labor groups do not approve of the idea because they pointed out that current wage and allowances given a worker do not meet the basic needs of the worker and his family.

It is the thinking of the labor ministry that wages be frozen in areas or provinces that are depressed for they cannot look forward to improvements in the standard of living of the people in these places even beyond the year 2000 unless they attract job-creating investments. Getting the basic pay is very good enough in these areas or provinces. The best assurance for an investor is cheap labor, at least during the time when his investment is not paying off.

In answer to the labor ministry's softening stand, the labor sector filed notices of strikes. The number of strikes averaged almost five days a week since the start of 1982. Because of the increased number of strikes and lock-outs, even in vital industries, the government has taken a tougher stand. And strikes has now become another pressing concern of the government aside from the worsening unemployment.

I believe, considering the prevailing economic crisis of business and industry, that labor unions and workers should abandoned their fight for higher pay and more fringe benefits in order to save their jobs Additional wages and allowances can wait until better times, or, when business improves. There is a proper time to fight management but certainly not today. However, their are industries which are making more money in spite of inflation such as those engaged in drugs, basic consumers products, insurance, rice and corn mills, chemicals, and drinks. On these industries labor can make their demands or even go on strike. They are making money or profits. How about it TUCP and the other unions? Pity the workers!

SYRIAN TRAINED TERRORIST HELD

Manila PHILIPPINES DAILY EXPRESS in English 13 Apr 82 pp 1, 6

[Text] **ZAMBOANGA CITY**, May 12 – A suspect in the bomb attacks in this city this week was arrested this afternoon by Southcom intelligence operatives in Recodo, a fishing village 15 kilometers away from the downtown area.

The suspect – whose identity was withheld by the military pending the arrest of his companions – was reportedly a Syria-trained member of the Moro National Liberation Front. He was reportedly seen by witnesses dropping one of the plastic bombs Monday in front of the Zamboanga Central School.

Military operatives sent seaborne patrols to a nearby island, where the suspected mastermind of the bombings was hiding.

* * *

AS THIS developed, an eight-pound time bomb, which was set to explode at 4 p.m. today, was recovered by members of the Southcom intelligence group and Zamboanga police anti-terrorist task force in one of the rooms of Bel Air motel in this city. The bomb was reportedly brought in by a man, described as "well-dressed and good-looking," at 3:30 p.m.

Maj. Damming Unga Jr., commander of the INP southern sector command, said the bomb had six pounds of potassium chlorate, an igniting powder. Attached to the bomb were two fragmentation grenades in a plastic box.

Unga said the bomb could blow up a building.

* * *

MAJ. GEN. Delfin Castro, Southcom chief, said three MNLF commanders, one of whom has been identified as a native of Zamboanga, were on a sabotage mission in urban centers in Mindanao.

Castro said that four persons were killed and 71 others wounded in Monday's seven bomb explosions in this city.

CSO: 4220/613

MNLF, CPP COOPERATE

Manila PHILIPPINES DAILY EXPRESS in English 12 Apr 82 pp 1, 6

[Article by Vic Pena]

[Text] ZAMBOANGA CITY, May 11 – Military authorities are tracking down a foreign-trained rebel commander and his group in a citywide manhunt launched after the series of bomb explosions in the city's commercial district Monday which killed four persons and injured 71 others.

Subject of the manhunt is a native of Zamboanga and reportedly a member of the abortive June Bride operation which was busted by operatives in Metro Manila under Gen. Fabian C. Ver, AFP chief of staff, last year.

Those killed were Dante Dagonas, 21, of Zamboanga del Sur; Jessie Alomes, 22, of Daet, Sangali, Zamboanga City; Ricardo Alagatmo, 23, and Jessie Flores, 26, military authorities in Zamboanga reported.

***

MAJ. GEN. Delfin Castro, AFP Southern Command chief, revealed today a tie-up of the Moro National Liberation Front (Misuari faction) and the Partido Democratico Socialista ng Pilipinas, one of the allied organizations of the Communist Party of the Philippines.

Castro said these two groups plotted the six explosions in the downtown section of the city.

Castro said that last December military operatives arrested Manolito Canonigo, PDSP secretary general, and seized from him documents which pointed to the tie-up of these two subversive organizations.

AMONG the documents seized were papers on an MNLF-PDSP plot to conduct urban terrorism in Zamboanga City on May 1 this year. However, the plan did not materialize because of the seizure of huge explosives shipment by military operatives from a commercial vessel coming from Tawi-tawi and a raid at a house in Baliwasan district, which yielded 16,000 blasting caps last March 13.

Other urban centers in Mindanao such as Davao, Cotabato and Iligan cities had experienced similar bombing incidents earlier this year, as part of the MNLF-PDSP plot, the military said.

BRIEFS

SYNDICATED LOAN--Colombo, 13 May (AFP)--Sri Lanka has successfully negotiated a syndicated loan of $100 million in London, the Finance Ministry announced today. The syndicated credit leaders are Citibank, Lloyds Bank International, Bank of Tokyo, Indosuez Bank and the Long-Term Credit Bank of Japan. The terms obtained are the best-ever by the Sri Lanka Government in the Euro-dollar market, the Finance Ministry said. The credit, which is for an 8-year period, is at half percent over libor for the first 2 years and five-eighths over libor for the next 6 years. For the first time Japanese banks will take a considerable portion of the syndication when it is finalised, the ministry said. [Text] [BK131321 Hong Kong AFP in English 1116 GMT 13 May 82 BK]

'YOUNG TURK' OFFICER REINSTATED TO FORMER COMMAND

Bangkok MATICHON in Thai 4 May 82 pp 1, 12

[Text] One of the 1 April Young Turks has been reinstated in government service as a Royal Aide-de camp by the order of the king.

News reports from the Army to MATICHON state that at this time the Army has ordered Col Sakan Mitkasem of academy class No 7 and former defendant in the 1 Apr 1981 rebellion returned to service. He has been returned to the position he held before his dismissal that of deputy commander of the Army transportation department. The report also revealed that on 27 April, His Majesty the King appointed Col Sakan as one of 96 Royal Aides-de-camp.

Concerning this matter, Col Sakan told MATICHON that he had been reinstated to his former position in the service approximately 6 months ago, but that none of his fellow officers who had been dismissed have as yet been reinstated.

Col Sakan Mitkasem had been dismissed from government service by order No. 10001/1981 of the Ministry of Defense dated 1 Apr 1981 along with Col Manoon Rupkhachon, Col Prachak Sawangchit, Col Pridi Ramasut, Col Panlop Pinmani, Col Sakhon Kitwiriya, Col Prap Chotsathien, Col Chanboon Phentrakun, Col Boonsak Phochareon, Lt Col Boonyang Bucha, and Major Surit Chanthrathip on the grounds that they were threats to the peace and order of the nation and the throne. The dismissal order was signed by Gen Prem Tinsulanon in his capacity as Minister of Defense.

Also, when the events of 1 April took place, Col Sakan was appointed a member of the Revolutionary Council by Gen San Chitpatima, the leader of the coup.

PRESIDENT CHOWDHURY'S MAY DAY MESSAGE SUMMARIZED

Dacca THE BANGLADESH OBSERVER in English 1 May 82 pp 1, 12

[Text] President Justice A.F.M. Ashanuddin Chowdhury expressed his hope that the toiling masses would be inspired by the spirit of May Day and discharge their responsibilities with devotion in their respective fields, reports BSS.

In a May Day message, the President also expressed his confidence that the working community would work hard to achieve economic self-reliance and raise the standard of life of the people.

President Ahsanuddin Chowdhury described May Day as a symbol of struggle and success of the working community of the world in establishing their rights and said that the appeal and significance of the historic day was immense.

President Chowdhury said that the Government had formulated policies and laws to ensure the rights and interests of the workers. Under these policies and rules, the working community on the one hand had built up organisations to work unitedly and on the other they had undertaken necessary programmes to improve their skill and efficiency, the President observed.

He said the Government and the management authorities had extended all cooperation to these programmes.

The President referred to different steps taken to improve the labour-management relations increasingly and said the Bangladesh Government considered such understanding and relations between the management and workers as essential prerequisite to raising production.

The President in his message extended good wishes and congratulations to the toiling masses and wished their well-being on the occasion of May Day.

GENERAL ERSHAD ISSUES MESSAGE ON MAY DAY EVE

Dacca THE BANGLADESH OBSERVER in English 1 May 82 p 1

[Text] The Chief Martial Law Administrator Lt. General H. M. Ershad on Friday night said in Dacca that the aim of the Government is to remove all barriers in the way of realising the legitimate rights of the working people by forming a people-oriented and progressive administrative framework reports BSS.

In a message on the eve of the historic May Day General Ershad said the Government's determination is to root out exploitation and corruption from the society. "We hold the assurance to our worker brothers and sisters that the present Government is determined to bring an end to injustice, exploitation, corruption and top heavy administration from all spheres of life to save the masses from the exploitation of the vested interests," he stressed.

He said: "Inshallah we shall establish such a political economic and social order in which brotherhood and bonds of mutual co-operation will be the main source of inspiration of national progress."

The Chief Martial Law Administrator visualised a cherished society devoid of the obstinacy of individual and in which man will be identified as man.

General Ershad said the working people of Bangladesh are observing today the historic May Day expressing solidarity with the working community of the world. On this mournful day we are recalling with gratitude those fearless workers who had laid down their lives in Chicago city hundred years ago in the struggle for establishing the rights of the workers he added.

The Chief Martial Law Administrator paid his deep respect to the great ideals of the May Day and urged all including the workers and employers to realise the significance of the day. He noted that even today the ideals of their struggle inspired the working people of all countries for realising their legitimate rights.

In common with the rest of the world the historic May Day will be observed throughout the country today (Saturday) in a befitting manner.

On this occasion the working community will pay homage to the workers of the United States who had made supreme sacrifice this day in 1886 at Hav Market near Chicago to establish the rights of workers.

The Day has been declared a closed holiday.

Newspapers will carry special articles highlighting the significance of the day and its impact on the working condition of the workers all over the world.

GENERAL ERSHAD ANNOUNCES WAR AGAINST POVERTY

Dacca THE BANGLADESH TIMES in English 24 Apr 82 pp 1, 8

[Text] Chief Martial Law Administrator and Commander-in-Chief of Bangladesh Armed Forces, Lt. Gen. H. M. Ershad said on Friday that the Government had declared war against poverty which should be won for the survival of the nation.

Gen. Ershad called upon all to participate in this war. "All citizens are equal and the poverty shall have to be shared by all equally," he said.

The Chief Martial Law Administrator was speaking at the foundation stone laying ceremony of a multi-storied sweepers' colony of Dacca Municipal Corporation at Tikatuly. Mr. Mahbubur Rahman, Adviser in charge of the Ministry of Local Government also spoke on the occasion.

Mr Pardesi, an elderly sweeper of the DMC laid the foundation stone of the complex. It would be built at an estimated cost of about Tk. 35 lakh to accommodate 60 sweepers' families. The complex is one of the six multi-storied buildings that the DMC planned to construct. The others will be built at Mohammadpur, Ganakkuti, Nayabazar, Sutrapur and Miranjala.

Social Change Must

Gen. Ershad said that the nation could not allow free hand to a handful of people to exploit others and lead luxurious lives. He said that under the present social structure, exploiters and the privileged ones were enjoying all benefits while those putting in labour were being looked down upon.

The CMLA said that the social structure had to be changed and the dignity of labour must be restored. He said that it should have to be ensured that those who gave labour, were honoured.

Jehad Against Corruption

General Ershad said that the jehad declared against corruption must be won. He said that corruption, which had been eating into the vitals of the nation, must be eradicated once for all. "We do not want corrupt people," he said.

The CMLA said, "we do not want the Government officials to be the masters. They are not masters, they are servants of the people," he said.

Objectives

General Ershad said that elimination of corruption and exploitation, attainment of food autarky, recasting of age-old administration and establishment of a pro-people democratic system were the major objectives of the present Government. He called upon the people from all walks of life to extend their support and cooperation to achieve these objectives of the Government to ensure a better future for the nation.

The CMLA said that all these objectives could be attained if every one performed their duties in their respective fields with honesty, sincerity and dedication.

General Ershad said that wherever he had gone, he had noticed tremendous enthusiasm among the people to work. They wanted direction he said. He called upon all to come forward and join hands with the Government to build up a happy and prosperous Bangladesh.

General Ershad also told that those who had earned money, acquired cars and houses by exploiting the poors, had a place in the society. But, the poor and downtrodden who worked hard, had no room in the society, he said adding that such society should be changed and the dignity of labour must be restored.

Mr Mahbubur Rahman said that the policy of the present government was to pay more attention to those who were neglected in the past, contributed much to the nation but received less.

Mr. Pardesi and other sweepers told me that they were inspired by the speech of General Ershad. "He has echoed our sentiments," they said.

All Are Equal

Mr. Mahbubur Rahman said that the present Government did not consider anybody as untouchable. He said that all sections of people of the society were equal.

Mr. Rahman said that General Ershad was not only the Chief Martial Law Administrator and the Commander-in-Chief of the Armed Forces. He said that Gen. Ershad was the Commander-in-Chief of the war against corruption and exploitation which was waged on March 24. He called upon all to participate in this war and help implement the programmes of the Government.

The Adviser said that the goals of the War of Independence of 1971 would be achieved under the leadership of General Ershad. He said that the present Government was backed by Almighty Allah and the nine crore people of the country.

Mr. Rahman said that the present Government had come to serve the people, not to rule them. He termed March 24 as "najat day" and said that all would now have to work hard with dedication, honesty and sincerity forgetting the past.

The Adviser said that the Government was planning to make the DMC effective so that it could render more services to the people. He said that it was being planned to bring Gulshan and Mirpur Purashavas under the DMC.

MARTIAL LAW ORDER ON VACATION OF GOVERNMENT PROPERTY

Dacca THE BANGLADESH TIMES in English 24 Apr 82 pp 1, 8

[Text] The Chief Martial Law Administrator on Friday night issued the Martial Law Order No. 15 of 1982, according to an official announcement.

Following is the announcement:

In pursuance of the Proclamation of the 24th March, 1982, and in exercise of all powers enabling him in that behalf, the Chief Martial Law Administrator is pleased to make the following Order:

1. All persons who are in unauthorised or illegal possession of any property, movable or immovable, belonging to or under the control, custody or management of the Government, including the Bangladesh Railway, shall within thirty days from the date of commencement of this Order, vacate or surrender such possession and hand over the property to the officer or authority concerned with the control, custody, management or maintenance thereof and obtain receipt therefor.

2. Whoever fails to vacate or surrender such possession of any immovable property and hand over the property to the officer or authority concerned within the period specified in paragraph 1 shall be liable to be evicted from the property without any notice and for this purpose the officer or authority concerned, or any other officer or authority authorised in this behalf by the Sub-Zonal Martial Law Administrator, may use such force as he or it deems necessary and any structure, building, erection or other property standing or found therein or thereon may be demolished, destroyed or removed and the cost of such eviction, as may be assessed by the officer or authority taking action under this paragraph and approved by the Sub-Zonal Martial Law Administrator may be recovered as a public demand.

3. Whoever fails to surrender and hand over any movable property mentioned in paragraph I to the officer or authority concerned within the period specified therein, or returns such property in a damaged or mutilated condition, shall be liable to pay such compensation to the Government or the Bangladesh Railway, as the case may be, as the officer or authority concerned may with the approval of the Sub-Zonal Martial Law Administrator determine and such compensation may be recovered as public demand.

4. Where possession of any immovable property mentioned in paragraph I has not been vacated or surrendered within the period specified therein, the officer responsible for the control, custody, management or maintenance of such property shall, within thirty days after expiry of that period, submit a proposal before the Sub-Zonal Martial Law Administrator for taking possession by eviction under paragraph 2 and take necessary action after such approval.

5. The Sub-Zonal Martial Law Administrator shall get the proposal submitted under paragraph 4 examined by a committee, to be appointed by him, consisting of a Judicial Officer not below the rank of Subordinate Judge, a Government Pleader and an Additional Deputy Commissioner and shall accord approval to the proposed action if the committee finds that the property concerned belongs to or is under the control, custody, or management of the Government or the Bangladesh Railway, as the case may be, and it is in unauthorised or illegal possession of any person and advises him to accord such approval.

6. If the officer mentioned in paragraph 4 fails to submit the proposal within the period specified therein and fails to take necessary action within thirty days of receipt of approval and cannot show satisfactory cause as to why he could not do so, he may be retired, removed or dismissed from service or reduced in rank by his appointing authority for such failure without any further opportunity of showing cause.

7. If any immovable property mentioned in paragraph I comes under unauthorised or illegal possession of any person after the recovery of possession thereof under this Order, the officer responsible for its control, custody, management or maintenance may, if he fails to show satisfactory cause as to why he could not prevent such possession, be retired, removed or dismissed from service or reduced in rank by his appointing authority.

8. Any person aggrieved by an action taken under this Order in respect of any property may get his claim established by an appropriate legal action instituted before a Civil Court of competent jurisdiction and get relief accordingly, but no such Court shall make any order of injunction, temporary or permanent, against any officer or authority acting or taking action under this Order.

9. Whoever, being responsible for the control, custody, management, maintenance or supervision of any property mentioned in paragraph 1, is found to have helped or connived at the unauthorised or illegal possession of such property by any person shall, without prejudice to the provisions of paragraphs 6 and 7 be punishable with imprisonment for a term which may extend to three years, or with fine, or with both.

MARTIAL LAW ORDER NO 16 ON FOREIGN RECRUITMENT

Dacca THE BANGLADESH TIMES in English 6 May 82 pp 1, 8

[Text] The Chief Martial Law Administrator has issued Martial Law Order No. 16 asking persons, who had received money from others promising them employment abroad, either to secure the employment or to return the money with compensation at the rate of 20 per cent per annum within 60 days.

Violation of the order shall be punishable with rigorous imprisonment for maximum term of five years of, or with fine or both.

Text

"In pursuance of the proclamation of the 24th March, 1982 and in exercise of all powers enabling him in that behalf the Chief Martial Law Administrator has made the following order.

1. Any person who, before the commencement of this Order, received any money from others on the promise of providing them with employment abroad, but failed to do so within the stipulated or agreed time or, where there was no such time, within one hundred and twenty days from the date of receipt of the money are directed either to secure the employment or to return the money received with compensation thereon at the rate of twenty per cent per annum within sixty days from the date of commencement of this Order.

2. Whoever contravenes the provisions of paragraph 1 shall be punishable with rigorous imprisonment for a term which may extend to five years or with fine or with both, and shall also be liable to return the money received with compensation thereon at the rate of twenty-five per cent per annum.

3. Whoever after the commencement of this order, receives any money from any person on the promise of providing him with any employment abroad, but fails to provide him with such employment within the stipulated or agreed time or where there is no such time within one hundred and twenty days from the date of receipt of the money shall be punishable with rigorous imprisonment for a term which may extend to five years, or with fine or with both and shall also be liable to return the money received with compensation thereon at the rate of twenty-five per cent per annum.

4. Nothing in this Order shall apply to a person against whom criminal proceedings were pending before any court immediately before the commencement of this order on the allegation that he failed to provide any person with any employment abroad as promised through he received money for the purpose or that he did not return the money received for that purpose when demanded.

MARTIAL LAW REGULATION ON UNTAXED INCOME ISSUED

Dacca THE BANGLADESH OBSERVER in English 1 May 82 p 1

[Text] The Government has issued Martial Law Regulation V about disclosure of untaxed income and investments of such income, an official handout said in Dacca on Friday reports BSS.

The Government and the public have for some time past noticed with increasing concern that there is considerable amount of idle and unaccounted money in the hands of many people. These funds cannot, for obvious reasons, but utilised for productive purposes. These scarce resources of the country are either being kept completely idle or are being used to finance various unproductive activities which do considerable harm to the economy.

It is, however, generally admitted that simplification and rationalisation procedures coupled with responsiveness of both income tax administration and income tax payees will considerably reduce the incidence of idle and concealed income in the economy. Of late some measures have already been taken to improve matters in this direction. The Government is keenly aware of the need to carry forward these improvements and reforms, but meanwhile there is a general concern about the urgent need to curb the incidence of idle funds in the economy and make it available for productive investments.

The Government has therefore, decided to give incentive to holders of idle and taxevaded funds so that these funds are declared and made available for productive purposes. The declared funds will be subject to a flat rate of 15 per cent to be paid along with declaration. The balance 85 per cent of the declared funds can be utilised by the declarants in a wide range of productive activities which will strengthen the productive sector of the economy, increase employment and help stimulate the private sector of the economy. This opportunity is also available for untaxed income in foreign exchange held abroad.

The Government is conscious of the fact that such extraordinary concession or incentive cannot be repeated as such concessions are unfair to honest tax payers. With the various improvements in the direct tax system, Government hopes that there will be no justification in future to provide any such incentive to attract idle funds.

In this connection, it is needless to add that those who fail to avail of this last opportunity will be dealt with very severely under the Martial Law Regulation that has been promulgated. At the same time the Government is determined to ensure that those who respond to this facility for disclosure of concealed and untaxed income will get complete immunity from any questioning or any other coercive action against them. The Government, however, expects that all persons in possession of concealed income will make a fair and full disclosure of the untaxed income in view of the extraordinary incentive given to them.

The details of the Martial Law Regulation are given in Martial Law Regulation V along with information regarding rate applicable, date by which the returns under the Martial Law Regulation are required to be submitted, investment opportunities available and the form of declaration. The declarant will have the choice to pay tax at 30 per cent along with the declaration if he does not intend to invest the balance amount in the prescribed manner.

SOURCES REPORT NATIONALIZED BANKS VICTIMS OF FRAUD

Dacca THE BANGLADESH TIMES in English 6 May 82 pp 1, 8

[Article by Muzaffar Hussain]

[Text] The country's six nationalised commercial banks have been robbed of at least Tk. 25 crore by internal and external fraud and forgery since Liberation, according to authoritative sources.

While due to inherent organisational defects chances of such fraudulant practices continued to exist, quite a large number of cases detected by the bank authorities were lying pending with the police for disposal.

The authoritative sources told the Times that the cases of undetected internal fraud could turn out to be large, if thorough probe was carried out in a planned manner in all the banks. They, however, warned that any haphazard action without going deep into the anomalies and without taking necessary deterrent measures against future repetitions might prove useless in the long run.

Although some cases of forgery and fraud were detected as early as 1973, such incidents began to increase with the expansion of banking in the country. Externally frauds were carried out by forged cheques and demand drafts by outside parties in collusion with the bank people. Internally, bank employees themselves did the job.

It is gathered that the banks were now facing a peculiar problem where cheques, exact prototype of the original cheques, were being produced at the bank counter for encashment. These cheque leaves, printed by some modern duplicating machines, do not differ with the original cheque leaves issued by the bank. In one case, detected recently, the forgers got the signature of the account holder so accurately that even the account holder could not differentiate between the two signatures. In this case, the original cheque leaf was found intact with the account holder. The forged cheque leaf contained the original cheque number of the bank.

In some cases, demand drafts, so long considered as the safest media in banking transactions, were being forged with surprisingly accurate code numbers.

Internally, fraud cases detected where huge amount of money had been withdrawn by issuing false cheque books against genuine accountholders. In some cases, deposited money was misappropriated without making necessary entries in the books. In some cases advances were made against fictitious accounts opened by the corrupt bank people. In some cases, bank managers made advances violating their limit of authority. It may be mentioned here that frauds and forgery normally take place in busy banks and in big towns.

Sources said that after detection on cases were filed with the police for investigation. But, in most of the cases there was abnormal delay in the investigation since the investigating policemen could hardly concentrate on a particular case due to their multifarious functions.

In the absence of any security press, banks are to depend on some earmarked printing press like Padma Printers, Ebco Pioneer Biac and Zenith Printers. Papers used for printing cheque books and demand drafts are imported exclusively for the earmarked printers and are never on open sale. Cases have been detected where some unscrupulous employees of these printing presses got some papers smuggled out for preparing forged cheques. These forged cheque books were used both by the internal external frauds.

Surprisingly, audit firms could hardly detect internal frauds. Cases of such frauds were detected when the accountholders lodged complaints with the banks about discrepancies in their accounts.

Secondly, posting of bank managers, accountants and other concerned employees for a long time at a particular branch made the task easy. Frauds were detected when concerned people were transferred elsewhere and new people took over. Previously, there was heavy pressure from the employees union on the management regarding transfer of employees. Most of the employees preferred to stay in towns with busy branches.

Internal frauds often manipullated accounts by jugglery during any inspection by higher authorities which made detection difficult. Long stay of bankmen in one particular branch helped the frauds to carry out jugglery of accounts with virtually no difficulty.

Sources said that the crux of the problem lay on the organisational structure of the banks. Due to the existing structure, there was great lack of supervision by senior bank officials. At present, General Managers or Deputy General Managers are responsible for a particular function of a bank. This functional jurisdiction instead of areawise jurisdiction virtually made no one responsible for the anomalies.

Welcoming the intentions of the present Government to put the country's banking system on the right track, authoritative sources suggested immediate setting up of a highpowered commission for reorganising the banking system and also to carry out a thorough probe into the anomalies piled up for years.

They suggested that separate agency should be set up for investigation of bank cases and separate court should be set up for disposal of these cases. This would ensure quick investigation and disposal of cases. Such management are seen in other countries of the world.

They also suggested setting up of a separate agency for the movement of cash from one place to another. They said that the bank officials should be freed as far as possible from non-banking jobs so that they could serve the people better.

ERSHAD SENDS MESSAGE ON SHER-E-BANGLA DEATH ANNIVERSARY

Dacca THE NEW NATION in English 27 Apr 82 pp 1, 8

[Text] Chief Martial Law Administrator Lt. General H. M. Ershad yesterday called for taking a fresh vow to establish a social system free from corruption and exploitation following the ideals of Sher-e-Bangla A. K. Fazlul Huq, reports ENA.

In a message on the occasion of the 20th anniversary of death of the great leader which falls today, Gen. Ershad said true respect would be shown to his memory only when the lot of the commonman of the country could be improved for which he had dedicated his life.

Paying glowing tributes to Sher-e-Bangla, Gen. Ershad said the political and economic emancipation of the neglected and exploited people of the rural areas was the only goal of the great leader and he had pursued it till his death. His contribution in the field of education will remain everfresh in history, the CMLA added.

A man of uncommon personality and rare genius Sher-e-Bangla was a wise and foresighted political leader, patriot and real-friend of the downtrodden Gen. Ershad said.

NATIONAL SAVINGS BUREAUS REPORTED TO EXCEED TARGET

Dacca THE BANGLADESH TIMES in English 30 Apr 82 pp 1, 8

[Text] With a total savings generation of about Taka 11 crore during the first 19 months of their existence, the achievements of the four national savings bureaus have exceeded the target.

The four bureaus--two in Dacca, one each at Narayanganj and Chittagong--were opened between February 1980 and May 1981 by the Directorate of National Savings with a view to extending more direct and efficient services to small savers.

The opening of these bureaus was felt necessary because the banks and the post offices, which are operating half a dozen savings schemes on the basis of commission, were preoccupied with their own businesses.

There was also popular demand from small savers that the Directorate of National Savings operate its own bureau offices alongside the banks and post office to directly deal with them.

Initially the four bureaus were asked to deal in two savings schemes--Pratirakkha Sanchayapatra and Bonus Sanchayapatra.

Total saving mobilisation by the four bureaus during fiscal 1980-81 stood at over Taka 5.78 crore while withdrawals amounted to only Taka 78 thousand thus leaving a net investment of Taka five crore.

The Motijheel National Saving Bureau which was opened on December 20, 1980, generated a total savings of over Taka 2.69 crore during 1980-81. The Narayanganj and Chittagong bureaus opened in February 1981 had collected a total savings of over Taka 85 lakh and about Taka 1.35 crore respectively. The Bureau at Elephat Road, Dacca, which was opened on May 15, 1981, generated over Taka 89 lakh as savings during the year.

Of the total savings mobilised during 1980-81, Pratirakkha Sanchayapatra accounted for 5.43 crore while Bonus Sanchayapatra fetched over Taka 35 lakh.

A Directorate source told the Times that during the first nine months of the current fiscal year ending in March, total savings generation by the four

savings bureaus totalled over Taka 5.37 crore against a target of Taka three crore for the year. Savings under the Pratirakkha Sanchayapatra scheme amounted to over taka 4.70 lakh while under Bonus Sanchayapatra scheme it was over taka 67 lakh during the nine months.

Recently the Directorate has introduced the sale of prize bonds through these Bureau offices in addition to the two schemes already being run by them, the source said.

The source said that the Directorate was considering the question of opening similar kind of bureaus in other important urban centres of the country. It is also being felt that a breakthrough in savings mobilisation under different schemes of the Directorate might be achieved, if there were bureau offices at all important district and sub-division towns.

The source said, at present the Directorate had its own field officers entrusted with motivational work at all district and sub-division towns, and some important thana headquarters. They publicised the different schemes and advised potential savers to save their money through the banks and the post offices.

He said that introduction of saving bureaus in Dacca, Narayanganj, and Chittagong made the field officers in these more effective, because they could lead potential savers to the bureaus whose only business was to deal with the savings schemes. The clients did not face the inconvenience that they usually faced with the banks and the post offices which were more busy with their own businesses to be able to pay adequate attention to the small savers.

The Directorate of National Savings, inspired by the success of national savings banks in countries like Sri Lanka and Thailand, went for introducing the savings bureaus. Except the Motijheel bureau which is being run by only one officer, one accountant and one clerk, the three other bureaus are being run by one officer and one clerk each.

UN DELEGATE SPEAKS ON PALESTINE ISSUES

Dacca THE BANGLADESH OBSERVER in English 25 Apr 82 pp 1, 12

[Text] New York, Apr. 24--Bangladesh has again condemned the illegal and arrogant acts of Israel which created a highly explosive situation today not only in Palestine and other occupied Arab territories but also in the entire Middle East region reports BSS.

Addressing the seventh emergency special session of the United Nations General Assembly yesterday, the Acting Permanent representative to the UN Mr. Farooq Sobhan, said that Bangladesh's involvement in the freedom struggle of the Palestinian people was total. Bangladesh has always condemned in no uncertain terms the Israeli acts of aggression and will continue to do so till the wrongs are righted, he added.

The Acting Representative told the UN session that Bangladesh's stand on the Palestine and the Middle East question was unequivocal and consistent, and was not based on political expedience. He said Bangladesh firmly believed that no solution in the Middle East could be envisaged which "does not fully take into account the legitimate aspirations of the Palestinian people."

Quoting from a recent message to the nation by Chief Martial Law Administrator Lt. General H.M. Ershad, the Bangladesh representative said "It is our deep conviction that there can be no fair and lasting solution to the problem of the Middle East without a total withdrawal of Israeli forces from all Arab lands and without the restoration of the inalienable national rights of the Palestinians to have a state in what has always been and still is their own land."

The Bangladesh Representative said that the sinister designs of Israel must be stopped, Israel must be compelled by the world body to obey its mandate not only in the interest of peace and justice in the region but also in the wider interest of international peace and security and the welfare of mankind as a whole.

UN DELEGATE'S 26 APR SPEECH TO ECOSOC REPORTED

Dacca THE BANGLADESH OBSERVER in English 27 Apr 82 p 1

[Text] New Kork, Apr 26--Bangladesh has reiterated its opposition to all forms of colonialism, racism and racial discrimination and its irrevocable commitments to their total eradication from the face of the earth, reports BSS.

The reiteration was made by the Bangladesh Representative at the United Nations while making a statement at the first regular session of the Economic and Social Council on Wednesday on the agenda item "Decade for action to combat racism and racial discrimination."

The General Assembly decided in 1973 to observe the decade beginning December 10 of that year.

The Bangladesh Representative said that the ultimate goals of the decade were to promote human rights and fundamental freedom for all without distinction of any kind such as race, colour, birth or ethnic origin through total eradication of racial prejudice racism and racial discrimination.

He said that the cruellest and most naked expression of racism were found in the policy of apartheid followed by the South African regime against its majority population. This policy resulted in denial of political representation to more than four fifths of its population, economic discrimination and exploitation of an unprecedented scale and dismemberment of the country through creation of so called black home lands.

AMBASSADOR REITERATES PRC SUPPORT FOR BANGLADESH

Dacca THE BANGLADESH OBSERVER in English 25 Apr 82 pp 1, 12

[Text] China has reiterated her Government's total support to Bangladesh in the preservation and consolidation of her state sovereignty and national independence and in the attainment of her economic emancipation progress and prosperity.

This was stated by Chinese Ambassador in Bangladesh, Mr Liu Shu Qing in an exclusive interview with ENA Chief Editor Golam Rasul Mallick on Saturday morning.

The Chinese Ambassador stated in clear terms that his Government and people hope that the Government and people of Bangladesh would achieve success in maintaining peace and stability in the country and in their efforts at developing good neighbourly relations and regional cooperation and maintaining peace in the region.

Mr Liu Shu described as excellent and very friendly the relations between Bangladesh and China and visualised greater cooperation between the two countries in the coming days.

Q: Mr Ambassador how do you describe the present state of relations between Bangladesh and China?

A: Our relations are very good and excellent. There is no problem between the two countries. Our friendly and cooperative ties between the two people will be further strengthened.

Q: How would you evaluate economic cooperation between the two countries?

A: The economic cooperation between the two countries is very good. There is some imbalance in import and export between the two countries. We are trying to bridge the gap. As you know we are always helpful to Bangladesh with our limited resources and despite our own constraints. We have been readjusting our own economy in our country. We are certain that in due course we will be able to extend greater economic cooperation to Bangladesh. Our trade relation with your country is encouraging and this will further grow in coming days.

In conclusion the Ambassador sincerely hoped that Bangladesh would develop into a strong, prosperous and peaceful nation. We shall always stand by them in their struggle against hegemonism and external interferences, he said.

ADVISERS DISCUSS PARIS MEETING, HEALTH FACILITIES

Dacca THE BANGLADESH OBSERVER in English 25 Apr 82 p 1

[Text] A meeting of the Council of Advisers was held in Dacca on Saturday with the Chief Martial Law Administrator in the chair at the CMLA's Secretariat for about six hours, reports BSS.

The Council took up the presentation of the brief to the Bangladesh Aid Group meeting in Paris. The Adviser for Finance and Planning gave detailed account of the proceedings of the Bangladesh Aid Group meeting. The CMLA took the opportunity to compliment the Adviser and members of the Bangladesh delegation on their performance.

The Council reviewed the foodgrains and salt situation in the country.

A substantial part of the Council meeting was devoted to in-depth examination of the role of IRDP in the context of Government determination to decentralise and streamline the administration using Thana as the basic unit.

The future of the cooperatives was discussed in particular and the Council decided that this vitally important subject will be taken up again exclusively in a special session of the Council Wednesday.

The Council took some important decisions in the health sector. It was decided that no doctor shall be allowed to go abroad for employment unless he served in the rural areas of the country for a minimum period of five years.

On completion of five years' service in the rural areas the Government will, however, consider only a small number of doctors for employment abroad keeping in view the country's requirements and the number of doctors available in the country.

The Council also decided to stop implementation of the schemes for the establishment of eight new medical colleges in different districts out of which four had already started functioning. This decision has been taken because the four medical colleges were started in these districts without providing adequate accommodation, required number of qualified teachers, appropriate equipment and other facilities.

However, in order to extend medical services to the people of those areas, it has been decided that the hospital component of the project where medical colleges were started will continue. Accordingly a 500-bed hospital in Khulna and 250-bed hospital each in Comilla, Bogra and Pabna will be set up.

These will be accomplished by upgrading the existing district hospitals where possible or by constructing new hospitals.

About the students, it was decided that those studying or admitted in these medical colleges will be shifted to the existing medical colleges in the country.

However, the Second Year students in Khulna and Pabna Medical Colleges will be shifted after they complete their Second Year Examinations.

The Council considered the present practice of sharing of the fees on account of pathological examination. X-Ray, ECG, EEG, physiotherapy, radiotherapy, blood test for blood transfusion by the doctors and the staff and decided to stop such practice under a Martial Law Order.

The decision was taken in view of the fact that doctors and staff used to keep themselves busy with cases of patients who were paying fee for such examinations to increase their earnings, causing negligence to the treatment of non-paying patients both in hospital wards and in outdoor.

At present, the doctors and staff are used to get 50 per cent of the charges on account of such examinations though they are doing these works as part of their normal duties using Government instruments and equipment. In order to ensure proper attention to the general patients and proper utilisation of Government resources, the Council decided to stop this practice forthwith.

ADVISER TALKS TO PRESS ON RETURN FROM PARIS MEETING

Dacca THE BANGLADESH OBSERVER in English 25 Apr 82 pp 1, 12

[Text] Mr A.M.A. Muhith, Adviser for Finance and Planning on Saturday expressed the hope that the actual disbursement of the aid would be higher than the amount committed by the donor countries for the next financial year, reports BSS.

Mr Muhith who led the 7-member delegation at the recently held Aid to Bangladesh Consortium meeting in Paris was addressing a Press conference at his Sher.e. Bangla Nagar office in Dacca.

The members of the Aid Group representing 27 Governments and institutions in their ninth annual meeting in Paris committed 1700 million US dollars for 1982-83.

Mr Muhith said due to the world-wide economic recession most of the donor countries had cut their external aid. But in case of Bangladesh their attitude was favourable, he observed.

Referring to the review made by the Paris meeting on the economic programme of Bangladesh, Mr Muhith said the donors had welcomed the policy reforms and announced their commitments. But they had also indicated that implementation of the policy would play an important role in determining their future aid allocations for the country.

He said seven countries, France; Canada; Norway, Netherlands, Japan; U.K. and Denmark, had indicated that they would increase their aid levels "substantially."

He said a delegation from Netherlands would visit Bangladesh next month for further talks. Netherlands had reduced its external aid budget by ten per cent, but in case of Bangladesh it was expected to increase the aid substantially.

Replying to a question, Mr Muhith said he hoped the quantum of aid from the United States would be the same as in the last year.

Bangladesh is also negotiating with the International Monetary Fund (IMF) another aid source, for its financial assistance during next year he said.

He termed the current financial year as critical for Bangladesh due to seven lakh tons additional food shortage widening of trade gap caused by decrease in export price and increase in import price of commodities.

He said that short term loans and reserve financial sources were utilised to face the situation.

He, however, cautioned that such sources will not be available in the coming years. At the same time trade imbalance would be widened due to further increase in prices of import commodities.

Stressing the need for setting up of scientific economic target, Mr Muhith said the Bangladesh delegation explained to the Paris meeting that the Government's policy was aimed at preventing wasteful expenditure in the public sector to achieve a growth rate of seven per cent. Our policy also aimed at encouraging private investment, achieveing self-sufficiency in food, controlling population through realistic measure and mobilisation of domestic resources.

Replying to a question he explained the measure for mobilisation of domestic resources. He said two and a half lakhs of people were now paying taxes and current year's performance was quite satisfactory. He stressed the need for revision of income tax laws to increase revenue earnings from agricultural sector and public entrepreneurs and by reduction of subsidy in different sectors and capacity utilisation of manufacturing projects.

Speaking about project implementation Mr Muhith said that a "fundamental change" would be brought about for speedy disbursement of fund to the priority projects. The project directors would be given necessary powers for efficient implementation of the projects.

Replying to a question the Adviser that instructions were already issued to the financial institutions for giving equal treatment to the public and private entrepreneurs in extending credit and other facilities.

He said small public sector units would be disinvested to encourage the private sectors and to prevent wastage in public sector.

He told another questioner that Bangladesh will also appeal to the foreign investors for oil and gas exploration in the country on production-share basis.

DETENTION PERIODS LENGTHENED FOR PROMINENT PERSONS

Dacca HOLIDAY in English 25 Apr 82 pp 1, 8

[Article by Manik Hussain]

[Text] In many of the cases where persons were arrested and detained initially for a period of one month, the authorities have now extended the period of detention by another six months. This order has been passed mostly in cases of prominent citizens now behind bars on various charges.

So far eight former ministers, including two deputy prime ministers and four former parliament members have been arrested. They are: deputy prime ministers Jamaluddin Ahmed and S.A. Bari A.T., former establishment minister Major-General (retd) Majid-ul-Huq, former finance minister Saifur Rahman, former jute minister Habibullah Khan, former public works minister and mayor of Dacca Abul Hasnat, former state minister for commerce Chowdhury Tanbir Ahmed Siddiky and former state minister for manpower development Atauddin Khan.

The former parliament members are: Akhtaruzzaman Alamgir of Patuakhali, Siddiqur Rahman of Barisal, Zillur Rahman of Kushtia and Dil Mohammad of Rajshahi. All the parliament members belonged to the Bangladesh Nationalist Party (BNP).

Besides Abul Hasnat, three commissioners of Dacca Municipal Corporation are in custody. They are: Yunus Abdullah Sentu, Moslehuddin Bagu Miah and Mirza Abbasuddin. Abbas was also the chief of the city unit of the BNP's youth front.

Former deputy prime minister Jamaluddin Ahmed is now being tried on different charges of corruption and abuse of power.

Release

Meanwhile, Mohammad Zahir, a director of Alauddin Taiwa Textile Mill and father-in-law of Abul Hasnat, and Sagir Ahmed, vice president of Jagannath University College Student's Union have been released. While Zahir was arrested in the last week of March, Sagir Ahmed was taken into custody by police on April 7 on charge of possessing unauthorised firearms. No firearms, however, could be recovered from his possession.

On April 9, Kotwali police arrested Dr Shahid Hasan alias Babul, an interne of Mitford Hospital and recovered a revolver on the basis of his confessional statement. The physician later told the police that he had bought the revolver from Sagir Ahmed making a cash payment of Tk 10 thousand.

Sagir was produced before a metropolitan magistrate a few days ago. He was set free and all the charges against him were dropped.

'HOLIDAY' INTERVIEWS ADVISER ON RURAL DEVELOPMENT

Dacca HOLIDAY in English 25 Apr 82 pp 1, 8

[Interview with Adviser Mahbubur Rahman by Jaglul Alam]

[Text] "The state of affairs in most of the organisations under the ministry of local government and rural development (LGRD) is very unsatisfactory. Many organisations are running without the required return and output, and have sunk in losses and debts."

This was revealed by Mahbubur Rahman, the adviser to the chief martial law administrator in charge of the ministry of LGRD in an exclusive interview with HOLIDAY last week.

He said that the performance of the members and chairmen of union parishads, who are in office now though their term in office normally would have ended in last February, is being "evaluated and we are intending to hold elections to union parishads sometime at the end of this year provided the election commission is ready and the atmosphere is congenial."

He added that thereafter the government intends to constitute thana parishads and also hold elections to zilla parishads. He recalled that after the emergence of Bangladesh, although a decade had passed, no election to zilla parishads had been held.

Mr Rahman said that "this government is for the whole nation and people and is neither in favor nor against any particular political party."

No political party has any influence on this government, he said. He observed that "most of the concepts, objectives and plans are General Earshad's, not borrowed from anybody. He is impartial and does not belong to any political party."

"His strength comes from the blessings of Almighty Allah, the 90 million people of the country including the entire armed forces," the adviser said.

"We who are with him are in total agreement with him," he added.

Mahbubur Rahman, while explaining the present conditions in different municipalities, said that the activities in all municipalities and the performance of the chairmen and the commissioners are now under scrutiny.

"Those who will be found to have failed or engaged in activities prejudicial to public interest or are sick may be replaced in accordance with law, and Dacca Municipal Corporation is no exception," he said.

"In this connection we are exploring the possibilities of integrating Mirpur and Gulshan municipalities with Dacca," he observed.

Gram Sarkers

He said that the government had been evaluating the work of the gram sarkers and the final decision about them would come within the shortest possible time.

He pointed out that the existing gram sarkers, if after evaluation they retains their existence, will be supplementary and not competitive to the union parishads.

In taking any decision, he went on, the present government does not suffer from any political constraint.

The adviser to the CMLA said after the liquidation of the youth complex the concerned agencies had already been directed to audit and inspect the accounts but due to paucity of manpower this process might take time.

"We intend to strengthen the cooperative movement by streamlining it, weeding out bad and fake cooperatives and providing incentives where they deserve them," he remarked.

Mahbubur Rahman observed, "The present government does not believe in unaccountability and hence everywhere we are trying to enforce accountability and the system of inventory. During last decade we lost both. This was one of our national tragedies."

LGRD

He said that since 85 percent of the total population are living in rural areas, the present government is determined to plan, channelize and direct its activities toward development of rural areas and rural people.

"One of the objectives of the government as repeatedly declared by the CMLA is to give more attention toward the neglected class of people and consequently attention will be focused on the rural areas," he elaborated.

The adviser said that in development activities the government wants to ensure participations of the people with a sense of belonging, self-help and self-reliance.

To achieve these ends the government is planning to carry out various reforms such as administrative, economic and social, Mr Rahman said.

The adviser said "we intend to make the local institutions of the people, such as union parishads, thana parishads and zilla parishads more powerful, with more responsibilities and service facilities but not for use to the advantage of particular individuals, groups or parties."

He assured that the present government would in every possible manner discourage misuse and abuse of power and resources given to those institutions.

"One thing I must mention. During my recent visits to different districts inspiring response from the people was demonstrated and noticed. They expressed their willingness and readiness to build the country for which they fought in 1971."

"Our people are patriotic and good. In my opionion, they never failed. It is we who assumed responsibilities and leadership failed in the past," he confessed.

On his personal experience he said, "I am from legal profession. Previously I used to work for my clients and at present I am working for the country and countrymen. Hence in the present assignment job satisfaction is greater. This is the real reward for me," he concluded.

CSO: 4220/7269

AID CLUB DISBURSEMENT DOWN IN REAL TERMS

Dacca HOLIDAY in English 25 Apr 82 pp 1, 8

[Article by Hossain Khasru]

[Text] The World Bank-sponsored Aid Club which concluded its ninth annual meeting in its usual course in Paris on April 21 pledged external aid commitments to Bangladesh to the tune of 1.7 million US dollars for upcoming fiscal 1982-83.

According to the official news agency report, the level of commitments for the coming year would represent an increase of about 14 percent over the one committed by the donors to the country last year.

The increase in aid commitments as such has been calculated at current prices. The import price indices for the country like others placed in the UN-category of LDCs have meanwhile been under phenomenal upward pressure due to a global inflationary wave.

According to a rough reckoning, the cost of imported merchandise in the case of Bangladesh registered an average increase of over fifteen percent over the last one year period.

When the global inflationary factor is thus taken into account and the figure relating to commitments by the Bangladesh Aid Club for 1982-83 is adjusted against the price escalating factor, the external aid scenario does not look as promising as matching the nominal increase in donors' pledges in percentage terms.

This is more so in view of the fact that the just-concluded Bangladesh aid group meeting has been the first one since the United Nations Conference on Least Developed Countries adopted the Substantial New Program of Action (SNPA) for 31 LDCs including Bangladesh and the Cancun summit endorsed increased flow of assistance for the LDCs.

It is worthwhile to mention here that external assistance to Bangladesh has recorded a downswing in real terms over recent years despite a higher volume of commitments and disbursements in nominal terms. According to an estimate, external aid disbursements in real terms were 15 percent

lower in 1980-81 than the related level in 1979-80, notwithstanding the fact that disbursements in nominal terms were higher during the period under review.

Fresh Promises

In all, Bangladesh received aid commitments to the tune of 3.7 billion US dollars for the first two years (1980-81 and 1981-82) of the second five-year plan (1980-85).

Against this, aid disbursements during the two years ending June next are expected to reach the level of 2.7 billion dollars, indicating that the next financial year is to begin with one billion dollar external assistance in the pipeline.

Fresh commitments for 1.7 billion dollars worth of external assistance have now been received at the Aid Club meeting from consortium sources which have normally been providing about seventy-five percent of the annual external aid availability for Bangladesh.

The exact picture about the fresh commitments and disbursements for the upcoming year to the country from non-consortium sources including OPEC and socialist countries is not yet known for certain.

Viewed against the backdrop of an increasingly unfavorable international aid climate over recent years which has adversely affected the aid-dependent LDCs in particular, the outcome of the just-concluded Aid to Bangladesh Club meeting in Paris can however be viewed otherwise as a not-so-disappointing one.

Most members of the Aid Group were reported to have said that they expect to maintain their aid-levels in the coming years at or above those indicated at last year's meeting.

Some donors have reportedly announced already substantial increased level of external assistance for Bangladesh for 1982-83.

The ninth Aid Club meeting in Paris was attended by Australia, Belgium, Canada, Denmark, Finland, France, FRG, Japan, The Netherlands, Norway, Sweden, the UK and USA.

Eight multilateral agencies including IMF, IFAD, IDB, UNDP, UNCTAD, and WFP also participated in it.

Besides, Italy, Switzerland, Kuwait Fund and OECD attended the meeting as observers.

Vice-President of the World Bank David Hooper, presided over the Aid Group meeting.

A seven-member Bangladesh delegation, led by A.M.A. Muhith, adviser-in-charge of the ministry of finance and planning, represented the country at Paris.

The Aid Club meet this year had a special session to consider the investment program and aid requirements in the country's energy sector in particular.

Official reports suggest that the donors have agreed in this connection for concerted efforts by Bangladesh and the aid-giving countries and agencies for effective exploitation of energy resources with particular emphasis on natural gas.

The concrete nature of donors' assistance in this particular sector for the coming year has not been spelled out yet in details.

The Needs

No firm indication was available before hand to suggest as to what Bangladesh sought in precise quantum terms in different forms of assistance--food, commodity and project--for the coming year at the Paris meeting from the consortium.

Indications prior to the change-over of the government showed that Bangladesh would seek 2.3 billion dollars from the Aid Group for 1982-83.

The new administration discussed at length in a meeting of the council of advisers on April 10 the issues relating to the Aid Group meeting in the light of its priorities for rejuvenating the economy along its stated lines.

According to available reports, Bangladesh had urged the donors at Paris for an increased flow of food and commodity assistance for 1982-83.

It was not however known till the writing of this report on Friday as to what the donors pledged in concrete forms, such as project aid, commodity assistance and food aid for the country for the coming year.

Official news agency report about the outcome of the Paris meeting indicated that some donors had expressed their willingness to provide more of their assistance in the form of fast disbursing commodity and to cover the local currency cost of priority development activities.

The donors were also reported to have welcomed the policy reforms announced by the new administration in Bangladesh and to have commended the prompt attention it had given to the critical economic and financial issues following its assumption of office.

Now that broad commitments by the donors for fiscal 1982-83 have been announced through their pledges in the Paris meeting, the next phase of the task which is indeed the more difficult one lies in the field of securing the disbursement of aid funds in the pipeline.

REPORTER SAYS FARM PRODUCTION IN SHARP DECLINE

Dacca HOLIDAY in English 25 Apr 82 pp 1, 8

[Article by Mahmud Rashid]

[Text] The question whether Bangladesh will ever be able to attain its long-cherished dream of self-sufficiency in production of foodgrain still remains unanswered as all previous exercises eventually turned out to be futile.

The latest addition to the series of exercises is the medium-term food production plan which was launched in February, 1982, covering the second five-year plan period.

The World Bank in its appraisal described the medium-term food production plan as ambitious. Yet its success by its terminal year, 1984-85 was claimed by its sponsors who have, meanwhile, paid heavily for their baseless and unrealistic claims with their exit from the coveted saddle of power.

The mid-term food production plan (MTFPP) envisaged production of foodgrains at 15 million tons in fiscal 1980-81, 16.2 million tons in 1981-82, 17.3 million tons in 1982-83, 18.6 million tons in 1983-84 and 20 million tons in 1984-85.

Due to unprecedented fair weather, production of foodgrain in 1980-81 was 14.7 million tons which was only 4.5 percent below the MTFPP target for the year.

But in the current fiscal year production has declined sharply from the target of 16.2 million tons to 14 million tons because of prolonged drought beginning in October, 1981.

According to a source in the agriculture ministry, now the target of food production for 1982-83 is 15 million tons while a maximum 16 million tons and 17 million tons of foodgrains are likely to be fixed as targets for fiscal 1983-84 and 1984-85.

It is evident that the MTFPP targets were inflated with a certain purpose. The present administration has already hinted that various plans of the previous government will be revised soon.

It may be pointed out that the spearhead of the MTFPP is enhancement of irrigated acreage and a corresponding expansion of seed-fertilizer technology. It is based on 57 quick gestation projects and its annual targets were fixed at the growth rate of 6 percent which was registered in 1980-81.

The input package of the food production program was based on the following plan: a total net investment of Tk. 5,100 crores was projected to achieve the targets, Tk. 250 crores medium credit was envisaged to provide finance for the purchase of irrigation equipment and agricultural implements and the sum of short-term crop loan was anticipated to double over the level of Tk. 150 crores per year, demand for HYV seed was estimated to increase from the 6,200 tons of 1980-81 to about 58,000 tons by 1984-85, fertilizer use in 1984-85 has been shown to go up to about 19 lakh tons and diesel requirements for the operation of irrigation equipment were anticipated to be about 7 crore gallons in 1984-85 from 2.8 crore gallons in 1980-81.

Besides, the plan further included expansion of irrigation acreage from 36 lakh acres in 1980-81 and arrangement of drainage and flood control facilities for 20 lakh more acres of land and minor irrigation facilities through low lift pumps, deep tubewells, shallow tubewells and hand tubewells to 80 percent of the incremental irrigated area.

Contradictions

Referring to the land occupancy survey of 1978 a senior official of the agriculture ministry told this correspondent, the impoverished condition of most of the country's farmers and input-oriented production strategy of the government are contradictory and this sort of production strategy never yielded satisfactory results.

It may be pointed out that the land occupancy survey of 1978 shows that 29 percent of rural households own no land other than homesteads, 33 percent of households possess less than one acre of land, but three precent of them having land of five acres and above own 25 percent of the total cultivated acreage.

Besides, 23 percent of the cultivated land is under share-cropping.

The increase in the production of foodgrains is attributed by a senior official of the planning ministry to the people's all-out efforts to raise their food production in view of the acute food crisis in 1979-80 which was offset by the then government through immediate arrangement of foodgrains from abroad.

However, the production achievement of 1980-81 convinced the policy-makers of the country that through traditional input-based production strategy self-sufficiency in foodgrains can be attained.

But the then agriculture minister disagreed with the planners who were optimistic about the spectacular rise in foodgrain production through the provision of modern technological package.

He expressed the view that structural transformation must accompany technological changes for the achievement of the MTFPP targets, otherwise underdevelopment would continue to take worse forms.

He also mentioned in the document on food production program that the pressure of population on land and the existing land ownership as well as tenurial system had been an obstade to the proper utilization of modern technology.

The importance of structural changes in land in order to raise the production of foodgrains has also been subtly admitted in a recent paper of the ministry concerned.

It mentioned among others, the purchasing power of farmers in the list of production limiting factors. Since a farmer's purchasing power is directly linked with the tenurial system the present tenurial system cannot ensure generation of farmers' purchasing power.

AGRICULTURE TO GET TOP PRIORITY IN NEXT ANNUAL PLAN

Dacca THE BANGLADESH TIMES in English 7 May 82 p 1

[Text] A total of Taka 445 crore has been earmarked for the agriculture sector in the proposed Taka 3300 crore Annual Development Plan for the next fiscal year according to reliable sources.

The allocation is higher by Taka eight crore than that of the current fiscal year. The increased allocation, the sources said, reflected the policy of the present government to attach highest priority to the agriculture sector.

Of the total allocation, Taka 350 crore has been allocated for fertilizer, seed, irrigation schemes excluding Bangladesh Water Development Board projects.

The sources mentioned that allout efforts would be made for the timely availability of seed and fertilizer and proper implementation of irrigation schemes with short gestation period.

The strategies and policies in the agriculture sector during the next ADP will be, among others, to (a) to expand irrigation coverage; (b) provide extensive production package of HYV seeds, fertilizer, pest management and farmer training credit etc.; (c) expand HYV wheat and rice in rain-fed areas and (d) ensure full capacity utilization of irrigation facilities and other support services.

ADVISER SAYS MISMANAGEMENT OF FOOD SITUATION OVER

Dacca THE BANGLADESH OBSERVER in English 28 Apr 82 pp 1, 8

[Text] Dudmukha (Feni), Apr 27--Air Vice Marshal (Retd) A.G. Mahmood, Adviser in-Charge of Food, Relief and Rehabilitation has said the firm measures taken now in food management with facilities for unrestricted flow of foodgrains were aimed at reaching food to people everywhere in the country, reports BSS.

Addressing the 46th annual prize-awarding ceremony here yesterday of the Yaqubpur Ishaqia Aytimkhana (orphanage) as chief guest, the Food Adviser said the perils of a grossly mismanaged food situation which mounted us in the recent past were now over as the government had adequately galvanised its measures to manage the food situation inclusive of bulk international procurements.

Our attempts of total self-reliance, including food, must not end up as hollow slogans only especially when the Food-for-Work Programmes had been effectively consolidated he said and warned, "you must not, just wait for the government to help you."

The Food Adviser said, a country-wide rehabilitation programme was now being prepared to motivate "all of you to work harder."

Earlier, Air Vice Marshal Mahmood was welcomed by Peer Sahib Moulana Abdul Huq of Dudmukha, a village 12 miles from Feni town. Briefly narrating the history of the orphanage in a remote village the venerable Peer Sahib, the founder's representative, sought assistance to develop the institution further.

Mr. Anwarul Islam, Deputy Commissioner of Noakhali who also spoke on the occasion, assured help and assistance to the orphanage.

Mr. Mahmood then saw the vulnerable group feeding programme for the orphans.

The Food Adviser called upon the Yatimkhana management to rear up orphans as selfless future citizens of the country who would engage themselves in enhancing the dignity of the nation.

Explaining certain new management measures, Air Vice Marshal Mahmud said that many redundant formalities in food carriage and movement were now removed, so that even imported grains could reach the distributing points at the LSD within a very short while from being unloaded at the ports.

The dealers in foodgrains were expected to be appreciative of this policy of the Government which, he said, promoted a genuine free-market atmosphere. Modes of operation in this respect including the modified and statutory rationing, free market operation and the open market sale, must not be lost sight of by the traders, since continuous monitoring and constant vigilance by the appropriate authorities were unabated, the Food Adviser said.

He also held out the assurance that, if necessary, more vulnerable group feeding programmes along with the existing ones throughout the country could be undertaken by the Government for the distressed, the lactating mothers and the children and the orphans.

PAPER TOLD FOOD TARGET TO BE REVISED DOWNWARD

Dacca THE NEW NATION in English 24 Apr 82 pp 1, 8

[Article by Kazi Montu]

[Text] The food production target for next fiscal year (1982-83) may be refixed at 15 million tons as against 17.3 million tons projected in the highly ambitious medium-term food production plan (MTFPP).

Disclosing it an authoritative source in the Agriculture Ministry told THE NEW NATION that the MTFPP would be reviewed and revised shortly for its adjustment with the refixed targets of food production for the remaining years of the plan.

According to the source, the food production targets for fiscal years 1983-84 and 1984-85 are going to be set at 16 million tons and 17 million tons respectively while the MTFPP targets for the two years were 18.6 million tons and 20 million tons respectively.

The MTFPP launched in February, 1981 after lapse of a year of the plan period beginning in July, 1980 was aimed at attaining self-sufficiency in food production by increasing it from a benchmark level of 13.5 million tons to 20 million tons by the terminal year of the plan, 1984-85.

The basic thrust of the plan was to raise the availability and utilization of modern agricultural inputs and provide small scale irrigation facilities.

It also promised to enhance the role of private sector in the distribution of inputs and the owneship of irrigation facilities.

Besides, the plan envisaged large investments in complementary storage and transport facilities and an expanded government role in procurement and open-market sale of foodgrains.

The first year of the MTFPP period, which ended before its launching was marked by record production of foodgrains because of the farmers' all-out efforts to raise production as they had suffered in the previous year when an acute food crisis hit the country.

But the current year's achievement proved the targets of the MTFPP as unrealistic. It may be noted that the gap between the target set in the MTFPP and the actual production is 2.2 million tons.

The input-based production strategy of the MTFPP has also been severely affected by the withdrawal of subsidy for fertilizers and pesticides.

The price of fertilizer increased by 46 percent over last years while 50 percent of the subsidy provided to the pesticides was withdrawn causing a sharp rise in the retail price of pesticides by 300 percent.

The sale of pesticides is being handled by the private sector.

Now subsidy is being provided to wheat seed, but there is heavy pressure from the external sources to withdraw it. Concerned circles maintain that if the provision of subsidy for wheat seed is discontinued the prospect of wheat production will be severely affected.

A source in the Agriculture Ministry informed that the demand for fertilizers had remarkably fallen in the current crop season.

It is learnt that Bangladesh Agricultural Development Corporation, which handles the distribution of agricultural inputs may be reorganised in order to streamline its activities.

The Government is learnt to have a plan to eventually defrock the corporation of its agricultural inputs distribution responsibility in the interest of the private sector. It will only manage the repairing workshop of the irrigation machinery.

EXPORT-IMPORT GAP CONTINUES TO WIDEN

Dacca THE BANGLADESH OBSERVER in English 24 Apr 82 p 1

[Text] Despite efforts to bridge the export-import gap, the imbalance continued to deteriorate during the last seven years ending in June '80. On an average the export was only 36.84 per cent of the total import during the period.

Though the export figure has considerably increased during the period, the import figure likewise has also marked a steep rise resulting in the staggering imbalance.

During 1979-80 the total export was to the tune of Tk. 1135 crore while the import figure stood at Tk. 3924 crore. Similarly during 1973-74, the total export was Tk. 297 crore against the import of Tk. 732 crore. The export earning rose to Tk. 837 crore during these seven years with the consequent rise in import bill to Tk. 3192 crore.

The highest percentage of export against import was attained during 1976-77 when the figure marked 44.70 per cent. The total export during the year was Tk. 625 crore against an import of Tk. 1399 crore. During 1974-75 and 1975-76 the export earnings were Tk. 306 crore and Tk. 551 crore respectively against the import expenditure of Tk. 1084 crore and Tk. 1470 crore.

The export earning during 1977-78 was Tk. 740 crore against the import figure of Tk. 1821 crore. During 1978-79 the export figure stood at Tk. 928 crore against the import figure of Tk. 2493 crore.

While jute and jute goods contributed more than 60 per cent to the export earnings, the bulk of the import expenditure accounted for the public sector, petroleum being the most.

Besides raw jute and jute goods, other products and commodities exported including leather, frozen foods, tea, fruits and vegetables, newsprint, ready-made garments, handicrafts, cables, G.I. pipe specialised textiles and cotton fabrics and fodder naptha, furnace oil and bitumen.

Imported goods included petroleum industrial raw material, industrial spare parts, consumer items and essential food commodities.

TEXT OF ANNOUNCEMENT LISTING BANNED IMPORTS

Dacca THE BANGLADESH OBSERVER in English 25 Apr 82 p 1

[Text] The Government has decided to ban the import of a number of items in pursuance of its policy to protect the indigenous industry with a view to maximising production in the country. The decision was taken in the meeting of the Council of Advisers held on Saturday says a PID handout.

Following are the items whose import has been banned:

1) P V C Compound (Shoe grade).

2) Cellophane paper all sorts except MST and MXXT type, which may be allowed to pharmaceutical industry as per their entitlement only.

3) Dry Cell Battery (Standard and medium sizes only).

4) Electric bulbs (15-100 watts only).

5) Electric Ceiling Fans.

6) Pilfer proof cap except for pharmaceutical industries within their entitlement.

7) Empty Lacquered Drums.

8) Metal and paper transfer of all foreign bicycle brands.

9) Steel Reeds of sizes upto 60s.

10) Electrical Accessories bed switches, table lamp switch, piano switch upto 15 Amp and 2 and 3 pin plugs only.

11) Hand sprayers, except those required by Tea Gardens requiring special automisation.

12) Locks and Padlocks upto 2 3/4" size, except combination and special locks.

13) Torch lights.

14) Telephone sets and exchanges upto 10 lines.

The following items shall remain banned, but import of any of these items may be allowed whenever necessary, with the clearance of the Industries Division and on notification by the CCI&E:

1) Paper, all sorts except the following grades - Cigarettee paper, Filter paper, Parchment paper, Tracing paper, Toilet paper, Base paper for carton paper, Base paper for sensitised paper, Monotype spool paper, Transfer paper, and Stencil Tissue paper.

2) PVC Pipe (Upto 8" dia).

3) Cycle tyre (2 ply) and tubes.

4) Foam Rexin.

5) Second hand and reconditioned buses, trucks and jeeps except Microbus, Minibus, Coaster and Pickup.

6) Aluminium conductors, steel re-inforced (ACSR).

7) Urea Formaldehyde Adhesive.

8) Carbon Dioxide Fire extinguisher upto 2 gallon capacity.

9) G I Pipe (1/2" to 4" dia).

10) Tear off vial seal.

11) Duplex Board.

12) Ships of steel or wooden bodies upto 1000 tons.

13) M S Tubes.

14) Shovels.

Import of duplicating ink under cash, credit and barter is also banned.

The decisions will come into force with immediate effect and the neccessary public notice has already been issued by the CCI&E in this respect.

To ensure adequate production within the country the industries concerned will be licensed at a level not less than 100% of their entitlement. The Government has decided to maintain strict vigilance on the market behaviour so that timely action could be taken for corrective measures.

BANGLADESH JUTE INDUSTRY REPORTED IN TROUBLE

Dacca HOLIDAY in English 1 May 82 pp 1, 8

[Article by Amin Choudhury and Hossain Khasru]

[Text] Like the case in the preceding years, raw jute exports in 1981-82 will in all certainty miss the target. The gap between projected target and actual exports may be even higher this year.

As Bangladesh continues to lose much of her traditional dominance in the global jute export trade over recent years, other raw jute producing countries like Burma, Thailand, Nepal, China and India have succeeded to gain new grounds by capturing the markets which Bangladesh's 'golden fiber, has lost for itself.

The export sales of raw jute registered during 1981-82 season up to the middle of April, '82 aggregated to 13.5 lakh bales valued roughly at about Tk 140 crore. The belated export sales during the corresponding period of the last fiscal 1980-81 were recorded at about 16 lakh bales.

The trends in the current year's raw jute export trade show that total sales were registered at 4.34 lakh bales valued at 43.20 crore taka up to September, '81 and then at 8.87 lakh bales valued at 89.18 crore taka at the close of November, '81.

The most recent figure relating to export sales of raw jute with 13.5 lakh bales as on April 15, '82 shows rather a sluggish performance during the last four and a half 'months' period from December '81 to mid-April '82.

The raw jute export target for 1981-82 was earlier fixed at 23 lakh bales which was less than the target of the previous year by two lakh bales. The target for the current fiscal year was as such fixed after taking into account the scarcity of seeds and the unfavorable weather conditions, adversely affecting raw jute production during the year.

The Ministry of Agriculture projected the volume of raw jute availability in the country in 1981-82 at 65 lakh bales while the ministry of jute estimated the related availability of raw jute for the new crop at 50 lakh bales.

However, Foreign Trade Division of the Ministry of Industry and Commerce felt that the value-wise target for raw jute exports in 1981-82 could be reasonably set at 240 crore taka in consideration of the fact that there had already been an increase in the current exchange rate of US dollars in taka ratio and also the fact that unit price of raw jute was likely to have an upward trend during 1981-82.

Price Falls

Now at the closing part of the current financial year, it is quite clear that Bangladesh's raw jute exports will fall short of the earlier projected targets by a wide margin both in terms of volume and value. Raw jute exports in 1980-81 were also short of the targets.

In terms of volume, the shortfall was to the tune of fifteen percent and in terms of value, it was about 30 percent. The Export Promotion Bureau (EPB) explained the last year's faltering performance in terms of the world-wide recession which resulted in the decline of both price and demand for raw jute in 1980-81.

Raw jute from Bangladesh sold in 1980-81 at an average price of 13.64 percent lower than that of previous year's average price of tk 1141 per bale.

It is true that persistent global recessionary trends have hit the primary producing countries like Bangladesh hard. But it must as well be admitted that lack of an effective and realistic thrust for marketing of raw jute in the international markets along with exploration of new markets, inadequate shipping space and internal transport problems, the absence of the much-needed coordination between the public sector agencies and the private traders connected with raw jute exports, etc. have in particular been responsible for Bangladesh being elbowed out in the international raw jute export trade.

Thus, the export earnings from raw jute indicate this year even more a depressing situation than that of the last year despite the fact that the exchange rate of taka in relation to US dollars has depreciated and the unit price of raw jute export has maintained a constant, if not slightly improved, position this year as compared to the situation last year.

Unofficial sources further maintain that smuggling of a sizeable quantum of raw jute across the border this year has led to lower level of availability of raw jute for export from Bangladesh.

It is to be mentioned here that more than fifty percent of raw jute produced in the country are needed as the basic raw materials in the jute industry. Ninety percent of the rest quantum of raw jute are available for exports.

About 80 percent of the raw jute export business of the country is now in the hands of the private sector.

According to official figures during 1979-80 out of little over 19.68 lakh bales export, private sector handled over 16.5 lakh bales and the nationalized jute exporting agencies namely the Jute Trading Corporation and the Jute Marketing Corporation did business of only a little over 2.5 lakh bales.

The previous government provided liberal credit facilities to the jute trading sector, both private and public. According to some sources during 1981 the total amount of bank credit outstanding to private traders and autonomous bodies for purchase of raw jute was 453 crore taka.

Of this amount 118 crore taka was sanctioned during July-December 1980. The remaining amount accumulated over the years. The quantum of credit sanctioned during the jute season of July-December 1979 was 134 crore taka.

According to one estimate a sum of about 200 crore taka bank loan has remained due from different traders of the private sector in the jute export business. Official sources believe that some of the jute exporters after taking the bank credit in the name of jute trade have switched over to other business and invested the money elsewhere.

Farmers

Over the last few years the jute growers, however, did not get fair price of their produce. There remained a big gap between the production cost and the selling price of raw jute per maund and as a result the farmers were the worst hit.

During the last jute season the government did not even fix the lowest price for raw jute in the internal market and jute was sold at 100 to 150 taka per maund while production cost of per maund jute was estimated to be about 175 taka.

Not only the jute growers have been suffering for the last several years jute acreage also has diminished sharply. According to official statistics the acreage under jute was 13.53 lakh acre in 1979-80 against 18.78 lakh acres during 1978-79.

Despite the continuous deterioration in the overall performance of the jute sector well-planned and coordinated steps were not taken to stem the rot. The government and private sectors accuse each other for the anomalies in the jute sector.

Private sector sources point out that the authorities have failed to evolve correct policies to streamline jute production and marketing in both internal and external markets, and fixing a competitive export price for raw jute vis-a-vis other exporting countries.

No Coordination

There is also lack of coordination between the nationalized jute industry, government raw jute purchasing agencies, and private sector jute traders though all these organizations are interlinked.

Jute being still the major foreign exchange earner of the country there is immediate need to adopt correct policies protection the interests of the growers, traders, and above all the country.

Observers feel that adequate measures should be taken before the beginning of the jute season from July this year.

The banking control department of Bangladesh Bank announced 15-point terms and conditions for banks to sanction or to renew credit facilities to jute traders in the private sector last year.

The Bangladesh Bank announcement also included a schedule for the liquidation of outstanding credits and the caution that the "repayment program must be strictly adhered to" in default of which strict action should be taken for recovery.

It could not be ascertained how far the situation improved following the bank's directives.

GOVERNMENT STEPS TO ACHIEVE JUTE EXPORT TARGET TOLD

Dacca THE BANGLADESH OBSERVER in English 6 May 82 pp 1, 8

[Text] The Government has taken certain measures to achieve the current year's target for export of jute despite the prevailing lull in the international market due to world-wide recession, according to official sources in Dacca on Wednesday, reports BSS.

The measures were taken following review of the situation in respect of sale and export of jute during last few days by the Jute Division of the Ministry of Industries and Commerce.

The measures taken to achieve the target of export of jute by end of the current year include.

1. The agencies and exporters who had concluded contracts for sale of specific quantities of jute by June this year would make allout efforts to export their goods within the specified time.

2. The Secretary of Jute would hold meetings with the principal jute exporters to emphasise the need for export of jute within the time limit. Traders facing any difficulties in respect of jute export have been advised to immediately bring them to the notice of the Jute Division so that it could remove such difficulties in time.

3. A number of countries which purchase certain quantities of jute from Bangladesh on regular basis have their representatives in Bangladesh. The Jute Secretary would hold meeting with them and request them to make efforts for timely import of jute according to their contracts.

According to the sources, the Government had fixed the export target of raw jute during current year to 20 lakh bales with the hope to earn Taka 210 crore in foreign exchange, but due to world-wide recession, the sale and export of raw jute slowed down. As a result, till April 30 last, it had been possible to export a total of 15 lakh bales of jute worth about Taka 160 crore.

The sources said that after reviewing the sale position of jute till April 30 last, it had been ascertained that the exporters in public and private

sectors had lined up sale of 7.50 lakh bales of jute. In addition, at least 3 lakh bales of jute are expected to be sold in next two months.

Official sources hoped that it would be possible to export at least 19 lakh bales if not 20 lakh bales by the end of current fiscal year if the exporters make all out efforts and if there was no problem of vehicles and ships for inland and overseas shipment.

The Jute Division during last few days held meetings with the representatives of government jute purchase agencies, Bangladesh Jute Traders Association and prime jute exporters with a view to achieving the target of jute export. Different aspects of jute purchase and export were reviewed at these meetings and necessary measures were taken to achieve the export target.

PAPER REPORTS IMPROVEMENT IN JUTE EXPORT SITUATION

'OBSERVER' Report

Dacca THE BANGLADESH OBSERVER in English 7 May 82 pp 1, 12

[Text] The export earnings of jute industry have been showing a rising trend in recent times.

Jute industry used to get greater financial help from the Government till 1969-70 compared to what it is getting in the form of subsidy in post-liberation period.

In the pre-liberation period, the Government patronage to jute industry was in the form of bonus vouchers.

The Government subsidy to nationalised jute industry was over Taka 160 crore during eight years from 1972-73 to 1978-79 which amounted to 5.38 per cent of the foreign exchange earning of Taka 2,980 crore during the period. The subsidy by the Government provided to the private owners of jute mills through bonus voucher in 1969-70 was 41.47 per cent of the total foreign exchange earning of Taka 77 crore during the year.

A total of 72 jute mills were nationalised and former owners or managers were appointed as administrators. Management of jute mills was taken over by the Bangladesh Jute Mills Corporation in 1975. Out of the total nationalised mills, 35 were owned by Bangladeshi owners. Two mills were later handed over to the former owners. Ten mills were financed by erstwhile EPIDC. The total installed capacity of these nationalised mills are 25791 looms out of which 91 per cent is operating and nine per cent lying idle.

Despite heavy odds the BJMC earned profit during 1979-80 and 1980-81. The net profit in 1979-80 was Taka 116 crore and Taka 39 crore during 1980-81. However, BJMC does not expect to earn profit during the current fiscal year.

The BJMC had to pay heavy amount of liability of bank loan insurance claim, and service charges of insurance etc. In 1980-81 alone, BJMC paid Taka 83 crore towards repayment of liability. The Corporation also paid Taka 75 crore to the national exchequer out of profit.

Despite reduction of thickness of products according to international market demand, production has registered an increase in 1980-81. During the year the production was 5,80797 tons which is 104 per cent of production in 1969-70. Product in 1969-70 was 5,60,500 tons. BJMC jute mills produced 5,47,300 tons in 1977-78.

BJMC expected 4,50,000 tons of jute goods during the nine months of the current financial year. The Corporation earned foreign exchange amounting to Taka 468 crore through this exports during these nine months.
